True, just as Comrade Zhou Enlai once pointed out, we cannot wilfully "frame and pick up on people. Nor can we trace their roots, impose political labels on them and wield big sticks in their faces," shut their mouths and make them timid in action. Meanwhile, he added: "Marxism is a framework. We have a larger framework. Therefore, generally speaking, we do not oppose framework." The four basic principles constitute a large framework which we cannot throw away. Any decision to free our writers and artists from the Marxist theory of literature and art as a guide, supervision and lashes from the masses of people and the leadership of the proletarian political party may appear to be something to the delight of some people. However, if we all regard such restriction, supervision and guidance as nuisances, I am sure by the time a truly revolutionary and talented writer or artist is relieved of this "painful rope" by a "savior," he may suffer even a greater pain, become more puzzled than ever, and get bogged down in the bourgeois quagmire of individualism, anarchism and liberalism. His original desire to free him from a specific type of shackles may find himself being bound up by another kind of more painful ropes. This is a logic of life that seems always working against the wishes of people.

Actually, such terms as "reins," "lashes," and "guidance" do not originate from objective reality alone. They also reside in our high sense of responsibility to society, the literary impulse to praise the true, the good and the beautiful and to condemn the false, evil and ugly things, ideals of devotion to the development of socialist literature and art and feelings of excitement. Can we call these self-imposed invisible reins, lashes and guidance that exist in the consciousness of revolutionary writers and artists?

In a quotation from the German proverb, Lenin said: "No analogy is perfect." Using this comparison between man and horse to convey a point that the writers and artists dedicated to "a national crusade in which they believe" should submit to the revolutionary theory, and heed the instructions of a political party and people is probably not a very ideal analogy. But I can take some comfort from the fact that the truth is identical. I sincerely hope that my bold attempt to use an ancient example to parody modern life will do nobody any harm.

CURRENT TRENDS IN LITERATURE, ART ANALYZED

Nanchang XING HUO [A SPARK] in Chinese No 6, 1981, pp 76-77

[Article by Guang Qun [0342 6746]: "Avoid Two Types of 'Inertia'"]

[Text] At present, under the leadership of the Party Central Committee, the entire party membership is committed to strengthen the political and ideological work. Socialist literature and art are an important weapon to influence the people in their ways of thinking, to enhance social stability and unity, and to build our socialist spiritual civilization. Under the current new situation, certainly the literary and artistic front should consider it necessary to make conscientious efforts to improve its work, carry forward its achievements, examine and correct its shortcomings and mistakes that really need to be corrected so that it can live up to the needs of the party and people.

However, lessons drawn from our past experiences teach us that vigorous efforts really must be made to overcome interference from the two types of "inertia" in order to improve and strengthen our work and develop our productive power in creative writing. What does it mean by interference from the two types of "inertia"?

When the guidelines come from the top echelons, instead of conscientiously studying and striving to comprehend the documents or instructions, the people involved just roughly and perfunctorily go over them as "a matter of formality." They seem more interested in gathering unofficial information and unreliable speculations. As a result, two types of "habitual" behavior will quickly come into action: 1) This will be seized by some people as an opportunity to look for "targets of attack" everywhere and as a starting point in their crusade against the "rightists." Among them are people who under the heavy influence of the "leftist" influence disagree with or have misgivings about the guidelines of the Third Plenum. Actually, attention must be paid to the problems that arise from the process of creative writing, problems which can be satisfactorily solved through the use of literary criticism as a weapon, and through the process of reasoning, persuasion and critical analysis which proves helpful in raising the political consciousness and improving the works of writers. But the quality of literary and artistic works cannot be enhanced by any subjective judgment of certain persons as "rightists" and certain works as poisonous weeds. Such behavior is not only harmful to writers themselves but also will mess everything up.

For example, some people have viewed the excellent situation characterized by cultural prosperity and competition among a hundred of blooming flowers produced by a new generation of writers as an "ideological confusion" and a dark cloud. Are you confused? A little bit. For example, a few people have mistakenly thought of an attempt to break away from party leadership while another small group of people is under the influence of an unhealthy tendency to ignore real life and the Marxist ideology as a guide in their writings. Criticism of these people is absolutely necessary. Earlier, those devoted to theoretical critical work made mistake of failing to criticize this tendency vigorously. Can we call our current main trend in literature and art and in writing an "ideological confusion"? A friend of mine who denounced a television program for showing "two platoon leaders vying for the love of one girl" said caustically: "Our army prohibits conscription soldiers from courting any girls. This television drama is counterproductive to the difficult and painstaking work done by instructors among the fighters!" I agree that all television programs catering to our army fighters must be carefully selected, and that special caution must be exercised against those "love scenes" in the programs which may have a bad effect on them. I feel that this consideration is right. Anyway specific analysis in this is necessary. All indiscriminate and blind criticism must be avoided. For example, that television drama mentioned by my friend and watched by me deals with a fighter who gradually changes his mind about his fiancee back home in the countryside following his promotion to the position of army cadre and who refuses to see her upon his return to home. Knowing this, a platoon leader voluntarily pitches in to persuade that fighter to change his wrong idea on this matter and to make him return to the right path in love affairs. Therefore, I argued that this drama is basically healthy and good and it absolutely has nothing to do with "two platoon leaders vying for the love of one girl." But my friend did not agree with me. He still stubbornly stuck to his views. Coincidentally, on that day another friend of mine--an instructor from the railway corps--also came to see me. In his presence, I asked whether he had seen that television program. The instructor said yes. Then I asked again: Did you see any problem with that drama? He said: "It is a very good drama of educational value! There are also some fighters who come from the countryside in my company, and who were engaged before joining the army. After seeing this drama, they called it an immunization shot in their arms. When a soldier is assigned to a station in a city, he must particularly guard against such characters as Chen Xi [7115 0823], a character in the novel 'A Sentry Under the Neon Lights,' and the way he thinks. That drama is actually a criticism of erroneous ideas harbored by persons like Chen Xi. Is it fair to say that the novel on 'sentry' is right and that television drama wrong?" This remark from the instructor's personal experiences was a strong rebuke to the argument by my friend who stood silently without a word.

2) This type of "tendency" affects mostly writers and editors for some publications in the literary and artistic circles who are sensitive and fragile and who often mistake wind for rain. This state of mind is understandable because they suffered punishment in the past. These are people who lack an independent thoughtful mind and a habit of analyzing and judging problems independently. For example, some writers these days have to "check the climate and see which way the wind is blowing" before displaying any courage to write. Some may say that right now we have to wait until the "reading season is over." Some hide their

finished works in the drawers and are not yet ready to publish them. Some even have written letters to the editorial departments requesting the return of their works mailed earlier.

It is ironic to note the following regulations from the editors to writers: 1) you can write only stories of the four modernizations; 2) you can only write about positive characters and heroes; 3) you can only write about new socialist personalities. What will happen to works dealing with other themes? They will all be returned to their writers. Some publications have become nervous and are ready to face punishment and criticism for publishing articles not compatible with these regulations. Does this sound like self-punishment? A calm and careful analysis will reveal that actually, the reaffirmation by the Central Committee of the guidelines calling for upholding the four basic principles and for further enhancing stability and unity and strengthening the ideological and political work is in every sense a continuation and development of the guidelines of the Third Plenum and compatible with its principles and emancipating the mind, seeking truth from facts and uniting as one to look forward. The guidelines of the Third Plenum on literature and art call on us to persist in moving in the direction of "serving the four modernizations and the people," and to gear literature and art to serve the people in a better way, to enhance the socialist construction program, social stability and unity, and to provide high quality spiritual food for the people to satisfy their growing needs to better their spiritual and cultural life. To this end, we must make conscientious efforts to implement the "double hundred" policy with the aim of diversifying the theme, and style of literature and art, and inspiring free discussion of creative writing and free competition for better literary and artistic styles. Is there any change in the guidelines of the Third Plenum? No. It is certain that we need more than any other time to encourage and promote the production of works boosting the morale and stimulating the spirit of our people, works directly reflecting the contradictions and struggles through the development of four modernizations, and portraying the pioneering heroes dedicated to the four modernizations program. Any judgment of this as the only demands and other themes as "formula" writing is a big misunderstanding of the guidelines of the Third Plenum and the "double hundred" policy requiring literature and art to "serve the people and the four modernizations." If the air is permeated with this "formula" writing, the atmospheric pressure will drop, and the people will experience difficulty in breathing and become nervous. Although a certain degree of excitement may be o.k., too much excitement may spell troubles. Since the smashing of the "gang of four," the consistent aim of our party's original policy is to encourage, promote and support the program to broaden the prospect for writing. This prospect may have been dimmed by action taken by some people. The metaphysical "formula" writing consistently opposed by our party may be revived among a certain segment of the population, thus slowing down or even bringing to a standstill the development of the productive power in writing or even pushing it backward. The broad masses of people will certainly never allow the literary and artistic front to return to the days of monotony, dullness and hibernation. Nor will they allow it to go back to the era of the "gang of four" in which only uniformity was emphasized and ten thousand horses were muted.

The Central Committee has called on us to study the new problems and understand the new situations and to move forward. Our primary task is to study humbly, in order to truly understand and comprehend the essence of the Central Committee instructions. We must achieve a correct understanding of this essence as a basis for building up our ability to consider, analyze and judge problems independently in conjunction with the realities of specific units and departments and in a way that takes into account the actual local conditions. Only in this way can we find solutions for problems. We should no longer parrot the words of others, mistake wind for rain, "drift along with the wind," and torture ourselves as well as others. (This article was drafted on 12 February and revised on 19 March 1981.)

SOCIOLOGICAL, EDUCATION AND CULTURE

QUALITY OF FILM TECHNIQUE COMPARED TO ATHLETIC ACHIEVEMENT

Beijing RENMIN RIBAO in Chinese 22 Jul 81 p 5

[Commentary by Wang Yicheng [3769 0001 6134]: "Gold Medals and the Quality of Film Technique"]

[Summary: The great contribution made by our athletic enterprise to revive Chinese prestige is inseparable from their constant hard training. It reminds me of the less-than-ideal situation of our cinematography. In cinematic circles, it is rather rare for someone to engage in serious study or even to learn a bit of his own trade. cinematic workers must resolve to overcome difficulties to acquire broad knowledge through diligent study. The crux for improving film quality lies in ideological liberation, intensive study, and keeping in close contact with new realities through practice. Cinematic workers must strive to grasp the knowledge and method of social and natural sciences. They must learn some historical materialism and some history itself. It is the honorable duty of literary and art workers to contact the masses, to be responsive to their opinions and to improve the quality of cinematic art.]

[Text] Not long ago, Vice Minister of the Physical Culture and Sports Commission, Comrade Rong Gaotang [2837 7559 2768] spoke to the reporters of the New China News Agency, "In the two and a half years since the 3rd Plenary Session of the 11th Party Congress...our athletes have won 598 gold medals in international competition. Last year alone, they won more than 300 gold medals...20 individual athletes and one team representing such categories as volleyball, soccer, hockey, gymnastics, track and field, basketball, and ping-pong have been chosen as the best athletes and the best athletic team. This is unprecedented in Chinese sports history."

These heartening words made me believe that our athletic enterprise is forging ahead out of the confines of Asia to the world arena and making a great contribution in reviving the prestige of China. In the meantime, however, I naturally thought about our literary and artistic enterprises. Athletics as well as literature and art have been heavy disaster areas during the decade of internal turmoil. Among those who perished or suffered persecution under the two counterrevolutionary groups led by Lin Biao and Jiang Qing, there are perhaps more from the literary and art world than from athletic circles. Following the 3rd Plenary Session of the 11th Party Congress, literature and art, like athletics, are rapidly recovering under the correct guidance of the Party Central Committee. Emerging from the literary and art contest held last year and this year are a large number of middle-aged and young writers, playwrights, directors, artist, performers and singers distinguished in literature (short story, novella, reportage, modern poetry), drama, fine art, movie and music. In general, however, among the categories, in literature and art as well as in athletics, there is some imbalance. For example, in literature and art, greater achievement is scored in short stories, novellas and modern poetry, whereas movies, which are highly mass-oriented, are less satisfactory.

In athletics, ping-pong has long been held in high esteem in international competition. In the 36th world ping-pong tournament, our team took first prize in all seven categories. Volleyball, gymnastics and diving have also broken through the confines of Asia and are moving world levels. Soccer and track and field have also made appreciable progress in the last two years. But watching the matches between the two Yugoslavian teams and our teams, anyone can tell that our soccer teams do not stand much chance to rank among the first eight in the world tournament. In certain categories of track and field, we are already leading in Asia, but seldom do we set world records. Traditionally the achievement in soccer as well as in track and field is often used to gauge a country's athletic level. Therefore, this unbalanced development deserves our attention and more effort.

Imbalance can also be termed disproportion. This problem is even more conspicuous in literary and art circles than in the athletic world. Compared with the decade of internal turmoil, the development of literature and art is obvious. In terms of quality and quantity, literature and drama have reached or even surpassed the level of the sixties and there are indeed talent and works. How about the movies which are watched by millions of people every day? Frankly, those which can reach or even surpass the level of the cities are only a small percentage of the total output. Moreover, even those films winning Hundred-Flower Prize and Golden Rooster Prize are not free from obvious shortcomings. Recently it came to my attention that many film studios sent finished film to Shanghai Film Studio for "dubbing," because the mandarin pronunciation of many actors from those studies is not good. This is why a troubleshooting comrade commented that the basic problem lies in the way actors are chosen. When directors of film studios and movie directors choose actors and when movie academies recruit new students, they tend to take into account only the applicants' appearance without paying attention to other factors which make an actor. This is not a new problem. Back in the sixties, premier Zhou Enlai said more than once that the so-called "stars" in foreign countries could not only act but also sing and dance. And our actors? Their speech is slurred, intonation inarticulate, they can neither ride a horse, nor swim or dive. Premier Zhou painstakingly admonished our performing artists (including play actors) to be committed to practice, determined to become "qualified actors." These words heard by many people, were, I remember, also published by some newspapers.

Why could athletes score such great achievement within the short period of two and a half years? My view is that it can not be separated from their daily practice and training. Not long ago, I saw a new film the "Sea Gull" which draws its theme from the making of a volleyball player. It made me even more aware of the inadequate quality of our film industry. Of course, the actor who plays the "Sea Gull" is a veteran player from the Beijing Volleyball Team, not a professional actor. It is impossible to demand a professional actor to possess that level of athletic expertise. What the film reminds me of is the long and persistent training (not limited to volleyball) traditionally required of an athlete. A comrade who went with me to see the "Sea Gull" could not hold back his tears at the scene of the athlete winning trophy at international competition which came after long period of hard training. As for myself, I was thinking of the problem of "dubbing" in our movies. China is a vast country. In the past when communication was poor, it was not unusual to speak with a local accent or not to speak mandarin well. It is not necessary for art academies to impose mastery of mandarin as a requirement on applicants. Having become a movie actor, one has made the decision to go for this trade or has been chosen for this trade, and he must be determined to overcome all the difficulties to become a qualified literary and art worker. No matter how attractive is one's appearance, slurring speech, inarticulate intonation and unaltered "thick native accent" are not acceptable. Of course, to become a qualified actor, language is but a minimal requirement. For any literary and art worker, especially at this time when we are at a turning point of fast approaching a highly democratic and highly civilized new China, there are many subjects which need to be learned and should be learned.

Literary and art workers differ from physical workers in their need of comprehensive knowledge and experience. Comrade Hu Yaobang time and again emphasized the importance of learning in his speech celebrating the 60th anniversary for the founding of the Chinese Communist Party. Exhorting us to study Marxism-Leninism, he said, "The tenets of Marxism are truths that have been repeatedly verified in practice. However, it does not embrace all the truths in the unending course of human history, nor can it possibly do so. For us revolutionaries, the theory of Marxism is the guide to action and by no means a rigid dogma to be followed mindlessly." Exhorting us to study history, he said, "We must continue to apply ourselves to the study and investigation of the history of Chinese revolution. For the China of today has grown out of the China of yesterday, a China about which we know, not too much, but too little." Exhorting us to sum up past experiences through studying, he said, "Whether it is the experience of success or that of failure, we should through analysis absorb whatever is useful in others' experience and lessons. We must, therefore, study and analyze the experience of other countries, other regions and other people while studying and summing up our own." What he spoke of is the great truth and concerning overall problems. But I also consider this talk for us literary and art workers, especially cinematic workers, as a sincere demand which also rings a stern warning. Perhaps this is my radical view: I have a feeling that in cinematic circles, the habit of seriously and persistently reading a little every day, learning a little philosophy, a little economics,a little science, or even a little about one's own trade is rather rare.

Our screen play based on revolutionary history often consists of good guys as 100% good and bad guys as 100% bad. Revolutionaries are perfect men of red-hot revolutionary zeal, counterrevolutionaries are born villains. War movies often depict our army as ever-victorious, never suffering any setback; enemies collapse at the first encounter, forever retreating. This is what Comrade Chen Yi once criticized as the God of "Thunder smashing beancurd" style. Isn't this kind of creative thinking metaphysical and the result of not seriously studying dialectical materialism and historical materialism? Isn't this the reason why the "creative method" of "three distinctions" advocated by the "gang of four" once prevailed in literary and art circles?

In recent years, few movies depicting rural scene have been made. Many writers contend that with the changing agrarian policy, such stories have a low "survival rate." Of course, this thinking indeed reflects certain reality. China is a vast country. Natural conditions vary a great deal between the northwest and the southeast and the economic development is also uneven. Thus the difference still exists between poor brigades and rich brigades. Because of this practical situation, even witin the same region which follows the same production responsibility system, the methods of implementation are different. As a whole, if we seriously study and analyze the agrarian policy promulgated since the 3rd Plenary Session of the 11th Central Committee, we can see there is no change from step-by-step eradication of the ultra-leftist thought in the agrarian policy of the Lin-Jiang counterrevolutionary groups and promoting great agricultural enterprises, large-scale food production, bringing life to agricultural production and letting some farmers get rich first. Moreover, literary work draws its theme from men, the relations between men and men, the thought and emotion of men under certain circumstances. We only need to focus on the overall situation and to look out for the entirety, avoiding partiality and leaving aside those secondary questions which are still being tried out without concluding evidence. Thus there should be broad possibilities for stories based on rural themes. For example, up till now, isn't the struggle still going on between the party's agrarian policy and those stubborn cadres whose thoughts are ossified and those cadres who cling to the ultra-leftist thought? Isn't family conflict reflected in the movie "Happiness" and the play "Celebration" still in existence? Therefore, I consider that the solution to the basic problem still lies in ideological liberation and intensive study. As long as we keep in touch with new realities through practice while grasping the knowledge and the method of social and natural sciences through hard work, our fear will disappear and the "survival rate" of our work will increase. The material which we can use for our stories will be rich and varied and the quality of our work will rise rapidly.

We must study Marxism and the thought of Mao Zedong as well as social and natural sciences. At the same time, being a literary and art worker, it goes without saying, we must be committed to diligent practice and to learn the specialized knowledge of our trade. Movie is a comprehensive art: for cinematic workers, many things need to be learned and a great scope of knowledge to be acquired. Judging from the writing of screen plays, we see the phenomenon of conspicuous imbalance. Some writers are well trained and widely read. But we cannot fail to notice that from some published plays, some writers are narrow. It is obvious that they have no interest in reading and studying the party's present policy, important document and articles on literary creation. For example, there are quite a few plays based on the authentic story of old revolutionaries. This of course is a good thing. But in those plays concerning important events of the party history, there are quite a few distortions of historical reality, conjectures and fictitious plots. Those plays, thus written by playwrights, without careful scrutiny and verification by directors of film studios and editors of film publications are published, filmed and shown. This caused ire and protest from those who were connected with the event or were themselves participants. It happened more than once in the last year or two. This situation also gives rise to another abnormal reaction. Individual writers who cannot accept criticism, getting incensed and taking criticisms of good intention as intervention or "strangling" of revolutionary themes. Hasn't the party asked us to seek truth from facts, to start from realities and to restore history's original face?

Historical museums and memorial halls have followed this, so have newspapers and journals. Why should movies which are the most mass-oriented art willfully distort history and indulge in subjective fictionalization? I do not want to be "sermonizing," but I do hope that literary and art workers seriously study a little historical materialism, or at least study a little contemporary and modern history. Literary workers have an unshrinkable responsibility to the movement of "five insistences and four niceties." Thus it is quite necessary for literary and art workers to have the "graciousness" to learn from the leaders and the masses with humility.

Since the 6th Plenary Session of the 11th CCP Central Committee party congress, our party and country are in a period of bringing order out of chaos, carrying on our cause and forging ahead. The party invests high hopes in literary and art work. Today, it is the honorable duty for every revolutionary literary and art workers to study, to practice, to contact the masses, to learn from their views and to raise the quality of our film technique continuously.

'HSIN WAN PAO' ON MAKING SOUTHEAST ASIA NEUTRAL ZONE

HK101030 Hong Kong HSIN WAN PAO in Chinese 10 Aug 81 p 2

["New Talk" column: "The Chief Culprits in Southeast Asia: The Soviet Union and Vietnam"]

[Text] Zhao Zhiyang and Mahathir raised the subject of establishing a peaceful, free and neutral zone in Southeast Asia. This is the desire of the ASEAN countries which China supports. Mahathir further stated that the basis for the establishment of such a neutral zone would be that the great nations would not interfere in the internal affairs of various countries in this zone. He also expressed his concern about the possibility that disputes in Indochina would spread and undermine peace and neutrality in this zone.

What he meant by great nations were the Soviet Union, the United States and China, in particular the Soviet Union and China.

Some people say that the disputes in Indochina reflect the contention between the Soviet Union and China. Actually, this is only a problem involving the Soviet Union.

China is a big country which is fully occupied with its own work. It will spend a score of years on modernization alone. Does it have time to meddle in Indochina and Southeast Asia?

Zhao Ziyang said in the Philippines that China has never attempted to establish a sphere of influence in any region. And it will never do so in Indochina, Southeast Asia...Does China not support the proposal of establishing a peaceful and neutral government in Kampuchea?

Zhao Zhiyang also stressed in the Philippines that China will neither interfere in the internal affairs of the Southeast Asian countries nor meddle in the internal matters of various communist parties in that region. China will neither concern itself with how various governments treat communist parties in their respective countries, nor how various communist parties cope with their governments. People can see more and more clearly this stand taken by China. In recent years, ASEAN countries have explicitly noticed the great efforts made by China in this respect. This problem should no longer obstruct China and the ASEAN countries from developing their relations.

The key to the problem of Southeast Asia lies in the Soviet Union and Vietnam which dances to the former's tune.

It is obvious to all and a matter of record that the Soviet Union is carrying out aggression and subversion in various areas throughout the world. The crimes it has committed in Indochina and Southeast Asia are absolutely vile.

Southeast Asia is not a bone of contention between China and the Soviet Union. But, there is conflict between the two because the Soviet Union carries out hegemonist acts of aggression directly against China. It does not tally with the actual situation to regard the problems of Southeast Asia as the results of contention between China and the Soviet Union. Viewing Southeast Asia as a place of contention only helps Vietnam, the small hegemonist in distracting people's attention and shirking responsibility.

To maintain peace and neutrality in Southeast Asia, we should defeat Moscow and Hanoi--the axis of war. The fact that China taught the Vietnamese a lesson has played a great role in checking their ambition.

PARTY AND STATE

AUTHOR OF 'SCIENCE AND SUPERSTITION' DISCUSSED

Hong Kong CHENG MING [CONTENDING] in Chinese No 7, 1 Jul 81 pp 46-47

[Article by Zhang Zhidong [1728 0037 2767]: "Looking at Ideological Trend in China Through a Book"]

[Text] Last fall, the Tianjin People's Publishing House publishing Li Honglin's [2621 3163 2651] collection of articles as a book entitled "Science and Superstition." The collection includes 24 articles and a parable. It may be said that all of these articles represent the author's reflections and explorations regarding history since the founding of the Chinese communist state, and they played an energetic promotive role in the current ideological liberation movement in Chinese society.

Man of the Hour in Ideological Liberation

Li Honglin is a theoretical cadre of the CCP Central Propaganda Department. Since 1979, he has always advocated ideological liberation and has published many authoritative articles in RENMIN RIBAO, LISHI YANJIU, DUSHU and similar newspapers and journals, and put forward many thought-provoking and exciting themes for discussion. Some time ago he published an article in the magazine DUSHU entitled "No Taboo Area for Reading." He thinks there should be no taboo area for reading, and even that the "Collected Works of Chiang Kai-shek" and "Plum Blossoms in the Golden Vase" (abridged version) should also be published. Later, he also published a long article in RENMIN RIBAO entitled "Leaders and the People" to lay out a critical discourse on the relationship between leaders and the masses of the people that was turned upside-down by Mao Zedong during the "cultural revolution" period, expressing the opinion that "leaders should be loyal to the people," and not "the people should be loyal to leaders;" at the same time, he also held that we should adhere to collective leadership and oppose the viewpoint about "one single leader," and he likewise criticized the way Mao Zedong personally designated a successor. Meanwhile, he also published such articles as "Historical Initiatives and Historical Limitations," "What Kind of Party Leadership Do We Adhere To," "What Kind of Socialism Do We Adhere To," etc. These articles promoted the CCP learning and studying Marxist theories anew. The above articles are mostly included in the "Science and Superstition" collection. After the collection was published, on 11 November 1980 Li Honglin again published an article entitled "What Does the 'Crisis of Belief' Illustrate?" in RENMIN RIBAO. At the beginning of this year, he further published articles like "What Kind of Cat Do We Need?" in XIN SHIQI magazine. From all of these, we can see that Li Honglin's articles are all proffered in response to realistic and sensitive questions in society; he really deserves to be viewed as an activist in the CCP's ideological liberation movement.

A Collection of Articles Crowded With "Poisonous Weeds"

The last article in this "Science and Superstition" collection is an "old story in a new edition" entitled "Who Really Understood the Divine Farmer." It tells the tale of how Li Shizhen had a label attached to him by the emperor's imperial hospital and was almost beaten with a stick because he revised the "Divine Farmer's Herb Medicine Classic" of ancestral days. It is said that after the story was published, someone immediately wrote to the newspaper office to say that it was a poisonous weed. If the "whateverist" viewpoint of yesterday were taken as the base, which article in this collection could be other than a poisonous weed?! Viewed from the standpoint of the CCP's current noise in urging the "four adherences" and its criticism of Mao, even if Li Honglin's articles may not be designated as "traitorous and heretical," they most certainly can be said to be "overdoing in the handling of ideological liberation." The reason why articles in "Science and Superstition" could be collected and published last fall was linked with the antiprivilege and antibureaucratic process last year; it was the result of the ideological liberation movement, and a direct product of the CCP's "holiday for opinions" in August, September, and October last year.

New Points of View Expressed by the Collection

As a CCP theoretical cadre, Li Nonglin's articles and ideas cannot but be subject to the restriction by the CCP's political environment; they must have their limitations. But as the more open side of the CCP's thinking, they also put forward many rather new points of view.

First, the collection engenders a sense of history in people with historical facts. Many of the articles criticize a certain idealistic and metaphysical attitude in claiming I alone am revolutionary and I alone am correct; they propose, instead, to treat historical facts with dialectics and historical materialism. In history, "the great is sometimes turned into the preposterous, and the solemn is sometimes turned into the ludicrous" (words of Goethe); this has already become a law. "The historically unprecedented great proletarian cultural revolution" has turned out to be a "catastrophe for the proletariat." Yet "after this great disaster, the Chinese people have understood many truths from pain" ("Historical Initiatives and Historical Limitations"). Most people are of the opinion that the "cultural revolution" does not have a single bit of historical meaning; yet the people and the state have paid a very high price. But the "cultural revolution" did promote the awakening of the people. It is very difficult to imagine that without the "cultural revolution" the CCP would have such self-reflection and the people would have such a degree of consciousness. Being aware of this, people will realize that the CCP is a product of China's revolutionary history; it belongs to history. It is not a case of "without the CCP there would have been no New China;" this is historical materialism.

Second, treat "party leadership" correctly. In the article "What Kind of Party Leadership Do We Adhere To" he, unlike some people, does not adhere "unconditionally" to "party leadership." He says: "There is no absolute authority in the world, nor is there natural leadership. All leaders arise from struggle and practice and must continue to be tested in practice." He points out: The question of party leadership arose from history and must be solved in history. He proves with historical facts from the time of the Opium War that during the democratic revolution of the past there is no doubt that the CCP became the leader of the New Democratic revolution. But can the CCP continue to play the leadership role today? He points out: in order to really adhere to party leadership, we must continue to improve party leadership. This is also to say that if "party leadership" cannot be improved, the people and history will not acknowledge it.

Third, they suggest that we can only adhere to scientific socialism. In the article "What Kind of Socialism Do We Adhere To" Li Honglin points out that from Hitler's state socialism to the feudal fascist socialism of the "cultural revolution" period, all kinds of socialisms have come into existence in the world; if we wish to adhere to socialism, we can only adhere to the scientific socialism of Marx, and we can only do so in struggle against various sham socialisms.

The Collection's Limitations

From the above views thus expressed, we can see that as a CCP theoretical propagandist Li Honglin is different from a propagandist rigidly confined to "directives from superiors." His thinking is relatively emancipated, and he shows singular and profound understanding of China's problems. Where "Science and Superstition" falls short is that it places emphasis only on the scientific nature of the analysis and solution of problems but fails to elevate their democratic nature to a comparable status for study. He merely makes the point that the CCP must seek "self-improvement," but he does not elevate "participation by the masses" to the same status. Because democracy is a means and at the same time also an end, without the masses of the people being real masters of their own house (that is, enjoying democracy), no party's "self-improvement" can attain real scientific socialism. Similarly, according to Li Honglin's view that leaders should be loyal to the people, we think that the CCP should not at this time loudly cry about "adherence to party leadership;" instead, it should loudly cry about adherence to uniting with the masses" and thereby make itself a real representative of the interests and wishes of the masses of the people. Only by doing this would the people acknowledge the CCP's "leadership" even without the CCP itself "adhering" to it. Because in past history the CCP still operated in a drifting state in relation to the people's interests, therefore what the collection reflects has more to do with the CCP's interests and less to do with the people's interests.

Far-Reaching Significance of the Ideological Liberation Movement

In the "Science and Superstition" collection, we see great improvement in CCP theoretical propaganda; the fact that there are such keenly innovative ideological liberation elements in the party is really a sign of hope for the CCP.

In 1919, because the feudal ethic was found to be "cannibalistic," because a traitorous government forsook sovereign rights and brought humiliation to the country, and because of the propagation of Marxism, the embers of anger piled up in the hearts of the Chinese people 10 years after the 1911 revolution burned into an anti-imperialist and anti-feudal conflagration and stirred up the momentous 4 May Movement, and thereby started the overture of the New Democratic revolution in China. Under this movement the Chinese people ultimately built a republic of their own after 30 years of bitter fighting under the leadership of the Communist Party. In 1976, because of dictatorship and superstition and because of the collapse of the people's confidence, the resentment piled up in the people's hearts through the 10-year "cultural revolution" suddenly exploded. And similarly, the earth-shaking 5 April Movement arose at Tiananmen Square. The ideological liberation movement today is a continuation of the Tiananmen Movement, or we can even say it is a continuation of the 4 May Movement. The reason these movements have such unlimited vitality is because they were not like those artificially started by Mao Zedong; they were spontaneous and they proved to be historical inevitabilities when the state and the nation were situated in moments of crisis. As a CCP critic said: The ideological liberation movement since the Third Plenary Session of the 11th Party Central Committee "in essence must be irresistible because it reflects history's inevitable needs. If it encounters obstacles, it will merely become an undercurrent, but it will definitely not be stopped."

"Democracy" and "science" were the two banners of the 4 May Movement. Li Honglin's "Science and Superstition" has already held up one of the two in behalf of the CCP innovative faction. We hope that the CCP will wish to be even more courageous in raising also the big banner of "democracy;" that would really deserve to be regarded as inheriting the bequeathed will of the revolutionary martyrs and representing the interests of the masses of the people. Only thus can they overcome the "three crises of belief, confidence, and trust" and rebuild the people's confidence in communism.

'TA KUNG PAO' RECOUNTS HISTORY OF PLA AIR FORCE

HK060150 Hong Kong TA KUNG PAO in English No 787, 6-12 Aug 81 Weekly Supplement p 14

[Article by Li Ying]

[Excerpt] On 1 October 1949, Mao Zedong, Zhou Enlai and other Chinese revolutionary leaders reviewed a march-past of troops from a rostrum in the heart of Beijing upon the founding of the People's Republic of China.

Above them, 17 propeller-driven planes captured from the fleeing troops of Chiang Kai-shek flew over in ponderous formation. This was the fledgling Republic's Air Force.

Thirty-two years later, this branch of the Chinese People's Liberation Army (PLA) is a force of highly-trained pilots flying Chinese-made aircraft, combat troops servicing antiaircraft artillery and ground-to-air missile batteries, paratroops and support units, radar and signal corps.

China's Air Force owes its origins and its fighting spirit to the tough revolutionary period that also produced People's China.

As early as the 1920's, the Chinese Communist Party began to send cadres to study aeronautics in the Soviet Union. In 1939, the party sent 40 military veterans to be trained in flying and aircraft maintenance in Xinjiang, northwest China, then ruled by warlords independent from Chiang Kai-shek's Kuomintang (KMT) troops.

By March 1946, the communists had set up their first aviation school in Mudanjiang, an area freed from KMT control in northeast China. The school was equipped with planes made from parts cannibalized from old machines captured from the Japanese during the Second World War.

The only "advanced" trainer was patched in 125 places and many times the planes had to be fueled with alcohol for lack of gasoline.

Nonetheless, the school managed to turn out 100 competent pilots who were to become the backbone of the PLA Air Force.

In 1949, Mao Zedong called for the creation of an air force that would "defend the motherland and be prepared to defeat invaders." Its mission has not changed since then.

"Our goal is to serve the people heart and soul," the present Air Force Commander Zhang Tingfa says. "Our mission is to safeguard our territorial skies against invasion by imperialists and hegemonists, including regional hegemonists, and to help China's socialist construction."

Enemy 'Ace Pilots' Gunned Down

Soon after its formation in 1949, the ill-equipped and largely-untested air force backed up naval and infantry forces in battles to liberate China's offshore islands and fought back KMT air fighters now based on Taiwan.

During the Korean war, the pilots of the air force of the Chinese People's Volunteers, with less than 100 flight hours gunned down enemy "ace pilots" who had gone through the Second World War and flown at least 3,000 hours.

China began its own arms research and arms production in the early 1960's, and now makes its own fighters and bombers.

Pilots undergo strict selection and training. "Young recruits are very eager to enlist in the air force, but our standards are high," said Zhao Qun, a veteran Red Army man and adviser to an aviation school near Beijing.

Qualification For a Pilot

Trainee pilots must have graduated from high school with good marks at age 16 to 18, and be fit and intelligent. Before going to training school they take preparatory courses in military affairs, politics, general knowledge and physical training.

The whole program lasts 3 years and entails 240 flight hours. Those who pass the overall final examination earn diplomas and are assigned to the air force as pilots.

The new pilots must take another 2-year practical training program, which includes all-weather and instrument flying, stunt flying, simulated combat missions and formation training.

PROBLEMS IN GUANGDONG PLANNED PARENTHOOD WORK

HK310456 Hong Kong CHENG MING JIH PAO in Chinese 29 Jul 81 p 1

[Article by correspondent Lo Ming: "Why Is There Still Lawlessness?--The Ultra-leftist Practice of 10 Counties and Municipalities in East Guangdong in Planned Parenthood Work"--continuation of second installment]

[Text] Criticism From Provincial and Central Authorities

After attending the enlarged meeting of the Standing Committee of the Prefectural Party Committee at the end of May--a meeting that used the "foreign policy" in launching the "Huai-hai campaign"--Secretary Du immediately went to the provincial capital to make a report. Before he left, he boasted that after his return, he would continue pressing on with his efforts. However, after he submitted his report in the provincial capital, he did not return immediately. Instead, he headed north (Beijing). Why? It was said that the Provincial Party Committee took a different view of these extremite actions. Du had taken things into his own hands, bypassing the immediate leadership and reporting directly to the higher levels. It was said that after debriefing him and reading the relevant data, the leadership of the State Council concerned said: Judging from what you say, it must have been quite a terrible scene the way things were done. This was actually a negation of the actions of those extremists. After Du returned to Huiyang, he did not reassert himself, instead, he drew in his horns. He walked down the steps in a quiet and subdued manner.

Why was such "criticism" from the relevant leadership of the Provincial Party Committee and the State Council so superficial? Why did they not check the "leftist" outrages in Huiyang in time? Some truth may be noted in a NANFANG RIBAO report on family planning: "The leadership must take a firm stand. Leading cadres at all levels must support family planning and should not freely condemn the practice." Thus, what cadres would dare to come out "against" the "revolutionary act" of fighting an "annihilation battle"--a battle for family planning? Therefore, "leftist" poison swept Huiyang Prefecture with disastrous consequences.

The Voice of Cadres and the Masses

A cadre said to this reporter: "Judging from the process as a whole, a 'leftist' mistake has been made in the current campaign for family planning, as far as the guiding thought is concerned. This finds prominent expression in the quest for instant results in disregard of objective realities and possibilities. This has resulted in a reckless push forward which armed many cadres and people. Such a practice is also a violation of party discipline and state laws and an encroachment on the people's democratic rights. It is a case of turning promotion of a policy into a compulsion and acting against the instructions of the Provincial Party Committee. It is a case of resorting to administrative means instead of following an elaborate and conscientious process of ideological and political work. It is also one of approaching the masses with a hostile attitude. As a result, the Communist Party's prestige has suffered. Relations between the party and the masses have been further strained."

A scientific and technical worker said: "The practice of Huiyang Prefecture is holding this generation responsible for all the debts incurred by the several preceding generations. This is imposing 'too heavy a burden.'"

A worker concerned said: "Thumbing through all official documents, newspapers and magazines, we could not come up with anything that says that only one child is allowed. Nor could we find anything that says that without a 'one-child' certificate, we can be subjected to 'three interruptions of supply.' If there is a national requirement for only one child, then why should the state have not dared to make it a law? Only with laws in force, can people be made to obey." "On my last visit to Guangzhou, I got in touch with comrades in many areas. Their areas basically did not get involved. The site where the provincial government is located--Guangzhou--has never witnessed any upsurge in such a campaign." Meanwhile, the worker said that at the provincial work conference on family planning, it was pointed out that we could not erroneously interpret the universal encouragement of one child for every couple as a leftist policy. Since it was a matter of "encouragement," how could it be interpreted as "policy?" On the contrary, if we did things the way Huiyang Prefecture did, carrying out the "policy" on a compulsory basis, then it was obviously a case of being "leftist."

It was said that some cadres at the bureau level in Huiyang Prefecture considered this "Huai-hai campaign" as really a case of carrying things too far. Those workers involved regarded this as a "leftist" activity which was an encroachment upon human rights. Those victims should be allowed to have their verdicts reversed. Those rural commune members hold the view that this practice is even worse than what the Kuomintang did. Those who work in judicial departments said privately: Is there any law after all? Should laws be respected? A cadre at the level of deputy director of an office of a party committee or a department of an area raved in private: Du Ruizhi was really like a mad dog that went around biting people.

From the above, we can see the unpopularity of what is "leftist."

The "Three Stages" of the Huiyang Disaster and Du

People in Huiyang have pointed out the "three stages" of the Huiyang "leftist" disaster. The first was the "expansion" of party power among the people. The second was Li Fulin's causing an unnecessary drain on the country's manpower and financial resources. The third concerned the extreme actions on the part of Du Ruizhi. Everyone holds that Du Ruizhi is most unpopular and is an object of hatred.

Dang Xiangmin acted as secretary of the Huiyang Prefectural Party Committee during the period of the gang of four. In 1975, he enlarged the scope of the campaign to "restrict bourgeois rights," arousing great discontent among the people. The higher levels were compelled to transfer him away from Huiyang. Then Li Fulin acted as secretary of the Prefectural Party Committee. Several years ago, he promoted the "Tonghu project" in a campaign to learn from Daizhai in agriculture, causing a great waste of labor and money in several counties. The Guangdong Provincial Party Committee then under Xi Zhongxun ordered the suspension of the project.

After Li Fulin, Du Ruizhi served as acting secretary of the Prefectural Party Committee. It was learned that this man was a secretary of the Fushan Prefecture in the 1950's. He was always talked down to or railed at others. Some of his colleagues said: "He lacked a humanitarian character." During his term of office, he fooled around with women, satisfying his animal desires. Later he climbed up to be a vice chairman of the Provincial Agricultural Commission. It was said that he also served as a member of the Provincial Party Committee. Early last year, after he was transferred to Huiyang Prefecture, he lived it up by sampling the charms of women. He stayed all the time at the palatial room of the guesthouse of the Prefectural Party Committee (the West Lake guesthouse), living like a king. At a cadre meeting this year, this man [Du] said: "When he (Hua Guofeng) was secretary of the Prefectural Party Committee, I was also a secretary of the Prefectural Party Committee. He is not one to be taken seriously." He was filled with "leftist" poison, but he said, "all cadres under 40 are products of the 'leftist' line." Just a few words show that he is full of vainglory. This explained why the masses bestowed on him the glorious title of "Du Xisi" ["Du the fascist"]--a nickname.

The Crisis Continues

It was said that Secretary of the Dongguan County Party Committee Ouyang De will be promoted to be deputy director of the administrative office of the Huiyang Prefecture. This is of course because the magnificent contributions he had made to this "Huai-hai campaign" had endeared him to Du. But it was recently again learned that the Guangdong authorities had announced the transfer of Du Ruizhi back to a provincial organ. It is still not known for certain whether he is being promoted for his "good" performance or being demoted for his bad performance.

Though Secretary Du is soon to be transferred away, Ouyang De will take his place. If the higher-level organ lets them "act freely," it seems that Secretary Du's promise to start another "Huai-hai campaign" "between September and October" is likely to be fulfilled.

INTERNATIONAL AFFAIRS

TAIWAN 'SPECIAL AGENTS' ON U.S. CAMPUSES DENOUNCED

OW110108 Beijing XINHUA Domestic Service in Chinese 1532 GMT 9 Aug 81

[Report by XINHUA correspondent Yu Zhiheng]

[Excerpts] United Nations, 8 Aug (XINHUA)--At the memorial service for Dr Chen Wen-cheng at Carnegie-Mellon University in the United States, quite a number of Taiwan students and scholars present covered their heads with paper bags. At the same time, among the marchers and demonstrators protesting the murder of Chen Wen-cheng in various parts of the United States, many were also seen covering their heads with paper bags. People cannot help asking: Why?

It is because the tentacles of Kuomintang special agents have long since extended into Chinese communities in various large U.S. cities and especially university campuses. Therefore, the students and scholars from Taiwan had to cover their faces with paper bags when participating in demonstrations and attending memorial services to protect themselves from persecution by Kuomintang special agents or accidents.

How do the Taiwan authorities keep watch on the activities of Taiwan intellectuals in various parts of America? As recently exposed by the MEIZHOU HUAQIAO RIBAO [OVERSEAS CHINESE IN AMERICA DAILY], the Kuomintang usually maintain surveillance over intellectuals in the United States through the "Anticommunist Patriotic League" or organizations like the "Party Groups" and so forth. According to a report by the University of Minnesota News Bureau dated 20 April 1976, there were 118 Taiwan students in the university, 4 of whom were being investigated and 10 under close surveillance. If Taiwan students were found discussing issues or reading books and periodicals published by mainland China, their passports would not be extended and their relatives in Taiwan would be punished. They would not be able to go back to Taiwan. If they did go back, they would not be allowed to leave Taiwan again and might even be imprisoned.

The backgrounds of those taking part in the Taiwan authorities' espionage activities are very complicated. They include graduate students directly sent to U.S. schools by Taiwan's espionage agencies, graduates from military schools, and Kuomintang's professional students. In the early 1970's, a major general of the Kuomintang Taiwan Garrison General Command, Tuan Chia-feng, who sneaked into Colombia University in New York under a "study" program, was often found at political discussion meetings of Taiwan students, gathering information on their political tendencies.

The Kuomintang Overseas Work Association and Taiwan's personnel stationed in the United States also frequently and directly take part in campus activities to keep watch on the students' movements.

Judging by reports, editorials and articles published by the MEIZHOU HUAQIAO RIBAO, the REIMEI RIBAO [NORTH AMERICA DAILY], the NIUYUE RIBAO [NEW YORK DAILY] and other Chinese-language papers and periodicals as well as speeches made at discussion meetings, many overseas Chinese are of the opinion that the tragic death of Dr Chen Wen-cheng was the inevitable criminal result of the Kuomintang's espionage activities abroad. As long as these espionage activities are allowed to continue, more and more overseas Chinese will be persecuted in the same way as Chen Wen-cheng was. Taiwan's espionage activities have swept into U.S. campuses like a gust of biting cold wind, chilling and threatening. Therefore, people strongly demand that the U.S. Government expel the "campus special agents" and also demand that the Taiwan authorities stop all espionage and terrorist activities and let people study and work in a peaceful environment.

TAIWAN ASSOCIATION OFFICIAL ON PROFESSOR'S DEATH

OW031248 Beijing XINHUA in English 1229 GMT 3 Aug 81

[Text] Beijing, 3 Aug (XINHUA)--A thorough investigation by Taiwan authorities into circumstances surrounding the death of Doctor Chen Wen-cheng, has been demanded by an official of the preparatory group for the establishment of the All-China Federation of Taiwan Compatriots.

Dr Chen Wen-cheng, an assistant professor at Pittsburgh's Carnegie-Mellon University in the United States, was found dead in Taibei on 3 July after a 12-hour interrogation by Kuomintang secret agents.

In an interview with XINHUA yesterday, the federation official said that judging from overseas press reports and statements by Chen Wen-cheng's relatives and other persons in Taiwan Chen Wen-cheng was apparently the victim of illegal interrogation and persecution by Kuomintang secret agents and the Taiwan authorities are responsible for his sudden and mysterious death.

Over the past 30 years, the federation official continued, the Taiwan authorities have exercised a reign of terror. The lives and security of the people of Taiwan are not protected and Dr Chen's death is a case in point.

"Dr Chen's death has aroused the deep concern of the people on the mainland and abroad," he said. "We wish to extend our deep sympathy and solicitude to the family of Chen Wen-cheng."

The official demanded the Taiwan authorities guarantee that no such political persecution will occur in the future and that Taiwanese living abroad have the right and freedom to visit their relatives in Taiwan.

He also demanded that Taiwan authorities terminate the so-called "martial law" which has lasted for more than 30 years, curtail the activities of secret agents and put an end to the political persecution of the people of Taiwan and ensure their democratic rights and their lives and security.

TAIWAN ORGANIZATIONS' REACTIONS TO CHEN WEN-CHENG'S DEATH

Association Head Remarks

OW112022 Beijing XINHUA Domestic Service in Chinese 1246 GMT 10 Aug 81

[Text] Shanghai, 10 Aug (XINHUA)--In a statement to the press here, a leading member of the preparatory group for the Association for the Promotion of Friendship Among Taiwan Compatriots in Shanghai pointed out that Chen Wen-cheng, a doctor of mathematics residing in the United States who was visiting his relatives in Taiwan, died suddenly and tragically as a result of a reign of terror instituted by the agents of the Taiwan authorities. He said the Taiwan authorities must stop their political persecution of the innocent compatriots in Taiwan and safeguard the Taiwan compatriots' democratic rights and security.

The leading member of the preparatory group said: The 1,500 or so Taiwan compatriots residing in Shanghai are very concerned about the case. After analyzing the case, they maintained that Chen Wen-cheng's tragic death was obviously political, resulting from illegal interrogation and cruel persecution by the special agents of Taiwan's "garrison command." They also maintained that the Taiwan authorities' investigation report covered up the facts of the case. It is fully justified for Chen Wen-cheng's family to reject the death certificate issued by the Taiwan authorities and to reject the remains of the deceased. While extending our deep condolences to Chen Wen-cheng's family, we firmly support the family's stand and the stand of all compatriots at home and abroad in demanding a thorough investigation of this case.

The group for the preparation of the Association for the Promotion of Friendship Among Taiwan Compatriots in Shanghai was set up in Shanghai on 7 August. The preparatory group is composed of 15 Taiwan compatriots. Guo Zhalie heads the group and Lin Chaoquan, Lin Renhe, Lin Minmin and Liang Suqing are deputy heads. Since its formation, the preparatory group has been soliciting the opinions of Taiwan compatriots in Shanghai. It will also draft the regulations of the association, discuss the nomination of representatives, sponsor a meeting of the representatives of the Taiwan compatriots in Shanghai and formally set up the association.

Control of Death Report

OW070546 Beijing XINHUA Domestic Service in Chinese 1708 GMT 6 Aug 81

[Text] Beijing, 6 Aug (XINHUA)--Taiwan's control yuan's 31 July investigation report on the cause of death of mathematician Dr Chen Wen-cheng, who was returning from the United States, covered up the true story.

After the sudden tragic death of mathematician Dr Chen Wen-cheng at dawn on 3 July, the Taiwan authorities said he "committed suicide to escape punishment." However, Chen Wen-cheng's relatives and Taiwan's public figures do not think he would commit suicide and doubt his death was a political assassination perpetrated by the Kuomintang. In the past few days, U.S. personages and Taiwan compatriots residing in the United States have condemned Taiwan authorities' U.S. espionage activities and their despicable acts of brutally persecuting Taiwan compatriots. They strongly demanded that Taiwan authorities thoroughly investigate the Chen case and give sincere and responsible explanations. On 31 July Taiwan's control yuan published an investigation report on the cuases of Chen Wen-cheng's death.

The investigation report rejected the Taiwan authorities' allegation at a 6 July press conference that "there is a possibility that Chen Wen-cheng committed suicide to escape punishment." It also admitted that there was only a slight possibility Chen Wen-cheng committed suicide.

According to the investigation report, from the morning of 2 July to the dawn of 3 July, Chen Wen-cheng "was extremely exhausted--physically and mentally--after 20 hours of emotional excitement. It is more logical to suppose that after mounting the safety ladders he straddled the rail and fell because he was in a trance or was feeling giddy."

The investigation report did not touch on the important question that Chen Wen-cheng's death was a political assassination--a question raised by people concerned about the case. The report rejected that Chen Wencheng was murdered, saying: Chen Wen-cheng died near Taiwan University's research library. He was not moved to that site after his death. Chen Wen-cheng could not have been thrown from the safety ladders.

Fujian's Taiwan Association Remarks

OW042342 Beijing XINHUA Domestic Service in Chinese 1241 GMT 4 Aug 81

[Text] Fuzhou, 4 Aug (XINHUA)--A responsible person of the Association of Taiwan Compatriots in Fujian Province called for the Taiwan authorities to account for the truth in the tragic death of Dr Chen Wen-cheng and to guarantee that no similar incidents of political persecution will occur. A native of Taiwan and a professor of mathematics in the United States, Dr Chen Wen-cheng died a tragic death while visiting his relatives in Taiwan.

In issuing a statement to this XINHUA correspondent on 3 August, the responsible person of the association pointed out: An analysis of Taiwan and foreign press reports on the case shows that Chen Wen-cheng's tragic death was apparently a political incident deliberately created by special agents of the Taiwan Garrison Command and an outcome of stubbornly clinging to a reactionary stand, refusing to work for the peaceful reunification of the motherland and practicing the reign of terror and special agents on Taiwan by the Taiwan authorities. People in Fujian are deeply shocked by Chen Wen-cheng's sudden tragic death. In the past few days, they have condemned the Taiwan authorities' despicable acts of persecuting Taiwan compatriots and have voiced their support for the stand of Chen Wen-cheng's relatives and Taiwan compatriots who demand that this case be thoroughly investigated.

The responsible person of the Association of Taiwan Compatriots in Fujian Province said: It is reasonable for Chen Wen-cheng's relatives to refuse to accept the death certificate issued by the Taiwan authorities or to identify and take back his body. We express our deep condolences to the relatives of Dr Chen Wen-cheng and call on the Taiwan authorities to clearly account for the truth in the Chen Wen-cheng case and to effectively guarantee the safety of Taiwan compatriots' lives.

League Leaders Comment

OW111135 Beijing Domestic Service in Mandarin to Taiwan 1500 GMT 10 Aug 81

[Text] Beijing--In the past few days responsible persons of the general headquarters of the Taiwan Democratic Self-Government League have made remarks one after another strongly condemning the Taiwan authorities for causing the Chen Wen-cheng murder case and demanding efforts to find out the root cause, sternly punish the murderer and insure the safety of overseas Chinese returning to Taiwan. They also extended their sincere condolences to Chen Wen-cheng's family.

Li Chunqing, vice chairman of the Taiwan Democratic Self-Government League, said: By suppressing the compatriots in Taiwan through political assassination the Taiwan authorities will never succeed in maintaining and consolidating their reactionary rule but only create grave consequences.

Su Ziheng, vice chairman of the league, said: Many compatriots from Taiwan who reside in the United States told me that students and scholars from Taiwan residing in the United States have been closely watched by special agents sent out by the Kuomintang authorities. Professor Chen Wen-cheng's death this time is eloquent proof of this. By ruthlessly persecuting the compatriots in Taiwan the Kuomintang authorities show their weakness and their fear of the people in Taiwan.

Tian Fuda, vice chairman of the league, said: In handling the murder case of Professor Chen Wen-cheng, it is necessary to thoroughly investigate the matter of criminal liability. He said that the compatriots of Kaoshan nationality on the mainland are indignant over the Chen Wen-cheng case and that they wish to extend their sincere condolences to Chen Wen-cheng's family.

Xu Mengshan, secretary general of the Taiwan Democratic Self-Government League, said: A year ago Lin I-hsiung's mother and two daughters were murdered in Taiwan. Until today this case has not been solved, and this time Chen Wen-cheng has been murdered. This fully shows that there is no guarantee for the lives of the compatriots in Taiwan and for their freedom.

'RENMIN RIBAO' ON TAIWAN FLYER'S HOMESICKNESS

HK140007 Beijing RENMIN RIBAO in Chinese 9 Aug 81 p 3

[Article by Wei Tong [3634 0681]: "A Home on the Map--The Thoughts of a Taiwan Flyer of Mainland Origin on Returning Home"]

[Text] Recently, I happened to read the first letter written in 32 years to his mother by someone who has gone to Taiwan. His homesickness genuinely touched me and it was a long time before I could calm down.

The letter said: "Dear mama, do you know how many times I have used a ruler to measure the distance from home? Mama, do you know how many times I have drawn the route back home? Mama, do you know that it would take only 1 hour for me to fly to your side. However, I can't....

"I was away from home for only 8 years during the war of resistance against Japan, however, the civil war has separated us for 32 years. How many times can one have 32 years? In these 32 years, I dreamed many times that I had returned home. The homeland is so endearing and charming to a wanderer in a strange land like me. I cannot help feeling homesick whenever I fly back from abroad. I look at the homeland on the map. It is so very close. Silently I say to myself: O homeland, my mother. When can I return to your side.

"Mama, I now find the only shortcut to return to your side; it is to go to foreign countries first before I return to the mainland, my motherland.

"Going to foreign countries first and making a detour back home is a shortcut--who could believe it? Take the air distance between Shanghai and the United States for example; it takes about 20 hours to fly from San Francisco to Shanghai; however, it takes a Boeing 747 only 1 hour to travel from Taipei to Shanghai. It is clear that a detour is not a shortcut to the mainland. Nevertheless, this is the fact. Taiwan compatriots who leave Taiwan have their wishes fulfilled, and they have reunions with their relatives in the mainland. However, compatriots who stay in Taiwan can only long for the motherland and sigh under the moon on the other side of the sea."

In view of this, the letter continued: "I have already applied for release from military service. As soon as I have got approval, I will apply for immigration to other countries and then the day for our reunion will not be far away."

After reading this sincere and touching letter, who cannot feel sad about the splitting of our motherland into two parts?

Chinese are, after all, Chinese, and it is our great happiness if we, the wanderers, can return to the motherland and have reunion.

However, many Taiwan compatriots must first become foreigners or overseas Chinese before they can return to the motherland, otherwise, they can only see a home on the map. What a ridiculous thing this is.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

SUBMARINE SCHOOL OFFERS NEW TRAINING PROGRAM

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 4, 1981 pp 18-21

[Article by Chen Jianxin (7115 0313 2450)]

[Text] A naval submarine school, located on the outskirts of a city close to the clear and blue ocean, has the task of training cadres for submarine units.

The school was reopened after the smashing of the Lin Biao counterrevolutionary clique. At that time, a majority of the students were only at the junior middle school educational level and teaching was done on a separate-course basis. In order to develop talents earlier and faster, it is imperative that students have a strong theoretical foundation and specialized knowledge which meet the needs of modern naval warfare and newer equipment and technology. The school's party committee, on numerous occasions, organized personnel to go solicit ideas from the units concerned and from submarine units, to study the training situations at same types of foreign naval institutions and to discuss and revise one by one the teaching program and course plans on classes for department heads and deputy ship captains. Plans were also formulated to change separate-course training to comprehensive-course training, basic college-level courses were added and the study of specialized basic theories was stepped up. After classes for department heads were changed to comprehensive-course training, there was more study time for such courses as higher mathematics, general physics, electronics and electronic computers. Moreover, courses such as operations research, automatic control, English, general chemistry and general ship operations knowledge have also been added, closely integrating scientific education knowledge with specialized technical courses. Students trained in this way have a solid foundation, broad knowledge and strong adaptability, which is beneficial to developing talents earlier and lowering the age of cadres.

The school leadership also used submarine units as a mirror to test teaching quality, maintained relations with them on a regular basis, solicited their ideas on the school's education and checked on how the graduates were doing. Every year they also send a number of instructors to take part in submarine training at sea and keep track of the units' training experiences so as to closely integrate training with practice, continuously enrich training content and improve teaching plans.

Today the submarine school has taken on a new look. Educational and specialized studies have become the order of the day. It has started to use modern teaching facilities, and teaching quality has continued to improve. One group of strong red and expert talents after another has been assigned to submarine units and are plying the great territorial waters of the motherland.

PLA CARRYING OUT VARIOUS TASKS

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 4, 1981 pp 30-31

[Articles: "Economy is Strictly Practiced Everywhere"]

[Text] Adhere to Diligence and Frugality in Military Training

A certain unit of the Beijing Garrison adheres to diligence and frugality in military training; it has undertaken to make large quantities of substitute training equipment by itself. The artillery detachment [fengdui] uses gauze to make targets in order to save wooden boards and steel bars. The antiaircraft artillery detachment's self-made "artillery firing training board" reduces the operation of actual artillery, radar and fuel-consuming engines and also reduces the friction wear of machine parts. The tank detachment substitutes rifle for cannon and thereby saves ammunition consumption. Last year, this unit accomplished outstanding training tasks and saved more than 4,800 yuan in training expenses. Reported by Pan Quan [3382 3123]

Photo captions [photos not reproduced]

1. Artillerymen undertake to make targets with gauze.

2. The tank squad substitutes machine gun for cannon in carrying out firing practice.

Rebuild Training Area

Basing itself on the spirit of "spending less money, accomplishing better military training," the antiaircraft artillery battalion of a certain unit of the Lanzhou Units undertook boldly to rebuild its original antiaircraft artillery training area, and set up flexible flight paths to assist the operation of the training area. In this training area, it is possible to practice firing at moving targets along 12 different flight paths and to indicate such tactical features as more directions, grouping and layer of planes, which is good for the high-level cadres in training in their organizational and command capabilities and for the quality of training. The funds spent for rebuilding were more than 4,700 yuan less than the original budget. Reported by Deng Daju [6772 6671 5282]

Photo captions [photos not reproduced]

1. In the rebult training area, arrangements are rational, easy to use.

2. To raise the quality of antiaircraft artillery firing training, battalion commander Zhao Jingang [6392 2533 0474] (second on the left) studies with comrades the rebuilding design blueprint for the training area.

Make Teaching Equipment Themselves

The Missile Technology Institute has given full scope to the spirit of running a school by diligence and frugality and has mobilized teachers, staff and workers to suggest plans and approaches in solving difficulties relating to teaching instruments. In the process of repairing and restoring the physics laboratory, the second teaching and research office made careful and detailed calculations and thereby saved nearly 10,000 yuan in investment. Cadres and workers in the institute's attached factory, in close coordination with the teachers and students, repaired and reconstructed as well as made by themselves more than 250 different instruments. During the past few years, in running the school by diligence and frugality the institute saved about 1 million yuan; this played an active role in stimulating teaching and scientific research activities. Reported by Li Jurong [2621 1565 2837]

Photo captions [photos not reproduced]

1. The sighting instrument successfully researched and produced by teachers Dong Xianxiang [5516 0341 4382] and Wang Hangong [3769 3352 0501] is suitable both for teaching and for use in practice by troops.

2. Guided missile simulation equipment produced by the plant attached to the institute.

SATELLITE COMMUNICATIONS GROUND STATION

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 4 Apr 81 p 37

[Article by He Mingjun [0149 2494 0689] and photographs by Wang Liangyuan [3769 5328 0337]]

[Text] With the development of scientific enterprises, the use of satellite communications has become increasingly more important in building up the national economy and national defense. To realize satellite communications, in addition to launching a communications satellite, satellite ground stations must be constructed for the transmission of television picture signals, radio broadcast programs, analog telephone, digital telephone, radio facsimile, telegraph, Morse and data signals.

According to mobility satellite ground stations can be differentiated into two types, stationary and mobile. Mobile stations can be mounted on vehicles or ships. Stations can be separated according to [transmission] mode into three types: analog, digital and one type which is compatible to both. At the present time, the PRC has developed analog and digital satellite ground stations.

A complete satellite ground station is equipped with an up line system (also called a transmitting system), a down line system (also called a receiving system), antenna, feed and servo systems. In many ways satellite communications ground stations resemble ordinary communications systems. The distinguishing feature of satellite communications is that a satellite placed in high-altitude is used as a relay station. Since synchronous satellites are positioned 36,000 kilometers out over the equator, at this distance signal attenuation is very substantial. This requires ground stations to have high-power transmitters and high gain antennas. Commonly parabolic antennas are used with diameters ranging from 10 to 30 meters. The ground station's preamplifier must be a low-noise amplifier. Usually parametric amplifiers are used and operate inside refrigerators in a surrounding temperature of approximately -253°C. This method reduces the internal noise level of the receiver to a minimum.

Most of today's communications satellites are synchronous satellites. Although the PRC expands over a vast area, one synchronous satellite approximately placed would facilitate communications and liaison between all of the nation's ground stations. It will not be long before the PRC's satellite communications network is established.

Photo captions [photo not reproduced]

1. A satellite communications scheme.

2. The antenna system of an analog satellite communications ground station.

3. The satellite ground station's frequency transformer, modulator, demodulator and terminal equipment room. Here, the work is all automated.

4. The main monitor station which monitors the operations of ground station equipment. Malfunctions are reported automatically and the work is switched over to backup equipment.

5. The modulator and up (line) frequency converter bay. The baseband signal is modulated onto an intermediate frequency and becomes a modulated intermediate signal. Then, the intermediate signal is converted to a radio frequency appropriate for transmission on a satellite channel.

6. The ground station's color television microwave relay equipment.

CHINA'S FIRST HIGH-FLUX REACTOR TEST

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 4, 1981 pp 38-42

[Text] China's first high-flux engineering test reactor was completed and put into operation by the Southwest China Reactor Engineering Research and Designing Institute under the Second Ministry of Machine-Building at the end of last year. The reactor has a thermal power of 125,000 kilowatts and a coolant water flow of 5,600 tons per hour. The reactor core is equipped with multi-layer sleeve tube fuel elements made of highly concentrated uranium. The maximum thermal neutron flux is 620 trillion neutrons per square centimeter second. To insure safe operations and to effectively utilize the reactor for developing scientific research work, physics, radiochemistry, materials radiation behavior research (hot room), isotope production preparations, and other corresponding laboratories were also built around this project. Only a few industrially advanced countries in the world can build such large-scale high-flux reactors.

The completion of this reactor will play an important role in developing China's science and technology in atomic energy. This is a major scientific and technological achievement made by the broad masses of scientists, technicians, workers, and cadres on China's scientific research and production fronts in the spirit of cooperation and after overcoming all kinds of difficulties. This shows that by relying on our own technical force and industrial foundation and actively adopting the advanced experiences of foreign countries, it is entirely possible to develop our atomic energy program independently and with our own initiative.

Photo captions [photos not reproduced]

1. Reactor hall. The long-shaft tool on top of the reactor is used for loading and unloading operations.

2. The reactor's inner structure. The reactor core is the active zone. Automatic return tubes are in the center. Ionization room pipeline is located around the reactor.

3. "Hot Room" where radioactive materials are being processed and radiation behaviors tested. The workers, separated by a protective wall and lead glass, are performing operations at a distance by means of mechanical hands.

4. This reactor can make multi-purpose activation analyses, such as cultural relics and industrial products, to determine the characteristics, age, elements, and quantity.

5. This reactor can make radiation tests on the new materials and system components of other reactors to determine whether or not their performances are up to the requirements. Photo by Li Fochuan

6. The reactor can produce radioisotope having a mass number--cobalt 60--and can treat cancer and other diseases, or can be applied to industrial and farm production. Photo by Song Houjun

7. The reactor can carry out radiation research on new-type fuel elements for nuclear power stations to determine their possible applications and production.

8. Illustration of chain-type uranium nuclear fission.

9. Illustration of uranium atomic structure. The center is the nucleus (consists of protons and neutrons). Revolving the nucleus is the electron.

We know that when a neutron with a specific energy (level) bombards the nucleus of Uranium 235 (U 235) the U nucleus will split into two of relatively equal mass releasing a large amount of energy and releasing 2-3 new neutrons at the same time. This process is called nuclear fission. The tremendous energy released by the nuclear fission process is what's commonly called atomic energy. Under the right conditions, using neutrons born of the fission process to continue to bombard other U 235 nuclei, this nuclear fission process will go on continually. We refer to this type of nuclear fission as self-sustaining chain reaction. The nuclear reactor is just such a facility to effect a self-sustaining chain reaction.

Installed within the nuclear reactor, fuel elements contain enough U 235 for fission. The tremendous energy released by nuclear fission-atomic energy can be used in many areas which would build up the national economy such as generating power, supplying heat and powering ships. This high-flux reactor is different from most power reactors in that it does not utilize the energy released by nuclear fission, but uses the large amount of neutrons produced by fission to conduct scientific experiments and production, such as radiation testing of reactor fuel elements and materials and production of radioisotopes. It is a research measure essential to the development of nuclear power stations, nuclear power and atomic energy. Also, the heat produced by nuclear fission is conducted out of the reactor by pumping coolants cycling through the reactor core. Afterwhich, the heat is passed over to the secondary coolant at the heat exchanger and carried away.

COMMANDERS TRAIN IN EXERCISE USING AGGRESSOR UNITS

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 5, 1981 pp 12-15

[Article: "Be A Commander Who Knows the Enemy and Knows Himself"]

[Text] Know the enemy and know yourself, and you can fight a hundred battles with no danger of defeat. By becoming familiar with the enemy's situation and our own, finding out his plans of operation and using these plans to arrange our own operation, once war breaks out it would be possible to suffer no defeat.

To "know the enemy" means it is necessary to fully and systematically study foreign armies, their combat doctrines, their establishment and equipment and the combat characteristics of the service arms in the initial stage of a future war. This is an important issue before commanders at various levels as well as a breakthrough in the aim to improve our armies' tactical training and to step up training.

Wang Jusheng [3769 5112 3932], deputy commander of a training unit of an unidentified unit of the Nanjing Units, has over the past ten or more years diligently studied foreign armies. During training he used materials of foreign armies to set up a more realistic combat situation and presented as far as possible the combat characteristics of the "blue army" to enable the "red army" to continue to improve its tactical skills in training exercises.

Presented here is a tactical training exercise which was set up by Wang Jusheng with the "red and blue" armies going against each other.

"Red army" lands itself in a passive position, "blue army" strikes first with its forces.

As soon as the blue signal flare was shot into the air, a "blue army" armored unit under the command of Wang Jusheng launched a surprise attack against the "red army." In no time, the "red army's"position was heavy with the smoke of gunpowder which billowed out everywhere... Under the continuous all-out attack of the "blue army" armored unit, the "red army" was thrown into a passive position.

"Blue army's" attack runs into obstruction, "red army" launches counterattack.

The "battle" is fiercely under way. With the "blue army" launching a surprise attack, the "red army" swiftly ascertained the situation, studied countermeasures, readjusted deployment plans, massed its forces and held its strategic point.

Against the "blue army" armored unit, it adopted the method of making distant attacks and nearby bombardments, combined indigenous and foreign methods, and used the tactic of deploying small groups of men from many directions to flexibly destroy the enemy.

Difficult to distinguish victory and defeat on both sides, the two armies fiercely engaged in battle.

The "battle" reaches an intense level. Wang Jusheng came up with an idea and directed the "blue army" to change its original main attack direction to a feint attack, use the forces of the 2nd echelon formation to outflank the "red army" on its weak side, launch an all-out attack and finally break through the frontline position of the "red army." The "red army" fought with all its might and the two sides were engaged in a bloody battle making it hard to differentiate the victor from the loser.

Photo captions [photos not reproduced]

1. Wang Jusheng showing the exercise plans to the commanders of the "red and blue" armies. An all-out "battle" is about to begin.

2. Wang Jusheng commands the "blue army" armored unit in launching an attack against the "red army."

3. The "blue army" taking advantage of the darkness of night to quickly make its advance.

4. The "blue army" deploys chemical warfare weapons, and the "red army" quickly takes protective measures.

5. Commanders of the "red army" simultaneously directing attacks and readjusting deployment plans to block the "blue army's" advance.

6. The "red army" uses defense fortifications to make concealed advances to provide support to the frontline units.

7. The "red army" lays antitank mines to slow down the advance of the "blue army's" tanks.

8. The "red army's" infantry soldiers use the fighting method of attacking to small groups from numerous directions to penetrate and cut up the enemy forces. They are using antitank weapons to attack "enemy" tanks.

9. Wang Jusheng, acting according to changing conditions, commands the "blue army" to immediately change its main attack direction and go against the weak position of the "red army's" defense.

10. The tanks of the 2nd echelon of the "blue army" outflank the "red army" from the rear and launch a new attack.

11. The "red army" closely watching the "blue army's" movements to command engineers who wait for an opportunity to quickly make antitank trenches.

12. With no hesitation about losing large numbers of men, the "blue army" launches continuous attacks. But the awesome firepower of the "red army" makes it hard for the "blue army" to achieve deep penetration.

13. The "blue army" launching a surprise attack with firepower against the "red army."

MISSILE BATTALION TRAINS CRACK MEN

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 5, 1981 pp 18-19

[Article: "Meticulously Train Crack Troops"]

[Text] "Fine workstyle breeds fighting strength"--this is an experience obtained in war with blood. If a troop unit can cultivate, in peace time, the workstyle of enduring great hardship, undergoing intense labor, marching whenever necessary, fighting whenever necessary, shrinking from no storm, and remaining forever firm and indomitable, then in time of war it can surely withstand the confusion and the test. The surface-to-air missile battalion of a certain unit of the air force is now precisely hammering out such a fine style of fighting.

When a troop unit's workstyle is strict, cadres are the key. The fact that battalion commander Wang Tingsheng held an examination on a stormy day is a good illustration of this question. One afternoon, an ocean breeze carrying a drizzle swept the missile training field; battalion commander Wang, together with his company commanders and staff officers, proceeded to inspect the basic training of the new fighters. Once the oral command was issued, the entire training field became intense and serious, and the fighters began to operate the crane, open up the shield, push forward the missile, dovetail and tighten.... Their maneuvers were quick, precise and well-coordinated; within the required time limit, a missile was soon assembled and mounted on the transport truck. The new fighters fully expected that they would hear a word of praise from the battalion commander, but little did they expect that the battalion commander would declare: this missile fell short of meeting the requirement of war preparedness. Pointing at a screw beside the main wing of the missile he said: "This tightening screw looks like it is tightened, but actually it is still a few twists from that." Then, he picked up the wrench to twist it a few more times, and further solemnly and patiently said: "When the missile is in flight, it is affected by powerful air currents; the slightest lossening of the screws leads to the danger of our losing control of it. Then it would be impossible to fulfill the heavy trust the party and the people have placed in us!" These words gave everybody a profound education; the fighters all admired from the bottoms of their hearts this meticulous, fine workstyle on the part of their battalion commander. Although sweat and rain flowed together on their faces, none of them failed to feel that, in order to have their own skills meet war requirements, they must exert themselves and train harder.

Skills are trained; workstyles are also trained. Once, the missile battalion had to cross a strait to carry out tasks of war preparedness. When the unit arrived at the shore, it suddenly started raining cats and dogs and a heavy fog hovered over the sea. In the face of such gusts and waves, the fighters' morale remained very high and their fighting will was utterly assertive; with vehicles pulling and men pushing, they loaded the heavy weapons into the vessels and safely crossed the strait. When they climbed to the other shore, they found the road muddy and their vehicles sinking; their missiles could not be placed in stable positions. The commanding officers feared no difficulties whatsoever; they deliberated and worked together, and came up with the method of using the vehicles to pull the missiles and using men in turn to push the vehicles to traverse a dangerous passage on the road. They finally arrived at their position ahead of time and completed their war preparations.

Photo captions [photos not reproduced]

1. Fighters seize every minute and every second, estimate and test conscientiously, so as to assure placing the missile in position quickly.

2. Battalion commander Wang Tingsheng [3769 1694 3932] (right) usually presides personally over the area during training and requires strict compliance when issuing commands.

3. A vessel carries missiles across a strait in war preparation tasks.

4. Their operational skills are proficient and their maneuvers swift as they proceed with war preparations according to the appointed schedule.

5. After the exertions of comrades of the entire battalion, one missiles after another accurately flies toward the target.

GOOD NEWS FROM THE KAMPUCHEAN LIBERATED AREAS

Beijing JEIFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 5, 1981 pp 36-37

[Article by Chen Xiong (7115 7160)]

[Text] Good news has recently continued to come from the Kampuchean battlefields. The Democratic Kampuchean National Army and guerrillas have repeatedly gone on the attack, killed and wounded large numbers of Vietnamese aggressors and opened up many new combat areas. Battlefield situations are undergoing thorough changes, becoming favorable for the Kampuchean people and detrimental to the Vietnamese aggressors.

People remember that in January two years ago the Vietnamese authorities, supported by the Soviet Union, launched a blitzkrieg against Democratic Kampuchea and occupied Phnom Penh and large areas of Kampuchea. They also publicly declared that Democratic Kampuchea had been wiped off the map and that in two or three weeks they could "completely calm" the situation. However, the heroically unyielding Kampuchean people were by no means cowed and stubbornly carried out a struggle to resist the Vietnamese and save the country. In more than two years, the Democratic Kampuchean National Army and guerrillas have appeared on various battlefields throughout the country, adopted such tactics as blocking attacks, night sorties and ambushes, eliminated enemy bases, cut his communications and transport lines and attacked his tanks and vehicles, even penetrating deeply into such cities where the enemy is holed up as Phnom Penh, Battambang and Kompong Som, severely punishing the Vietnamese occupying army. In February of this year they again attacked the Vietnamese army at its major supply base in Western Kampuchea--the O Sralau airstrip.

Thus far, Vietnamese army bases in the Melai mountain district have completely been cleared out. Democratic Kampuchean units have also been continuously opening up new combat areas, liberating and controlling new enemy bases and annihilating the enemy's effective strength. At present, Democratic Kampuchean units have already joined together in bases in southwest, west, north and northeast Kampuchea and their combat strength continues to increase.

At this time, some patriotic Democratic Kampuchean forces have already begun to move towards unity, which will give further impetus to the developing situation to oppose Vietnam. If the Kampuchean people only strengthen their unity they will certainly achieve the final victory.

ANTI-AIRCRAFT ARTILLERY COMPANY HONES SKILLS

Beijing JIEFANGJUN HUABAO [LIBERATION ARMY PICTORIAL] in Chinese No 6, 1981 pp 10-11

[Article by Yu Jiasheng (6079 1367 5116) et al.: "Thinking Moves Ahead, Skills Scale Greater Heights"]

[Text] The party branch of the 3rd Antiaircraft Artillery Company of a certain unit of the Nanjing Units is a strong fortress. They have launched "three-hand" activities closely around "four-have," "three-emphasis," and "two-fear-no" to educate the fighters to unite their far-reaching revolutionary ideals with seriously doing a good job in fulfilling tasks at their own posts and to understand that practicing their skills well, strengthening national defense, and protecting the four modernizations are the ideals of revolutionary fighters.

In launching the "three-hand" activities, cadres and fighters of the whole company strive for advancement in their thinking and attempt to scale greater heights in their skills, and firmly drill well in the basic maneuvers. They repeatedly emphasize that if the artillerymen wish to demonstrate their total power in fighting, they must establish the collective concept; if there is one person whose orientation proves incorrect, who cannot focus on the target, or who fails to bring forward the needed artillery shells, the whole fighting situation will be affected.

In the past, the 3rd Antiaircraft Artillery Company grasped relatively well the acquiring of scientific and cultural knowledge and activities in physical education; they are now even more conscientious. After his assiduous study of the knowledge of weapons, second sighter Yang Guifeng [2799 6311 1496] has not only become proficient in the operations of his own post but also learned the fourth sighter's handling skills and the squad leader's organizational and command capabilities; he is therefore called a skillful hand. Fifth artilleryman Xu Ronghua [1776 2837 5478] adheres to physical training every day and has thus strengthened his prowess; during his training, he boldly proposed to compete with the company's top man in skills, Qian Lianghong [6929 5328 3163]. Whether going to the drilling ground or entering the classroom today, cadres and fighters of the 3rd Antiaircraft Artillery Company all pay attention to their military appearance and discipline; they are very courteous when speaking or answering questions; everyone consciously observes discipline at the artillery ground and the classroom. They say proudly: only when one is not afraid of difficulties and hardships and obeys orders and follows commands in peace time can he be unafraid of bloodshed and sacrifice and can he bravely and stubbornly fight, winning battles in time of war.

Photo captions [photo not reproduced]

1. The 3rd Company organizes contests in operational skills so that cadres and fighters can learn to compensate for their own weak points with other people's strong points.

2. The 3rd Antiaircraft Artillery Company gives full scope to the roles of crack artillerymen and skilled hands in doing a good job of deploying air defense and coordinating training.

3. Crack artilleryman Xu Ronghua persistently practices opening and shutting maneuvers in order to heighten speed in loading and unloading artillery shells.

4. Crack artilleryman Zhang Bin [1728 2430] has not only mastered operational skills of a fourth artilleryman but also practiced the shell-forwarding maneuvers of a sixth artilleryman.

5. Crack artilleryman Cao Guiliang [2580 2710 0081] searches for his target with concentration and earnestly practices his skills well.

6. Team of fourth artillerymen carries out technical "joint diagnosis" to ascertain the laws of determining a target's flight route while facing the sun, a highly difficult task.

7. On the basis of the enemy planes' battle functions, fighters study the key points of shooting at them.

8. Company commander Sun Jingdong [1237 2529 2639] painstakingly studies military theories and command skills; he is appraised as a fine commanding officer.

9. Skilled hand Yang Guifeng has resolved his key technical problems as he manipulates the command module dexterously here in search of targets.

10. Skilled hand Du Guanbiao [2629 1351 2871] has acquired speed, accuracy, and steadiness in his skills in searching for following targets.

China Report

POLITICAL, SOCIOLOGICAL AND MILITARY AFFAIRS

No. 217

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

KHRUSHCHEV'S ATTEMPTED ARMED INTERVENTION IN POLAND RECOUNTED

Tianjin GUOJI WENTI YANJIU [JOURNAL OF INTERNATIONAL RELATIONS] in Chinese No 1, Jul 81 pp 27-29

[Article by Wang Bingnan [3769 3521 0589]: "Recollection of the 'October Incident' of 1956 in Poland"]

[Text] In 1956, a change that commanded worldwide attention took place in the international communist movement. Under the pretext of opposition to the "worship of personal cults," Khrushchev delivered a "secret report" to the "20th CPSU Congress" shocking the world with a comprehensive denunciation of Stalin. At that time, I worked in Poland and found that this not officially announced but already widely circulated top secret document was once used by someone at a marketplace as wrapping paper, something which greatly surprised me. Later, I learned that this top secret document was picked up by a defected Polish military officer of Jewish origin and brought to the United States as an important piece of intelligence. Soon it was published by the NEW YORK TIMES. This "secret report" became explosive world news immediately after its full text was published, jolting communist parties in the Western European countries, forcing many of their members to quit the party, and causing great damage to their organization.

The convocation of the "20th CPSU Congress" had a tremendous adverse impact on Poland. Because the Soviet Red Army played a direct role in the liberation of Poland during the World War II, the Polish people consistently had high regard for Stalin as "a savior." By the time they read the "secret report," however, their "savior" fell to the ground and turned out to be "a butcher" and "murderer" in the eyes of the Polish people. The Polish people felt that they had been deceived by Soviet propaganda. The impact of this mental shock drove many people to tears and they quit the party in droves. Under this impact, the originally very active Polish-Soviet friendship assocation was quickly paralyzed and the people were ideologically confused to a great degree. The already instable situation was aggravated further by the loss to the Polish people of their most popular leader Boleslaw Bierut, chairman of the Polish United Workers' Party, who died in Moscow shortly after the close of the "20th CPSU Congress." In the face of this situation, the Polish party called its Central Committee into a plenary session and elected Edward Ochab its first secretary with the blessing of Khrushchev. However, the situation in Poland continued to deteriorate. On 28 June, rioting, strikes, and bloody fighting occurred in Poznan.

The impact of the "Poznan incident" was far reaching although it was suppressed. There existed in Poland disputes over the outcome of the "20th CPSU Congress," the evaluation of Stalin, and ideological confusion among the people. These were problems the Polish party had to face up to and for which it had to find a swift solution. For this reason, the Polish party launched its entire membership into a discussion. Articles full of doubts and denunciation concerning the socialist system appeared in the newspapers and journals. This discussion proved unsuccessful in unifying the thinking of the entire party membership and the people throughout the country, on the contrary, the situation finally got out of control. Particularly noteworthy were the historical reasons that pit the Polish people against the Soviet big-power chauvinism and their deep-rooted discontent with the way the CPSU repeatedly interfered in the internal affairs of the Polish party. Their distrust of the Soviet Union soon grew into a credibility crisis. As a result, a demand for the independence of the Polish party and state and for a change in the abnormal relations between the two parties and two countries and the voice of opposition to Soviet big-power chauvinism and Soviet intervention grew into a storm which erupted like a volcano in October.

Earlier, Ochab had headed a Polish party delegation to attend our "Eighth Party Congress" held in September. Shortly after his return to Warsaw, he appeared at the National Day reception given by our embassy at our invitation. At the reception, I noticed Ochab and the members of the Politburo huddled in a corner whispering. The mood was tense, and one got the feeling that something big had either already occurred or was about to happen within the Polish party. Fed by speculations from the Warsaw diplomatic corps at that time, the situation in Poland became a subject of popular concern.

The mood of dissatisfaction with the Soviet Union grew steadily with the close of the "20th CPSU Congress," during which the massive purge of Stalin's enemies was exposed along with other mistakes committed by him and the Polish United Workers' Party. The Polish people pinned their hopes on Gomulka, standing behind a strong demand for his return to power. Gomulka was general secretary of the party from 1943 to 1948. In 1948, he was accused of committing right deviationist and nationalist mistakes. In 1949, he was expelled from the Central Committee, and later imprisoned as a target of contradiction between ourselves and the enemy. In 1954, he was released from prison. After that, he worked for a grassroots unit and did not hold any important post. After eight years of obsecurity, Gomulka suddenly became the center of the storm. The Soviet leaders long considered Gomulka a strong anti-Soviet and nationalist element, and therefore were extremely opposed to his return to power. On 19 October, the development of the situation forced the Second Polish Party Central Committee to hold its eighth plenary session. At that time, I saw Polish workers and students take to the streets, and massive parades and demonstrations. Demonstrators encircled the Party Central Committee building shouting slogans demanding that the party return Gomulka to power and hand over the proposed list of the members of its Politburo to the masses for discussion. The holding of the eighth plenary session of the Polish party and the strong popular demand for Gomulka's return to power angered the Soviet Union which regarded itself as the "father party," because the Polish party did not seek prior Soviet clearance of its major leadership reshuffle as it had in the past. Many high-ranking Polish military leaders such as commanders of the naval and ground forces and their general chief of staff held dual nationality, being citizens of both Poland and the Soviet Union. The then vice premier and concurrent minister of national defense, Rokossovskiy, who controlled the Polish armed forces was a Polish-Soviet citizen and a Soviet Marshal. This absurd relationship reminded the Polish people that the Polish party was nothing more than an appendage of the Soviet Party. They were at the mercy of the Soviet Union and had lost their independence. This abnormal relationship had to be changed right now.

In order to prevent the holding of the Party's Eighth Plenary Session and Gomulka's return to power, Khrushchev lost no time in bringing his interventionist tricks into play. On the one hand, he secretly ordered Rokossovskiy to move troops toward Warsaw and to place it under the threat of armed intervention. On the other hand, on the day of the opening of the Eighth Plenary Session, he boarded a plane with Gakanovich, Molotov and Mikoyan for a nonstop flight to Warsaw without invitation from the host country. But the Warsaw airport refused to clear the plane for landing, and ordered it to return. However, Khrushchev insisted on landing, so he kept his plane circling. Eventually the plane issued a warning that it was low on fuel, so the return trip was impossible. If it were not allowed to land immediately, there would be a serious accident. Under these circumstances, Poland permitted the plane to land.

By then, the Plenary Session of the Central Committee was underway, discussing the matter of returning Gomulka and others to the Central Committee. Nevertheless, the unexpected arrival of the Soviet delegation forced the Polish party to put the proposed resolution to a vote under a tense atmosphere. The sesssion adjourned temporarily after agreeing to Gomulka's return to the Central Committee. The plenary session also adopted a resolution inviting Gomulka to join the Polish leaders in a meeting with the Soviet delegation. After its adjournment, Ochab, Cyrankiewicz, Zawadzki, Gomulka and others hurriedly arrived at the airport to meet the Soviet visitors. Some high-ranking Soviet military leaders were also on hand at the airport to welcome the Soviet delegation. They stood on one side of the plane. What particularly attracted the people's attention was that Khrushchev appeared very angry upon alighting from the plane and shook hands first with the Soviet military leaders before moving toward the Polish leaders. When moving toward the Polish welcome party, he did not shake hands with his hosts but pointed his finger at Cyrankiewicz, saying: "Do you know that Poland was liberated by the Soviet Red Army. We will not allow you to betray it." At this time, many drivers and security guards stood by watching the drama take place. According to their recollection, Cyrankiewicz replied sternly: "May I remind you, Comrade Khrushchev, that you are in the territory of Poland and we are the hosts. Please be a little more polite!" Considering that a public quarrel would serve no useful purpose, the Polish leaders later persuaded Khrushchev and company to accept the offer of a ride into the city.

Following a heated debate, the Polish and Soviet parties reached no agreement. The Polish party wanted the Soviet delegation to go home, promising to send a delegation to the Soviet Union for a meeting following at the close of its current plenary session. Khrushchev returned to Moscow empty-handed after failing to prevent the return of Gomulka to power. But he never gave up his attempt at intervention. The Soviet party immediately summoned all communist party leaders in the Eastern

European countries except for Poland to Moscow for a meeting in an attempt to bring pressure to bear on Poland through the issuance of a joint communique. At the same time, the Soviet Union sent Mikoyan to China to meet Chairman Mao, requesting that he send a Chinese Communist Party delegation to the Moscow meeting. Following a dispassionate analysis of the situation at that time, Chairman Mao, aware that any measure of suppression would lead nowhere, agreed to send a Chinese delegation to Moscow, but only on the condition that the Soviet Union pledged never to fire the first shot at Poland. The Soviet Union agreed. After arriving in Moscow, the Chinese delegation headed by Liu Shaoqi and Deng Xiaoping held bilateral talks with its Soviet counterpart, but refused to participate in any multilateral talks attended by the delegations from the Soviet Union and the Eastern European countries. In the face of the Polish people's struggle and the Chinese Communist Party's resolute opposition to Khrushchev's behavior, the Soviet Union was forced to change its original plans by ordering the Soviet troops stationed in Poland back to their home bases, thus avoiding the grave prospect of armed intervention. The news that the Chinese Communist Party resolutely opposed Soviet interference at a time when the Polish people faced difficulties spread like a swift breeze across Poland. Many schools and factories posted bulletins and streamers carrying this message: "The Chinese party supports us." Later, many Poles told me that "the Polish people will never forget the type of support China has given us when we faced immense difficulties."

During the Eighth Plenary Session of the Polish party, the Polish people ransacked Soviet clubs and stores, forced Soviet passengers to leave the trains, encircled and tried to break into the Soviet embassy several times. At night, sporadic gunfire was heard. The demonstrators even went so far as to destroy the Cemetery for Soviet Martyrs. In this way, the anti-Soviet torrent reached a peak.

The Eighth Plenary Session closed on 21 October after electing a new leading organ headed by Gomulka. His former associates including Zenon Kliszko and Marian Spychalski were reappointed to their original leadership positions. After his return to power, Gomulka immediately pressed for an answer to the question of why the Soviet troops were ordered to move toward Warsaw. In response to this inquiry, the Soviet Union used the pretext of "Autumn Military Maneuver" to cover up its plot for intervention. The Polish party also adopted a decision to dismiss all Soviet citizens from their Polish military leadership positions, and to order their departure from Poland before a specific date. Among them was Poland's vice premier and minister of national defense, Soviet Marshal Rokossovskiy. Economically, Poland also settled accounts with the Soviet Union, demanding that the latter compensate for the losses the former incurred from the sales of Polish coal to the Soviet Union at incredibly low prices after the liberation of Poland. Efforts were made to liquidate the Polish party leadership at all levels. The Polish people finally won victory in their resolute struggle against the brutal intervention attempted by the Soviet Union. They called this struggle to reshuffle their party leadership and their crusade against Soviet intervention the "October Incident" or "October revolution," which undoubtedly taught the Soviet Union a serious lesson.

POLAND'S PREMIER URGES HARD WORK IN ENTERPRISES

OW250307 Beijing XINHUA Domestic Service in Chinese 1609 GMT 23 Aug 81

[Text] Warsaw, 22 Aug (XINHUA)--According to PAP, in a meeting with managers of 70 major enterprises, Polish Premier Jaruzelski expressed resolute support for leaders of enterprises who are carrying on work under difficult conditions. The PAP report says: The meeting on 19 August discussed the tasks and role by enterprises' cadres in the face of the current economic crisis. Managers of many enterprises described the difficult conditions in factories and enterprises and put forth some suggestions for improvement.

Premier Jaruzelski told enterprise leaders that the government would discuss their suggestions promptly. He said: "At present, we must first check economic recession. We must push selected and the most important economic departments forward. To this end, we must do away with the helpless situation and overcome laxity in discipline." He pointed out: "Economically, we have good and dedicated managers working under difficult conditions. The government will support them. We will give them more power. Those who negate the role of managers and the role of technical supervision either do not understand them or want to paralyze the most important link in political power purposely. This can only lead to a reduction in productivity and a worsening of living conditions. If we have faith in the creative power of reform, then we should not endorse those people who want to make life miserable for the managers. Any move to force conscientious managers to leave their jobs will not be tolerated, besides it is against the principle of the right to work."

Jaruzelski reminded them that the country's economic conditions would be worsened by excessively raising wages and increasing the number of days off and by staging labor strikes. "We will be bringing in a more tragic prospect if we do not curb such negative phenomena and put a stop to these kinds of endless rallies." "Our most important task at present is to get rid of the crisis. This is a task for the government as well as for the entire society."

Jaruzelski endorsed the appeal of the "solidarity" national consultative committee about working on their scheduled days off. He added at the same time: "The government endorses autonomy. However, as far as the country is concerned, the government must decide on how to put this autonomy into effect."

'BEIJING RADIO' DESCRIBES NEUTRON BOMB, OTHER WEAPONS

OW251729 Beijing Domestic Service in Mandarin 1100 GMT 25 Aug 81

[Excerpts] On 8 August, U.S. White House spokesman Larry Speakes announced that President Reagan has already decided to order the manufacture and stockpile of neutron bombs. This decision has triggered worldwide response. Some listeners have sent us letters asking: What sort of weapon is the neutron bomb?

Also called enhanced radiation bomb, the neutron bomb is a kind of nuclear weapon that uses neutrons to kill people on a mass scale. When a neutron bomb explodes, large quantities of high-energy neutrons are released. The radioactive strength of these neutrons is approximately 10 times that of an ordinary nuclear weapons of the same equivalent. After they enter into a human body, the neutrons destroy the body cells and kill the person.

Neutrons have strong penetrating power. Within their effective range they can penetrate a tank's steel armor or a concrete building's thick walls and kill the people inside, thus posing a great threat to tanks and armored units. However, the penetrating power of neutrons is not unlimited. A neutron bomb's radiation can be blocked by an earthen barrier of 1.5 meters thick or more. A neutron bomb's equivalent is relatively low. Generally it is of the kiloton class. That is to say that a neutron bomb has the exploding power of 1,000 tons of TNT. Thus, a neutron bomb can kill people with its highly strong radiation, but will cause no great damage to tanks and buildings as it does not generate shock waves similar to the ones by the atomic bomb that totally wiped out Hiroshima.

Some listeners stated in their letters that they have often heard us mention that the USSR has deployed SS-20 guided missiles against targets in Western Europe. They want to know what sort of a weapon is the SS-20 guided missile.

A SS-20 guided missile is a medium- and long-range ballistic guided missile. SS is short for the English term "surface to surface," referring to a surface-to-surface guided missile that is launched from the ground to hit another target on the ground. With a 4,500 to 5,000 km range and composed of the first and second sections of a SS-16 intercontinental ballistic guided missile, a SS-20 guided missile is about 17 meters long, has a diameter of 6 meters and weighs about 21 to 25 tons. The tip of a SS-20 guided missile is composed of three nuclear warheards, which can be guided to hit different targets. Each warhead has the equivalent of at least 150,000 tons of TNT, or 15 times that of the atomic bomb dropped on Hiroshima. According to Western journals, the 250 SS-20 guided missiles deployed by the USSR against Western European targets since 1977 have constituted a serious military threat to Western Europe.

In December 1979, a special NATO joint meeting adopted a decision to deploy Pershing II intermediate-range missiles and cruise missile in Western Europe by 1983 to meet the Soviet military threat. Some listeners have written to ask about the properties and effects of Pershing II and cruise missile. The two types of missiles are both capable of hitting targets with great accuracy and are better than the Soviet SS-20 missiles.

Some listeners want to know what are the Soviet Union's BC weapons. BC weapons stands for biochemical weapons. The Soviet Union attaches great importance to BC weapons research and production. With a chemical corps numbering 90,000 to 100,000 men, the present Soviet Army is equipped with the largest number of chemical weapons in the world. It is reported that there are 10 to 20 research institutes and 40 to 50 factories engaged in BC weapons development and production in the Soviet Union, producing about 30,000 tons of toxicants each year. As much as 170,000 tons of toxicants are stockpiled. Soviet forces are equipped with large quantities of such weapons. About 20-30 percent of Soviet tactical missiles are equipped with chemical warheads, and 20 percent of all artillery shells are chemical shells. As we all know, Soviet troops have used nerve gas in Afghanistan to slaughter the Afghan people. The Soviet Union also has provided chemical weapons to Vietnamese troops for use in Kampuchea. Greater attention should be paid to a report from Tokyo, Japan, that the Soviet Union has stockpiled large quantities of chemical weapons in areas along the Sino-Soviet border.

In the following we shall tell you about chemical weapons. Generally chemical weapons are divided into six types.

'RENMIN RIBAO' ON BREZHNEV'S CRIMEA MEETINGS

HK270620 Beijing RENMIN RIBAO in Chinese 26 Aug 81 p 6

[Report: "About the Meetings in Crimea"]

[Text] On 22 August, TASS released a communique on the results of the examination by the Politburo of the CPSU Central Committee on Leonid Brezhnev's recent meetings with leaders of seven countries--East European countries and Mongolia--in the Crimea resort. PRAVDA also carried an editorial, boasting that Brezhnev had "pursued peace and a creative line" at these meetings.

Both the aforesaid communique and editorial are carefully worded and nothing is revealed concerning what concrete "agreements" were reached, what "very complicated problems" and "difficulties" were examined and overcome, and what "necessary coordination" among the members of the "socialist community" was achieved at these secret meetings. However, the communique makes a point of stressing the "acute crisis phenomenon" in Poland and Moscow's attitude toward this, and plays up the urgent necessity of the Kremlin to "coordinate" "the foreign policy of the countries of the socialist community," given the greater tension in the international situation at present. This is quite spectacular.

The Polish leader was the last to travel to the Soviet Union for a meeting becuase of the tense situation taking place in Poland. He did not say, as leaders of other countries did, that he had come to Crimea "to take a rest," but said that he was on "a working visit." In addition, a joint communique was issued after the meeting. After mentioning that "the Polish people are faced with the elements of an acute crisis," the communique of the Politburo of the CPSU Central Committee states something unusual: "Practice has again convinced people "how important it is" "to pursue a realistic economic policy without running into excessive debt to the capitalist states, educate the working people in the spirit of internationalism, show revolutionary vigilance and give a timely and resolute rebuff to antisocialist forces." PRAVDA further denounces that "enemies at home and abroad hostile to socialism in Poland are trying hard to make the situation there unstable, hoping to create a gap between the people's Poland and the Soviet Union."

This time, although there are no direct and undisguised intervention and threats as was the case in the letter from the CPSU Central Committee to the Ninth PZPR Congress, the implication is obvious. The PZPR is not only criticized for not "giving a timely and resolute rebuff" in the beginning but also for adopting instead a policy of negotiation at home. In this communique on the Politburo meetings, the leaders of the Soviet Union go so far as to ask other parties to do this and not to do that, and stresses the principle of "the concern of each not only with the interest of its own country but also with the interest of its friends and allies." This is another manifestation of "Brezhnevism." By coincidence, 21 August this year happened to be the 13th anniversary of the Soviet invasion of Czechoslovakia. At that time, this principle of mutual concern was used by the Kremlin as the pretext for its invasion of Czechoslovakia. This remains fresh in our memories.

The analysis of the present international situation and the expression of the so-called "foreign policy of the socialist community" are also examples of Moscow imposing its will on others. The communique accuses the United States of "building up international tension," "of deploying U.S. medium-range guided missiles in Western Europe," "of deciding to produce the neutron bomb and of its constant attempts to maintain high tensions in crisis situation." It says that in contrast, the Soviet Union "wants to halt the armaments race," "lower the level of military buiol-up," "carry out constructive dialogues," and so on. All this is a continuation of Moscow's recent propaganda offensive. As to the slander about China in the communique saying that China's policy is becoming "increasingly close to" the line of imperialism, it is only singing an old tune. Nevertheless, it seems that the necessity for making this slander is not to be divulged.

In the past few years, "meetings in Crimea" have been held by Brezhnev every summer. These recent meetings have attracted more attention because the crisi in Poland has again intensified and the relations between the East and the West have become tenser.

HISTORICAL BACKGROUND TO MAO ZEDONG THOUGHT ANALYZED

Beijing RENMIN RIBAO in Chinese 24 Jul 81 p 5

/Text/ The Sixth Plenum of the Sixth CCP Central Committee in October 1938 brought up the question of concretely applying Marxism-Leninism according to the particular conditions of China. In his report, "The Role of the CCP in the National War," given to the plenum, Comrade Mao Zedong said: "The theory of Marx, Engels, Lenin and Stalin is universally applicable. One must not regard it as dogma, but rather as a guide to action." "Any talk about Marxism in isolation from the specific characteristics of China is merely Marxism in the abstract, Marxism in a vacuum. Hence to apply Marxism concretely in China so that its every manifestation has an indubitably Chinese character, that is, to apply Marxism in the light of China's specific characteristics, becomes a problem which is urgent for the whole party to understand and solve." ("Selected Works of Mao Zedong," Vol 2, pp 498-500)

Based on Comrade Mao Zedong's report, on 6 November the plenum passed the "Draft of a Political Resolution of the Enlarged Sixth Plenum of the CCP," which stated: "It is necessary to quickly and earnestly raise the level of theoretical knowledge throughout the party. Everyone, from top to bottom, must energetically study the theory of Marx, Engels, Lenin and Stalin, in order to be able to make flexible use of Marxism-Leninism, as well as all international experience, in every phase of China's actual struggle."

In October 1939, in his article "Introducing 'The Communist,'" Comrade Mao Zedong proposed "the integration of the theory of Marxism-Leninism with the practice of the Chinese revolution."

In April 1945, the enlarged Seventh Plenum of the Sixth CCP Central Committee stated in its "Resolution on Certain Historical Questions:" "Since its inception in 1921, the CCP has adopted as its guiding principle in all its work the integration of the universal truth of Marxism-Leninism with the actual practice of the Chinese revolution. Comrade Mao Zedong's attitude toward the theory of the Chinese revolution and its practice is representative of this kind of integration."

In May 1945, at the Seventh CCP National Congress, Comrade Liu Shaoqi in his report on the revision of the party constitution formally brought up the concept of "Mao Zedong Thought," which was then furthermore incorporated into the party constitution adopted by the Seventh Congress. In the preamble of the constitution, it says: "The CCP takes as guiding principle for all its work the ideological union of Marxist-Leninist theory with the practice of the Chinese revolution--Mao Zedong Thought. The party opposes all trends toward dogmatism and empiricism." The party constitution also makes it the duty of every party member to make efforts to gain an understanding of Marxism-Leninism and Mao Zedong Thought.

In his report on the party constitution, Comrade Liu Shaoqi gave a systematic discourse on Mao Zedong Thought. He said: "After the Chinese Communist Party was created, there grew up in our country this particularly Chinese theory, which was perfect and correct for building up our state through a Chinese people's revolution. This theory has already guided our party and people in achieving tremendous victories and will continue to guide our party and people to achieve the final and complete victory and liberation. It is our party's and our people's greatest gain and glory in their protracted struggle, and it will benefit our nation in innumerable generations of the future. This theory is Mao Zedong Thought."

Starting with the Seventh Congress, our party officially established Mao Zedong Thought as our party's guiding ideology.

Mao Zedong Thought Is the Application and Development of Marxism-Leninism in China

If the proletariat of any country is intent on revolution, it will have to follow the universal principles of Marxist dialectical materialism and historical materialism. Since actual conditions differ from country to country, Marxism must not be taken as a dogma to be indiscriminately copied and imitated: Marxist theory must be correctly applied by integrating it with the actual conditions of the country concerned.

China was a large semicolonial, semifeudal country. In its revolution many particular and complex problems were met with. It was not possible to repeat here what Marxism had prescribed in concrete terms for revolution in the developed countries of the West. as it was also not possible to imitate the concrete example of the October Revolution in Soviet Russia.

In our party's history there was a time, mainly in the late twenties and early thirties, when a trend became current to turn Marxism into a dogma and to regard the Communist International and the Soviet experience as something sacred, thereby almost leading the Chinese revolution into an impasse. The dogmatists of those days in their leftist deviation did not understand the special characteristics of the Chinese semicolonial, semifeudal society, did not understand that the Chinese bourgeois democratic revolution was in essence a peasant revolution, did not understand the unevenness, complicated and long-drawn-out nature of the Chinese revolution. They obscured the definite demarcation line between the democratic and the socialist revolution and were subjectively overanxious to surpass the democratic revolution. They underestimated the decisive role of the antifeudal struggle of the peasants in the Chinese revolution, but proposed an all-out attack against the bourgeoisie and the upper level of the petty bourgeoisie. They were dreaming of having the cities as the core of an armed uprising and consequently underestimated the importance of peasant guerrilla warfare and the establishment of bases in the villages, etc.

It was precisely in the process of struggling against these mistaken trends that Mao Zedong Thought gradually took shape and developed. Our party ceaselessly summed up the experiences of the Chinese revolution and integrated the universal principles of Marxism-Leninism with the actual practice of the Chinese revolution. Mao Zedong Thought is therefore the application and development of Marxism-Leninism in China, it is the correct theoretical principle and summary of experiences of the Chinese revolution, as practice has proved.

Those parts of Mao Zedong Thought that were relevant to establishing bases in the villages, encircling the cities from the countryside, finally seizing the revolutionary path to nationwide victory and the reconstruction policy based on independence and self-reliance are also meaningful for other people of colonial or semicolonial countries in similar conditions. However, as Comrade Mao Zedong has repeatedly pointed out: The experience of the Chinese revolution may be taken merely as reference by other countries, which must not copy it indiscriminately. Any foreign experience must not be taken as dogma, the universal principles of Marxism-Leninism can only be applied if they are integrated with the actual conditions in the country concerned.

Mao Zedong Thought Is the Crystallization of the Collective Wisdom of the Chinese Communist Party

While viewing Comrade Mao Zedong as the principal representative of a Chinese communist and based on the fundamental principles of Marxism-Leninism, Mao Zedong Thought is the theoretical summation of the series of unique experiences of the long-drawn-out Chinese revolutionary practice; it became the scientific guiding ideology suited to Chinese conditions, the product of an integration of the universal principles of Marxism-Leninism with the actual practice of the Chinese revolution--this is Mao Zedong Thought. Mao Zedong Thought was not produced by the wisdom of Comrade Mao Zedong alone: it is equally the product of the wisdom of his comrades-in-arms, of the party and of the people. It is the crystallization of half a century of revolutionary struggle by the Chinese people.

For instance, the theory of the new people's democratic revolution was developed as a collective effort, based on the revolutionary practice, and constituted a continuous summing up of the revolutionary struggle experiences. The Second Plenum of the party in 1922 set forth as its revolutionary objectives the fight against imperialism and feudal warlordism, and the plenum decided to establish a democratic united front in order to achieve these aims. The Third Plenum of the party in 1923 formally decided on a policy of nationalist-communist cooperation. The Fourth Plenum of the party in 1925 summed up the experiences of the 3 years since the founding of the party, particularly the experiences of over 1 year of nationalist-communist cooperation. It clearly pointed out that the proletariat must occupy the leading position in the Chinese democratic revolution and that this revolution must be most extensively participated in by the workers, peasants and the urban petty bourgeoisie. The peasants were to be an important component of this revolution, being the natural allies of the working class. The fundamental content of this revolution was to be the fight against international imperialism, feudal economic relations and the rule of feudal warlords. During this period, from the Second Plenum to the Fourth Plenum, the basic ideology of the party regarding the new democratic revolution was initially taking shape. In the course of these developments many leading personalities of the party, as, for instance, Li Dazhao [2621 1129 6856], Deng Zhongxia [6772 0022 1115], Cai Hesen [5591 0735 2773], Qu Qiubai [4234 4428 4101]. Mao Zedong, Zhou Enlai, and others, wrote, as their personal contributions, quite a number of articles exploring the fundamental theories underlying the Chinese democratic revolution. Of course, knowledge of these basic theories of democratic revolution was at that time not very complete and systematic. Following the development of the Chinese revolutionary movement, Comrade Mao Zedong, proceeding from the historical and social conditions of China, made a penetrating study of the special characteristics of the Chinese revolution and of the rules governing the Chinese revolution as an evolutionary development of Marxist-Leninist ideas on the leadership of the proletariat in the democratic revolution. He thus created the ideology of the new people's democratic revolution in which he advocated the leadership of the proletariat based on a worker-peasant alliance; this was an ideology of the masses directed against the imperialists and against feudal and bureaucratic capitalism.

Another example is the theory of "encircling the cities from the rural areas and then capturing them." This was a creation of the party and the people in their collective struggle, as a scientific summation of collective experiences gathered by the proletarian revolutionaries of the older generation. After defeat in the great revolution, the party launched the Nanchang Uprising, the Autumn Harvest Uprising, the Canton Uprising and armed uprisings in many other places in an armed struggle with the new warlordism of the Kuomintang. Mao Zedong led the troops of the Autumn Harvest Uprising in a march to Jinggang Mountain. In these rural areas where the enemy's rule was weak, he established the first revolutionary base and "lighted the spark" by setting up an armed independent regime of workers and peasants, thus evolving a new revolutionary way to preserve and develop the revolutionary strength. After the failure of the Nanchang Uprising, one part of the remnant forces moved to Haifeng and Lufeng in Guangdong Province and joined forces with local armed peasants, while another part was led by Comrades Zhu De [2612 1795] and Chen Yi [7115 3015] to southern Hunan where they launched the South Hunan Uprising. In the actual experiences of their struggles, they unceasingly explored new revolutionary ways and initially effected an integration with the peasant movements in the rural areas. In April 1928, Zhu De and Chen Yi led their troops to Jinggang Mountain, joined forces with the troops led by Mao Zedong, and formed the Fourth Army Group of the Chinese Red Army of workers and peasants. The meeting on Jinggang Mountain and the formation of the Fourth Army Group of the Red Army had a deep influence on keeping up and promoting the struggle in the Jinggang Mountain area, as well as on the future establishment and extension of revolutionary bases and on a resolute continuation of the tactics of encircling the cities from the rural areas.

At the same time as the fighting in the Jinggang Mountain area, and after the various forces that had staged uprisings moved into the countryside, the process of summing up their own struggle experiences and the influence of the fighting in the Jinggang Mountain area gradually led to an integration of armed struggle, land revolution and the establishment of bases. By 1930, the Red Army had expanded to around 100,000 men and had established 15 larger or smaller revolutionary bases. The establishment of each new revolutionary base or its development provided new experiences for the strategy of encircling the cities from the rural areas.

Comrade Mao Zedong scientifically summed up the experiences accumulated by the party and the people in their collective struggles and elaborated the objective rules of the Chinese revolution. He set forth the complete theory of the necessity for the Chinese revolution to go the path of encircling the cities from the rural areas and thus evolved a creative development of Marxism.

There are still many more examples that show that Mao Zedong Thought is the crystallization of collective wisdom, as, for instance, the theories regarding socialist revolution and construction, building of the party, building of the revolutionary army and military strategy, etc. They will not be listed here one by one.

The "Three Magic Weapons" of the Democratic Revolution

The united front, armed struggle and building the party were the "three magic weapons" used by the CCP to defeat its enemies in the democratic revolution. This was what Comrade Mao Zedong arrived at by summing up the abundant experiences of the party, its defeats and successes, retreats and advances, constrictions and developments, experienced during the democratic revolution.

The Question of the United Front. The Chinese national bourgeoisie on the one hand demanded in a revolutionary way to fight imperialism and feudalism, but on the other hand showed a very weak and vacillating character. The big bourgeoisie (that is, the comprador class, the bureaucratic capitalist class) has always been the target of the revolution, but various groups have had the backing of different imperialist powers. When it is the main thing at one stage of the revolution to fight one particular imperialist power, big bourgeois groups that belong to other imperialist groupings may well be allowed to join the revolutionary struggle. During the war of resistance against Japan, we could therefore very well form an anti-Japanese united front with the Chiang Kai-shek clique, which was closely linked with Great Britain and the United States. However, the big bourgeoisie is still always reactionary and apt to sabotage or break up the united front at any time. The proletariat must therefore firmly maintain a struggle on two fronts when organizing a united front with the bourgeoisie (especially the big bourgeoisie). On the one hand, we must fight the mistake of denying the possibility of the bouregoisie joining the revolutionary struggle--this would be leftist "closed-doorism." On the other hand we must fight the mistake of denying the differences in principle between the proletariat and the bourgeoisie, of obliterating the independence of the proletariat and the communist party, of having them become the tail end of the bourgeoisie--this would be rightist capitulationism. For the duration of a united front with the bourgeoisie, the independence of the proletariat must be maintained and a policy of united yet struggling against them, gaining unity through struggle, must be followed. When forced to break up with the bourgeoisie, mainly with the big bourgeoisie, we must dare and excel at resolute armed struggle against the big bourgeoisie, and at the same time gain the sympathy or neutrality of the national bourgeoisie. When the party carries out this kind of correct united front policy, the party will be able to develop and the revolution will be victorious.

The Question of Armed Struggle. Due to the fact that there was no bourgeois democracy in China, the reactionary ruling class relied on armed strength in their dictatorial, terrorist rule over the people. The revolution could therefore only be carried out mainly in the form of a protracted armed struggle, as an armed revolution against an armed counterrevolution. The armed struggle in China was a revolutionary war led by the proletariat with the peasants forming the main body of the revolutionary force. The peasantry is the most reliable ally of the proletariat. The proletariat, relying on its vanguard, the communist party and its advanced ideology, organized and disciplined character, raised the level of consciousness of the masses of the peasantry, established rural bases and pursued the protracted revolutionary war of encircling the cities from the rural areas. In such a backward large country as China, in facing an enemy of great strength, the best strategy for the people's armies to persevere in a protracted struggle and gain victory was guerrilla warfare. It was a coordination of armed struggle, the main struggle form, with struggles on the political, economic and ideological fronts which continuously developed and increased the revolutionary strength and gained victory in the revolution.

The Question of Building the Party. The two basic weapons that defeated the enemy were the united front and armed struggle. The struggle history of our party during the democratic revolution makes it clear: when the party correctly handled the two problems, the united front and armed struggle, the development and consolidation of our party took one step forward; when it did not correctly handle these two questions, the development and consolidation of our party would retrogress. The process of building the party is therefore closely linked with the political line of the party, it is closely linked with the ability of the party to correctly handle the problems of the united front and of armed struggle.

Our party, under the leadership of Comrade Mao Zedong, integrated the theories of Marxism-Leninism with the practice of the Chinese revolution, became aware of the special characteristics and laws of the Chinese revolution and correctly understood the united front, armed struggle and building the party, these three questions and their interrelationship. As a consequence, the party was able to speedily develop and gain strength to become the leadership core of the entire nation, leading all the people of this nation to final nationwide victory in the democratic revolution.

The "Three Great Workstyles" of the Party

In his political report to the Seventh National Congress of the CCP, entitled "On Coalition Government," Comrade Mao Zedong summed up and set forth the three great workstyles of the party, which are: integrating theory with practice, forging close links with the masses and practicing self-criticism. In Comrade Mao Zedong's opinion it is these three workstyles which are the hallmarks that distinguish our communist party from any other political party.

When explaining the integration of theory and practice, Comrade Mao Zedong said: "The universal truth of Marxism-Leninism, which reflects the practice of proletarian struggle throughout the world, becomes an invincible weapon for the Chinese people when it is integrated with the concrete practice of the revolutionary struggle of the Chinese proletariat and the broad masses of the Chinese people." Our party has grown and advanced through staunch struggle against every manifestation of dogmatism and empiricism, which runs counter to these workstyles.

When explaining the workstyle of forging close links with the masses, Comrade Mao Zedong strongly emphasized the mass viewpoint and mass line. He said: "Our point of departure is to serve the people wholeheartedly and never for a moment divorce ourselves from the masses, to proceed in all cases from the interests of the people and not from one's self-interest or from the interests of a small group, and to identify our responsibility to the people with our responsibility to the leading organs of the party." He emphatically pointed out: "The supreme test of every word and deed of a communist is whether they conform with the highest interests and enjoy the support of the overwhelming majority of the people." "As long as we rely on the people, believe firmly in the inexhaustible creative power of the masses and hence trust and identify ourselves with them, we can surmount any difficulty, and no enemy can crush us while we can crush any enemy."

When explaining the workstyle, Comrade Mao Zedong said: A Chinese communist "never balks at any personal sacrifice and is ready at any time to give his life for the cause. Could he be reluctant to discard any idea, viewpoint, opinion or method which is not suited to the needs of the people?" He also said: "Countless revolutionary martyrs have laid down their lives in the interests of the people." "Can there be any personal interests, then, that we would not sacrifice or any error that we would not discard?"

The three great workstyles that Comrade Mao Zedong summed up, and their practice throughout the party, guaranteed the party's leadership which led the whole nation from victory to victory.

"The workstyle of the ruling party is a question which decides the life or death of that party." The restoration and promotion of the party's three great workstyles and the rectification of various bad workstyles adopted during the 10 years of turmoil are bound to unite the whole party and the whole nation in its efforts to gradually build up, with one heart and one mind, a modern, highly democratic, highly cultured, socialist powerful state.

STUDY OF SIXTH PLENUM RESOLUTION URGED IN HUBEI

Wuhan HUBEI RIBAO in Chinese 8 Jul 81 p 1

[Article by a commentator of HUBEI RIBAO: "Stress Studying the Essentials, Understand the Spiritual Essence of the 'Resolution'"]

[Text] The "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" adopted by the Sixth Plenary Session of the 11th CCP Central Committee is a brilliant Marxist document in the history of our party. It correctly summarized the fundamental experience of the party in the 32 years since the founding of the PRC, expounded in a scientific way the historical position of Comrade Mao Zedong and Mao Zedong Thought, fully affirmed the correct path suited to China's situation for building a strong, modernized socialist nation which has been gradually established since the Third Plenary Session, and further pointed out the direction ahead for us.

Making such a resolution is a demand of history, a demand of the entire party and a demand of the people. In the "Great Cultural Revolution," right and wrong were mixed up and great confusion was created in theory, ideology, policy and in some important historical questions. In accordance with the wishes and demands of the entire party and all the people, the historically significant Third Plenary Session began to set things to rights in a series of questions, undertook a thorough overhaul and put forth great efforts and launched highly effective work. The "Resolution" approved by this Sixth Plenary Session and other important documents symbolize that the party has completed the historical mission of setting things to rights in guiding ideology. Its evaluation and analysis of the accomplishments and mistakes, merits and faults, and right and wrong in the 32 years since the founding of the PRC shows that our party is an earnest, open and aboveboard party, a party responsible to the people. Our party is more mature politically, more united ideologically, and stronger and more unified organizationally. The party comrades and the people are elated and filled with confidence and hope that we will win out over and conquer difficulties on the road ahead and that we will realize the goal of socialist modernization.

Up to now, in the history of our party there have been only two occasions when resolutions have been adopted concerning party history systematically summarizing historical experience. The first was the "Resolution Concerning Certain Historical Questions" which was approved by the Seventh Plenary Session of the Sixth Central

Committee of the CCP. This resolution was adopted at an historical turning point when we were about to win victory in the war against Japan. It summarized in great detail the historical experience and lessons since the founding of the party, gave high marks to Comrade Mao Zedong for his brilliant contributions applying Marxist-Leninist theory to resolve questions of the Chinese revolution, so that the entire party achieved a high degree of stability and unity ideologically, politically, organizationally and militarily, and played an enormous role in the ultimate victory in the war against Japan and in the entire liberation of the Chinese people. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" approved by the Sixth Plenary Session of the 11th CCP Central Committee was adopted to set things to rights in the party and nation and when we are carrying forward the revolutionary cause. It uses the universal principles of Marxism to summarize China's historical experience in socialist revolution and socialist construction and not only will play an inestimable role in unifying the ideology and understanding of the party, army and all the nationalities to struggle with one heart and mind for the realization of the new historical mission, but also will enrich and develop Marxism and Mao Zedong Thought, providing many new experiences for the international communist movement.

Comrade Hu Yaobang's speech at the meeting celebrating the 60th anniversary of the founding of the CCP looked back on the party's glorious history and pointed out the important significance and direction of strengthening party construction. The content set forth in the "Resolution" and "Speech" is very rich and profound and the summarized experience is very incisive and scientific. These two brilliant documents which shine with the light of Marxism and Mao Zedong Thought are valuable treasures which concentrate all the party's wisdom and experience gained through tests of victory and setbacks in long-term struggle and for which the party has paid an enormous price and they are our guide for future work and the compass for our actions. Conscientiously studying, profoundly understanding and firmly implementing the spirit of these two documents is an important task which faces all the party comrades and all the nation's people and it is a central task which must be stressed well by party organizations at all levels.

In the process of constantly summarizing historical experience and using this historical experience to educate the membership and cadres of the party, our party is constantly advancing and maturing. For this reason, the party has always stressed guiding party members and cadres to study Marxist theory, and party history and to summarize the teachings of experience. This is the enormous strength of our party and one important reason why we can overcome our own mistakes and win out over all difficulties and obstacles. During the time of the democratic revolution, by correctly summarizing historical experience, the party won the great revolutionary victory. This time, by correctly summarizing the party's historical experience since the founding of the PRC, it will promote the even greater victory of future socialist construction. For this reason, stressing the study of the "resolution" and the "speech" and educating party members and cadres using the new historical experience of the period of socialist revolution and construction is the central key to strengthening party construction, mastering ideological education and uniting the party to wage the great political struggle, and it is necessary that it be stressed firmly and well.

Party organizations at all levels should painstakingly guide and organize this study, broadly and deeply propagandize and launch this study and guide it deeper in a planned and gradual way. Everyone should be guided to stress the essential points of study and understand the spiritual essence, with attention to guarding against getting entangled in quibbling over individual issues or adopting a study attitude of casual skimming and superficial understanding. Everyone should be guided to use the dialectical materialist and historical materialist point of view to evaluate the events, merits and faults, and rights and wrongs of history, to analyze the subjective factors and social causes which brought about these events, to absorb the experience of history, become more united, to look ahead and to concentrate their energies on resolving new questions and completing new historical missions. We should advocate getting things off one's chest and speaking out freely, conducting full discussions of different understandings and find some solution to mistaken understandings by reasoning things out and reaching conclusions on the basis of unifying the thinking of the entire party in the "resolution." In sum, this study should strive both to take many forms and be active and at the same time to be serious and conscientious and strive for results. Through study we can truly raise the party's level of Marxism and Mao Zedong Thought and the ability to use it better to direct actual work and to achieve the goal of unifying the ideology and understanding of the party and the entire nation and heighten the consciousness of carrying out the line, direction and various policies of the party since the Third Plenary Session.

What should be especially emphasized is that party organizations at all levels should do a good job of organizing the study of the party membership and the masses and that party leadership cadres at all levels in particular should set an example in their own behavior, being the first to study, studying deeper and better. This is the key to whether or not this study will be profound and effective. In the Yan'an campaign for rectification and study which started in 1942, the fact that many upper and middle level party cadres took the lead in studying made this Marxist ideological education campaign enormously effective. For the leaders to be the first to study and strive to become models is the most forceful appeal and the best way to mobilize the party members and the masses to study. At the same time, if the leaders study deeper and study better they will be able to provide the correct direction for the study by the party members and the masses and will be able to constantly lead the study even deeper. In particular, the leader's position and the responsibility he bears will determine whether or not he has studied well. This is not purely a question of influence on the study of rank-and-file party members and the masses, but a question of influence on the work of a district, section or unit. If one has not penetrated the spirit of the document or understood it well or even has a distorted view, then how can one make the fundamental experience summarized by the "resolution" the guiding thought in one's work and consciously carry out the line, principles and policies of the party"?

The historical period since the founding of the PRC which is summarized by the "resolution" and the series of important historical events which it evaluates are part of the personal experience or at least very familiar to many comrades. For this reason when we begin to study it we not only feel it very personally, but it is also easy for us to relate it to actuality. This is a favorable condition for doing a good job of study. However, there is also the question of how to relate it to actuality. One way is to view it as an outsider and just talk in generalities--nothing is learned this way. Another way is to get caught up in historical questions and even debate the right and wrong of the specific history of one's region or unit--it is impossible to comprehend and master the spiritual essence of the documents this way. The correct attitude should be to understand more profoundly the fundamental experience summarized by the "resolution" to raise one's understanding and to achieve the goal of unified thinking and stronger unity so as to take the spirit of the "resolution" as one's own thinking and conscious action.

In the 32 years since the founding of the PRC, the socialist undertaking of our party's leaders has undergone a tortuous development. To link up study and actuality, one should also be good at comparing the times of victory with the times of setbacks, especially comparing the generally good situation which has appeared economically and politically since the Third Plenary Session with the domestic chaos created by the decade of the "Great Cultural Revolution," and conscientiously analyze the causes of victory and setback. In this way we can truly and profoundly understand through a clear comparison of successes and failures that the ideological, political and organizational line reestablished by the Third Plenary Session of the 11th CCP Central Committee is the correct Marxist line and that it will restore and develop under new conditions the scientific principles of Mao Zedong Thought and the correct policies of the party; truly and profoundly understand the fundamental experience summarized by the "resolution" and that the path which has been gradually established since the Third Plenary Session suited to China's situation for building a strong, modernized socialist nation is correct and absolutely necessary. If we adopt this comparative method of linking up actuality with study, we can truly comprehend and accept ideologically the fundamental experience summarized and evaluated by the "resolution" with regard to a series of important historical issues, and can heighten our consciousness in carrying out the line, directions and policies of the party since the Third Plenary Session.

We firmly believe that on the foundation of conscientiously absorbing the teachings of historical experience gained by the party and the people in this study, on the road scaling the peaks of socialist modernization, we will certainly be able, as Comrade Hu Yaobang has predicted, to conquer the Eighteen Bends, mount the South Gate to Heaven, and reach the Peak of the Jade Emperor, and push on toward new summits.

SIXTH PLENUM RESOLUTION ON MAO'S CONTRIBUTION DISCUSSED

Shanghai WEN HUI BAO in Chinese 16 Jul 81 p 3

/Article by Yun Xiang /0061 4382/: "The 'Resolution' Is Permeated With the Spirit of Looking Forward United as One"/

/Text/ On the eve of the CCP's 60th anniversary, the Central Committee called the Sixth Plenum of the 11th CCP Central Committee, which adopted the "Revolution on Certain Questions in the History of Our Party Since the Founding of the PRC." This was a great event for the entire party and also a great event in the political life of the whole nation. The "resolution" is of great and far-reaching significance as it will unify the thinking of the whole party, the whole army and the entire nation, and it is also of significance for the building up of our party and for the work of socialist modernization.

We Must Unify Our Understanding on Questions of Basic Principle and Strengthen Our Unity

The "resolution" is permeated with the spirit of a nation looking forward united as one. Under the present conditions of our party, looking forward united as one requires first of all a realistic evaluation of merits and demerits, a clear distinction between right and wrong and the appropriate solution of various problems left over from the past. Since the Third Plenum, our actions have been precisely directed toward these goals. The Central Committee undertook to bring order out of chaos with great determination, as a comprehensive effort and having carefully considered all aspects of the problems. These efforts also entailed a reevaluation of some historical events and the redress of wrongs and rehabilitation of those who were unjustly, falsely and wrongly charged. The mistakes of the "leftist" trend were gradually rectified and a series of problems left over from the past were solved, resulting in a gradual normalization of internal party relations and in the political life of the party, as well as in a gradual restoration and strengthening of party unity.

As solutions were provided for a series of historical problems, the people naturally demanded one step further: an evaluation of our history as a whole and answers to some fundamental questions. First among these questions is: how to evaluate Comrade Mao Zedong's historical role in the Chinese revolution, since he was the foremost leader of our party for a long period of time, and how to assess Mao Zedong Thought? These questions touch on the most important political and ideological foundation on which the strengthening of internal party unity depends. It is for this reason that a correct summing up and evaluation of certain historical questions since the founding of the PRC was presented in the form of the "resolution." It thus satisfies the needs of the situation and the demands of everyone in the nation and also provides a solid basis for our party to forge ahead united as one. In its realistic resume and assessment of the past 32 years, the "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" points out: "Generally speaking, the history of the CCP since the founding of the PRC is a history of tremendous successes; guided by Marxism-Leninism and Mao Zedong Thought the party led the various nationalities of our country in carrying out socialist revolution and socialist construction." The "resolution" cites facts to prove that in spite of all complications, the successes gained were paramount. On the other hand, the "resolution" also seriously and earnestly points out and analyzes the mistakes we committed, including the comprehensive, long-drawn-out and grave blunder of the "Great Cultural Revolution." Through a study of the "resolution," we will appropriately evaluate and analyze the history since the founding of the PRC and gain a uniform understanding of it. This is extremely important to strengthen unity throughout the party.

The "resolution" gives a realistic and apt evaluation of Comrade Mao Zedong's role in history, a matter of the greatest concern to everybody. Comrade Mao Zedong was a great Marxist, a great proletarian revolutionary, a strategist and theoretician. To come out with this kind of an evaluation of Comrade Mao Zedong is completely in conformity with historical reality, as it also fully reflects the aspirations of the entire party and of all the people. Looking back on the entire history of the Chinese revolution, Comrade Mao Zedong's contributions were great indeed, never to be obliterated. Comrade Mao Zedong, a great personality who influenced the progressive flow of history, had in common with many great men of history that he was not completely free from certain shortcomings and committed mistakes of one kind or the other, which in his case were serious mistakes in his later years. However, precisely as the "resolution" points out: "Considering all that he did during his lifetime, his contributions to the Chinese revolution far outweigh his faults." Comrade Mao Zedong is our great leader and teacher. The "resolution" gives a scientific and comprehensive explanation and exposition of Mao Zedong Thought, clearly affirming that Mao Zedong Thought was, is and will be our guiding ideology and the great banner that guides our advance.

Firm adherence to Marxism-Leninism and Mao Zedong Thought is one of our fundamental principles. The evaluation of Comrade Mao Zedong's role in history and the analysis and exposition of Mao Zedong Thought presented in the "resolution" conform with historical materialism. The "resolution" repudiates the "two whatsoevers" guiding policy and dismisses whatever was the subject of the personality cult propaganda. At the same time as it affirms Comrade Mao Zedong's great historical contributions, it also points out realistically his mistakes. The "resolution" also opposes the mistaken viewpoint that scientific value must be denied to Mao Zedong Thought because of certain mistakes committed by Comrade Mao Zedong in his later years. All these statements in the "resolution" are of extreme importance because they clear up much confusion and give clear and correct answers to certain doubts and misgivings voiced domestically and abroad. These important conclusions in matters of principle reached by the "resolution" after the widest, repeated deliberation and discussion within the party are the crystallization of collective wisdom, as they are also the full account of achievements in the party's efforts to bring order out of chaos, efforts exerted ever since the Third Plenum. The "resolution" as such, having been passed by the entire plenum, forcefully demonstrates that the leadership core of the party is united as one. The study and implementation of this "resolution" will undoubtedly greatly raise the level of ideological knowledge and strengthen the unity throughout the entire party.

Unify Conceptions and Strengthen Unity in the Question of Drawing Lessons From Past Experiences

In the course of achieving great successes during the past 32 years, there also occurred many mistakes in our work, including the comprehensive, long-drawn-out and grave blunder of the "Great Cultural Revolution." As we fully affirm the achievements of the socialist revolution and construction, we must at the same time also earnestly analyze these mistakes and draw lessons from these experiences. This is another highly important question which relates to the strengthening of unity throughout the party.

In questions regarding the serious overextension of the antirightist struggle, the movement of the "Great Leap Forward," the people's commune movement, the antirightist, socialist education movement, etc, the "resolution" analyzes the correctness and mistakes in the guiding ideology of the party during these events in the light of the historical conditions of the time, and ascertains the subjective factors and social causes of these mistakes. In listing these facts, the "resolution" tells us that the main mistakes committed since the founding of the PRC were "leftist" mistakes. We must draw a fundamental lesson from these experiences. In the past, we could not sum up these experiences and draw lessons from them while being subjected to a "leftist" mistaken ideological guidance. Since the Third Plenum of the 11th CCP Central Committee we began in earnest to bring order out of chaos in a comprehensive way and to rectify realistically the leftist-deviationist mistakes. In the short period of about 2 years since then, our progress in this respect has been very rapid. We have not only solved a great number of problems created as part of our past leftist mistakes and left over from those days, but furthermore, on the basis of the corrections of leftist mistakes and the summing up of the lessons from past experiences, we have formulated and implemented a correct political line and a series of principles and policies that are fundamentally different from those of the "Great Cultural Revolution" and even differ widely from those prior to that. In the course of these developments, the mentality of leading cadres at all levels of the party and of the broad masses of party members is now also gradually being freed from the fetters of the "leftist" guiding ideology. In the course of these developments, many have shaken off the influence of the "two whatsoevers," broken out of the state of full or partial ossification of the mind, and earnestly accept the lessons taught by the "leftist" mistakes of the past. They continuously deepen their understanding of the line, principles and policies determined by the Central Committee, and a lively atmosphere is brought about of having the entire party work with one heart and one mind for the four modernizations.

The "resolution" emphasizes that it wants to implement the spirit of "upholding truth and correcting mistakes." This is extremely important. If we were to adopt an irresponsible attitude, wantonly exaggerate the mistakes of the past, describe the 32 years since the founding of the PRC as utter failure without a single redeeming feature, and as a consequence throw doubt on and denounce the four basic principles, this would be an attitude incompatible with the objective realities and a harmful attitude. Conversely, if we were to disregard our mistakes, cover up our mistakes, or to this date deny any mistakes, it would also be a most inappropriate attitude. It would in itself constitute a mistake. In studying the "resolution" and in summing up the lessons to be drawn from past experiences, we must be wary and avoid or overcome attitudes such as the two mentioned above.

At present it is still our main aim to eradicate the "leftist" ideological influence within the party, particularly among the leading cadres, to draw lessons from the experiences of the past, and on this basis to be better able to maintain unity in political matters with the Central Committee and consolidate and strengthen party unity. For this purpose, we want to purge one step further the influence of the "two whatsoevers" and change one step further the book worship and dogmatic style of study. After the smashing of the "gang of four," we had the mistaken policy of the "two whatsoevers" appear in the party, a refusal to learn from past mistakes, and furthermore attempts to suppress the discussion of the question of standards for truth and to obstruct the trend of emancipating the minds, facts that fully attest to the obstinate nature of all "leftist" matter. If we had not at that time repudiated the "two whatsoever" policy, the whole party would not have been able to grasp completely and correctly the scientific system of Mao Zedong Thought, and also could not possibly have effected a genuine emancipation of the mind, a realistic correction of the "leftist" mistakes, acceptance of the lessons from our past common experiences, unification of our concept[illegible]s and could not have become united as one.

Since the beginning of this year, the leading cadres of the party in their studies of the documents from the Central Committee Work Conference, carried out comradely criticism and self-criticism to liquidate "leftist" ideology. All units that consciously and earnestly did the same thereby raised the level of their knowledge, strengthened unity, raised the political awareness in carrying out the principles and policies of the Central Committee, and were quite successful in all these respects. This good experience must be fully approved, but the summing up and digesting of historical experiences is an arduous process. Due to the fact that the "leftist" mistakes were committed nationwide over a long period of time and produced a great impact, on the theoretical plane the summing up of lessons from the "leftist" mistakes and the elimination of "leftist" influences are certainly not easily accomplished nor can they be accomplished in a short period of time. The problems can only be solved and the aim can only be achieved by repeated studies and contemplations in the course of the practical experience of working to accomplish the four modernization projects. Through the study of the "resolution," all our comrades in the party will without the slightest doubt inevitably draw further lessons from the experiences of the "leftist" mistakes of the past and on this basis make joint efforts to handle affairs in a much better way in future.

The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" adopted at the Sixth Plenum presents a deepgoing summing up of basic lessons drawn from the experiences of the last 32 years. Based on the practical experiences gained since the Third Plenum, the Sixth Plenum listed 10 main points to be observed on our country's path of socialist modernization. We must integrate our studies of the "resolution" with the realities of our situation, one step further eliminate all "leftist" ideology, consciously and with everyone keeping in step implement the series of principles and policies decided upon since the Third Plenum, and persevere in the correct road toward building a modern, highly democratic, highly cultured socialist powerful country in a way suited to our country's particular conditions.

Rally Around the CCP Central Committee for Joint Endeavor and Struggle

At the present Sixth Plenum, new members were elected in place of others or as additional members to become principal leaders in the Central Committee. This will play an important role in strengthening the collective leadership and unity of the Central Committee on the basis of Marxism, and in guaranteeing complete realization of the correct line, principles and policies of the party following the Third Plenum. The election results reflect the aspirations of everyone in the nation and have caused great joy. The leadership core of the party Central Committee has been gradually taking shape in the more than 4 years since the Jiang Qing counterrevolutionary clique was smashed, during the arduous and complex struggle to bring order out of chaos, during the time of leading the entire nation in the work of the four modernizations, and in particular in the practical experience of carrying out the eight-character policy of "readjusting, restructuring, consolidating and improving." Among the men now in key leadership positions there are comrades-in-arms of Comrade Mao Zedong who have fought for decades on many fronts and performed outstanding meritorious deeds for the party and the people, and there are also men of outstanding abilities in the prime of their lives who are excellent students of Comrade Mao Zedong. Precisely as the events of the last few years have shown, this is a strong leadership core which enjoys great popularity among the whole party, the whole army and the people of the entire nation. This kind of Central Committee is the most important organizational guarantee for the strengthening and consolidation of unity throughout the party. We will consciously and closely rally around the party Central Committee, expend our energy on economic costruction and on the foundation of a socialist spiritual culture, show firm determination to eliminate all obstacles, and endeavor and struggle to build a socialist, modern, powerful state with a high degree of democracy and culture. We are certain of our success.

FUJIAN CADRES URGED TO STUDY SIXTH PLENUM RESOLUTION

Fuzhou FUJIAN RIBAO in Chinese 16 Jul 81 p 1

[Editorial: "Leadership Cadres Should Take the Lead in Studying 'Resolution'"]

[Text] The Sixth Plenary Session of the 11th CCP Central Committee deliberated and passed the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China, reelected and elected the main leaders of the Central Committee, completed the historical mission of setting things to rights in the party's guiding thought, strengthened the collective leadership and unity of the Central Committee on the foundation of Marxism organizationally, and guaranteed the complete realization of the party's correct line, direction and policy since the Third Plenary Session of the 11th CCP Central Committee. The party membership, cadres and masses received this news with exultation and they support these measures enthusiastically. Throughout the province a high tide is forming to study the documents and to carry out the spirit of the Sixth Plenary Session.

For leadership cadres, especially those leadership cadres from above county level, to take the lead in studying the documents of the Sixth Plenary Session and in studying the "Resolution" is the focal point and key to doing a good job of this study.

Stressing leadership cadres' study is the central link in using the spirit of the "resolution" to help the party membership, cadres and masses to unify their understanding. Since the founding of the PRC, generally speaking, under the guidance of Marxism-Leninism and Mao Zedong Thought, our party has led all the people of the country to carry out the socialist revolution and construction and to make enormous accomplishments, but it has also made mistakes, especially the mistake of the Great Cultural Revolution, created serious confusion in theory and thinking, and for one period, among cadres and the masses there was no unity of understanding with regard to the right and wrong, merits and faults of the 32 years since the founding of the PRC, and with regard to the historical position of Comrade Mao Zedong and Mao Zedong Thought. These different understandings also existed in leadership groups at all levels. It is everyone's aspiration that through summarizing experience, the thinking and understanding of the leadership cadres can be unified on the foundation of Marxist principles, the leadership can be unified and the party membership, cadres and the masses can concentrate their energies on completing the glorious and enormous mission presented to us by the new historical period. After the Third Plenary Session, the party began to set things to rights in a comprehensive way and fundamentally turned away from the mistaken leftist direction. The "Resolution," which was produced through a long period of extensive debate within the party and through conscientious discussion at the Sixth Plenary Session, drew correct conclusions regarding the important events in the party, especially the "Great Cultural Revolution," in the 32 years since the founding of the PRC; evaluated Comrade Mao Zedong's historical position by seeking truth from facts; carried out a complete discussion on the great significance of Mao Zedong Thought as the party's guiding ideology and at the same time affirmed the correct path which has gradually been established since the Third Plenary Session which is suited to China's condition of building a strong, modernized socialist nation; further pointed out the direction for China's socialism and the continuing advancement of party work; and defined this content strictly in the form of a resolution. This has provided a common political foundation for further unity of ideology and understanding. Through conscientious study of the "resolution" the leadership cadres can distinguish the line between right and wrong ideologically, clear up muddled thinking and unify understanding. And with the leadership's understanding clarified, they will be able to carry out ideological and political work in the spirit of the "resolution," help the broad ranks of cadres and masses to unify their understanding and in their actions to consciously be models of unity, be models in carrying out the policy, direction and line of the Third Plenary Session and be excellent examples among the masses.

The fundamental reason for studying the "resolution" is to summarize experience. In the 32 years since the founding of the PRC, in the process of leading the people in the socialist revolution and construction, our party has made important achievements in all areas and by taking tortuous paths has paid an enormous price. This is because our task is to fundamentally transform Chinese society--something people had never done before. We did not understand much about the objective laws of building socialism, and our experience in this area was rather inadequate. We also had subjective biases with regard to analysis of the situation and understanding of national conditions. Thus there were serious mistakes in the party's work in the guiding direction and it was hard to avoid making this or that kind of mistake or even serious mistakes. But our party dared to acknowledge these setbacks and mistakes and was able to derive benefit from the study of these setbacks and mistakes. The "resolution's" scientific summary of the party's experience, both positive and negative, in the struggle for revolution and construction since the founding of the PRC is a valuable spiritual treasure of completing our historical mission in the new period. By conscientiously studying the "resolution," self-consciously absorbing this experience and mastering and applying it, in leading the masses of the people on the new long march, the leadership cadres can avoid the great twists and turns of the past, and can enable our undertaking to successfully take the scientific track ahead and realize the great goal of the four modernizations, to which the people aspire.

The leadership cadres also bear the heavy task of organizing and leading the broad party members, cadres and masses to study and should get down to the grass-roots level to understand the problems of the masses, and straightforwardly and persuasively carry out propaganda work on the "resolution" in the rural areas, in the factories and mines, in the schools and in the neighborhoods. This demands that the leadership study it earlier and more thoroughly and understand it better than the masses. If they do not study it well they will be unable to lead the study activity.

Conscientious study of the "resolution" is one of the central tasks for the entire party for the second half of the year. Party committees at all levels may use party schools, cadre schools, agency-operated short-term classes or other suitable forms for organizational leadership cadres to participate in study on rotation. In study, they should conscientiously study intensively the important content of the "resolution" and unify their thinking and understanding in the fundamental conclusions of the "resolution." On this foundation they will look ahead in unity and strive for the goal of the Four Modernizations with one heart and mind. In studying the "resolution" one must consider history, but historical questions should be considered in general terms, not in detail, and one should not get entangled in the details of history nor should one debate the rights and wrongs of the history of one's region or unit. We should develop the excellent tradition of combining theory and practice, and study and continue to complete the mission of setting things to rights according to the spirit of the "resolution," and further improve the party leadership and workstyle in order to heighten consciousness, to enable our party construction to become more mature politically, more unified ideologically and more solid organizationally, so that the party will become a firm nucleus capable of unifying and leading all the people to carry out the socialist modernization. We should absorb the experience of 32 years of economic construction and further carry out economic readjustment. In Fujian we should now vigorously promote the continuing establishment and improvement of various systems of production responsibility, overcome the natural calamities, and improve agricultural production. We should promote the implementation of systems of economic responsibility in industry and communications, improve the reorganization and mergers centered on expanding consumer goods, and actively complete the production plan. We should actively expand economic activity abroad and promote the implementation of special policies and flexible measures. We should promote work in the areas of trade and finance, culture and education, science and technology; promote the implementation of policies concerning cadres, intellectuals, overseas Chinese and other policies; strengthen unity, and bring into play all positive factors to work for socialist modernization.

The Sixth Plenary Session of the 11th CCP Central Committee is a new milestone in our party and nation, setting things to rights and continuing to develop. Thirty-two years ago the "Resolution on Certain Historical Questions," which was passed by the Seventh Plenary Session of the Sixth CCP Central Committee, unified the party's understanding, strengthened party unity and promoted the rapid advance and great victory of the people's revolution. Today, the "resolution" passed unanimously by the Sixth Plenary Session of the 11th CCP Central Committee will play a similar historical role; it will become a very important document and enter the pages of history if we conscientiously study the documents of the Sixth Plenary Session, consciously use the "resolution" which was unanimously passed by the plenary session to unify thinking and understanding; we can then implement the steel-like unity, form an invincible force, overcome all obstacles, eliminate all difficulties, and make our country gradually into a modernized, highly democratic, and highly civilized, strong socialist nation.

PARTY LEADING BODIES ENCOURAGED TO LEAD DUAL EXISTENCE

Harbin HARBIN RIBAO in Chinese 15 Jun 81 p 1

[Article by Li Hongjun [2621 3163 0689] and Li Shulin [2621 2885 2651]: "Upholding the System of Dual Organizational Life"]

[Text] A great many party committee leading bodies and members from the various areas, offices, and directly affiliated factory enterprises thoughout our city have led the organizational life of both party committee groups and party branches, and this has had a positive promotional effect toward rectifying their ideological line and heightening the groups' combat effectiveness.

Recently, leading bodies of the various units have placed the greatest importance on doing a good job of leading the organizational life of leading bodies. Within a specified period, they have all held specialized meetings for heart-to-heart talks, using the methods of criticism and self-criticism to investigate the situation regarding the implementation of the party's line, programs, and policies since the Third Plenum, and the implementation of the "standards", and have conscientiously summed up their experience and lessons learned. Numbers of leading groups of Wei Jian factory launched activities involving heart-to-heart talks centered on the questions of whether or not in the new period we still need to do a good job of political ideological work and how to do it. On the basis of unifying their thinking, and directed at the various kinds of ideology prevalent among cadres, they convened two separate factorywide informal meetings devoted to political ideological work, and in the spirit of the Third Plenum, in a timely way unified the thinking of the staff and workers of the entire factory and roused in themselves a revolutionary spirit. In the course of this activity, a good many units' leading bodies and members were able to express themselves fully, persevered in constructive criticism and patient helping of comrades who were guilty of mistakes, and in particular emphasized summing up experiences and lessons learned in seeking truth from facts and helping them to do better work from now on. In the course of the informal heart-to-heart meetings, leading bodies of the Harbin farm management office, after taking the initiative in investigating the problems involved in carrying through the implementation of the party constitution, the "standards," and the party's line, programs and policies, immediately changed their methods and, with major leaders in charge of each group, went deeply into the more backward farms and brigades and carried out investigations in an attempt to understand the situation, conscientiously helping them to solve the actual difficulties involved in production and in the lives of staff members and workers.

Party committee leading comrades of many units, along with persevering in doing a good job of leading the organizational life of leading bodies, are also able in their capacity of ordinary party members to participate in the organizational life of party branches and groups. The party branch of Comrad Xu Baodong [1776 1405 2767], district party secretary of Daoli, wanted to propose two new party members for admission. Though he had different views on the subject, he did not seek to impose his own views on the party branch. On the one hand he expressed his own views to those two comrades; on the other hand, according to the principle that the minority is subordinate to the majority, he went along with the decision of the party branch's meeting, and so followed the principle of the individual being subordinate to the organization. Comrade Chen Jie [7115 2638], head of the city's Second Light Industry Bureau took several comrades to Canton to take care of some business and, in order to persevere in doing a good job of leading the organizational life of a leading comrade, he suggested that a small party group be set up which would hold small organizational activity meetings in Canton in their spare time.

CADRES URGED TO DEVELOP REVOLUTIONARY SPIRIT

Nanjing XINHUA RIBAO in Chinese 16 Jun 81 p 3

[Article by Xu Hsiren [1776 1585 0088]: "We Must Eliminate 'Leftist' Ideology and Develop a Revolutionary Spirit"]

[Text] The eradication of "leftist" ideological influence by leading cadres is a development that is welcomed everywhere. However, it also gives rise to some arguments. The gist of these arguments is: might not the eradication of "leftist" ideological influence hinder the development of a revolutionary spirit? Do we still want to promote a revolutionary spirit?

We consider that the eradication of "leftist" ideological influence among leading echelons is not in conflict with developing a revolutionary spirit. From the point of view of the requirements for building socialist modernization, "leftist" ideological influence must definitely be eradicated, and a revolutionary spirit must continue to be developed. In that case, in real life why is it that some comrades are concerned and think that contradictions might arise between the two? This is first of all due to the fact that the questions of what constitutes "leftist" ideological influence and what is our objective in implementing a clearing up of ideology have still not been truly clarified, giving rise to misunderstandings. After the socialist reformation of our basis was completed in the course of building our national economy, in our guiding ideology the error of "leftism" truly existed, and the causes of this were: first, not paying due attention to the existing situation of our productive forces and at the same time, with regard to production, being overanxious to change over to a transitional stage; second, not paying due regard to objective reality in the building of the economy and being overanxious to achieve quick results; and third, violating the law of a proportional development for our national economy. The end result of these "leftist" errors, with the addition of the interference and destruction wrought by Lin Biao and the "gang of four" during the "cultural revolution," was extremely serious; the national economy wavered and could not progress, and the superiority of the socialist system could not be brought into full play, seriously dampening the socialist spirit of the broad ranks of cadres and the masses. Ever since the Third Plenum of the Central Committee, the party Central Committee has adhered to the principles of Marxism-Leninism and Mao Zedong Thought with regard to integrating theory with practice and seeking truth from facts; summed up its experiences and lesson learned; rectified the errors of the "left"; combined the basic principles of scientific socialism with the concrete situation in our country; and formulated a correct line, programs, and policies. Today, the formulation and implementation of the guiding principle of the readjustment of our national economy is a sign that the guiding ideology behind the building of our national economy has begun to undergo a fundamental transformation. The principal manifestation of this change lies in the fact that we have freed ourselves from the shackles of leftist ideology and returned to the path of seeking truth from facts. The party Central Committee demands that the leading cadres eradicate "leftist" ideological influence from their economic work through making a clear distinction between right and wrong in our guiding ideology, drawing a clear line between the correct and the false, and urging the entire party to be more conscientious in implementing the party Central Committee's great policy decision on carrying out further economic readjustment. For this reason, correctly eradicating "leftist" ideological influence is absolutely not capable of hindering the development of a revolutionary spirit. On the contrary, only by having freed themselves of the fetters of the guiding ideology of "leftism" will the broad ranks of cadres and the masses be able to rouse themselves to revolutionary enthusiasm, have their hands and feet free to work, and enable our country's economic work to develop in a healthy and progressive way. There is still another important reason why some comrades erroneously consider that eradicating "leftist" ideological influence would hinder the development of a revolutionary spirit: during the 10 years of turmoil, when the "gang of four" pushed the error of "leftism" to an extreme, the question of right and wrong in displaying revolutionary spirit also became quite confused. For example, "high quotas" and "high rates of speed" that departed from reality were considered to be manifestations of revolutionary enthusiasm, while the notion of proceeding from the firm basis of one's actual abilities was considered to be rightist; a slogan like "do not fear our not being able to accomplish something--fear only our not trying," which placed excessive emphasis on determination, was greatly extolled as a revolutionary slogan, while the idea of proceeding according to objective economic laws and the scientific spirit of wanting to have our feet firmly on the ground were disparaged as lacking enthusiasm for socialist construction, and even labeled rightist. For this reason, if in clearing up "leftist" thinking from our economic work we abandon the whole set of "leftist" slogans and methods from the past, some comrades will mistakenly suppose that it is also no longer necessary to promote a revolutionary spirit. This kind of understanding is incorrect. The revolutionary spirit of striving for the prosperity of the country and arduous struggle has been an important condition for the forward advance of socialism, and at any and all times we still want to display a revolutionary spirit. The fact that our new China is able to have the kind of accomplishments it has today is precisely the result of the fact that the broad ranks of cadres and the masses, under the leadership of the party, did not fear difficulties or sacrifices and, filled with revolutionary ardor, proceeded with their arduous struggle. The problem is that the promotion of a revolutionary spirit must be founded on a basis that is consistent with reality. If we depart from this point, then we will act rashly and blindly, harming the revolution and construction. That is to say, the revolutionary spirit that we want to promote is the revolutionary spirit of upholding scientific socialism, and not a blind, rash action that attempts to transcend realism.

Of course, the original significance and aim of clearing up "leftist" ideological influence is for the benefit of developing a socialist, revolutionary spirit. Nevertheless, it is also far from being the case that in the course of this clearing up there will not occur or exist problems that are in violation of that original significance. For leading cadres, in the course of clearing up their ideology there really exists the question of a scientific attitude, which is to say that in seeking truth from facts they must attempt to make a clear distinction between right and wrong. For example, since we cannot, on the pretext of being afraid of having a negative influence on revolutionary enthusiasm, simply not try to clear up "leftist" ideological influence or act in a haphazard manner, we also cannot brand as "leftist" certain shortcomings and problems in our concrete work or, citing the pernicious influence of "leftism," fail to make an active effort to complete projects that could be completed fairly quickly if necessary. Still less when we speak of clearing up erroneous "leftist" ideology can we splash cold water on the revolutionary enthusiasm of grassroots-level cadres and the masses in the concrete performance of their duties; in particular, we cannot place the blame for upper-echelon policy errors on energetic, hard-working lower-echelon cadres. The revolutionary enthusiasm of cadres and the masses must be fostered thoroughly and at all times. If, without having a clear idea of exactly what we are talking about, we indiscriminately brand everything as "leftist," then not only will we not be able to put our economic work back on the proper, healthy track, but it will quite possibly suppress the revolutionary spirit of grassroots-level cadres and the broad masses of workers.

In short, "leftist" ideological influence must definitely be eradicated and the revolutionary spirit of working hard for the prosperity of the country and striving arduously must definitely be promoted. Through clearing up our ideology and clearly distinguishing between right and wrong, all echelons from top to bottom, must rouse themselves to a revolutionary spirit, start from a basis of reality, do everything possible to overcome difficulties, do a good job of further readjusting the national economy, and raise production, and the aims of clearing up our ideology will have been accomplished.

MORE THAN 800 TEACHERS OF SCHOOLS OF HIGHER LEARNING JOIN PARTY

Beijing GUANGMING RIBAO in Chinese 20 Jun 81 p 1

/Article: "In Beijing Institutions of Higher Learning More Than 800 Teachers Gloriously Enter the Party: After Entering the Party They Actively Serve in the Vanguard Model Role of Party Members"7

/Text7 Reporter Wang Yuanping /3076 6678 16217 reports: According to statistics 821 teachers and other professional and technical personnel at the 43 institutions of higher learning in Beijing have entered the Communist Party of China within the past several years. These comrades who have just entered the party include Professors Cai Xu /5591 24857, Jiang Zehan /3068 3419 32117, Zhu Zhixian /2612 2535 63437, Wang Zhuxi /3769 4554 33057 and 26 other professors, 57 assistant professors and 377 lecturers.

This group of teachers who have become new party members have for the most part undergone long periods of training, have an unshakeable faith in communism and a deep feeling for the party. At the forum for young comrades, several of the older professors who have newly entered the party took their personal experiences in the new and old society to explain that there is a new China, and they themselves have a glorious old age only because of the leadership of the communist party.

They explained that the four basic principles in support of the party are needed by a billion people and are the road determined by historical necessity.

The vast majority of these new party members are the backbone of education and research. Before they entered the party they made demands of themselves in accordance with the standards for party members and after becoming members they actively have served as vanguard model party members. One lecturer who recently entered the party said: "The party has expended such effort to train us to be university teachers and we only are a small fraction among the people of our age group. If we don't exert ourselves to the utmost how can we ever meet our obligation to the party and to the people!" One older professor who recently entered the party while teaching and doing research also served as the head of an auxiliary hospital and has enthusiastically trained and guided young people. When this hospital director was not at the hospital, the doctor in charge had only to make one telephone call, no matter whether it was day or night and he would immediately come to the hospital to guide young comrades in handling medical or research problems. One assistant professor after entering the party served as a political counselor and while teaching or instructing people patiently did ideological work among the students. The students expressed appreciation for his patient help.

During the organizational and developmental work in the various higher level schools in Beijing, the standards for party members were scrupulously mastered while paying attention to correcting "leftist" influences. For example, concerning the historical problems and the problems of the relationships of intellectuals in society, while making clear that each person must understand himself, the policy of "importance is in expression" was also supported. As for applicants for party membership who had shortcomings, the party organization always strictly but enthusiastically helped them overcome and correct these, never relaxing their demands. As a result of accurately mastering the standards for party members and the policy for intellectuals, in these several years of party organizational and developmental work among educators the results have been quite good, and a relatively large number of educators have met the standards for party members and have been absorbed into party organizations. Taking Qinghua University as an example, the proportion of teachers who have developed into party members compared with the number of new party members from the entire school over the period 1969-1976 is 1.6 percent. This is an increase over the past several years of more than 10 percent.

BEIJING SCHOOLS OF HIGHER LEARNING HOLD PARTY REPRESENTATIVE ASSEMBLIES

Beijing GUANGMING RIBAO in Chinese 18 Jun 81 p 1

/Article: "Beijing Schools of Higher Learning Successively Convene Party Representative Meetings: Put the Democratic Life of the Party in Good Order, Strengthen and Improve Party Leadership"7

/Text7 In Beijing recently, 20 institutions of higher learning, including Beijing University, Qinghua University, Beijing Normal University, and Beijing Technical University convened party representative assemblies. These assemblies restored the democratic life within the party in these schools which had been almost completely destroyed during the 10 years of disruptive activity by the "gang of four" and served to actively promote the improvement of leadership workstyles and the strengthening of party leadership.

During the party representative assemblies, the party committee members of the various schools made a broad call for opinions from the masses in and outside of the party toward educational work and especially toward the committee members thoroughly implementing the line, principles and policy undertaken since the 3rd Plenum of the 11th Party Central Committee, carrying them on to a conscientious conclusion, further clarifying the mission of properly carrying out educational work and important measures. The broad masses, under the spiritual encouragement of the party representative meeting and through the liberation of thought and conscientious work, unified their thinking and raised their knowledge concerning the work of the schools and other important questions, thus increasing unity among comrades and between the leadership and the masses. There was a new increase in activism of the broad group of teachers, students, staff and workers in their work and in study.

General elections of the new party committee members were held during the party representative assemblies at the various schools. The elections were carried out on a more thoroughly enhanced democratic basis. Candidates were mostly determined after a vote of the opinions of party members, after broadly listening to opinions of those in and outside of the party and after repeated consideration and consultation in various other democratic activities. Finally at the meeting of party representatives, the new party committee members were elected by means of a plurality vote. The characteristics of the newly elected party committee secretaries and assistant secretaries in the recently held party representative meetings of 18 schools of higher learning changed from those before the election in four points. First, their numbers were reduced. From an original 85 people, the number was reduced to 63. Second, their average age was lower, declining from 68 to 58.5. Third, the percentage of those with university education levels was increased from 49 percent to 58 percent. Fourth, the number of party general administrative staff was reduced. Before the election there were five or six party general administrators among the party administrators of the various schools, after the elections there were only two or three. Some of the new committee members from the educational institutions also decided to adopt several measures to improve leadership workstyles.

Recently the relevant department of the Municipal Communist Party Committee of Beijing invited some comrades from the schools to a forum to sum up the experiences of the party representative meetings.

LIAONING EMPHASIZES STRENGTHENING OF IDEOLOGICAL POLITICAL WORK IN UNIVERSITIES

Shenyang LIAONING RIBAO in Chinese 7 May 81 p 1

[Article: "Thoroughly Strengthen Ideological and Political Work in the Universities"]

[Text] Since the work conference of the Party Central Committee, there have been new improvements in the ideological and political work in the institutions of higher learning in our province creating many good experiences. The strengthening of ideological work has caused a great rise in the ideological awareness of students and caused an obvious change in mental attitudes. But this is merely a good starting point for ideological work in the schools. Looking from the perspective of the basic mission of institutions of higher learning and their educational goals, our work still has a long way to go, and there is a great need to continue strengthening ideological work.

The basic mission of higher education is to develop high quality specialized personnel educated both morally and intellectually for the tasks of socialism. That is to say, to become a college student who meets the standards of socialism one must not only have the resolute specialized skills needed to serve the four modernizations and national reconstruction, but must also have steadfast political beliefs, the lofty ideals of communism, an aspiration to give one's all for the four modernizations, and to have high-minded morality, i.e. to become an "idealistic, moral, knowledgeable and skillful" person who is both red and expert. To accomplish such a basic mission, to reach this kind of educational goal, ideological and political work must be strengthened and moral cultivation must be put in the forefront of student ideological education.

To carry on ideological and political education for students, we should first research the special characteristics of contemporary university students, profoundly understand their ideological circumstances and strive to make a fairly precise and pertinent analysis. This is the starting point for accomplishing work among students and is also the principal basis for determining policy in ideological education. If we don't accurately recognize the object of our cultivating efforts, then it is the same as "shooting an arrow without looking at the target or talking without regard for the audience," and it would be difficult to avoid problems in guiding ideology and in working methods. The basic character and the main trends among this generation of students are good. They love the socialist motherland, love the party, support the four basic principles and uphold the four modernizations. They study diligently and long to be useful, to promote in China the assiduous study of modern scientific and cultural knowledge. They consider the situation as a whole, are reasonable, cherish a favorable outlook on security and unity, make allowances for the problems of the nation and the schools, and are imbued with the courage and determination to overcome difficulties. Yet some problems also exist. This generation of students was raised during the chaotic period of the ten disastrous years, and they have been affected by the various pernicious influences of Lin Biao and the "gang of four." They were born in the new society and have no personal experience of the bitterness and darkness of the old China. They don't have the experience of the vast difference between the new and the old society. They lack an essential understanding of the superiority of the socialist system and the corruption of the capitalist system. They long for and look forward to a strong democratic and enlightened country that has achieved the four modernizations, yet still cannot correctly handle the problems that will come while carrying this out, and still lack accurate knowledge about certain mistakes our party has made during its work. It is precisely for the aforementioned reasons that the majority of students all have various levels of problems, no matter whether it is in their ideals for the future, study goals, outlook on life, world view, moral sense or notions of discipline.

There are also a small number of students in whom doubt and wavering have emerged about certain basic principles. If you don't see the problems among students, then your understanding of the importance of ideological and political work among university students, its complexity and its tremendous difficulty, will be insufficient. If you have seen the problem, you may lose confidence in the objects of cultivation and adversely affect our work. It should be noted that the great majority of students are comparatively young when they enter school and that this time is precisely the important formative stage in their view of life and the world. They are very malleable. They are just becoming concerned about national affairs, searching for truth, boldly investigating, diligently thinking things over, becoming active ideologically and so on. Also, their fundamental knowledge of Marxism-Leninism and historical knowledge are lacking, their thinking is not mature, they tend to extreme views when considering problems and have other weakpoints. Yet, by and large most students are good, and the ideological and political conditions in which they are growing up are even better than for the last generation. They are fully capable of becoming a generation adept at thinking and which can make great contributions. The key is whether we can arm them with Marxism-Leninism-Mao Zedong Thought. This means we must take careful aim at their special ideological characteristics, support the policy of keeping communications open and carry out ideological and political education successfully.

We must be adept at answering questions posed by the students, patiently explaining the relevant principles and "explaining the principles and teaching with skill and patience." When carrying out ideological education we must adopt an attitude of fair discussion, imbuing them with the perception that you are a "good teacher and beneficial friend," so that they are inspired and enlightened. When doing ideological and political work you must persuade people, you can't force them; you must move them by reason, not by force. You must offer judicious guidance according to the circumstances and cannot rely on simple and rigid teaching methods.

Students in their ideological activity are willing to think independently and this should be advocated and encouraged. Even if their knowledge concerning some questions is inaccurate that is not important. Willingness to think is better than laziness in thinking. Ideological knowledge will always have different levels. We should guide university students correctly in the atmosphere of ideological activity, life and study, and bring them to a healthy maturity.

We must advocate that leading cadres of all schools everywhere involve themselves deeply with the students and make friends with them, vigorously fostering deep confidence, emotional links, and heart-to-heart talks. Possibly the questions put forth by the students can't be answered all at once, or the answers won't convince them absolutely, but this is not important. If once isn't enough, further conversations or hold group discussions will gradually resolve their problems.

Ideological work is a science. It has a scientific and orderly nature. For this reason it is completely necessary to establish an elite contingent political workers and to maintain stability. Yet it is insufficient to rely solely on the political work contingent to carry out ideological and political work. We must mobilize the broad group of educators, staff and workers, especially the teaching assistants, lecturers and professors to do ideological work among the students. There are many educators and they see the students every day, moreover, the words and deeds of teachers influence students greatly. For this reason the significance of mobilizing all educators to do ideological work is very great. To instruct and to cultivate people is the glorious responsibility of educators. Intellectual education and moral education cannot be completely separated; moral education should be a part of intellectual education.

All schools must strengthen leadership in ideological and political work. They must skillfully organize their strength in many aspects, adopt various approaches, and use many channels of communication. In this way the base of ideological and political work will be broadened even more. We need only work energetically and a generation of students, both red and expert, developed both morally and intellectually, will certainly be brought to healthy maturity, and the institutions of higher learning will certainly produce successive generations of able individuals.

PARTY AND STATE

ABUSE OF AUTHORITY TO PUNISH SUBORDINATES CRITICIZED

Beijing RENMIN RIBAO in Chinese 3 Aug 81 p 5

[Article by Liu Xianting [0491 0341 1694]: "'Small Shoes' and 'Jogging Shoes'"]

[Text] Shoes are mainly designed to help people walk safely. However, another type of shoes function differently, and will make the wearer so uncomfortable that he cannot move a single step forward. They have been dubbed "small shoes" by the people.

In the old society, women were required to bind their feet. In the end, their feet became "so small" that they often lost their balance when walking. Although this unhealthy tradition of requiring women to bind their feet disappeared long ago, another unhealthy trend to deliberately force people to "wear shoes" as a form of punishment still exists today, and in some places, has even gained strength.

According to a newspaper report, one day a security guard at a certain mine offended his boss when he denied the boss' sons entry to a bathhouse to take a shower pursuant to a regulation issued by the boss that no dependent without a ticket in hand should be allowed to use the bathhouse. The guard's "retirement from his glorious post" was announced 3 days later for "health reason" at the age of less than 50.

Another example is that a cadre who exposed his boss' attempt to transfer his son from a frontier post at a meeting after refusing to heed his instruction in this connection was transferred to a hardship post 3 months later on the ground that "he is a man of principle capable of enduring hardships."

Cadres critical of the "disobedient" to their bosses have been denied benefits in terms of work-study, promotion, awarding of housing units to themselves and jobs to their children. Anyone at odds with his boss will sooner or later "meet the same fate" and will suffer other inconveniences. Although cases of this sort can be avoided, no efforts have been made to prevent their recurrence.

Some people have acknowledged this trend as a problem but not a cause for alarm. Although the inclination to impose "small shoes" on people is a behavior more "civilized" than brazen reprisals and vengeful attacks, its dangerous consequence can in no way be minimized. This unhealthy trend to punish people this way is actually a form of unfair treatment or mistreatment, which will have a dampening effect on their initiative. A more serious consequence is that under its influence, democracy can be suffocated, motivation to progress can be nipped in the bud, talented people can be destroyed, and souls will feel scared to death. In localities where "small shoes" are in wide circulation, comrades of rectitude, intelligence and the courage to stand for the principle are bound to face suppression, while sycophants and flatters will become more active than ever. In some units, those who have experienced the "small shoes" will lose their courage to speak out again, while others who have not experienced them will hesitate to volunteer any proposals. In the end, although their prestige will be diminished, leading cadres will become more arrogant than ever, the party's excellent tradition will suffer damage, the enthusiasm of the masses will be dampened, the lively political situation will give way to a dull climate in which 10,000 horses will stand mute and rectification of the unhealthy workstyle will become an empty slogan.

Although the trend to compel people to wear "small shoes" is deeply hated by the public, thus far nothing has been done to deal with it. Since those who can threaten people with "small shoes" are power-wielders, they can hardly be persuaded by the masses to change their minds unless they are ousted from offices of public trust.

As far as we know, these power-wielders are usually classified as "men of good personality" or "good cadres," and therefore cannot be dismissed from office for forcing someone to wear "small shoes." At worst, they might be asked to exercise self-criticism and perfunctorily examine their conduct. (They can also ignore this request.) In the days ahead, the existing wearers of "small shoes" will have to continue to wear them and others may not be able to avoid wearing them. Meanwhile, the compulsive order to force "small shoes" on people is by no means a graceful act. For this reason, those who plot this matter often have to invent some good reasons for doing this under a plausible pretext in order to deceive the public. Now let me return to the two examples I mentioned earlier. In essence, there is nothing wrong with a decision to retire a worker from his glorious post, nor is there anything wrong with a decision to assign a cadre to a remote hardship post which conforms to the party's requirements. However, such executive power has been wielded by some people to punish their adversaries. In response to the public's protests, they always say: "we are only acting in accordance with the policy!" In the end, the victims of "small shoes" become awkward characters bearing a striking resemblance to a "deaf-mute unable to complain after being unjustly treated." It is clear that this treatment is unjustified and unfair. But no one can do anything about it. So this treatment still persists. This is why many people want to adopt "a hands-off policy" in this matter and why this ill-intentioned trend is so hard to reverse over a long time.

"An angry eye must be met with an angry eye" is an ancient proverb that can be used to portray those narrowminded and mean characters intent on avenging their adversaries as soon as they come to power. A typical example was the Dowager Empress Ci Xi of the late Qing Dynasty, who was universally condemned for saying: "I can make anyone unhappy for the rest of his life if he makes me unhappy once." Communist Party cadres should never emulate her conduct. Nor should they promote such a philosophy bordering on sadism. Leading cadres should learn to bear with all forms of mass criticism no matter whether they are correct, incorrect or even mistaken. The power wielded by leading cadres is not a tool for them to vent their pent-up wrath on others and threaten them with "small shoes." The "Certain Principles Regarding the Internal Political Life of the Party" clearly state: Leading cadres should refrain from using their power to take revenge or conspire against comrades suspected of opposing them, or punish them by cutting their feet to fit "their small shoes." This conduct is a violation of the party democratic system and the revolutionary code of ethics.

I still recall that during the war, whether on a military march or in pursuit of retreating enemy troops, our cadres often took straw sandals and cloth shoes from their knapsacks and handed them to barefoot soldiers so that none might lag behind. Today, our motherland is still in a period of socialist construction. Everyone is required to move forward at a fast pace. The leaders have responsibility for providing everyone with suitable shoes, especially our most favorite "jogging shoes." Only thus can our leaders encourage and help the people to move forward swiftly along the revolutionary path and make greater contributions to the country and the people.

SOVIET AIRLIFT CAPABILITY IN AFGHAN INVASION NOTED

Beijing GUOJI HANGKONG /INTERNATIONAL AVIATION/ in Chinese No 3, 1981 p 14

/Article by Li Chun /2621 4783/: "Soviet Airlift Capability in the Invasion of Afghanistan;" concluding part of article/

/Excerpt/ 3. Several Noteworthy Questions Raised by the Large-scale Soviet Military Airlift in the Invasion of Afghanistan

The strong airlift capability of the Soviet Army means it has mobility on a global scale. In other words, it serves as a means to invade the Third World or to start local wars at any time. In the face of a nuclear stalemate, the Soviet Union evidently hopes to eliminate the Third World countries and the other intermediate zones one by one, as long as a direct confrontation with the United States can be avoided. By this means, it will strengthen its strategic position and finally dominate the whole world. This may be the current Soviet strategy, and military airlifting is a powerful means to support this strategy.

As a precaution against old Soviet tricks, we should pay attention to the following questions while drawing lessons from the Afghanistan incident:

1. If we want to determine whether or not the Soviet Army will launch a sudden attack, it is not enough to judge from the surface activities of the Soviet Army, simply because its airlift capability makes it possible for the Soviet Union to transport troops and equipment on a campaign scale directly into the war theater over geographical obstacles from different locations and within a short time.

2. In launching a sudden attack, the Soviet Army does not necessarily start its penetration from the frontier regions. It may possibly fan out from a political or military center or start its attack from both the rear and the frontal areas. This poses new problems in planning for combat, choosing the form of combat and the deployment of military forces. For example, in launching an invasion, the Soviet Army can rely on its strong air mobility in choosing not only the direction of its attack but also the distance of its objective. This will give it great initiative. As a precaution against invasion, therefore, we must have not only suitable defense positions but also adequate mobility. The NATO forces hold that this mobility is necessary not only for the war areas, but also for the air arm as well as the air transport units.

3. Air bases are the first targets of Soviet assaults. They were the steppingstone for the sudden invasion of Afghanistan. There should be special defensive power and effective defensive measures for the frontier as well as the rear bases.

4. Research should be conducted in counter-airlift tactics. If we can deliver our blows in the course of Soviet airlifting and stop such airlifting, there will be a better chance for us to frustrate a Soviet invasion.

5. Research should be conducted on tactical problems raised by the entry of armed helicopters into the battlefield.

MILITARY AND PUBLIC SECURITY

SETTING, ACTIVITIES OF NAVAL SUBMARINE SCHOOL DESCRIBED

Beijing JIANCHUANG ZHISHI [NAVAL AND MERCHANT SHIPS] in Chinese Jun 81 p 7

[Article by Li Dianming [2621 3013 2494] and Yang Jun [2799 6511]: "Naval Submarine School On the March"]

[Text] In the "Soldiers, the Sons and Brothers of the People" program of the central TV station on the eve of the Spring Festival of 1981, a color documentary entitled "Underwater Hunting Begins From Here" was televised. The "Steel Whale" was shown slowly sailing into the open sea to the strains of a delightful melody, leaving a deep impression on the viewers. The majestic military banners, the young marines, the well-laid-out blocks of school dormitories and the martial spirit of the fighting vessels were all watched with rapt attention.

The naval submarine school is located in a beautiful coastal city. Illuminated by the sunlight of the party, this only training school for "underwater dragons" of the navy has grown up along with the people's navy. In the past 30 years, this school has sent group after group of fine commanders and fighters to the submarine units of the navy in accordance with the party's "steadfast and correct political orientation, hard working and plain living style, and highly flexible strategy and tactics" and the principle of "all-round moral, intellectual and physical development." These commanders and fighters are now sailing fighting vessels along the long coastal defense lines of the motherland, patroling the open sea, and dedicating their valuable youth to the defense of the socialist motherland and the building of a steel wall of the sea. They have written a proud chapter of heroism in our history.

The submarine school affords a pleasant environment for study and enjoys a unique geographical advantage--its proximity to the sea. The entire school compound is located near the shore with a mountain behind it. The well-laid-out blocks are flanked by luxuriant foliage, with a huge drill ground, measuring more than 10,000 square meters, in the center. The majestic school building is in close proximity to an azure bay, so that on a calm day the classrooms command a good view of the open sea with ships plying to and fro. In the early morning, people can enjoy the refreshing sea breeze; at night, they can see dots of fishing lights and hear the waves lapping against the shore. It is against such a poetic background that the "underwater dragons" of the future are exploring the mysteries of submarine technology, being gradually uplifted under the influence of the glorious traditions of our army, and learning the skill of winning victories.

The main task of the submarine school is to train submarine commanders at various levels. The students here must have high political consciousness, at least a high school cultural level, and the physical condition of aviators. They are mostly former army personnel or high school graduates. The school term is 4 years. Besides political theory, higher mathematics, general physics, foreign languages, electronics and other basic subjects taught in institutes of higher learning, the students also have to learn navigation, weaponry and other professional military techniques related to submarines. The submarine school is very well equipped. There are more than 50 practical training compartments where simulated submarine warfare of various types can be conducted. The school also concentrates on the use of practical methods, including practical training at sea. In late spring and early summer, or late autumn and early winter each year, the training vessels, with full loads of students, sail out of the military harbor and cruise the vast open sea day and night. This is an indispensable part of the training program to help the students combine theory with practice, steel their will at sea, and learn about workstyle and techniques. There is also a strong teaching staff in the school. Among the staff are veteran submarine crew members of the older generation and many experts in submarine theory and military equipment. These hard-working "gardeners" are now toiling day and night to bring up the "underwater dragons." Like a sowing machine in perpetual operation, they are disseminating the matured seeds all over the vast coastal areas and territorial seas of the motherland. In the past 30 years, they have brought up group after group of "red and expert" submarine commanders who have become backbone elements at various levels of the naval submarine units.

The military academy spends its time in a tense and yet orderly atmosphere. As soon as the trumpet heralds the arrival of dawn, waves of students take to the drill ground. Some of them practice at the single or double poles, some race on a swinging bridge; some join the marathon; and some participate in mass drills.... The school drill ground in the morning is the scene of flying dragons and leaping tigers, all full of youthful vigor. Eight classes are held in the school each day, and these classes are the main components of the curriculum. After supper, the students review their own lessons. Some of them carry out self-study in the classrooms; others go to the laboratories to familiarize themselves with the instruments; and still others head for the playground with basketballs in hand.

Immediately after sunset, the navigator students, led by their tutors, come to the shore and scan the sky with their sextants. Although modern science and technology have now developed to such a stage that satellites are used in navigation, sky scanning is still the most basic means of determining positions and this must be grasped by all navigators. They deftly operate their sextants, measure each twinkling star from the horizon, chart the heights and write down the times.

The school pays great attention to physical training. Aside from regular military training, it also includes swimming, boating and gangway ladder climbing in the curriculum. There are swimming pools in the school compound and special swimming beaches outside.

The students enjoy a large variety of outdoor life and are free to participate in various activities according to their own hobbies. They can read in the library, watch movies at regular hours, join in singing and sports contests, or organize sightseeing tours. By these means, they can enrich their minds as well as steel their wills.

Under the fluttering military banners and amid militant songs, the naval submarine school, as the cradle of "underwater dragons," is now marching along the road illuminated by Marxism-Leninism-Mao Zedong Thought toward the goal of national defense modernization! The vast open sea is beckoning them, and the motherland wants to be strong and prosperous. The younger generation dedicated to the defense of the motherland's territorial waters is now sturdily maturing under the care of the party. They are learning the required skill and will take to the oceans where they will build an underwater steel wall and dedicate themselves to the four modernizations!

BRIEFS

ANHUI PLA CIRCULAR--The party committee of the Anhui military district recently issued a circular calling on all PLA units under its jurisdiction to study and implement the guidelines of the 6th plenary session of the 11th CCP Central Committee. The circular says that in August each military subdistrict should hold an enlarged party committee meeting to include cadres at and above the regimental level to study the guidelines for 10 to 15 days. Its says leading cadres should go to the companies and militia units to help fighters and militiamen in their study. [OW231451 Hefei Anhui Provincial Service in Mandarin 1100 GMT 21 Aug 81]

WUHAN PLA UNITS MEETING--Having studied the CCP Central committee's 6th plenary session resolution, reviewed history and summed up experience in order to acquire a correct approach toward the party's shortcomings and mistakes, comrades attending the plenary session of the Wuhan PLA units party committee [date not given] believed that our party is capable of shouldering the arduous tasks entrusted by history. They felt that the resolution correctly evaluates the merits and demerits of the party and Comrade Mao Zedong and is an example of the Marxist attitude of seeking truth from facts. To guard against mistakes and shortcomings, they suggested keeping to the ideological line of seeking truth from facts, doing away with the practice of reporting only the good news and holding back the unpleasant, listening to the masses' views and conducting frequent self-criticism. INTERNATIONAL AFFAIRS

CHANGE IN HONG KONG'S STATUS DEEMED UNLIKELY

Hong Kong CHENG MING [CONTENDING] in Chinese No 45, 1 Jul 81 pp 55-56

[Article by Xiong Da [3574 6671]: "Looking at 1997 From the Present Relationship Between China and Hong Kong"]

[Text] In April of this year, Deng Xiaoping, vice chairman of the CCP Central Committee, received in Beijing Lord Carrington, British Secretary of State for Foreign and Commonwealth Affairs, and discussed the future of Hong Kong. Deng indicated: "Within or after 16 years, even if Hong Kong's status changes, the profits of investors will not be damaged." Two years before, when receiving MacLehose, the governor of Hong Kong, Deng had expressed the same idea.

Deng Xiaoping is the number one political strongman of the Chinese communists, and what he said once again made clear that the Chinese government is willing to maintain normal relations between China and Hong Kong.

The CCP's Consistent Position With Regard to Hong Kong

Hong Kong is China's territory. Owing to reasons that everybody knows, Hong Kong Island, Kowloon, and the New Territories were placed, one after another, under British rule. The Chinese communists have consistently refused to recognize the unequal treaties imposed on China by imperialism. However, the Chinese communists have adopted an attitude of tacit acquiescence with regard to the continuation of Hong Kong's status quo. Since the Chinese communists founded their state, they have engaged in many military operations, but their armed forces have never crossed the Shenzhen River. Even in 1976, when riots broke out in Hong Kong under the influence of a leftist ideological trend, and when some people proposed that British rule over Hong Kong be ended, the Chinese communists did not take this opportunity to regain sovereignty over Hong Kong.

The Chinese communists hold the absolute initiative over Hong Kong. If they wanted to recover it, they could move a division from the Guangzhou Units into Hong Kong in a short while, and the British forces stationed in Hong Kong would be no match for the division. Backing up a little, military force need not be used; it is only necessary to cut off the supply of grain, vegetable, and potable water, and Hong Kong will have no way to maintain normal life.

Why do the Chinese communists not take back Hong Kong but rather want to maintain its status quo? This is because it is advantageous for China to maintain Hong Kong's status quo. In other words, the present status of Hong Kong is of great practical value for China. On the eve of Lord Carrington's visit to China, the Chinese communists' most authoritative newspaper--RENMIN RIBAO--published a poem written by the famous poet Ai Qing, which best illustrates this point. Ai Qing, in his poem entitled "Hong Kong," wrote:

> "You are the motherland's import-export passageway,
> You are the place where commodities are exchanged,
> You are the link for friendly intercourse,
> You are the bridge to the five continents and four seas.
> For many years you have created immeasurable wealth for the
> motherland."

In the final analysis, how much wealth has Hong Kong created for China? This is really hard to estimate. In 1980, the total output of goods exported by China to Hong Kong reached US$ 1 billion, and China obtained US$ 400 million in income from tourists coming through Hong Kong. Adding other items, in that year the amount China earned in foreign exchange from Hong Kong reached over 5 billion yuan, about a third of its total income from foreign exchange.

Just imagine, if the Chinese communists had long ago taken back Hong Kong, its status would be far inferior to that of Shanghai or Tianjin and would not even be as good as that of Guangzhou. It would not have today's prosperity and importance, so how could it make as much a contribution to China? Also, how could it play the role of a "passageway," "link," and "bridge"?

Hong Kong's Role in China's "Four Modernizations"

China is now healing the wounds left by the catastrophe of the Cultural Revolution, readjusting the national economy, and beginning the construction of the four modernizations. The construction of the "four modernizations" requires the exploitation of natural resources, the introduction of funds from abroad, the assimilation of advanced technology and management experiences from abroad, the development of maritime lanes and transport.... Hong Kong has great prospects in all of these aspects. Compared to the other areas and cities, Hong Kong can play a greater role in aiding China's "four modernizations."

In the exploitation of China's natural resources, first on the list is the exploitation of energy sources. China's coastal waters contain rich deposits of petroleum and natural gas, and China needs international cooperation to extract these deposits in large amounts. Hong Kong can help China to exploit its natural resources, especially the oilfields in the South China Sea and the land adjacent to Hong Kong. If Hong Kong is used as China's logistical base and its advantageous conditions are fully utilized, then China can get twice the results with half the effort.

In raising foreign capital, Hong Kong has now become China's major source of foreign exchange. Following the increase in China-Hong Kong trade and the expansion of China's investments in Hong Kong, after several years Hong Kong has provided China with 10 billion yuan in foreign exchange. And Hong Kong is the banking center of the Far East, and if China so requires Hong Kong can obtain large loans for China.

With regard to technology and management experience, Hong Kong's laborers and workers are fairly skilled and its managerial ranks are of fairly high quality, and can provide China with experience in enterprise management and with specialized knowledge about production. Owing to its convenient geographical position and its cultural affinity, Hong Kong's experience is more easily assimilated by China and thus is of more use to it.

With regard to developing maritime shipping and transport, Hong Kong is one of the three largest commercial ports in the world and is the shipping center of the Asian and Pacific region. The ship tonnage controlled by Hong Kong shipowners now exceeds 50 million tons and is the fourth largest in the world, behind Greece, America, and Japan. China's shipbuilding industry is developing rapidly, and its maritime fleet is also rapidly expanding. China and Hong Kong can vigorously cooperate in the ocean shipping enterprise, and they are actually already in the preliminary stage of this cooperation.

In short, Hong Kong in many aspects can help China's construction of the "four modernizations." During construction of the "four modernizations," China can develop Hong Kong's role fully over a long period. By maintaining Hong Kong's status quo and establishing normal relations with Hong Kong, China can continue to regard Hong Kong as a "passageway," "link," and "bridge" to the world and will obtain even greater benefits.

The Chinese Communists Have Taken Positive Measures With Regard to Hong Kong

Normal relations between China and Hong Kong depend on safeguards by the three sides--China, Britain, and Hong Kong--and the decisive factor in this equation is China. China's attitude toward Hong Kong also decides the practical value and contributions that Hong Kong has and makes for China. As stated before, Hong Kong has made a great contribution to China over the past 30 years; during China's construction of the "four modernizations," it can make an even greater contribution. Therefore, China has taken many positive measures with regard to Hong Kong.

First of all, the Chinese leaders have once again guaranteed the profits of Hong Kong investors, allowing them to concentrate on developing their enterprises, and China has fully cooperated with Hong Kong with regard to many aspects, such as traffic, water supply, and restrictions on illegal immigration, which has spurre spurred the continued maintenance of Hong Kong's stability and prosperity.

Second, China has expanded its investments in Hong Kong. Over the past 5 years China's real estate investments in Hong Kong have reached a total of US$ 3 billion, banking businesses are being expanded continually, and the scope of companies selling goods made in China is being continually enlarged. Trade representative offices from various provinces and cities in China are being set up one after another, so that Chinese commercial organizations have become identified with those in Hong Kong, and China uses Hong Kong as a base for entrepot trade.

Third, the special economic zones opened up in the two provinces of Guangdong and Fujian (in Guangdong, the three places of Shenzhen, Zhuhai, and Shantou) draw in foreign commercial investments, (principally from Hong Kong), and many enterprises have been cooperatively set up. Recently, the leaders of Guangdong Province indicated that the city of Guangzhou and the island of Hainan, with regard to the use of overseas chinese capital and foreign capital, provide about the same conditions as the special zones. It looks as if the special economic zones will continue to expand.

Fourth, China strives to win over the group of Chinese capitalists in Hong Kong, and has expressed sincerity and respect for this group, not only taking in its funds, technology, and managerial experience, but also giving it the fullest support economically and the fullest encouragement politically, so that enterprises run by the group of Chinese capitalists in Hong Kong become more prosperous with each passing day and their attachment to China is strengthened.

What About 1997?

In brief, the present relations between China and Hong Kong are exceedingly normal, and the relations between China and Britain are extremely good. Some people worry in this fashion: In 1997, the lease on the New Territories will expire and China can take them back; Kowloon and Hong Kong Island could be recovered at the same time. This causes the people of Hong Kong to feel insecure, and to worry that their capital will be drained away and their businesses will languish. Hong Kong could become a stinking port [a play on the name Hong Kong, which means "Fragrant Port"]. This kind of "groundless worry" is hardly necessary.

First of all, the Chinese communists have never recognized the unequal treaties. Whether China takes back Hong Kong certainly does not depend on the limits of treatises or leases, but rather on what benefit Hong Kong is to China. Facts over the past 30 years fully show that the present relations between China and Hong Kong are most beneficial to the former, so why would the Chinese communists need to change over to new ways?

Second, even if Hong Kong's status is changed in the future, the Chinese communists will devise a policy that will ensure Hong Kong's stability and prosperity. This is because the stability and prosperity of Hong Kong are conducive to China's "four modernizations" and can bring even more benefits to China; contrarily, if there were an upheaval and a decline in Hong Kong, China would lose its "passageway" and "bridge" to the world.

Returning to mv theme, although normal relations between China and Hong Kong depend upon China, in the final analysis they depend on Hong Kong itself. If the Hong Kong and British authorities, as well as the personages who hold the balance with regard to Hong Kong, lack foresight and cause Hong Kong to lose its practical value for China so that it cannot make a contribution and even becomes detrimental to China, then the relations between China and Hong Kong cannot remain normal and Hong Kong's prospects will be dim. Neither China, Britain, nor Hong Kong is willing to see this situation arise; neither the billionaire nor the man who lives from hand to mouth is willing to see this situation. Therefore, this situation will certainly not appear.

COLUMNIST SAYS CHINA'S CONSTITUTION SHOULD GUARANTEE HONG KONG'S STATUS

Hong Kong CHENG MING [CONTENDING] in Chinese No 45, 1 Jul 81 p 54

[Article by E E [6166 6166--"Straight Talk"]: "Hong Kong's Status Should Be Guaranteed by Law"]

[Text] Even after repeated guarantees from CCP Vice Chairman Deng Xiaoping on Hong Kong's status, many residents of Hong Kong still have misgivings. This is because he has already reached the advanced age of 76, and even though he is in good health, "winds and clouds appear in the sky without warning, and man's fortune can change suddenly." Who can guarantee that within 16 years he will not have gone to see Mao Zedong? Moreover, "white clouds change into grey dogs--the changes in human affairs often take freakish forms." The affairs of human life are constantly changing, and after 16 years, even if he is still living, who can guarantee that he will continue to be in power and still be able, as now, to have a decisive effect on the political situation? "When a man is alive he has power, when he dies his power ceases," and the political situation on the mainland over the past 30 years keeps this fresh in our memory.

Hong Kong's future status involves both the delimitation of administrative regions and the effects of international treaties.

The original unequal treaties that ceded territory and gave concessions have already been abrogated, so we are not talking about the question of renewing a treaty. If one wants to conclude a new treaty, then, according to article 25 of the mainland's constitution: The power to ratify or abrogate treaties with foreign states resides with the NPC Standing Committee. Although the premier of the State Council has the right to make a proposal to the Standing Committee, he cannot by himself decide on a treaty's existence or on its effect. Now, the importance of Hong Kong's economic and political situations means that Hong Kong could definitely be put on an equal footing with a municipality directly under the central government such as Beijing, Tianjin, or Shanghai. According to article 22 of the mainland's constitution, the power to approve the division and delimitation of the country into provinces, autonomous regions, and municipalities directly under the central government resides with the NPC, and neither the premier of the State Council nor the CCP chairman can make this decision.

The CCP is stressing that it wants to perfect China's legal system, and the necessary condition for doing so is respect for the constitution. The position of the CCP leader in this respect is that he can only put forward suggestions and they do not have any legal effect. To comply with the strict nature of the legal system, it is also inappropriate for an individual to issue a "guarantees" as he pleases.

Since it is advantageous for China to maintain Hong Kong's status quo, it should use the method that puts the minds of overseas personages even more at ease, viz, legal guarantees, thereby changing the method of verbal guarantees, which have difficulty in being effective for a long period of time and which pose problems of legality.

The mainland is going to revise its constitution this year. According to disclosures last September Hu Yaobang, general secretary of the CCP Central Committee, told a meeting of party committee secretaries from the provinces, municipalities, and autonomous regions: "The constitution must undergo a major revision." In reality, this so-called "major revision" is not a patching-up job but a major overhaul, a redrafting of a new constitution to take the old one's place. The draft of the new constitution has not yet been made public, but we believe it has much new content as compared with the constitution currently in effect. The additions were necessary because the constitution is the fundamental law, the legal basis for the legislation and administration by the organs of the state. At present, some measures taken by the Chinese communist government, strictly speaking, lack a legal basis. For example, the current constitution stipulates that only in localities inhabited by minority nationalities can there be "regional autonomy," and does not authorize the government or the NPC Standing Committee to set up "special economic zones" in other localities. Obviously, owing to the fact that China is still in the beginning stage of gradually perfecting its legal system, some gaps and omissions are hard to avoid. When revising the constitution, China should remedy these gaps and omissions, and explicitly provide in the constitution for the setting up of "special economic zones," even to the extent of permitting some provinces to share in the implementation of "specific policies and flexible measures," in order that laws and government decrees concerning "special economic zones" will be based on law at the highest level. At the same time, China should also make explicit stipulations for the future status of Hong Kong as well as Taiwan. The Chinese communists have declared: After the peaceful unification of Taiwan and the mainland, the status quo of Taiwan's economic system, political system, as well as military system can be maintained and will not be changed. Obviously, the future status of Hong Kong should also be like this, i.e., the present living standard of the residents would be preserved, and the residents of Hong Kong would themselves manage their political affairs. On 5 June of last year, when Xi Zhongxun met with personalities of various circles in Macao, he said: "In reality, Macao and Hong Kong are special areas; their territory is China's but their way of doing things can be flexible. In the future, after Taiwan is returned to China, it will be the same kind of special areas." Obviously, what Mr Xi said in public during his official visit was not just his individual view but had been approved by the highest level of leadership. However, to explicitly stipulate this in the constitution, as opposed to merely giving a verbal guarantee, will set the minds of Hong Kong residents even more at ease and Hong Kong's economy will continue its steady development, thereby making an even greater contribution to China's construction.

'CHINA POST' EDITORIAL ON PRC THREAT TO TAIWAN

OW240635 Taipei CHINA POST in English 20 Aug 81 p 4

[Text] Senator John Glenn, Dem-Ohio, revealed August 17 in Peiping that Chinese communist leaders have refused to reassure the United States that Red China will not take Taiwan by force.

The Ohio Senator, the ranking minority member of the Senate Asian and Pacific Subcommittee said that he explained to Peiping's leaders that "the continued assurances of no military takeover were key to there even being normalization" of relations between the United States and Peiping. But he said that in his discussions with Chinese communist leaders including "Vice Premier" Chi Peng-fei, "Vice Foreign Minister" Chang Wen-chin, and Hao Te-Tsing, head of "People's Institute for Foreign Affairs," "they would not guarantee that there would not be a military takeover."

Senator Glenn also revealed that arms sales to the Republic of China was a "major stumbling block" in improving Washington-Peiping relations. Communist China, he indicated, is vigorously opposed to continued U.S. arms sales to Taiwan and has promised to make a strong response if they continue.

It is clear that by the outspoken refusal of Peiping to reassure the United States not to use force against Taiwan, Peiping has violated the essential condition upon which the United States normalized its relations with the Peiping regime. The United States should take serious view of this situation and stop any thought about arming that unreliable regime with any "lethal arms," rashly promised by U.S. Secretary Alexander M. Haig, Jr. The U.S. Congress should indeed hold extensive hearings on this basic issue of normalization and arms sales which will inevitably endanger the peace and security of the Taiwan Straits and the Asian and Pacific region.

In view of the Chinese communist threat against the Republic of China to use force, there is an urgent need to speed up the arms sales program by the United States to the Republic of China so that its self-defense may be strengthened. Time is short and any delay will have detrimental effects upon the security of the free people of the Republic of China.

On the other hand, the United States should postpone indefinitely the arms sales talks with the Peiping regime tentatively scheduled for September as the State Department announced the other day. Any arms sale to the Peiping regime will strengthen its power of aggression against the Republic of China or Southeast Asian nations including the ASEAN nations. But it will be inadequate to counter-balance the Soviet strength as the disparity between Peiping and Moscow if their military strength is too great to be overcome by any U.S. supply of "lethal arms." The United States should not pay any attention to Peiping's boast about its ability to restrain the Soviets. It has neither the facilities nor the fighting spirit to do it, as Peiping's military establishment is an outdated and demoralized outfit which cannot possibly fight a modern war. Senator Glenn should give the Senate Asian and Pacific Sub-committee a factural report of his findings so that all free people may know the truth about Peiping's warlike behavior.

'CHINA POST' EVALUATES REAGAN'S PERFORMANCE

OW240643 Taipei CHINA POST in English 18 Aug 81 p 4

[Text] It is more than half a year since U.S. President Ronald Reagan entered the White House. During these six months he has demonstrated his strong will, his courage and excellent discerning powers. The U.S. President's possession of these qualities is indeed a blessing for the Americans. It also gives the Free World great encouragement.

Reagan took office as the highest executive of the U.S. at a time when the country had been weakened by Jimmy Carter's policies. In a period as short as six months, he has come up with three major policies: a tax reduction, the manufacture of the neutron bomb and resumption of the study of the B1 bomber, and a hard stand on strikes by federal employees. Timid Carter would not have dared to Taiwan relations. Act faithfully. [Sentences as published]

It should be understood that Communist China is likely to become reconciled with the Soviet Union at any time. It is dangerous for the U.S. to gamble on Communist China and on Teng Hsiao-ping, who is close to 80 years of age. The U.S. used to base its policy toward Iran on Pahlavi's personal attitude toward the U.S. The success of these policies, and even the rash Nixon could hardly have made the same decisions.

The only regrettable thing about Reagan's performance so far is that he has not been able to reverse the abnormal U.S. policy toward China by actively expanding U.S. relations with the Republic of China.

In fact, the repeated criticisms that Communist China has been hurling at U.S.-ROC relations and its threat that it may re-establish relations with the Soviet Union are nothing but a pretense. It is as meaningless as the Soviet threat to Carter concerning the neutron bomb.

We earnestly hope that President Reagan will calmly reconsider his China policy and fulfill his campaign promise of implementing that type of policy.

President Reagan showed exceptional wisdom and farsigntedness in his declaration of his China policy during his election campaign. We believe that, after he has handled the urgent issues mentioned above, he will seek to improve relations with the ROC based on those declarations.

TAIWAN DEFECTOR ADDRESSES BEIJING PLA RALLY

OW200230 Beijing XINHUA Domestic Service in Chinese 1247 GMT 19 Aug 81

[Text] Beijing, 19 Aug (XINHUA)--At a rally held today by the leading organs of the PLA Air Force and directly subordinate units to welcome Huang Zhicheng on his crossing over and to announce the order for his appointment, Huang Zhicheng said: "I had longed to return to the Mainland of the motherland. The road I have chosen is absolutely correct."

He said that he lived in Taiwan for 29 years and served 12 years in the KMT Air Force. He said that the people in Taiwan have no way to correctly understand the conditions on the Mainland because the Taiwan authorities have blocked news from the Mainland for a long time and have generated groundless propaganda. However he said that he was able to learn about the true conditions and policies on the Mainland from foreign magazines, leaflets sent to Taiwan from the Mainland by balloons and radio broadcasts from the Mainland. These sources enabled him to realize that the Taiwan authorities have been deceiving the people in Taiwan.

Huang Zhicheng said: Taiwan lacks natural resources and capital. Everything there relies on imports and foreign investment. The expressway on Taiwan was built with foreign loans and the tolls have increased from time to time. Some of the light industrial products manufactured in Taiwan depend on export sales and the current economic recession in the capitalist world has seriously affected Taiwan, where commodity prices are soaring and the economic outlook is gloomy. Some young people have become perplexed and depressed and have degenerated in such a decadent society while others live in agony.

Huang Zhicheng said: Our motherland is a country with over 5,000 years of history and civilization. It is big and populous and is abundant in products. We should be prosperous and should work hard. Our motherland has great potential and its future development is boundless. I secretly made up my mind to fly toward brightness and to return to the motherland at an early date so that I could contribute my youthful vigor and blood, my knowledge and ability to the motherland. I realized that I must be very determined to fly back to the Mainland because I left behind a kind mother, who is over 60 years of age, my brothers and sisters, who cherish me, and my classmates and colleagues, who are like brothers to me. Furthermore, I had to risk my lief to make the return possible. Nevertheless, I had the courage and strength whenever I thought about the motherland.

He said: I remain very excited about the past 10 days or so. I have met many senior officers, have come into contact with numerous fellow countrymen and have toured places of historical interests and scenic beauty, all of which has benefited me a great deal. In coming to Beijing, I passed through seven provinces and municipalities. All places north and south of the Changjiang are busy producing. The simplicity of the people is an eyeopener to me. I find everything fresh and new and have discovered that the motherland is truly great and lovely. For the first time I have personally experienced the great differences of the two societies. The road I chose is absolutely correct.

Huang Zhichang said: Taiwan and the motherland have been separated for over 30 years. All people who are conscious of the state and the nation are earnestly supporting the early return of Taiwan to the embrace of the motherland in order to realize the reunification of the motherland at an early date. He said: The people I have encountered on my journey from Fujian Province to Beijing share a common desire and aspiration for the unity and reunification of China. The dream of kinfolks on both shores of the Taiwan Strait is unity and reunification. I feel that the return of Taiwan to the embrace of the motherland and the fulfillment of the great cause of reunification are in accordance with the will of the people and represent the general trend of events. The government of the motherland has issued a series of principles and policies for the peaceful solution of the Taiwan question. I feel that the government is sincere and that the Taiwan authorities should make a positive response.

'RENMIN RIBAO' ON 'PERSECUTION' OF TAIWAN COMPATRIOTS

HK171054 Beijing RENMIN RIBAO in Chinese 13 Aug 81 p 4

[Report: "Responsible Person of All-China Federation of Returned Overseas Chinese on Chen Wencheng's Death, Demands Cessation of Persecution of Compatriots in Taiwan"]

[Text] On 11 August, the responsible person of the All-China Federation of Returned Overseas Chinese issued a statement to the press on the murder of Chen Wencheng, a scholar from China's Taiwan Province who made his home in the United States, by the Taiwan Garrison Command. He pointed out: The murder of Dr Chen Wencheng, a compatriot from Taiwan who lived in the United States, by secret agents of the Taiwan Garrison Command during his visit home has aroused great indignation among the vast numbers of Chinese nationals residing abroad as well as among the masses of returned Overseas Chinese and their dependents. They all condemn this savage political act and strongly demand an earnest confession from the Taiwan authorities. We fully support this just demand.

The responsible person said: The Taiwan authorities have been carrying out espionage activities among the Overseas Chinese and persecuting them for many years. For this, they have long been held in contempt by the Overseas Chinese. To this day, they still show no repentence and cling obstinately to their cause by pressing on with their espionage and terrorist activities inside and outside Taiwan and intensifying their efforts to suppress the people of Taiwan. This will not be tolerated by the people of the whole of China, including the people of Taiwan and Overseas Chinese. We would like to convey our sincere solicitude to the family of Dr Chen Wencheng. The responsible person also said: The Taiwan authorities must stop persecuting compatriots in Taiwan and must guarantee the democratic rights of compatriots in Taiwan.

FUZHOU YOUTH WELCOME TAIWAN PILOT

OW151236 Beijing XINHUA in English 1206 GMT 15 Aug 81

[Text] Fuzhou, 15 Aug (XINHUA)--Huang Zhicheng, the Taiwan Air Force pilot who crossed over to the Mainland in a F-5 fighter last Saturday, joined 150 young people at a gathering in his honor here yesterday evening.

The young people pressed around him to shake his hand, and Huang Zhicheng repeatedly said "Thank you all."

Hu Huige, a stepdaughter of Wang Sheng who is a Kuomintang general and director of the Taiwan KMT "General Political Warfare Department of the Ministry of National Defense," made a special trip back to Fujian Province to attend the gathering.

She told Huang Zhicheng that last month she sponsored "I love the motherland" activities for the Fujian Provincial Youth Federation. Some youths whose parents are now in Taiwan had taken part.

Huang Zhicheng said: "I never expected that relatives of Taiwan KMT big shots could live in such freedom and happiness on the Mainland."

A professional art ensemble entertained him with local songs and dances and he sang a song entitled "Heirs of the Dragon," which is popular in Taiwan and expresses the Taiwan people's love for the motherland.

The same day, the Fujian provincial committee of the Chinese people's political consultative conference gave a tea party to welcome the pilot.

A number of former KMT pilots, who crossed over before or after the founding of the people's republic in 1949, have sent telegrams to Huang Zhicheng, praising his patriotism and congratulating him on his enlistment in the air force of the Chinese People's Liberation Army. They include Huang Youshou, deputy chief of staff of the air force of the PLA, Chengdu units; Huang Cungang, deputy director of the Shandong regional administration of the general administration of Civil Aviation of China; Xu Tingze, deputy to the Fifth National People's Congress and deputy chief of staff of a PLA air force unit; and Liu Huantong, Zhang Yunong, Zou Yuekun, Du Daoshi, Huang Tianming and Zhu Jingrong, who all hold commanding posts in the air force or in civil aviation departments.

CYL, YOUTH FEDERATION LEADERS PRAISE TAIWAN PILOT

OW151104 Beijing in Mandarian to Taiwan 0400 GMT 15 Aug 81

[Text] According to a ZHONGGUO QINGNIAN BAO report, members attending the 3d session of the 10th CYL Central Committee and the 2d meeting of the 5th All-China Youth Federation Committee, who are natives of Taiwan or who have relatives in Taiwan, warmly acclaim the patriotic action of Huang Zhicheng who has returned to the Mainland with his airplane. There is a strong cohesive force hidden in the hearts of Chinese on both sides of Taiwan Strait. Huang Zhicheng's action reflects the wish of the people and youth on both sides of the Taiwan Strait for reunification and against division.

(Xu Jinlai), member of the All-China Youth Federation Committee, was formerly an enlisted man in the Kuomintang's armed forces. In 1965, when he was performing duties at sea, he resolutely returned to the mainland. When he heard about Huang Zhicheng's crossing over with his airplane, he was filled with emotions. He said: Peaceful reunification of the motherland is the will of the people on both sides of the Taiwan Strait. Huang Zhicheng has taken the correct road.

(Gao Hedai), a young woman worker of Taiwan origin in the Tianjin machine-building plant and member of the China Youth Federation Committee, said with feeling: Peaceful reunification of the motherland accords with the will of the people and the general trend of events. Anyone who refuses peace negotiation and insists on division is unpopular.

Wang Hua, Standing Committee member of the All-China Youth Federation Committee and teacher at (Pingyi) primary school in Anfu County, Jiangxi Province, is a daughter of Wang Sheng, now director of the General Political Warfare Department of the Kuomintang Armed Forces. When she heard about Huang Zhicheng's crossing over, she was both happy and worried. She said: Huang Zhicheng's relatives, colleagues and close friends are still in Taiwan. I wonder whether they are being implicated. I hope that the Taiwan authorities will have sense of righteousness and, in the same way the Chinese Communist Party has treated me and my sisters on the Mainland, attach importance to the motherland's reunification and the reunion of compatriots of our own flesh and blood and give Huang Zhicheng's relatives, colleagues and friends the right to lead a normal life without fear of persecution. Any acts to persecute patriots and the innocent will be condemned by history.

FIRST TAIWAN-INDIA SEMINAR HELD IN TAIPEI

OW161449 Taipei CNA in English 1336 GMT 16 Aug 81

[Text] Taipei, 16 Aug (CNA)--The first Sino-Indian cultural and economic seminar was held in Taipei on the 34th independence day of India Saturday to discuss ways of improving Sino-Indian relations.

The one-day seminar, attended by some 500 persons, was presided over by Chandur D. Gidwani, honorary president of the Indian's association of Taipei.

Guest speakers at the seminar included Gen. Ho Ying-chin, strategy adviser to the president; Vice Education Minister Li Mo; Hsiao Wan-chang, deputy director-general of the Board of Foreign Trade; and Lo (?Lou-hsing), counselor of the Overseas Chinese Affairs Commission.

In his speech, Gen. Ho said the peoples of the Republic of China and India should strengthen their cooperation to deepen bilateral substantive relations so as to halt the expansion of communism in Asia.

He said the late President Chiang Kai-shek had stated during the war and before India's independence that "the world would have no genuine peace if China and India gained no freedom." China and India are the two most populous countries on earth.

The Indians' Association of Taipei, sponsor of the seminar, was established in 1974 and has 120 Indian companies as members. These companies account for about $500 million worth of annual exports from Taiwan.

TAIWAN SCHOLARS WELCOME TO ANNIVERSARY SYMPOSIUM

OW210856 Beijing XINHUA in English 0707 GMT 21 Aug 81

[Text] Beijing, 21 Aug (XINHUA)--Scholars from Taiwan are welcome to participate in a symposium commemorating the 70th anniversary of the 1911 revolution, opening in Wuhan on October 12. This was revealed by Professor Liu Danian, chairman of the symposium organizing committee in an interview with XINHUA today.

Liu Liu Danian, director of China's Institute of Modern History, said the four-day symposium will provide historians with the opportunity to discuss views and present studies on the great 1911 revolution, the bourgeois democratic revolution led by Dr. Sun Yat-sen which overthrew the Qing dynasty.

Professor Liu said that invitations to the symposium have been accepted by more than 40 scholars from Australia, Canada, Korea, France, Japan, Romania, Thailand, United Kingdom, the United States and Hong Kong and Macao regions. The committee has received 200 papers submitted by Chinese and foreign scholars. "We hope the historians will fully air their academic views and let a hundred schools of thought contend at the symposium," he added.

Liu Danian said that any scholars from Taiwan who so wished would be invited to take short tours around the Mainland or to visit their relatives and friends.

SCHOLARS INVITED TO PRC HISTORY SYMPOSIUM

OW230308 Beijing XINHUA Domestic Service in Chinese 0802 GMT 22 Aug 81

[Excerpt] Beijing, 22 Aug (XINHUA)--Liu Danian, chairman of the organizing committee for the symposium in commemoration of the 70th anniversary of the 1911 revolution, was recently interviewed by a XINHUA correspondent on welcoming scholars from Taiwan Province to participate in the symposium.

Liu Danian said: The 1911 revolution led by Dr Sun Yat-sen was a great bourgeois democratic revolution in China's modern history. To overthrow the Qing dynasty's feudal monarchical rule and found a democratic republic, the revolutionary forefunners waged arduous struggles and heroically laid down their lives, performing a magnificent service for the Chinese people. Our symposium in Wuhan Municipality from 12-15 October this year will be part of the activities commemorating the 70th anniversary of the 1911 revolution. The year-long preparations for the symposium have been completed.

On behalf of the organizing committee for the symposium, Liu Danian extended a formal invitation to the historians of Taiwan Province to take part in the grand symposium so they can join their counterparts on the Mainland in discussing the glorious history of Dr Sun Yat-sen and the 1911 revolution led by him. In this way we can exchange experiences and learn from each other's strong points in order to offset weaknesses in the study of history.

He said the travel expenses incurred by historians from Taiwan will be paid by the organizing committee for the symposium, and their itinerary will include Beijing, Wuhan, Guangzhou and Guangdong Province's Zhongshan County. After the symposium they can either leave the Mainland or stay for a short visit. The organizing committee will make proper arrangements with the travel services or agencies for those who wish to have a sightseeing tour or visit their relatives and friends on the Mainland.

Liu Danian hopes the Taiwan authorities will honor Dr Sun Yat-sen's great historical feats, stress national righteousness and not keep those historians who want to participate in the symposium from leaving Taiwan. In fact, he hopes the Taiwan authorities will make their travel convenient. He again warmly welcomed Taiwan's scholars to come to the Mainland for the symposium.

BRIEFS

DEFECTOR VISITS FUJIAN PLA--On the morning of 13 August, Mr Huang Zhicheng was invited to visit the broadcasting station of the Fujian Front PLA units in a certain locality in Fujian. Huang Zhicheng visited the station's broadcasting studio, generator room and transmitter station. Everywhere he went, he was warmly received by cadres and fighters busy at their jobs. At the broadcasting studio, a female announcer played for him a taperecording of the greeting given him when he returned to the motherland with his airplane. He listened happily to the tape and thanked the station's director. He said: "Several days have gone by since I returned to the motherland. I think my mother is very worried about me. After my conditions here have been broadcast, my mother can surely feel relieved now. I am my mother's youngest son, and she loves me most. My elder brothers and sisters also love me dearly. I believe that when they have heard your broadcast and learned that I have safely returned to the motherland, their minds can now be at ease. In returning to the motherland, I am innocent. My relatives are also innocent. The many schoolmates and colleagues of mine who are now working in the KMT Air Force are also innocent. I hope Taiwan's authorities concerned do not implicate them." 'TAIWAN RELATIONS ACT' IMPERILS NORMAL U.S.-CHINA TIES

Tianjin GUOJI WENTI YANJIU [JOURNAL OF INTERNATIONAL STUDIES] No 1, Jul 81 pp 21-27

[Article by Zhuang Qubing [8369 0637 4014], Zhang Hongzeng [1728 7703 1073], and Pan Tongwen [3382 0681 2429]: "Critizing the U.S. Taiwan Relations Act"]

[Text] Lately, when leading members of the U.S. Government discuss U.S. policy toward China, they express, on the one hand, their wish to develop relations between the two countries in observance of the principles of the joint Sino-American Communique on Normalizing Diplomatic Relations, but on the other hand they say that they will conduct affairs according to the Taiwan Relations Act passed by the U.S. Congress. They have declared again and again that there is no contradiction between the two. What is the actual substance of the Taiwan Relations Act? What policy does it reflect? Is it in contradiction with the Joint Sino-American Communique? If implemented, what will be its effect on Sino-American relations? These are questions that anyone who feels concern for the prospects of Sino-American relations must seriously ponder.

1. The Process That Gave Birth to the Taiwan Relations Act

In December 1978, the governments of China and the United States negotiated, agreed, and proclaimed to the world: As of 1 January 1979, the two countries will recognize each other and establish diplomatic relations with each other. The U.S. Government accepted three principles which the Chinese Government had been enunciating for a long time--namely, that the U.S. Government would sever "diplomatic relations" with Taiwan, abrogate the U.S. Taiwan Joint Defense Treaty, and withdraw all military personnel from Taiwan. In the Joint Sino-American Communique, the United States "recognizes the Chinese position to the effect that there is but one China, and that Taiwan is a part of China," and "acknowledges that the Government of the PRC is the only legitimate government of China, and that it is within this framework that the American people will maintain future cultural, commercial, and other unofficial relations with the people of Taiwan." With this Joint Communique, a new page in the history of Sino-American relations was opened.

When agreement was reached between China and the United States on resuming diplomatic relations, the Carter Administration indicated that it would "adjust" American laws to regulate the unofficial relations between the United States and Taiwan in line with the new conditions created by the normalization of

Sino-American relations. On 26 January 1979, the Carter administration submitted to the U.S. Congress the draft of the Taiwan Relations Act. The two houses of Congress debated the draft for about 2 months, passed the final version on the 28th and 29th of March, respectively, and sent it to President Carter, who signed it on 10 April.

Since the Taiwan Relations Act was formulated so closely following the Joing Sino-American Communique, and since, according to the pronouncements of the American authorities themselves, the law was to regulate U.S.-Taiwan relations in line with the new situation following the resumption of diplomatic relations between the United States and China, it stands to reason that this law would strictly observe and fully recognize the basic principles acknowledged by the United States in the Joint Communique and would be truly adapted to the new situation following the resumption of Sino-American diplomatic relations. However, the draft of the Taiwan Relations Act that President Carter sent to Congress, and the clarifications to the draft that were given to Congress by high officials of the U.S. Government, already contained items that contravened the Joint Sino-American Communique. Although the members of Congress in general did not oppose the resumption of diplomatic relations, considering this to be in the best interests of America, there were quite a few who attacked the Carter administration for "yielding too far" to China in order to bring about the normalization of relations. These men tried hard to add to the Taiwan Relations Act one clause after another that would contravene the Joint Communique and would pull back the American standpoint on the Taiwan question from the position expressed in the Joint Communique. Their proposals centered mainly on the following two questions:

First was the question of a so-called "guarantee of Taiwan's security" for the period after the termination of the U.S.-Taiwan Mutual Defense Treaty. There is no provision relevant to this point in the draft of the Taiwan Relations Act submitted to Congress by the Carter administration. However, many congressment considered this a "great flaw." Quite a number of congressmen proposed that the United States must clearly assume a commitment to "protect Taiwan from attack by mainland China." Some congressmen demanded that certain articles in the U.S.-Taiwan Mutual Defense Treaty be copied word for word into the Taiwan Relations Act. Other congressmen suggested that it be stipulated clearly that in case China were to resort to armed force against Taiwan, the United States would immediately cancel its recognition of China and break off commercial contacts with China. Others demanded that the U.S. Government exact a guarantee from the Chinese Government that it would not attack Taiwan. Others proposed adding to the provisions concerning American arms sales to Taiwan a clear statement that these would include the most modern military equipment, etc, etc. Although the majority of congressmen would not go along with such barefaced methods, they still felt that it was not enough for Carter merely to state in his public announcement of the resumption of diplomatic relations that the United States "continues to have an interest in the peaceful resolution of the Taiwan issue," but [felt] that the Taiwan Relations Act should contain a provision "guaranteeing Taiwan's security." Only an extremely small minority of congressmen pointed to the self-evident contradiction that the United States on the one hand was establishing a new relationship with China and terminating the U.S.-Taiwan Mutual

Defense Treaty, but on the other hand it was declaring that it would not tolerate the use of military force by China against Taiwan. Generally speaking, the debate on this question in Congress at that time was, precisely as the CONGRESSIONAL QUARTERLY WEEKLY REPORT expressed it, mainly not on whether the Taiwan Relations Act should contain a clause "guaranteeing Taiwan's security," but on the question "to what degree of force and to what degree of formal recognition"[1] the United States should commit itself. To use the words of the chairman of the congressional Foreign Relations Committee: "How best to delineate such a guarantee."[2]

Second was the question of the character of agencies established by the United States and Taiwan to conduct their mutual affairs, which in fact is a question of the character of their mutual relations. The Carter administration originally proposed to Congress the establishment on Taiwan of an "American Institute in Taiwan" to deal with all unofficial relations between the American people and the people of Taiwan. Legally, this was to be a corporate body of a nongovernmental character, and Taiwan was to establish a similar organization in the United States (the so-called Coordination Council for North American Affairs). During the debate in Congress, however, many congressmen brazenly tried to confer an official character on these organizations. Some proposed that the appointment of the person in charge of the American Institute in Taiwan must be approved by Congress, as in the case of high-ranking officials of the U.S. Government or its diplomats. Some proposed that the staff of the American Institute in Taiwan should all be on the payroll of the U.S. Government. Others proposed granting personnel of the American Institute the same diplomatic rights and immunities as those enjoyed by diplomats. A considerable number of congressmen even went so far as to demand the establishment of "liaison offices" by the United States and Taiwan, in the same way that liaison offices existed for a period of time in the United States and China before the two countries resumed diplomatic relations. Although the majority of congressmen voted down all these amendments, they still passed some resolutions which, comparatively speaking, implicitly give the agencies of the United States and Taiwan the actual character of diplomatic organizations.

This shows that in formulating the Taiwan Relations Act, the dominating idea which guided the U.S. Congress was not how to arrive at a Taiwan Relations Act that would implement the basic principles of the Joint Communique just signed by the United States and China, but rather how to partially counteract and negate those principles by means of the Taiwan Relations Act. One congressman admitted that the U.S. Congress, in formulating the Taiwan Relations Act, aimed at maintaining the status quo and at preserving the relations with Taiwan as they had been heretofore, as if the resumption of diplomatic relations between the United States and China had changed nothing in the U.S.-Taiwan relationship.

President Carter made valuable efforts to bring about the normalization of relations between the United States and China. He demonstrated his opposition to those proposals in Congress which would have been most brazen and flagrant violations of the Joint Communique, even threatening to use his veto. However, he approved a series of other "amendments" which also contravene the Joint Communique. When he signed the Taiwan Relations Act into law, he obstinately asserted that this law is consistent with all Sino-American agreements reached at the time of normalization of relations. Only on a few particular questions did he maintain reservations and express his intention to use presidential "discretion," which the Congress had authorized in the Taiwan Relations Act, in order to take action, using this "discretionary power," in a manner consistent with the Joint Communique.

2. The Taiwan Relations Act Violates the Sino-American Agreement on Resumption of Diplomatic Relations as Well as International Law

As already mentioned, the United States acknowledges in the Joint Communique that the Government of the PRC is the only legitimate government of China, that there is but one China, and that Taiwan is part of China. Since this is so, the United States must also acknowledge that it is completely a matter of Chinese internal policy what method China may choose to return Taiwan to its mother country and to restore the unity of the country. As a basic principle of international law, neither the United States nor any other country may interfere in this matter.

However, the Taiwan Relations Act clearly stipulates:

"The decision of the United States to establish diplomatic relations with the PRC rests upon the expectation that the future of Taiwan will be determined by peaceful means";

"Any effort to determine the future of Taiwan by other than peaceful means, including by boycotts or embargoes, will be considered a threat to the peace and security of the Pacific region and of grave concern to the United States";

"The United States will maintain the capacity to resist any resort to force or other forms of coercion that would jeopardize the security, or the social or economic system, of the people on Taiwan";

"The President is directed to inform the Congress promptly of any threat to the security or the social or economic system of the people on Taiwan and any danger to the interests of the United States arising therefrom. The President and the Congress shall determine, in accordance with constitutional processes, appropriate action by the United States in response to any such danger."

These provisions obviously violate the Sino-American agreement on the resumption of diplomatic relations as well as the principles of international law. Anything concerning the future, security, social or economic system of the Chinese province of Taiwan is purely a matter within the scope of China's sovereign rights. What right has America to interfere here without rhyme or reason?

The provisions regarding the so-called "guarantee of Taiwan's security" were included in the Taiwan Relations Act as a result of the "joint proposal" by two congressmen. Explaining this "joint proposal," one of them publicly declared it to be an "equivalent"[4] for the U.S.-Taiwan Mutual Defense Treaty that had just become invalid. The other congressmen even boasted that the "joint proposal" would make the "guarantee" of Taiwan's "security" even much broader than was the case with the original Mutual Defense Treaty: for one thing, the Mutual Defense

Treaty merely provided against any danger to Taiwan's "security," but the Taiwan Relations Act also provides against dangers to Taiwan's "social and economic system"; for another, the Mutual Defense Treaty merely provided for action against the use of military force against Taiwan, while the Taiwan Relations Act provides for action against "other forms of coercion," such as blockades and embargoes.[5] It is no wonder, then, that following the passage of the Taiwan Relations Act, a former U.S. "ambassador" to Taiwan commented: "After the U.S. headquarters on Taiwan and all other American military personnel are removed from the island and the Mutual Defense Treaty becomes invalid on 1 January 1980, the Taiwan Relations Act, as amended by Congress, will guarantee Taiwan's security and stability in the same way that formal diplomatic relations and treaties did in the past."[6] It also is no wonder that the chairman of the U.S. Chamber of Commerce on Taiwan believes that the provision of the Taiwan Relations Act, which "guarantee Taiwan's security, are even stronger than the corresponding provisions in the Mutual Defense Treaty."[7]

This shows that by providing in the Taiwan Relations Act for the so-called "guarantee of Taiwan's security," the United States is in actual fact closely following up its announcement of the termination of the Mutual Defense Treaty with a restoration of that treaty in a disguised form. This is not the attitude that a country should adopt in handling its foreign affairs.

It must be emphatically pointed out that the Taiwan Relations Act specifically stipulates that the United States intends to continue to provide Taiwan with so-called "defense materiel" and "defense services." Everyone knows that the local Taiwan administration is obtaining American weapons for the purpose of resisting the Chinese central authorities. Since the United States recognized the Chinese central government as the sole legitimate government of China, and since Taiwan is a part of China, how can the United States, according to generally recognized principles of international law, support the local administration of a country by supplying it was arms, thus enabling it to offer resistance against its central government? Did the United States not also, during the Civil War, resolutely oppose the supply of weapons by Great Britain to the Southern states and consider such action a breach of international law? In 1965, the General Assembly of the United Nations adopted a "Declaration of Inadmissiblity of Intervention in the Domestic Affairs of States, and Protection of Their Independence and Sovereignty," which demands that "no state may interfere in civil strife in another state."[8] Didn't the United States cast its vote in favor of this declaration? The "Declaration on Principles of International Law Concerning Friendly Relations and Cooperation Among States in Accordance with the Charter of the United Nations," passed by the General Assembly of the United Nations in 1970, clearly points out: "It would violate the spirit and the principles of the Charter if any country were to try to partially or completely destroy another country's unity or territorial integrity"; "every state has the duty to refrain from organizing, instigating, assisting, or participating in acts of civil strife in another state."[9] Wasn't the United States the country that sponsored that declaration at that time? A congressman who had "opposed the recognition of the PRC as the only legitimate government of China" asked in Congress: "How can we sell military equipment and arms to the people on Taiwan when we have recognized Peking as the 'sole government' of China? Are we not, then, selling arms to a rebellious province?"[10] This precisely is indirect evidence that selling arms to

Taiwan is inconsistent with recognition of the PRC as the only legitimate government of China.

The fact that the Taiwan Relations Act violates the Joint Communique and the principles of international law is evident not only in the so-called "guarantee of Taiwan's security" question, but also in the character of U.S.-Taiwan relations. When it resumed diplomatic relations with China, the United States recognized that Taiwan is part of China. When the United States terminated "diplomatic relations" with Taiwan, the United States declared that the American people will maintain cultural, commercial, and other unofficial relations with the people on Taiwan, in line with the recognition of the PRC as the only legitimate government of China. However, quite a number of provisions in the Taiwan Relations Act in actual fact continue to treat Taiwan as a "state," treat the administration on Taiwan as the "government" of a "state," and strive to confer an official character on U.S.-Taiwan relations.

The Taiwan Relations Act stipulates: "Whenever the laws of the United States refer or relate to foreign countries, nations, states, government, or similar entitites, such terms shall include and such laws shall apply with respect to Taiwan." An American deputy secretary of state at that time also confirmed that one of the purposes of the Taiwan Relations Act is to have Taiwan considered a "state."[11]

Although the Taiwan Relations Act states that future relations between the United States and Taiwan shall be conducted through "nongovernmental bodies," it also stipulates that agreements and transactions between the "American Institute in Taiwan" and Taiwan authorities and other organizations "shall be subject to the same congressional notification, review, and approval requirements and procedures" as if these agreements and transactions were made through organs of the U.S. Government. The said law also provides, with respect to the personnel of the agencies that will be mutually established by the United States and by Taiwan, that they shall enjoy "such privileges and immunities as may be necessary for the effective performance of their functions." According to the explanation by the Carter administration and the "Agreement on Privileges and Immunities" concluded later between the American Institute in Taiwan and the Coordination Council for North American Affairs, these privileges and immunities comprise almost all the diplomatic privileges and immunities; in the words of Han-sai-er [phonetic], legal adviser to the State Department, they are "the equivalent"[12] of so-called diplomatic privileges and immunities. Some American congressmen have said quite frankly that the American Institute in Taiwan established by the Taiwan Relations Act is a "clumsy disguise." Apart from its name, it "possesses all the attributes of an official agency of the United States."[13]

The Taiwan Relations Act stipulates that all "treaties" and "agreements" existing between the United States and Taiwan before the end of 1978 shall continue in force, with the exception of the Mutual Defense Treaty and agreements related to this treaty. That means that a large number of "treaties" and "agreements" which had been signed in the past by the United States and Taiwan as "states" will be preserved without the change of even word. It is common knowledge that only a state has the capacity and authority to conclude international treaties and agreements. A local administration is not qualified to conclude international treaties and agreements with other countries unless it has obtained approval or authorization from its central government. Article 1 of the U.S. Constitution also clearly states that no single state of the union may conclude treaties with foreign countries or contract agreements with foreign countries without the consent of Congress. Since the United States has recognized that Taiwan is a part of China, all "treaties" and "agreements" between the United States and Taiwan ought to be declared null and void. Indeed, one American congressman could not help asking: How can the former "treaties" and "agreements" between the United States and Taiwan continue in force after the United States has recognized that Taiwan is a province of China? It is hardly possible that the United States could maintain treaty relations with the Canadian province of British Columbia without the consent of the Canadian Government.[14]

The Taiwan Relations Act also stipulates that recognition of the PRC shall not in any way affect the "ownership of all property, tangible and intangible," held by the Taiwan administration in the United States prior to the resumption of diplomatic relations between the United States and China." However, according to generally acknowledged principles of international law, it is the duty of the U.S. Government, after recognizing the PRC as the sole legitimate government of China, to hand over immediately to the PRC Government all property in the United States originally held by the Taiwan administration. Even President Carter, on signing the Taiwan Relations Act, could not help having certain reservations regarding the above-mentioned provisions of the law, as he remarked that "originally, a different method of handling the problem of the diplomatic property of China was considered preferable."

It is evident from the few items mentioned that the main purpose of the Taiwan Relations Act was, precisely as one American congressman said, to "ensure that our relations with Taiwan will continue essentially unchanged."[15]

3. Development of U.S.-China Relations Requires Removal of the Obstructions Presented by the Taiwan Relations Act

Ever since President Nixon's visit to China in 1972 and the resumption of diplomatic relations between the United States and China in 1979, there has been quite a group of people in the American ruling party, who, on the one hand, wish to improve relations with China, but on the other hand try to maintain control of Taiwan. Following the bankruptcy of one plan after another, they rack their brains trying to make Taiwan into a kind of "independent political entity" and have it acquire a certain "international status." This is the new edition of the old scheme of "one China, one Taiwan." The Taiwan Relations Act is one expression of this kind of policy and mentality. However, there is an irreconcilable contradiction between developing relations with China and maintaining control over Taiwan. The two policies cannot exist simultaneously. The Taiwan question was the core problem that for a long time prevented the normalization of relations between the United States and China. Only after the United States accepted the three principles that China had insisted upon all along for a resumption of diplomatic relations, after recognizing the PRC Government as the sole legitimate government of China and Taiwan to be part of China, could the two countries, the United States and China, finally reach agreement on establishing diplomatic relations. It stands to reason that one could assume that the Taiwan question had been resolved between China and the United States with the publication of the Joint Communique. However, the appearance of the Taiwan Relations Act again created an immense obstacle for the further development of relations between China and the United States. For 30 years, China and the United States have been in sharp and complex conflict over the Taiwan question, sufficient to make it fully clear that the standpoint and resolve of the Chinese people to achieve unity and protect the territorial integrity of its country are firm and unshakable. If the United States stubbornly persists in such practices as the Taiwan Relations Act, normalization of relations between China and the United States, so laboriously achieved, will certainly suffer serious harm.

In the debate over the Taiwan Relations Act, many of those congressmen who proposed inserting a provision of a so-called "guarantee of Taiwan's safety" all said that they were only "concerned about a peaceful resolution of the Taiwan question." In actual fact, it is precisely their method that obstructs a peaceful resolution of the Taiwan question. Everybody knows that the Chinese people are striving hard to have Taiwan return to the mother country in a peaceful manner. However, the provisions in the Taiwan Relations Act which interfere in the internal affairs of China are only apt to encourage the Taiwan administration to refuse all peaceful negotiations and oppose peaceful reunification. As a result, this could lead to certain consequences, namely to force China into a position where there would be no other choice but to employ nonpeaceful means, which were origninally felt undesirable, in order to resolve the Taiwan question.

Some members of the upper circles in the United States still to this day maintain the old viewpoint that China will not make any fuss about the Taiwan question as long as the United States opposes Soviet Russian expansion. This clearly indicates that they lack correct knowledge, consistent with the demands of objective developments, as to the exact basis on which Sino-American relations must be established. As early as 1972, in the Sino-American "Shanghai Communique," both sides agreed "that countries should conduct their relations on the principles of respect for the sovereignty and territorial integrity of all states, nonaggression against other states, noninterference in the internal affairs of other states, equality and mutual benefit, and peaceful coexistence." Both sides "are prepared to apply these principles to their mutual relations." Both sides also declared that "neither side should seek hegemony in the Asia-Pacific region, and each is opposed to efforts by any other country or group of countries to establish such hegemony." Both items constitute the fundamental principles on which Sino-American relations were established; neither of them can be unilaterally abrogated. The Joint Communique on the Establishment of Diplomatic Relations Between China and the United States also gave expression precisely to this point. In the Joint Communique the United States recognized the PRC Government as the sole legitimate government of China and Taiwan to be a part of China. At the same time, both sides repeated the stipulation of the Shanghai Communique as regards their opposition to hegemonism. Under the new situation thus created, the thought that Sino-American relations could be established merely on opposition to the hegemonistic moves of other countries would be nothing but pure retrogressive thinking. If anyone were to believe that China could agree to such retrogression, he would be laboring under an illusion.

There are still others in the United States who nakedly advocate a "two Chinas" of "one China, one Taiwan" policy and go so far as to arrogantly proclaim that China has to rely on the United States to counter the threat from the Soviet Union, and that China needs American help in its four modernizations. If America adopts a stiffer attitude, China will therefore be willing to swallow some "bitter pills" on the Taiwan question. This is an assessment that shows 100 percent ignorance of history and of the present situation and is absolutely mistaken.

Opposition to the hegemonistic drive of the Soviet Union is of benefit to the efforts for world peace, as it is also in the interests of China and the United States. Although China is at present poor and militarily backward, its position and role in the struggle against Soviet hegemonism and its capability to withstand severe tests from outside forces must not be underestimated. The United States poses as the richest and most powerful country in the world, but as Secretary of State Haig said, the military strength of the Soviet Union is already sufficient to support its aggressive foreign policy of global imperialism. To counter the Soviet challenge we have to rely on collective strength; it would be impossible to do so relying on the United States alone.[16] Since this is so, Haig emphasized that improving Sino-American relations is "a fundamental strategic reality and a strategic imperative. It is of overriding importance to international stability and world peace."[17] The secretary of defense in the Carter administration, Brown, also acknowledged when speaking of Sino-American relations that China's anti-Soviet policy was of immense strategic benefit for the United States.[18] It is therefore most ridiculous to say in connection with the Soviet threat that "China is even more out to seek favors from the United States."

As to the four modernizations being carried out by China, it is a fact that we hope to strengthen economic cooperation with the United States and other industrialized countries on the basis of equality and mutual benefit. However, China has always and will always put self-reliance first in its socialist construction. Hasn't new China since its inception been able to develop its economy while the United States was for many years maintaining a blockade and embargo against China?

The Soviet Union absurdly believed in the late 1950's and early 1960's that China had to rely on the Soviet Union to counter the United States, that China needed Soviet "assistance" for its construction, and that therefore it would swallow any unreasonable practices in the Sino-Soviet relationship if the Soviet Union were to take a harder position toward China. The Soviet Union even went so far as to exercise pressure on China by cancelling contracts, withdrawing experts, and recalling loans at a time when China was in an extremely difficult economic situation. What was the result? The Chinese people raised high the banner of opposition to Soviet hegemonism, carried on an indomitable struggle, and demonstrated the lofty spirit that the Chinese nation will not permit itself to be bullied. This chapter in history should be a significant lesson to those who miscalculate regarding the question of Sino-American relations. An American expert on Chinese matters who was invited to present his opinion of the Taiwan Relations Act before the congressional Foreign Affairs Committee also referred to that historical episode in Sino-Soviet relations when he pointed out: "If the United States thinks that it can leave out of consideration Peking's dignity, its standpoint, and its past history, this [thinking] will prove to be extremely mistaken and dangerous in the future."[19]

Some members of American upper circles now also acknowledge that "there are mistakes in the Taiwan Relations Act," but they still emphasize that the U.S. Government must carry out the laws passed by Congress. This touches on the question of the relationship between domestic laws and international duties. The Taiwan Relations Act is an internal law of the United States which cannot override the international agreements that the United States has concluded with other states, nor can it override the generally acknowledged principles of international law. It cannot be used as a norm governing the international relations of the United States with other countries. The Vienna Convention on the Law of Treaties states explicitly: "No state may adduce its national laws as a reason for nonfulfillment of a treaty." The United States itself is a signatory of the Convention.

At the time when the Taiwan Relations Act was being debated in the U.S. Congress, the Chinese Government had already pointed out to the American Government that the text of the said law which Congress was about to pass violated in a series of points the principles that both countries had agreed upon as conditions for the resumption of diplomatic relations and the undertakings of the United States, and that these violations would be very harmful for the relationship which had just been established between the two countries. After the United States enacted the Taiwan Relations Act, the Chinese Government again pointed out to the U.S. Government that failure of the American side scrupulously to abide by the agreements concerning the resumption of diplomatic relations would only have harmful consequences for Sino-American relations and would bring no benefits for either side. We hope the U.S. Government will value Sino-American relations as a whole above everything else and will conscientiously observe the principles of the Sino-American agreement concerning the resumption of diplomatic relations.

Sino-American relations have passed through a very long and tortuous road; now they have arrived at a critical new juncture. Are they to continue to advance along the lines indicated by the Joint Sino-American Communique on Establishment of Diplomatic Relations, or are they to be dragged back by the Taiwan Relations Act? This will depend on whether American policymakers will be able to derive the correct lessons from historical experiences, soberly assess the overall situation in the international struggle, get rid of the obstruction of the Taiwan Relations Act, and make a wise choice.

'CHINA CARD,' 'TWO CHINAS' IDEAS ATTACKED

Beijing LIAOWANG [OBSERVATION POST] in Chinese No 1, 20 Apr 81 pp 45-46

[Article by Mu Guangren [4476 1684 0088]: "China Is Not a 'Little Deuce'--A Criticism of the 'Two Chinas' Idea"]

[Text] The last time that the wind blew in the United States for relations with Taiwan, and to have "one China and one Taiwan," it was not a strong wind, and it also stirred up controversary that was not very large. Following some twists and turns, the acceptance by high ranking Taiwan official, Chiang Yanshih [5592 1750 1102], to attend President Reagan's inauguration ceremonies fizzled. Subsequently, the Americans repeatedly signaled that when President Reagan took office Sino-American relations would develop along the lines of the accord reached in the communique attending establishment of relations between the United States and China; however, from time to time a detestable remnant showed up--the United States would carry out the "Taiwan Relations Act," and this internal American act was poles apart from the principle whereby the United States and China established relations.

The Dutch government's approval to sell submarines to Taiwan, though vetoed by the Dutch parliament and opposed by China, caused no change in the original attention. In addition, some European countries and even India sent delegations running to Taipei. It seemed that this very small storm in international relations might be difficult to calm for a time. It might be said that one wave had not died away before another one arose.

Waves do not rise unless there is wind, and the source of the wind was the pro-Taiwan forces in the United States. The United States has several people like Ray Cline (director of the Georgetown University Center for Strategic and International Studies) who take every opportunity to go around giving speeches and writing articles opposing development of relations with China and advocating, "two Chinas." Though not very much in vogue, they nevertheless seek through various channels to influence the White House's China policy.

This storm is also related to the world economic recession. Some shortsighted foreign traders use fair means or foul in a search for opportunities. Some foreigners also have a misconception about China's economic readjustment, and make an erroneous estimate of China's economic development.

China's Part in the Overall Strategic Situation

Cline's major argument in opposing development of Sino-American relations is that China is too weak "to be a card; it is just a small deuce." This is to say that America's dealings with China are a card to be played against the USSR. Moreover, this China card does not account for much; it is of little importance. Consequently, even though the revival of official relations with Taiwan and engaging in "two Chinas," would cause a falling out with China, this would be inconsequential. Some congressmen feel that China needs the United States more than the United States needs China, and so the United States should not worry about carrying out a "two Chinas" policies that damages its relations with China.

Numerous people of vision in the United States, including people in the Republican Party, which has just taken office, and people in the Democratic Party, which has just left office, do not agree with such a view. They advise looking at the development of Sino-American relations in terms of the overall world strategic situation. Some people also explain that Cline is not an important figure, so the Chinese did not set great store by him. In fact, the Chinese do not set great store by anyone; however, it cannot remain silent on the views that these kind of people maintain.

To be a country and a people that is regarded by the United States as a card to play against the USSR, and to be taken for a counter to be used in bargaining with the USSR, in and of itself, causes China to suffer insult. This is first of all a matter of a people's feelings and a people's self-respect. But the issue far exceeds the bounds of feelings. China's advocacy of unity among all the countries in the world that have suffered Soviet threats, insults, and intervention to oppose hegemony and to preserve world peace positively does not proceed from partial benefits for a single country, but rather from regard for this issue in the overall strategic situation of security benefits for the people of the world. Development of Sino-American relations is also done with this overall strategic situation in mind.

The world has entered the 1980's bearing the trauma of the Soviet invasion of Afghanistan and Vietnam's invasion of Kampuchea. The rapid escalation of Soviet military forces has made it every more willing to take risks. Its military forces already stretch from the continent of Europe to the Indian Ocean, the Middle East, Africa, Southeast Asia, and even to the Caribbean Sea at America's front door. The increased pressure of the USSR in Asia and the western Pacific region, including support to Vietnam in its expansion in Southeast Asia, and the advance toward the Persian Gulf region means danger not only for the countries in these regions, and not only for Europe and Japan, which rely to a very great extent on petroleum from the Persian Gulf, but for the peace and stability of the entire world. Can it be that none of this has anything to do with the United States? Can it be that the American government's rebuilding and developing since 1972 of its relations with China has not been done precisely out of consideration of global strategic needs?

The American people understand this, of course. Americans who went through the 1970's fully appreciate the decline in America's position and the challenges it has faced. Even though President Reagan has written a prescription for "American revival"; nevertheless, a prettied-up future cannot substitute for today's grim realities. Last year, former Japanese premier Ohira Masayoshi [1132 1627 2973 5364] made a blunt remark during his last visit to the United States: "The United States is no longer a superpower, but is an ordinary power." Many Americans already realize that American power alone cannot be relied upon alone to stand up to the USSR. This requires, in addition to strengthening its alliances with Western European and Japanese allies, the development of a relationship with China. To use the words of a report issued by the United States Joint Chiefs-of-Staff this February, "China's containment of a large number of military forces on the Sino-Soviet border performs a beneficial function that is generally consistent with that of the United States in East Asia and other areas." For this reason, this report advocated, in guarded language, continued expansion of relations with China.

The attitude maintained by this report is, in the final analysis, a rather realistic one.

In actual fact, China's share in the overall world situation objectively exists, and no matter how much pro-Taiwan figures in the United States may want to sidestep this, it cannot be sidestepped. On the Sino-Soviet border, China has tied down one-fourth of the Soviet Union's armed forces. Europeans and Americans understand the importance of this "one fourth." Additionally, China's stand on principle against hegemony cannot but play a restrictive role on Soviet strategy for movement southward in which Vietnam plays a special role.

There is an even more important implication. It is wrong to look at China's part solely in terms of modernized weapons. China is presently fairly backward, and even though it has a little nuclear force and some medium range transport vehicles, we still admit to being backward. However, as compared with other powerful countries possessed of advanced military equipment, China is far and away the leader in not fearing the military blackmail and threats of the USSR. The Chinese people are in favor of friendship with the people of all the world including the Soviet Union, oppose war, and will positively not commit aggression against anyone. Even when it is prosperous in the future, it positively will not. However, when invaded from outside, China will never bow its head. "Indomitability is a strength of the Chinese. China has a big area and a large population, and has experience in protracted war as well as a tradition of using outmoded weapons to triumph over enemies with advanced euqipment. The victories won by the Chinese people in the war of resistance to Japan and the triumph over Chiang Kai-shek with his American style equipment were not won by becoming rich and strong first and then defeating the adversary, nor through reliance on foreign aid, but rather through reliance on our own strength to defeat the adversary. Consequently China is full of confidence. This "value" of China's is not only not that of a "little deuce"; even an "ace" or a "king" cannot compare with it. As for China's role in the world struggle against hegemony, some of those American "strategists" who boast of their power while becoming weak-kneed and fainthearted in the face of challenge from the USSR, don't even want to mention the subject. They even distort China's stand on principle as a "desire for war attitude," using this to cover their cowardice.

China has sought self-reliance only because of more than 100 years of endless big power aggression and humiliation. Today it is still facing a threat from the north. It is also precisely because of the steeling gained in this long struggle against the humiliation of the big powers that China has developed such a lofty national confidence and has developed such an "indomitable" national character.

Economically China Is Not A "Little Deuce" Either

Some people also treat China as a "little deuce" both economically and internationally. Lameng Maiersi [phonetic, possibly Raymond Myers], senior researcher at the Hoover Institute of Stanford University in the United States believes that based on China's economy of the past 2 years, trade between the United States and China will not expand rapidly. For this reason, he advocates a "reappraisal of Sino-American relations." In late February, the Dutch newspaper, TELEGRAF, published an article defending the Dutch government's sale of submarines to Taiwan. It said, "business is business." "There is no expectation of getting large orders from the Chinese People's Republic," while Taiwan is "a fairly good customer." He believed that "in a period of economic recession that has brought an astounding increase in unemployment, people are struggling to hold fast in this topsy-turvy world." And this was his reason for making a loud appeal to recognize "two Chinas." Please note that the proponents of "two Chinas" have already completely stripped away the veil of international good faith (the principles for accord in establishing relations with China), friendship, and diplomatic protocol etc. What remains is only naked "commercialism"--make moneyism.

These "disgraceful" disclosures have been a superb dose of sobering medicine for the Chinese, particularly for those not familiar with the capitalist character or those who have forgotten the capitalist history. The world, after all, has not only the perfume of the flowers of friendship, but also the stink of money, and some people make earning money their highest principle. In the minds of some people, the specter of the law of the jungle has not been dispelled. If only a country is poor and backward, it cannot avoid being looked down upon and suffering humiliation, to be treated as a card to be played or even being considered a "little deuce."

The Chinese people are one of the world's outstanding, good and honest people. China desires to develop relations with all countries on a basis of the five principles for peaceful co-existence. We will wait with good will for those who have made a wrong assessment of China to correct their assessment. However, if anyone uses the arrogance and prejudice of out of date ruffians in dealing with China, that is another matter. We admit to being relatively poor and relatively backward today, but though the people may be poor there is no paucity of will. The Chinese people developed in the midst of being blockaded and surrounded for a long period of time. During the period of the revolutionary war, they were blockaded by the Kuomintang; during the 1950's they were blockaded by the United States; and from the end of the 1950's, the USSR joined in the blockade. With what result? Through self-reliance, independence and democracy, and working hard for the prosperity of the country, China still developed itself, and in overall terms the speed of development could not be termed slow. The Chinese people are not anti-foreign by any means; they desire to study advanced foreign things, and they welcome to cooperate with foreign countries on the basis of equality and mutual advantage in the development of China's economy. However, our foundation is self-reliance. The spirit of hardwork, frugality, and arduous struggle of the Chinese people is also famed throughout the world. Furthermore, the Chinese people are by no means stupid. Numerous foreigners have observed the intelligence of the Chinese people from the fine achievements of Chinese students studying abroad. What reasons do foreigners have for looking down on China? What reasons do the Chinese people have to feel inferior?

Today many foreigners of vision who truly understand China appreciate the wisdom of China's current economic readjustment policies. If it is said that many setbacks occurred during the past 20 years of development of China's economy and that unpredictable ups and downs occurred, which were related to overly ambitious "leftist" economic policies, they predict that as a result of this sober-minded readjustment, it will be possible to look forward to more consistent and reliable development, and possible to look forward to the vast market of China's 1 billion population realizing its potential. Of course, some people are skeptical, and some want to wait and see; still others in a foul-mouthed manner attack China; and still others take the opportunity to preach "two Chinas," in an effort to turn back the clock in regard to relations with China.

History Will Provide the Answer

All right. We shall see. Let history answer. The Chinese people who have gone through 10 years of catastrophe, feel deeply the pain of the wounds remaining from those years of disturbance, and look with shame on the distance China fell behind in world ranking during this period. We are in process of summarizing the lessons of historical experience, bringing order out of chaos, and in accordance with the line, programs and policies formulated by the Third Plenary Session of the 11th Party Central Committee, putting down one step after another, and doing a solid job, in a struggle to realize before the end of this century a "comparatively well-off" level of "four modernizations." This is the aspiration of the 1 billion people of China. Realization of this aspiration will require great exertion, but the Chinese people are resolved to make this effort. Everywhere in China today one can hear a word of warning: "There can be no more thrashing around." This possesses an extremely widespread mass philosophy, which has found collective expression in the objectives put forward by the central work conference most recently convened by the Chinese Communist Party. This is the realization of further political stability and further readjustment of the economy. When the will of the people is concentrated, and everyone is of one heart and one mind, there is strength. This strength will bring about the most beautiful vistas in China's history during the late twentieth century.

History will thoroughly demolish the falsehood that "China is a little deuce," and will provide reply to all sorts of skepticism.

China is now in a fine situation such as has been rare since the founding of the People's Republic. China is heading toward the future with an increasingly more mature posture.

PARTY AND STATE

SIGNIFICANCE OF RECENT PARTY PLENUMS POINTED OUT

Third Plenum a Turning Point

Shanghai WEN HUI BAO in Chinese 17 Jul 81 p 3

[Article by Wang Jienan [3769 2212 0589]: "Why May We Call the Third Plenum a Great Turning Point of Far-Reaching Significance in All the History of Our Party Since the Establishment of the PRC?"]

[Text] In his "Speech at the Meeting in Celebration of the 60th Anniversary of the Founding of the Communist Party of China," Comrade Hu Yaobang [5170 5069 4382] pointed out: "The tremendous significance of the Third Plenum of the 11th CCP Central Committee lies in the fact that it really started to bring order out of chaos in an all-round, determined, well-considered way, relying on the masses."

The Third Plenum of the 11th CCP Central Committee started an all-round and serious rectification of all the leftist mistakes committed during and before the "Great Cultural Revolution." It concluded the state of wavering progress in the work of the CCP during the 2 years beginning in October 1976. The plenum elected additional members to the leadership of the Central Committee and under the guidance of the party brought order out of chaos in ideological respects. From then on the initiative for bringing order out of chaos was firmly in the hands of our party, which created an excellent situation in our country in every respect.

The fact that the Third Plenum was a great turning point mainly manifested itself in the following aspects:

First, the Third Plenum resolutely criticized the mistaken policy of the "two whatsoevers." Due to the fact that the leading comrades in the Central Committee practiced and were too slow in rectifying the mistaken policy of the "two whatsoevers," they seriously obstructed the all-round rectification of the leftist-deviationist mistakes during and prior to the "Great Cultural Revolution," which prevented the smooth progress of any work toward bringing order out of chaos and which in turn led to the commission of further faults. The Third Plenum resolutely criticized the mistaken policy of the "two whatsoevers" and called on the whole party and nation "to gain a broad and accurate grasp of Mao Zedong Thought as a system, to integrate the universal principles of Marxism-Leninism-Mao Zedong Thought with the concrete practice of the socialist modernizations and furthermore to develop these principles under the new historical conditions." This undoubtedly is taking the most important step forward in the all-round rectification of the leftist-deviationist mistakes and toward affirming the Marxist ideological line.

Second, the Third Plenum highly appraised the discussion on the standards for truth and affirmed such guiding principles as the emancipation of minds, the use of one's brains, seeking truth from facts and looking forward united as one. Advancing these principles freed thoroughly the broad masses of cadres and people from the spiritual fetters of personality cult and dogmatism that prevailed in the past. Inside and outside the party, ideological interest became extremely brisk and presented a scene of sincere efforts to study new conditions and new problems, which very effectively promoted work on the four modernizations.

Third, the Third Plenum resolutely put a stop to the use of the slogan "take class struggle as the key link," which is not applicable to a socialist society. It made the strategic decision to shift the focus of work to socialist modernization work, mobilized the entire nation to direct its efforts to the realization of the four modernizations, and developed one step further the political situation of stability and unity.

Fourth, the Third Plenum set forth the demand that attention must be paid to solving effectively the serious imbalance in important economic ratios among the people. The plenum formulated decisions for speedy agricultural development, rectified the leftist mistakes that had existed in agricultural work for a long time, and in the economic sphere gave every consideration to the material interests of the peasants. All this had an extremely stimulating effect on the socialist consciousness of the millions of peasants.

Fifth, the Third Plenum set forth with great emphasis the task of strengthening socialist democracy and the socialist legal system.

Sixth, it investigated and settled a number of cases of miscarriage of justice that had occurred throughout the history of our party and also determined a number of questions as to the merits or demerits, right and wrong, of important leadership personalities. In line with the policy of the Third Plenum, and as a result of a considerable amount of conscientious investigation and study, honor and reputation was restored to Comrade Liu Shaoqi [0491 1421 1142], former vice chairman of the CCP and president of the PRC, and to other leading personalities of the party and the state, as well as leaders of various nationalities and from various circles, who had suffered injustices. Their historically important meritorious services to the party and the people during the long revolutionary struggle were duly affirmed. Throughout the country a large number of cases of miscarriage of justice were reexamined and revised, wrongful designations of people as rightist elements were corrected, and people originally of the industrial and merchant class who had reformed were proclaimed workers. Small-scale merchants, peddlers and handicraftsmen who had been workers all along were differentiated from bourgeois industrialists and merchants, and the status for most of the former landlords and wealthy peasants who had reformed and become workers was revised. The whole range of work in this area brought appropriate solutions to a large number of contradictions within the party and among the people and was wholeheartedly supported by the entire nation.

This whole series of important changes signifies that the party has reestablished the Marxist ideological line, political line and organizational line. In the same manner as the Zunyi Conference turned jeopardy into safety, defeat into victory, and opened up a new prospect for the Chinese revolution, the Third Plenum redirected the party on to the correct Marxist path and furthermore pointed out the direction of advance in our country's socialist undertaking and our party's future work.

Hua Guofeng's 'Leftist Errors'

Shanghai WEN HUI BAO in Chinese 17 Jul 81 p 3

[Article by Jing Shangming [0064 0006 2494]: "How Are We To Understand Fulfilling Our Historic Mission of Bringing Order Out of Chaos in the Guiding Ideology of the Party?"]

[Text] The communique of the Sixth Plenum states: "This session will go down in history for fulfilling the historic mission of setting to rights things which had been thrown into disorder in the guiding ideology of the party." The phrase signifies the fact that our party has now completely returned to the scientific path of Marxism-Leninism and Mao Zedong Thought in fulfilling one basic aspect of its historic mission of bringing order out of chaos, namely in the guiding ideology of the party.

Generally speaking, since the founding of the PRC our party has achieved tremendous successes in socialist revolution and socialist construction, guided by Marxism-Leninism and Mao Zedong Thought. However, we should also analyze in concrete terms what happened during the 32 years since the founding of the PRC with regard to the guiding ideology of the party: in the 7 years during which the socialist transformation was basically completed, the guiding principles and basic policies determined by the party were correct. In the 10 years of initial socialist construction, the party policy was correct in its essential aspects but also not free from serious faults. In the 10 years of the "Great Cultural Revolution," serious leftist-deviationist mistakes were committed nationwide and over an extended period of time. In the 2 years from the smashing of the Jiang Qing clique of counterrevolutionaries up to the Third Plenum of the 11th CCP Central Committee in December 1978, the party advanced hesitatingly, because Comrade Hua Guofeng [2799 0948 6912] in his capacity as party chairman continued to commit leftist errors in the guiding ideology. These developments show that all mistakes in the party's guiding ideology since the founding of the PRC were leftist deviations. These leftist-deviationist mistakes run counter to the scientific theories of Marxism-Leninism and Mao Zedong Thought. When we speak of bringing order out of chaos in the guiding ideology, we mean eliminating the mistaken leftist-deviationist ideology and returning to the scientific path of Marxism-Leninism and Mao Zedong Thought.

From the Third Plenum to the Sixth Plenum, the party fulfilled its historic mission of bringing order out of chaos in the party's guiding ideology through a complex and arduous process of transition. There had been serious obstacles prior to the Third Plenum. It was only in the Third Plenum that the party began its all-round and resolute efforts, relying on the masses and after careful consideration, to set things right that had been thrown into disorder, and it was only then that the leftist mistakes committed during and prior to the "Great Cultural Revolution" were comprehensively and seriously rectified. From then on, the party had the initiative in bringing order out of chaos firmly in its hands. The policies adopted by the Third Plenum, namely to emancipate the mind, everyone to use his brain, seeking truth from facts, to look forward united as one, amount in essence to a rectification of the leftist ideological mistakes that had prevailed for a long time. The penetrating discussion of the standards for truth, the discussion of the objectives of production and the other discussions on important theoretical questions amounted to purges of leftist mistakes. Like the following Fourth and Fifth Plenums, on the basis of the liquidation and repudiation of the Lin Biao and Jiang Qing counterrevolutionary cliques, it realized the shift of the focus of work of the whole party and nation, and during the time up to the Central Committee Work Conference of last December, our party demonstrated that it had already completely broken in its political line with the leftist mistakes. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," unanimously adopted by the present Sixth Plenum, applies Marxist dialectical materialsim and historical materialism in a correct summing up of the major historical events of the party in the 32 years since the founding of the PRC, particularly of the "Great Cultural Revolution." The "resolution" scientifically analyzes the rights and wrongs in the party's guiding ideology during these events, analyzes the subjective factors and social causes that gave rise to the mistakes, realistically evaluates the historical role played by Comrade Mao Zedong, the great leader and teacher, in the Chinese revolution, and fully elaborates the great significance of Mao Zedong Thought as the guiding ideology of our party. It is for these reasons that the "resolution" signifies that our party's historical task of bringing order out of chaos has already been successfully completed.

This does not mean, of course, that completion of our party's historical task of bringing order out of chaos in the guiding ideology is tantamount to completion of the task of bringing order out of chaos in every single aspect of the party's work. In his speech in celebration of the 60th anniversary of the party, Comrade Hu Yaobang repeatedly pointed out: "Needless to say, many difficulties confront us. We have yet to finish the process of bringing order out of chaos, and in various fields many problems remain to be resolved." We are determined to be guided by the correct political line of the Third Plenum and shall continue to liquidate all mistaken leftist ideologies. We shall implement all principles and policies determined by the Central Committee and continue our efforts to fulfill the task of bringing order out of chaos in every field of our activities.

PARTY AND STATE

WAY TO EVALUATE MAO'S ACHIEVEMENTS, MISTAKES ANALYZED

Beijing XIN SHIQI [NEW ERA] in Chinese No 6, Jun 81 pp 6-8

[Article by Lu Yu [7120 7183] and Wang Yu [3076 5940]: "Using a Scientific Attitude To Evaluate Comrade Mao Zedong"]

[Text] The question of how to evaluate Comrade Mao Zedong is one that the whole world is following with great interest. This question not only deeply affects the countless millions of people in our country, but it is a question that progressive people throughout the world are deeply concerned over, and it has produced a violent reaction on the part of the various classes internationally. This is because Comrade Mao Zedong was the leader of the Chinese Communist Party and of the Chinese people, and his entire life, theory and practice were all closely bound up with the history of our party and our People's Republic. An evaluation of Comrade Mao Zedong unavoidably involves our understanding of and attitude toward the history of our party and state, toward the state system of the people's democratic dictatorship, toward the socialist path that we have chosen for ourselves, as well as toward Marxism-Leninism and Mao Zedong Thought. For this reason, the evaluation of Comrade Mao Zedong concerns not only the achievements and mistakes of Comrade Mao Zedong himself, but the fundamental advantage of our nation and people, and the question of how to sum up our historical experience and continue to progress. At the same time, it also has great practical significance for upholding the four basic principles and implementing the party's line, programs and policies since the Third Plenum.

Generally speaking, after an important historical personage dies, people analyze and study him and make some kind of evaluation of him. It is no cause for surprise at all that a great man like Comrade Mao Zedong, who in a great oriental nation of several hundred millions led the people to achieve victory in the revolution, and after the victory continued to serve as one of the major leaders of the party and the state for nearly 30 years, who possessed vast influence on the world political stage and who, having had the greatest successes and victories throughout his life, was also so seriously at fault in later life, should after his death arouse so much comment. The problem now is: what is the correct attitude and method to adopt in evaluating a historical personage like Comrade Mao Zedong?

Evaluating Comrade Mao Zedong is really a question of evaluating the effect of an individual on history. Historical materialism considers that history is created by the people, by the masses, but it does not in the slightest deny the effect of outstanding individuals on history. Lenin pointed out: "In history, any class, unless it elects its own political leaders and progressive representatives who are good at organizational and leadership activities, cannot possibly gain a position politically. ("Selected Works of Lenin" Vol 1 p 210) It is quite clear, from the point of view of a proletarian party, that if there are not a number of party leaders who have experience and the highest prestige, then the whole idea of wanting to achieve victory in the revolution will become merely empty words. Of course, party leaders certainly cannot simply do whatever they like and so create history. Leaders are subordinate to the masses and to a class; leaders are not individuals, but part of a group. They are produced in the struggle of the people, and only when they represent the advantage and the demands of the people, go along with the tide of historical developments, and obey the laws of the development of society are they able to produce a great effect in promoting the advance of history. Therefore, since Marxism is opposed to disparaging or denying the masses' creation of history, improperly exaggerating the effect of outstanding personages, advocating a superstitious belief in the powers of the individual, and the historical-idealistic viewpoint of deifying leaders, it is also opposed to the viewpoint of underestimating or denying the theory of the spontaneous effectiveness of proletarian revolutionary leaders. Historical materialism also tells us that in evaluating a historical personage it is necessary to place him within a definite historical framework, and in the light of his original aspect, analyze and study him in a historical context, comprehensively, and not indulge in subjective wishes or entertain any bias. Only in this way can one make a just evaluation based on seeking truth from facts. In evaluating the achievements and mistakes of Comrade Mao Zedong, we should undoubtedly adopt this scientific attitude and method.

Comrade Mao Zedong engaged in revolutionary activities within the concrete historical environment of China. As a leading personage of the Chinese proletariat and of the masses, for a long time he played an outstanding role on the political stage. From a comprehensive, objective analysis of Comrade Mao Zedong's effect on the historical course of the Chinese revolution, we can arrive at the following conclusion: Comrade Mao Zedong was the outstanding representative of the Chinese communists and of our people's excellent traditions. Comrade Mao Zedong's entire life was that of a great Marxist, a great proletarian revolutionary. Comrade Mao Zedong not only made an indelible contribution to the Chinese revolution, but he also left behind rich spiritual wealth for us. Comrade Mao Zedong's greatest accomplishment was his creative combination of Marxist-Leninist theory with the realities of the Chinese revolution, opening up a correct path for the Chinese revolution that was sure to lead to victory. Comrade Deng Xiaoping has pointed out that Chairman Mao "many times saved the party and the state from a crisis situation. If it had not been for Chairman Mao, then at the least the people of China would have groped in darkness for a longer time." Comrade Mao Zedong's theories on the new democratic revolution, on socialist revolution and socialist construction, on revolutionary war and the ideological method and work methodology of dialectical materialism, have added a great deal of new content to the treasury of Marxism-Leninism and possess far-reaching guiding significance for us. The ideology proposed by Comrade Mao Zedong regarding the accurate distinction between and treatment of the two essentially different kinds of contradiction, his strategy and tactics regarding an international combination to oppose hegemony, as well as his creative insights into other areas, are all immense contributions to Marxism-Leninism. Our speaking this way is not some kind of eulogizing or giving of undeserved praise, but is an objective, fair evaluation of Comrade Mao Zedong and, moreover, has already been proven by the actual practice of the Chinese revolution.

Now this Comrade Mao Zedong who was a great Marxist and proletarian revolutionary, in the later part of his life made certain mistakes, even serious mistakes. In economic construction, he was too eager to obtain quick results, and he mistakenly perpetrated the "Great Leap Forward." He magnified the importance of class struggle and used methods appropriate for dealing with enemies to deal with contradictions within the party, to the extent that he was tricked by Lin Biao and the "gang of four," leading to the 10 years of turmoil of the "Great Cultural Revolution." This agonizing mistake brought a great deal of misfortune to our party, state, and people. However, looking at the life of Comrade Mao Zedong in its entirety, we can say fairly and in the manner of seeking truth from facts that if the accomplishments and mistakes of Comrade Mao Zedong are compared, his achievements are predominant and his mistakes are secondary.

Both the achievements and the mistakes of Comrade Mao Zedong have objective, historical existence. There are some comrades who in evaluating Comrade Mao Zedong depart from the demands of historical materialism and are wanting in the scientific attitude of seeking truth from facts. One circumstance is their improper exaggeration of the effect of Comrade Mao Zedong as an individual on history, seeing him as an absolutely perfect man without any shortcomings or mistakes, and adopting an attitude of approving everything he did. For a long time, Lin Biao and the "gang of four" created modern-day superstitions, deified revolutionary leaders, and shackled the ideology of a great many people. After the smashing of the "gang of four," there were also some comrades who brought up the notion of the "two everys" with the intention of being an obstacle to the liberation of people's thinking, and somehow bringing order out of chaos. Regarding Comrade Mao Zedong, they do not make an analysis based on the principle that everything devides into two, but merely accept the great accomplishments of Comrade Mao Zedong throughout his life, and do not accept the fact that in later life he made many mistakes. For this reason, when they hear people say that Comrade Mao Zedong had shortcomings and mistakes, they cannot accept it, and even consider that such an attitude means negating everything good about the old man. This kind of superstitious belief in individual leaders has a considerable market in China. Our country has a history of several thousand years of feudal society and is a vast sea of small producers. The influence of the class position of small producers and of feudal traditions has led them to place their hopes for improving their own politics and improving the political situation onto the persons of individual great personages and to look upon the results achieved through their personal participation in struggle under the leadership of the party as rain and sunlight bestowed upon them by individual leading figures. A great many people among the masses proceed from precisely this feeling of gratitude, considering Comrade Mao Zedong to be their great saving star. Lin Biao and the "gang of four" then took advantage of these ideological weaknesses of the people, took advantage of people's simple class feeling toward the party and toward their leaders to launch a deification movement, causing the superstitious belief in the effect of individuals to spread unchecked during the period of the 10 years of chaos. This circumstance, through discussion of the question of the standards for arriving at truth, has already changed greatly. Of course, it is not possible to overlook the fact that a considerable number of people to this day still have not completely freed themselves from the influence of a superstitious belief in the effect of individuals and of the notion of the "two whatevers," so that work in this area must continue.

Yet another circumstance worthy of our attention at present is the fact that in evaluating Comrade Mao Zedong, some comrades improperly exaggerate his shortcomings and mistakes, even to the point of negating everything good about him. Some people cannot grasp the essentials of a problem, but only look at superficial phenomena, and then indulge in simple analogies and make rash evaluations. For example, some people label Comrade Mao Zedong's later period as the same as Plekhanov's. This is extremely inappropriate. Plekhanov was a forerunner of the Russian proletarian revolution who made great achievements with regard to disseminating Marxism. Afterward, however, he became a Menshevik, opposed the October Revolution, and betrayed Marxism. Comrade Mao Zedong was fundamentally different from Plekhanov. Mao was a great Marxist theoretician and also a great proletarian revolutionary and strategist. The leading part of Comrade Mao Zedong's life was quite correct, and even though in his later period he made serious mistakes, nevertheless, objectively, he still wanted to make the revolution progress and, moreover, there were still many accurate insights that glistened with the brilliance of Marxism, and there is no way that this can be likened to Plekhanov's later period. Some people are fond of going to extremes; either they approve everything or negate everything and are lacking in the analytical method of dialectics. Our view is that Comrade Mao Zedong was a man and not a god, and that to worship him as a god and uncritically approve everything he did is erroneous. However, the nihilistic attitude of exaggerating his mistakes and even denying everything good about him is also extremely harmful.

The causes behind such various kinds of inability to evaluate Comrade Mao Zedong correctly are many and varied. One important cause is that some people cannot apply the viewpoint of historical materialism to observe and analyze problems. In particular, among many young people there is a lack of proper understanding of our country's history and of how the old China met its end and the new China came to be born, there is a lack of a deep comprehension of how we came to rise up and achieve liberation, becoming the masters of our own fate, while at the same time the negativism and lack of self-confidence that they themselves feel is considerable. For this reason, at a time when all kinds of new ideological currents are appearing in society, they are not able to distinguish clearly among them, and it is all too easy to run along with other people. These young people generally are without any bias. They need only continue patiently with their education and they will gradually be able to overcome their political immaturity, learn to apply the scientific attitude of historical materialism, and make a correct evaluation of Comrade Mao Zedong.

Yet another cause of the inability to evaluate Comrade Mao Zedong correctly is the fact that some people cherish individual grievances and are inclined to be swayed by their personal feelings. These comrades were attacked and harmed in past political movements, especially in the "Cultural Revolution"; their experience of the various problems and mistakes has been extensive and serious, and they are not dispassionate enough to evaluate the achievements and mistakes of Comrade Mao Zedong. Surely, there is an aspect to their attitude that is understandable, but we revolutionaries in considering problems must look at things from the point of view of the situation as a whole and from the point of view of what will be of the greatest benefit to socialism; we cannot allow ourselves to be swayed by our personal feelings. In this regard, a great many of the older generation of revolutionaries are worthy of our emulation. They made a great contribution to the cause of the revolution, and yet were mistakenly attacked, and suffered a great deal. Nevertheless with a feeling of equanimity, proceeding from the basis of the fundamental advantage of the party and the state, upholding the scientific attitude of historical materialism, in a manner of seeking truth from facts, they have objectively and fairly evaluated Comrade Mao Zedong, displaying the broadminded magnanimity of proletarian revolutionaries.

Making an objective study of the entire history and the entire work of Comrade Mao Zedong, affirming the great contribution he made to the party and to the people, and studying how it is that such a great man was capable of committing mistakes in his later years and learning whatever lessons are to be learned from that--all this is extremely important for our party's leading the people in their continued progress and building our country into a modernized, highly democratic, highly civilized, strong socialist country.

In the history of our party, we have had both positive and negative experience with regard to the problem of how to deal with historical questions of the party and comrades who commit mistakes. The "Resolutions Concerning Certain Historical Questions" adopted at the Seventh Plenary Session of the Sixth Party Central Committee held in 1945 pointed out that in dealing with historical questions we should not place emphasis on the culpability of individual comrades, but on an analysis of the circumstances at the time, on the social, historical, and ideological causes at the time of the mistake, and put into effect a guiding policy of "punish a past mistake to prevent future mistakes, and cure the disease to save the patient" in order to achieve our goal of unifying the comrades as well as clearing up our ideology. Also, it exhorted the comrades of the entire party: regarding all questions we must adopt an analytical attitude; we must not try to negate everything. With regard to our present summing up of the party's historical experience and evaluating the accomplishments and mistakes of Comrade Mao Zedong, this still has important significance. The mistakes of Comrade Mao Zedong were the mistakes of a great revolutionary in the course of struggling for the cause of the people. Some of his mistakes were avoidable; some were hard to avoid completely. Due to having been victorious, Comrade Mao Zedong in his later years ceased to be cautious, came less into contact with reality, and developed autocratic ways, and this is the individual aspect of the cause of his mistake. However, the fact that Comrade Mao Zedong committed mistakes in his later years also had deep historical and social causes. In a poor, backward, great country with a large population and a complicated situation in the course of building socialism, some mistakes were made due to our lack of experience. If we demand of a revolutionary that in the course of making revolution he cannot make any mistakes, isn't that the same thing as not allowing revolution in the first place!? We definitely cannot have a rash, hasty attitude, but must evaluate Comrade Mao Zedong in a respectful and cherishing frame of mind.

LIAONING THEORETICAL WORKERS STUDY CCP RESOLUTION

Shenyang LIAONING RIBAO in Chinese 10 Jul 81, p 3

[Article: "Unify Ideology and Advance Together: Liaoning Theoretical Workers Convene Conference to Study 'Resolution'"]

[Text] On the afternoon of July 3rd, the Communist Party Liaoning Provincial Committee Propaganda Department together with the LIAONING RIBAO Editorial Department convened a conference of theoretical workers to study the CCP "Resolution." The speakers at the conference included Liu Jiliang [0491 4949 5328], the Deputy Director of the Propaganda Department; Miao Baotai [5379 1405 3141], the Vice-president of the Provincial Party School; Wen Yonglu [3306 3057 6922], the Deputy Director of the Provincial Social Science Institute; Song Deqing [1345 0463 5887], Vice-president of Liaoning University; Meng Jie [1322 2638], the Deputy Director of the Communist Party Shengyang Municipal Committee Department of Propaganda; Tang Guangwu [3282 0342 2976], the editor-in-chief of the magazine GONGCHANDANGYUAN--THE COMMUNIST PARTY MEMBER; Ma Yun [7456 0061], Deputy Director of the Provincial Historical Society; Chen Changshu [7115 2490 2562], the Director of the Northeast Engineering Institute Marxism-Leninism Study and Teaching Group; and Zhang Tie [1728 6993], the Deputy Director of the Provincial Party School Philosophy Teaching and Research Section. Yu Weiping [0358 2607 1627], the Vice-president of the Shenyang Municipal Party Committee School composed the written statement. Liu Yiyun [0491 3976 0061], of the Provincial Party Standing Committee and Director of the Propaganda Dept. presided over and spoke at the conference. Gao Fu [6392 7079], editor-in-chief of the LIAONING RIBAO was in charge of the discussions.

The Great Ideological Weapon of Unified Party Understanding

The comrades in attendance at the conference the great historical significance of the issuance of the "Resolution" and discussed the significance of implementing its leadership.

Everyone believes that the appearance of the "Resolution" is a sign that the party's guiding ideology has completed the historical task of bringing order out of chaos. The party's guiding ideology is the foundation of a whole series of policies, therefore a return to order under the guiding ideology occurs on the most basic level. In the 32 years since the founding of the nation there have been great accomplishments in the socialist revolution and in socialist construction. These successes are primary. Nonetheless, there were some mistakes and shortcomings which led to that large-scale mistake the "Great Cultural Revolution" which brought great losses to the party and the people. The basic reason for this was the errors in our guiding ideology. In order to correct the leftist errors in our guiding ideology, ever since the Third Party Plenum suggested ideological liberation and a policy of being realistic, the party has expended great amounts of energy and has performed a great amount of work. The "Resolution" is part of a natural series of consequences of bringing order out of chaos ever since the Third Party Plenum. Of course, correcting the leftist errors in the party guiding ideology does not mean that this is the end of restoring order in all areas. Nonetheless, having this great ideological weapon makes it comparatively easy to eliminate leftist ideological tendencies from all aspect of all battlefronts.

The production of the "Resolution" is the mark of greater maturity in the party. The GUANYU REGAN LISHI WENTIDE JUEYI--RESOLUTION CONCERNING CERTAIN HISTORICAL QUESTIONS produced at the Seventh Plenum of the Sixth Party Congress in 1945 summed up party experiences in the new democratic revolution, eliminated the leftist errors committed by Wang Ming [3769 2494] from 1931 till late 1934, brought maturity to the party in all matters from theory to implementation and won a great victory in the new democratic revolution. Although we have gained abundant experience in carrying out the new democratic revolution, nonetheless socialism is still a relatively new matter for us. In these 32 years there have been great victories in socialist revolution and construction. Yet, we also have had to pay a great price. We have the experience of success and the lessons of defeat. Precisely because of this, the summation of thirty years of national construction in the "Resolution" is of extreme value and will enable party leadership to become even more mature in the theoretical aspects of leading socialist revolution and construction. The "Resolution" is the foundation for unifying party ideology. The "Resolution" is the crystallization of the collective wisdom of party and was unanimously passed by the Sixth Plenum, which shows that the party's new ideological foundation has attained new unity. Ever since the Third Plenum of the Eleventh Party Congress, successive central committee meetings and speeches by central committee comrades have been of great use in solving problems of understanding the right and wrong of many historical events. The "Resolution" is a concentrated manifestation of the collective will of the entire party and not only has sincerity and authority but also is convincing and appealing. It definitely will fill the historical role of unifying the party and all the people.

Mao Zedong Thought is a Precious Party Treasure

The "Resolution" makes an analysis of Chairman Mao's great historical accomplishments and the mistakes of his latter years. This analysis is both realistic and appropriate and its evaluation of Chairman Mao's historical status is exceptionally scientific. For a long time, Comrade Mao Zedong was a great teacher and leader in our party and there is a very close connection between the evaluation of his achievements and the affairs and work of the party. The "Resolution" reaches a correct conclusion with a high sense of responsibility toward the party, the people and toward history. This conclusion not only agrees with historical reality but also is in agreement with the wishes of the whole party and all the people. It is thoroughly convincing and demonstrates the party's spirit of realism and scientific attitude toward Marxism.

The "Resolution" makes an incisive exposition of the scientific system of Mao Zedong Thought. It does not simply repeat the formulation of the Seventh Congress of 1945, but rather provides more precise, stricter and more correct scientific significance. The "Resolution" deals with Mao Zedong Thought in six parts which relate to theories regarding the new democratic revolution, theories regarding the socialist revolution and socialist construction, theories regarding building the revolutionary forces and military strategy, theories regarding policies and political strategy, theories regarding ideological work and cultural work and theories regarding party construction. The "Resolution" moreover examined the spirit enunciated in Mao Zedong Thought and found that the three basic ideas of realism, the mass line and independence and initiative permeate its stance, viewpoint and methodology. This makes Mao Zedong Thought even more scientific and systematic, and makes it easier for the party and the people to more accurately study and firmly grasp the scientific system of Mao Zedong Thought.

The comrades attending the meeting felt that the "Resolution" correctly made a clear distinction between the Mao Zedong Thought which underwent a long period of historical testing to form a scientific theory and the errors of Comrade Mao Zedong's latter years, and felt that this distinction is of major significance. This is because only if we approve of the scientific system of Mao Zedong Thought can we firmly and steadfastly establish Mao Zedong Thought in a guiding position for our future work. By the same token, only if we admit and thoroughly correct the errors of Comrade Mao Zedong's latter years is there any possibility of bringing order out of chaos in the party's guiding ideology and returning to the correct path of Mao Zedong Thought. In regard to these question, we must oppose both the nihilism which rejects Mao Zedong Thought as a guiding principle because of the mistakes of his latter years as well the doctrinaire attitude which slavishly obeys all of Comrade Mao Zedong's words. We must continue to uphold Mao Zedong Thought, correctly understand the developmental process of Mao Zedong Thought, grasp the causes and effects of the birth and development of Mao Zedong Thought, and be aware of the organizational components of Mao Zedong Thought as well as the stance, viewpoint and methodology which permeate it. We also must apply its stance, viewpoint and methodology to study new conditions and questions which arise from practice and must during the course of practice enrich and develop party theory. This is the only way to guarantee that our great efforts will follow the scientifically correct path of Marxism-Leninism-Mao Zedong Thought to win future victories.

Thirty-two Years of Great Accomplishments

Marxism tells us that in examining history we must observe its intrinsic qualities and see its main trends. The establishment of socialism in China was the greatest and most profound social reform in all of Chinese history and is the basis for all future developments and progress in China. In stating the main trends of the thirty-two years of history the "Resolution" uses irrefutable facts to sum up the great accomplishments of these years in ten major areas, and this in perfect agreement with the facts. These accomplishments are the result of the creative use of Marxism by the party and the people and are a demonstration of the superiority of the socialist system. During these 32 years the party committed many errors in revolution and in construction, especially the broad-ranging, long-term error the "Great Cultural Revolution" which prevented us from attaining our rightful accomplishments. Some comrades have compiled long lists of figures which demonstrate that although this has been the case the speed of our economic development has still surpassed that of such advanced countries as the United States, the Soviet Union and Japan. This demonstrates the undeniable truth that "only socialism can save China."

The comrades attending the conference pointed out that in order to deeply understand the spirit of the "Resolution" and make a correct basic evaluation of these 32 years of history we must overcome certain work habits of partiality in party work which were formed under the influence of leftist errors. For a long time in the past we always said, "Only consider the political accounts and do not consider the economic accounts," which meant that the political line represented everything so that if the political line was correct then everything was all right and if the political line had problems then mistakes were made. Or else, we saw party history as the history of an individual, so if the leader was correct then the party was correct, but if a leader made errors then the party was damaged. If such a method is used to understand problems then one cannot correctly evaluate party accomplishments and Marxism-Leninism Mao Zedong Thought in their leadership of the people in carrying out the great accomplishments of socialist revolution and socialist construction. Nor can one apply and develop the experiences of these successes. Nor can one correctly understand the errors in party work and truly derive lessons from them. We must learn how to examine problems from an overall perspective and not merely observe one event at a point in time. We should rather observe the entire history and all the work of the party. Spatially, we must see the whole picture and chronologically, we must see the entire process. This is the only way to grasp the true spirit of the "Revolution," correctly evaluate these 32 years of history, bravely and truly grasp socialism, firmly grasp party leadership, firmly grasp the people's dictatorship (which is to say, the proletarian dictatorship), and firmly grasp Marxism-Leninism-Mao Zedong Thought.

A Great Historical Turning Point

Everyone who discussed the excellent conditions on all fronts in the national economy, politics, culture and foreign relations was even more convinced that the high-level evaluation of the Third Plenum by the "Resolution" was entirely correct.

The smashing of the "Gang of Four" enabled China to enter a new period of historical development. Nonetheless, the all-round, general correction of leftist errors committed during and prior to the "Great Cultural Revolution" began with the Third Plenum. Prior to the Third Plenum, the party and the state were in a precarious position. Not only was there a huge pile of remaining historical problems, new conditions and new problems continuously appeared. However, the various leaders on the Central Committee were following the mistaken policy of upholding and promoting the "two whatevers" and avoided solving the problem, so that party work foundered, unable to progress. It was the Third Plenum which grasped criticism of the mistaken policy "two whatevers" and completely approved of thoroughly and correctly grasping the scientific system of Mao Zedong Thought; made elevated evaluations of the discussions on the standards of truth and determined the guiding policy of liberating thought, opening minds, seeking truth and joining together to make progress; decisively brought an end to the slogan of "taking class struggle as the outline" because of its unsuitability in a socialist society and changed the work emphasis to the strategic policy of construction of socialist modernization; suggested the economic work policy of adjustments, reforms, rectification and improvements; investigated and solved a large number of remaining historical problems and reversed unfair cases. In short, without these post-Third Plenum directions and policies we would still be foundering under the restrictions of leftist mistaken ideology and would not have today's political peace and harmony, stable economic development and unprecedented ideological advances.

The Third Plenum was a great beginning, and only with this great beginning could there be the Fourth Plenum, The Fifth Plenum, the Central Committee Work Conference and the Sixth Plenum of today which has produced this great series of policies. This is the correct road to having a line, direction and policy which agree with reality and suit the people's wishes. This was the only way to gradually establish the correct road of socialist construction of modernization suitable to our conditions. By constantly following this road the party definitely has a bright future and the state as well has a glorious and bright future.

A Marxist Stance, Viewpoint and Methodology

The comrades at the conference looked back over the history of the development of Marxism and pointed out that this valuable document the "resolution" is a model of the unification of Marxism with the concrete practices of the Chinese revolution and also is a model of the application of dialectical materialism and historical materialism.

In our study of the "Resolution" we not only should study its correct conclusions regarding major historical events but also should strive for a deep understanding and firm grasp of its inherent Marxist stance, viewpoint and methodology in order to greatly improve our theoretical level of Marxism-Leninism-Mao Zedong Thought.

Dialectical materialism and historical materialism are the world view and the methodology of the proletariat and are our great ideological weapon for understanding and transforming the world. Our party has always had a superior tradition in using this ideological weapon to solve genuine problems in the Chinese revolution. However, because of the influences of leftist errors this tradition has been destroyed, the party's level in theory has been lowered, the relationship between theory and practice has been weakened and during the "Great Cultural Revolution" there even were instances of idealism and metaphysics. This not only has endangered all aspects of party work but also has brought great chaos to the thought of the broad party membership and the masses. Even today, idealism, metaphysics and historical idealism have a certain currency within the party. Because of this one of the party's important tasks of ideological construction is to generally carry out Marxist education to improve the level of Marxism-Leninism-Mao Zedong Thought. The publication of the "Resolution" provides us with excellent educational materials for carrying out this task. Study of the "Resolution" will definitely make all party members and party cadres have a better grasp of dialectical materialism and historical materialism and greatly improve the party's fighting strength.

INDEPENDENT EXERCISE OF PROCURATORIAL POWERS URGED

Beijing RENMIN RIBAO in Chinese 3,4 Aug 81

[3 Aug 81 p 5]

[Part I of this article was not translated by JPRS]

[Text] Part II. The Independent Exercise of Procuratorial Authority in Accordance with the Law

Article 9 of the "Organizational Code of the People's Procurate of the People's Republic of China" stipulates: "The People's Procurate exercises independent procuratorial authority in accord with legal statute and is to be free of interference from other executive agencies, groups or individuals." This is a basic principle of procuratorial work. If the procuratorial agencies cannot exercise their powers independently and must tolerate the influence and interference of others, then they cannot possible carry out their supervisory duties as called for in law. Of course, the independent exercise of procuratorial authority by the procurate must adhere to the penal code and to the penal litigation code as well as to the organizational code of the people's procurate. That is to say that it cannot neglect official duties nor abuse official powers.

The facts make it clear that if we adhere to the law in the independent exercise of procuratorial authority, we will run into numerous difficulties and obstacles. A number of cadres lack respect for the legal system. Incidents of replacing law with individual pronouncements can still be found; some leading cadres steeped in the ideology of feudal privilege believe themselves to be above the law and when they run into a case in which they themselves are deeply involved, they always use their position and power to put pressure on the procuratorial agencies; some persons even go so far as to pardon criminals, being lenient and forgiving; some persons call for mercy and twist the law for nepotic purposes in order to get in good with the relatives and friends of criminal elements; there are still others who constantly obstruct procurators who uphold principles, even going so far as to attack them to seek revenge. All these terrible things are obstacles to the independent exercise of procuratorial authority in accordance with the law. Procuratorial agencies must boldly uphold principles, resist all improprieties, overcome all obstacles, seriously carry out the duties bestowed on them by the state in accordance with the law, and do well in their task of legal supervision.

After 2 years of hard work the vast majority of the procurators of the entire nation at all levels are now basically able to independently exercise their procuratorial authority. In regard to cases themselves, in those cases of arrest and indictment which the public security agencies send on to the procuratorial agencies, independent procuratorial authority has basically already been exercised. The cases of legal and economic investigation which are directly carried out by procuratorial agencies more often meet with interference and obstruction because most are cases involving violation of the law by cadres. There are a number of these cases in which the independent exercise of procuratorial authority is still not possible. One important reason that this situation exists is that some cadres view the independent exercise of procuratorial authority by people's procurates in terms of party leadership. They believe that the independent exercise of procuratorial authority necessarily entails the weakening of party leadership; if we wish to strengthen party leadership, then we cannot allow the independent exercise of procuratorial authority. Actually, this viewpoint is unfounded. Many party committees place great importance on the establishment of procurates. And they oversee the earnest enforcement of the law by the people's procurates and see to it that they are not interfered with by other executive agencies, groups or individuals. This not only does not weaken party leadership of procuratorial agencies, it strengthens party leadership of procuratorial agencies. The reasoning here is very simple: the independent exercise of procuratorial authority by the people's procurates reduces the daily workloads of the party committees enabling them to better carry out principle and policy leadership of procuratorial work; and it is helpful in increasing the sense of responsibility of the procuratorial cadres which will help them work hard at doing a good job. More important still is that our nation's laws are established by organs of national authority under the leadership of the party and on a foundation of democracy. They reflect the will and interests of the people of our entire nation and they embody in concentrated form the policies and views of the party. They are the final form of the party's principles and policies. The procuratorial agencies' independent exercise of procuratorial authority and operation in strict accordance with the law actually serves to uphold party leadership. In order to resolutely and thoroughly implement this important legal principle of procuratorial agencies independently exercising procuratorial authority procuratorial cadres must faithfully carry out their individual duties, not yield to outside powers and influences, not show personal favoritism, when necessary put their lives on the line for their jobs, and struggle resolutely to protect the socialist legal system.

[Text]

Part III. Criminal Investigation

Criminal procuratorial work is the primary method by which the procuratorial agencies attack our enemies, punish criminals, protect the people, and uphold the law. Since 1978 when stress was laid on construction work, the procuratorial agencies have made criminal procuratorial work their major responsibility.

According to the laws of criminal indictment, aside from the cases handled directly by procuratorial agencies, most cases are to be investigated by public security agencies. All cases which require the use of forceful measures or arrest, and those in which the investigation calls for indictment or dismissal of charges, must be sent to the procuratorial agencies for review and approval. Procuratorial agencies must carry out a review of those suspects that the public security agencies propose to arrest and make the final decision on whether or not to arrest; in regard to those cases in which the public security agencies have called for indictment or for dismissal of charges, they must carry out a review and decided whether or not to indict, and furthermore must carry out supervision by reviewing the arrest report and the indictment to determine if the investigative activities of the public security agencies were legal. The work by procuratorial agencies of reviewing arrest reports and indictments includes the two aspects of reviewing and determining the facts of the crime and accurately enforcing the law. In terms of reviewing and determining the facts of the crime, the procuratorial agencies must earnestly carry out investigative research and get ahold of precise facts and evidence. In terms of enforcing the law, they must not only accurately determine whether or not the behavior of the accused was criminal, the type of crime, the severity of the crime and whether or not the nature of the case has been accurately understood, but must also inspect the investigative activities of the public security agencies to see that they followed due process and did not obtain evidence illegally. If violations of law are discovered, they have the right to suggest remedial measures. Through the exercise of this authority the procuratorial agencies on the one hand see to it that criminal elements receive the legal punishment they deserve, and on the other hand can guarantee that the innocent are not subjected to persistent criminal investigation.

The law stipulates that the procuratorial agencies have the right to represent the state in public prosecutions. This is a matter of a case which has been investigated by a public security agency and recommended for indictment and which was accepted and reviewed by a procuratorial agency being prosecuted in court. A procurator in the role of public prosecutor is sent into court to prosecute the case and to oversee matters to determine that the trial is conducted according to law. The public prosecutor appears in court, hears the reading of the indictment, participates in the court's inquiry, states the prosecutions case, and carries out debate to fully expose and prove the crime and to protect the litigation rights of those involved.

According to the law, the procuratorial agencies have the right to oversee the verdicts and rulings of the people's courts and to suggest remedial measures when matters do not accord with the law. After the court has finished issuing its verdicts and rulings, if the people's procurate believes that there were mistakes made in determining the facts or in the application of the law, it should make its objections known to the court at the time of appeal, allowing the Second Hearing People's Court to decide the issue. When errors are discovered after the verdict or rulings have already been put into effect, then objections should be raised according to Trial Supervision Procedures. The law stipulates that such authority belongs only the high level people's procurates in dealing with people's courts at lower levels and to the Supreme People's Procurate in dealing with people's courts at every level. The local people's procurates at every level do not enjoy the authority to raise objections with the people's courts at the same level.

According to the law, procuartorial agencies take part in the entire process of criminal prosecution procedures from the initial investigation (for cases handled directly by the procuratorial agencies) through the supervision of the investigation, the granting of permission to arrest, the review and indictment, the arraignment, the prosecution, the overseeing of the trial, to the overseeing of the verdict. This makes it clear that the procuratorial agencies play an important role in criminal prosecution procedures. In order to better perform criminal and other procuratorial work the procuratorial agencies must listen attentively to the masses in their work, do well in investigative research, and accept the supervision of the masses.

STRICT ADHERENCE TO LAWS, MAINTAINING SOCIAL ORDER STRESSED

Tianjin TIANJIN RIBAO in Chinese 18 Jul 81 p 1

[Article by TIANJIN RIBAO commentator: "Deal Fatal Blows to Criminals, Build Well, Secure Social Order"]

[Text] Yesterday, the Tianjin municipal middle level people's court held meetings in the municipal gymnasium and Hangu District to announce the verdicts on six active criminals charged with seriously disturbing the social order. The court swiftly handed down severe sentences to the six criminals, five of whom, charged with committing heinous and inexcusable crimes, were immediately escorted to an execution ground to face a firing squad. The broad masses of people clapped their hands as a gesture of their approval of this court action.

Today the people are masters of their own country. Anyone found guilty of committing murder, robbery, rape or arson, or of setting off explosions to endanger the social peace, must be mercilessly suppressed. Otherwise, we would be guilty of being cruel to the people.

At present, a campaign has been launched by the people in this municipality to study and implement the guidelines of the Sixth Plenary Session of the 11th Party Central Committee. Our decision to resolutely deal blows to criminals and to preserve the social order conforms to the guidelines of the Sixth Plenum. It also represents an emergency measure to ensure the realization of greater political stability and the further readjustment of the economy. The people throughout the city must be mobilized immediately to deal blows to criminals and to maintain social order and public security.

In response to the people's earnest desires, our judicial organs must resolutely speed up the handling of criminal cases and mete out severe punishment to those charged with seriously disturbing social order, in order to turn the drive to deal blows to criminals into a powerful movement. To this end, the public security organs, procuratorates, and people's courts must bring into full play their role as the tools of the people's democratic dictatorship, closely coordinating with each other in their common struggle against crime. Once a crime is committed, they must take swift action to crack the case and bring the process of examination, indictment, and trial to a quick conclusion. Only in this way can we deal telling blows to the criminals, introduce panic into the hearts of the enemies, cheer up the masses, resolutely deflate the arrogance of criminals, create in the city a normal order whereby bad elements fear decent people and the masses, and make socialist justice prevail.

The masses of people constitute a genuine wall of iron and steel. No lawbreaker or criminal who is guilty of breaching public security can escape their surveillance. At present, plans must be worked out and steps must be taken to extensively mobilize the masses to expose and report crimes as well as bad elements and their wrongdoings. Special efforts must be made to expose criminals at large, elements who have fled to another area after committing crimes in one area, and fugitives who had been sentenced to hard labor or committed to reform and education programs. We must expose and report elements who secretly store weapons in their homes, criminal rings, instigators, and other lawbreakers. We must sow seeds of discord among the criminal rings in order to break them up, deal blows to their leaders and instigators, and isolate them from the rest of society and strive to rescue wayward youngsters. As long as the masses are mobilized, the criminals will appear like "rats being chased by passers-by across the street" and will sooner or later fall into the dragnet formed by the people. Political and legal affairs organs must resolutely back up those who have exposed and reported crimes, and protect their personal safety. We must commend public security models and activists who have daringly struggled against criminals. Severe punishment must be meted out to those criminals who dared take retaliatory violent action against people who had exposed and reported their crimes.

In the course of strengthening social order and public security, we must convey to lawbreakers and criminals a policy of "leniency toward those who acknowledge their crimes and severe punishment of those who refuse to do so," a policy consistently reaffirmed by our party. Various units must formulate plans, take advantage of available propaganda media, and hold meetings to explain this policy with the aim of dividing and breaking up the criminal rings. In doing so, leniency must be accompanied by stern measures and stress must be laid on education. We must promise lenient treatment to all criminals and give them a chance to turn over a new leaf in their lives as soon as they decide to stop their criminal activities and proceed to confess frankly the crimes they have committed. Light penalties may be handed down to those who have distinguished themselves by voluntarily confessing their crimes and by exposing and reporting the crimes of their accomplices. Those who may be committed to a correctional institution or sentenced to prison terms can be acquitted; those who may be subjected to severe punishment can have their sentences reduced or commuted. However, the people will never tolerate or condone those criminals who continue their wrongdoings. We want to remind those parents and relatives with delinquent children that if they really love their children, they must strictly discipline their sons and daughters and persuade them to give themselves up to the government and political and legal affairs organs; if they wrongly decide to continue to shelter and pamper their delinquent children, they may face the consequence of harming their children as well as themselves. We also want to warn those hitherto unrepentant criminals: you may be able to avoid arrest today, but you cannot avoid arrest tomorrow; wherever you go, sooner or later you will be brought to justice, so you had better make a swift decision now to give yourselves up to the authorities.

In our society, there are some gangsters who call themselves buddies working hand in glove and assume that they are tyrants capable of working their will on a part of society. Actually they are merely fair-weather buddies and a bunch of undisciplined elements. We must make thorough efforts to destroy such gangs and deal fatal blows to their leaders and instigators. As for their members who have been threatened and deluded into joining such gangs, we must teach them to come to their senses quickly before it is too late, to stage uprisings against the gangs as soon as possible, to make a break with the gangs, and to take the side of the people. In doing so, they will be entitled to lenient treatment.

The Tianjin Municipal Public Security Bureau has reaffirmed its "Circular on Confiscating Weapons," stating that no one can manufacture or carry weapons for any reason. All those who possess weapons are urged to turn them in before a specific date; those who refuse to do so will be forced to turn their weapons in. In the future, if anyone continues to manufacture, store, sell, or carry weapons, he will be treated as a lawbreaker no matter whether he commits a crime or not; he will be punished according to the nature of the case, and will be held responsible for any consequences. There are units in our society which produce, sell, and use knives such as hacking knives and Cuban knives. They are urged to establish, perfect, and strictly enforce a control and safeguard system for such weapons. If anyone controlling these weapons loses them or lets them be stolen through a dereliction of duty on his part, and if anyone sells them without authorization and presents them as gifts, he will be held responsible for any grave consequences that result from such action. Today, militia units seemingly face problems of storing and controlling rifles and ammunition. They are urged to conduct an inventory of such weapons. If they find that their weapon storage houses cannot measure up to the regulatory standards, they must temporarily turn them over to the prefectural and county people's armed forces departments for safekeeping until their storage houses are repaired and remodeled. Strict measures must be taken to prevent the theft of rifles and ammunition.

All units must follow uniform regulations in strengthening their internal security measures, and must persist in dealing blows to those who gang up in plotting embezzlement, speculation, and smuggling. They are required by relevant regulations to establish public security patrol teams, economic police force and public security commissions, and to organize the masses to prevent and stop criminal activities. In addition to strengthening its own security measures, each unit must cooperate with fraternal units in guarding against crime.

An important function of this joint measure is to strengthen the education of wayward youngsters. Industrial and mining enterprises, government organizations, schools, neighborhoods, and families have assumed a responsibility to educate these youngsters. Meanwhile, educational assistance groups composed of schools, neighborhoods, and police stations and other units have been formed with the promise of wholehearted devotion to the education, transformation, and salvage of these wayward youths. One of their objectives is to help them eliminate from their minds the worship of fugitive-type heroes, anarchistic views of freedom, and indecent pleasure-seeking concepts so that they can emancipate their minds from the shackles of quackery and foster a correct view of life that will enable them to return to the correct path.

We must mobilize the entire party and the people throughout the city to strive to strengthen this cooperative effort to control crime, and to constantly concentrate on developing the "five stresses" and "four beauties" as the basis on which a socialist spiritual civilization will be built. At the same time, we must make resolute efforts to correct erroneous and ineffective methods of dealing with crimes, and instead take swift and decisive measures to severely punish all active criminals. As long as we can do so, we can certainly create a secure social order and provide an environment in which people can cheerfully and vigorously devote themselves to the development of the four modernizations!

BRIBERY, EXTORTION, OTHER UNHEALTHY PRACTICES DENOUNCED

Beijing XIN SHIQI [NEW ERA] in Chinese No 1, Jan 81 p 9-11

[Article by Wang Ruowang [3769 5387 2598]: "An Initial Study of the 'Science of Public Relations'"]

[Text] Today, everyone in our country who wants to do business with both public and private enterprises has to study the "science of public relations." Because it is merely a negative aspect of life in our society, people have talked about it only jokingly. Thus far, no one has viewed it as a social phenomenon. Nor has anyone studied it with a scientific attitude. The following is only a brief account of my initial achievements in studying this new subject of interest, under the title: "An Initial Study of the Science of Public Relations."

The "science of public relations" is not a branch of science dealing with the normal and general relationships between man and man but a special study of vertical and horizontal relationships between one public service official and another, between private citizens and public service officials, and between those at the top and those at the bottom who want to gang up in plotting embezzlement and extortion, in practicing bribery, in making personal gains at the expense of the public interest, and in practicing favoritism and nepotism to the point of breaking the laws as well as of some ways to eliminate them. Strictly speaking, the term "science of public relations" used here is actually a misnomer and should be renamed the "science of public pests."

There was also a "science of public relations" in feudal society. But it was not as complicated as it is today. For example, in Chapter 4 of the "Dream of the Red Chamber," there was a mention of "pledges of loyalty" read aloud by an old caretaker official upon the arrival of his new boss, Jia Yucun [6328 7183 2625]. Such "pledges of loyalty" were actually key points in the "science of public relations" of feudal dynastics. There is also a "science of public relations" in capitalist society; it was analyzed in the "Communist Manifesto" this way: "The bourgeoisie, wherever it has got the upper hand, has put an end to all feudal, patriarchal, and idyllic relations. It has left no other nexus between man and man except naked self-interest, callous 'cash payment.'"

Socialism in our country has been built on a semicolonial and semifeudal foundation. Our party's excellent tradition suffered serious damage during the 10 years of tyrannical rule by Lin Biao and the "gang of four." This situation was aggravated by shortages of various categories of material supplies, the existence of special privileges and the cadre life-tenure system, overconcentration of power, and rigid control of life. The growth of interest in the "scien of public relations" during this period was a concentrated expression of negative historical, social, and economic factors. Today, as in feudal society, acquaintances are often sought out, and the "influence" of relatives and former bosses (or their special privileges) are used by people in order to "establish communications with," "open the door to," and "clear the way for establishing relations with someone in power whom they do not know. The same purpose can be achieved by bringing "economic laws" into play and bribing someone with gifts, entertainment, kickbacks, and "cash payments." These two methods are parallel with each other and can be used alternately by anyone to achieve his intended objectives. This is where the difference between our modern "science of public relations" and its feudal and capitalist counterparts lies.

Now let me cite an example, as follows:

RENMIN RIBAO on 21 October 1980 exposed the case of Yuan Peiyu [5913 1014 3768], former deputy director of the political department of a certain PLA regiment. During the Cultural Revolution, he was a military representative at the preliminary examination section of the Palizhuang police station and the Chaoyang public security subbureau. Although his position was not prominent, he planned to divorce his wife and marry her younger sister. In order to move her from the countryside and resettle her in Chaoyang District, he really had to rack his brains and bring his wits into full play: He first besought a middle-school principal to falsely certify her as a student. He then bribed the relevant communes of Fengxian County, Jiangsu and Zhuoxian County, Hebei with 3 tons of chemical fertilizer for services rendered. Finally, he secured the "special service" of his former subordinates at the Chaoyang public security subbureau to move her from the countryside to Beijing. In order to find a job for her, he got someone to contact the job placement department. To divorce his wife, he went through various channels to establish a contact with the deputy chief judge of the higher people's court. All told, he had to take nine steps in building up his personal relationships so they could divorce his wife, marry her sister, and move her from the countryside to Beijing. In doing so, he struck no snags. Facts show that Yuan Peiyu had a good mastery of the "science of public relations." A review of his illegal actions indicates that he knew only too well how to make special privileges enjoyed by cadres, feudal relationships, and the capitalist system of material exchanges serve his private interests. However, his thoughtful scheme still went bankrupt. The reason is that he was skilled only in applying the "science of public relations," but he forgot to take into account opposition from his wife, unfavorable public opinion, and the fact that judicial personnel always abide by the law. This tells us that there exist in our society forces or socialist democratic and legal systems which work together to eliminate those masters of the "science of public relations" as public pests.

Judged in terms of an organized network, this "framework of public relations" consists of many "associated units," which in turn form an invisible multilayer net, at the center of which stands a central figure or a power-wielder who enjoys special privileges. For this reason, to eliminate this "framework of public relations" we must simultaneously eliminate the system of granting cadres special privileges, and special privileges themselves. Without making efforts to solve, once and for all, the problems arising from the implementation of the system of granting cadres special privileges and their abuse of power, it seems impossible to eliminate this network composed of "associated units."

In Shanghai, there is a man named Zhou Liqing [0719 0536 7230]. As a supply chief of a large machinery plant, he engaged in illegal transactions with his "associated consumers" (including 105 plants and leading departments of industry and commerce) in all provinces and municipalities (except Tibet and Xinjiang) throughout the country. He shipped out of his plant without authorization some 2,400 tons of steel products, 41 motor vehicles, 96 freezers, and 33,000 sets of electric machinery. He traveled by plane by way of almost all scenic places or points of interest throughout the country. Wherever he went, he was treated like a VIP. On the day of his triumphant return home, he rode in a car escorted by four other cars. Once he went to Wuhan. Upon his arrival at Wuhan airport, he was met by two companies' representatives with cars. These two "associated consumers" wanted him to stay as a guest of honor at their high-class guesthouses. He also once visited Hainan Island. Upon his departure from the island, he received a lot of gifts from the Hainan political and military organizations. Because the civil aviation plane carrying him from Hainan Island found itself overloaded because of his gifts, he had to leave behind two burlap bags of peanuts as gifts to his driver and others who were on hand to see him off. In his native place, he built a Western-style multistory home filled with nonstaple foods, brocade quilt covers and clothing, and other gifts worth thousands of yuan, all presented by others. Zhou Liqing's success in turning that large plant into an enterprise serving his self-interest dates back to the days when he decided to present its leaders with television sets and carved furniture, thus marking a good beginning of his relationship with them. To make the entire staff under his supervision happy, he allowed them to exchange steel products owned by his plant for things they could not get by any other means. For example, steel products were used in exchange for spacious new homes or to clear the way for moving their children from the countryside to the cities. This network, with Zhou Liqing as its center, was designed to use material supplies as lures (including supplies from other plants which were used to serve private interests). This network consisted of many "associated consumers" throughout the country.

The aforementioned two cases are relatively exceptional. More common are the smaller networks of commodity exchanges that authorize both supply and purchase departments to award agents with extra gifts for providing supplies which are in great demand or are outside state distribution plans. Among these gifts are consumer goods for home use, television sets, and wristwatches. Other forms of awards are big parties that are frequently given in honor of such agents. Such unhealthy practices are very popular with enterprises in major cities. If traveling purchasers or sales agents do not learn to master this art of bribery, they are bound to meet difficulties wherever they go. Zhou Liqing-type figures are certain to emerge as soon as their relationships expand along with their business. Therefore, the existence and growth of "associated consumers" will have a corrupting effect on the socialist economic base and will constitute a hotbed for breeding violators of law and discipline and extorters devoted to enhancing their private interests at the expense of the public interest.

This criminal activity has something to do with the moral quality of its culprits and with social and economic conditions. This means that in times of serious material shortages--which force the authorities concerned to tighten the control of commodity circulation--arrangements will be made to ship all goods outside public accounts (actually, materials which have been transferred from public to private accounts) through channels in order to beneift those "associated consumers." In the future, it is expected that this practice of currying favor with "associated consumers" may undergo changes when enterprises are delegated greater power of self-determination and new measures to encourage competition are put into effect. However, if no fundamental efforts are made to crush these networks, large and small, the enforcement of these new measures may also prove ineffective in changing this situation and in preventing the growth of the trend to bribe "middlemen" with gifts and cash payments.

The "science of public relations" is useful as a method for fulfilling certain forms of economic exchange. Armed with this branch of science, a leader can use his political privileges to open a line of communication between those at the top and those at the bottom, or as a door to illegal dealings so that he can realize what he desires. More often than not, such privileges are used to get his children to pass certain examinations by cheating. He can also mobilize acquaintances to allow his sons or daughters to go abroad, to move his or her residence from one place to another, to transfer educated youths settled in brigades upward, and or to promote cadres and recruit workers in violations of relevant regulations. He can shelter his delinquent sons and daughters from the law and entertain outsiders by showing movies intended for internal circulation. Even applications for bank loans, requests for inspection of certain completed projects, examination of new products and determination of their prices, requests for allocation of new homes, and the official business of inviting superiors to inspect security measures and the quality of work call for giving parties and gifts as part of the public relations program. As distinguished from the previously mentioned material exchanges of mutual benefit, which emphasize horizontal relationships in a network, the reference to "associated units" emphasizes vertical relationships in a network. In other words, the underprivileged can ask the privileged to do them favors or give a green light, or as for special and exceptional care. In such relationships, those at the top can always take something in without giving anything in return. What they are to do is to stamp their chop on a paper without any sense of guilt. In other words, they can trade principles for material benefits.

Parties featuring excessive eating and drinking and "inviting guests to feasts" have become popular entertainment throughout the country and an especially valid device catering to our national tastes that can be used to "draw people into breaking the law." Our forefathers followed a tradition of entertaining the god of the kitchen with sweets once a year in hopes of keeping his mouth shut or getting him to "say something nice upon his ascent to Heaven." In our country there is another popular saying: "Gifts will have a binding effect on the hands of their recipients; food provided by others can keep the eaters' mouths shut." After gulping down a few drinks, a powerful superior is certainly willing to say something nice about his host or even go so far as to commit perjury and cheat those at the top and deceive those at the bottom, without giving a thought to the national interests or the party's "guiding principles."

We have used the phrase "strive to pluck the feathers from migrating wild geese" to describe those greedy and corrupt officials. However, I must add the following two footnotes to this phrase: 1) This popular phrase "strive to pluck the feathers from migrating wild geese" refers more often than not to traveling enterprise agents willing to dispense gifts. 2) Gifts so dispensed do not come from the dispensers themselves but from the people. These gifts are dispensed at the expense of the public interest. They come from the people's pockets, just as all wool originates from sheep. Only those gifts that are used to bribe rural commune heads into approving the transfer of their sons and daughters from brigades to higher government organizations and to bribe managers of housing projects into approving their requests for new homes come from their own pockets.

In this connection, the authoritative instruction "Those who do not engage in backdoor dealings are not necessarily decent; those who do so are not necessarily indecent" must be repudiated, because it has been viewed by some people as a basis for legalizing "backdoor dealings." Actually, this remark by Chairman Mao refers only to the recommendation of worker-peasant-soldier students for admission to college. He made this remark in response to a report that some of them had entered college by means of backdoor dealings. On this occasion, Chairman Mao said that they could not be called bad elements even if they entered college through backdoor dealings. I feel that this remark was not an overall evaluation of backdoor dealings. This is why he could not touch on their detrimental effect. At any rate, this incomplete remark has been misconstrued by some people as an indication that Chairman Mao did not oppose backdoor dealings.

During the 17 years prior to the Cultural Revolution, the term "backdoor dealings" was unheard of. It gained wide popularity, however, during the 10 years of catastrophe. Particularly noteworthy is the fact that "backdoor dealings" became a national fad by the time educated youths were resettled in the countryside while their parents wanted to exhaust every means to bring them back, including bribing authorities in charge of their resettlement with gifts.

The study of the "science of public relations" as a public pest has led us to draw this correct conclusion: Backdoor dealings have had a serious adverse impact on our party's prestige and a corrupting effect on our party's cadres. We must resolutely expose and eliminate backdoor dealings as an unhealthy trend which has led the masses to abandon the party. We must handle faits accomplis resulting from backdoor dealings on a case-by-case basis and on the basis of an evaluation of their consequences and their impact on society.

The "science of public relations" is a branch of science touching on sociology, economics, folklore, and ethics. This scientific study of the "science of public relations" is conducted with the aim of eliminating its existence. This effort to eliminate this public pest may not work in a matter of a few days through the proclamation of a simple decree, however, because it has become deep-rooted and endemic, affecting all aspects of life. I am afraid that eliminating it once and for all may call for many years of hard work and endless hard struggle.

Overt acts of extortion, embezzlement, and bribery were supposed to be an incurable disease in the old society. The fact that this kind of "public pest" still exists today in our country after 30 years of socialist revolution is a shame on the Communist Party and a stigma on socialism. However, the socialist system is in no way the same as the system in old China. We must fully apply socialist democrary, the legal system, and the strong pressure of public opinion to cleanse this dirt from our bodies as quickly as possible. I believe that this dark side of our society can be eliminated.

SOCIOLOGICAL, EDUCATION AND CULTURE

STEPS IN MODERNIZING SCIENCE, TECHNOLOGY OUTLINED

Beijing ZIRAN BIANZHENGFA [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 5, 1980
pp 1-2

[Article by Tan Gaosheng [6151 6964 3932]: "Modernization of Science and Technology"]

[Text] The modernization of industry, agriculture, and national defense has to be realized through modernization of science and technology, which takes the lead in the four modernizations. That we have to achieve modernization of science and technology is an indication that our science and technology are backward. Generally speaking, our science and technology are 30 years behind the West. There are many reasons for this backwardness. For one thing, while culture was comparatively developed and there were some important inventions and creations in China in the past, no stress was laid on the development of science. Modern science, which has a history of only 300 years in the West, counting from the time of Galileo and Newton, takes a scientific approach to the laws of nature. The scientific approach includes observation, experimentation, and theoretical generalization. Measured by this criterion, the development of science in our country is slow. While there was a turn in events after liberation, unfortunately we did not attach importance to science over the past 20 years and more--particularly during the Great Cultural Revolution. Scientists overseas take the view that China's approach to the development of science is pragmatist and is devoid of basic research. The so-called pragmatist approach means "studying what is urgently needed" "so as to get instant results," in Lin Biao's words. This Western opinion warrants our examination.

Without basic research, modernization of science and technology will come to naught. What is basic research? There was a controversy over this question in the past; later, the consensus that was arrived at called for separating basic research from applied research and engineering technology. Basic research is aimed at knowing nature, and applied research and engineering technology at transforming nature. Transformation of nature should rest on the foundation of knowledge of nature. Without the guidance of theory, transformation of nature is blind practice. Speaking of basic research, people often misconstrue it as basic theory. Actually, basic research includes not only basic theory but basic experiments as well. Catching up with the advanced world level refers to two aspects: theory and experiments. It is comparatively easy for the Chinese people, who are intelligent and talented, to catch up in the field of theory but comparatively difficult for them to catch up in the field of experiments. The level of experiments is closely related to the technological level of a country. It is estimated that it will take 20 to 30 years for us to catch up in the field of experiments. Besides, there are financial difficulties involved.

Some people divide basic science into six major branches: mathematics, physics, chemistry, astronomy, geology, and biology. My view is to leave out mathematics. Mathematics is the tool of science. Western scientists regard it as half philosophy and half science. The remaining five branches--physics, chemistry, astronomy, geology, and biology--should fall into the category of physical science. Engels' definition of chemistry more than a hundred years ago is outdated. He took the view that what lies outside the field of atoms and molecules is physics and what lies within the field of atoms and molecules is chemistry. Today, we find that not only what lies within the field of atoms and molecules but also what lies within the field of atomic nucleus is physics. Chemistry is not physics but is included in the physical sciences. Apart from this, we have astronomy, geology, and biology. Oldtime astronomy, geology, and biology are descriptive. Modern astronomy, geology, and biology are astrophysics, geophysics, and biophysics. These three branches of physics with prefixes are in the category of the physical sciences! Another view of mine is involved, here. In an article that appeared in LIXUE XUEBAO [MECHANICS JOURNAL], I advanced the idea that mechanics is the foundation of physical science. There was a controversy over this point. Comrade Quian Xuesen [6929 1331 2773] regarded mechanics as an engineering technology, while I regarded mechanics as a basic science. Later, the question was discussed at symposia of scientists inside and outside the academy; at the national mechanics planning conference held in 1978, Comrade Zhou Peiyuan [0719 1014 3293] announced that natural science includes seven basic disciplines: mechanics, mathematics, physics, chemistry, astronomy, geology, and biology. Let me illustrate this with an analogy. Physical science is like a beam over which bloom five golden flowers--physics, chemistry, astronomy, geology, and biology--and under which stand two pillars--mathematics and mechanics.

The modernization of science means the physical transformation of science. The foundation of physics is mechanics, which is the science that treats of the law of the basic motion of matter. The modernization of physics means the dynamic transformation of physics. Physics generally refers to power, sound, light, heat, and electricity. In the 19th century there appeared statistical mechanics. In the early 20th century, quantum mechanics and relative mechanics appeared. The physics of the 20th century moves forward through quantum mechanics and relative mechanics. The modernization of physics is realized through the modernization of mechanics. Without the development of mechanics, physics cannot move forward. On the other hand, in the past the contingents of mechanics scientists had always remained within the limits of Newton's classic mechanics system. Today, the modernization of mechanics demands the physical transformation of mechanics. Kailov, a Soviet scientist of the 1960's, pointed out that the first half of the 20th century was the era of electricity, while the second half has seen the era of physics. To meet the requirements of the era of physics, the physical transformation of various disciplines is called for and should be brought into microcosms. This should also be the case with mechanics. The resistance to this is not great. At the last symposium of the mechanics department organized by the Science and Technology University, I proposed taking the four major branches of mechanics (theoretical mechanics, electrodynamics, statistical mechanics, and quantum mechanics) as the basic courses of study. Some comrades disagreed, regarding the four major branches of mechanics as physics. It was only after the chemistry department, the geophysics department, and the biology department put forward the same proposal that comrades of the mechanics department accepted it.

The key to modernizing science and technology lies in having a modern contingent of scientists and technicians. As Vice Chairman Deng has pointed out, "Talent is hard to come by." To foster scientific persons, it is necessary to set minds free, to establish a good style of study, and to let the old train the middle-aged and the middle-aged train the young. Scholars must not scorn each other. Aged scientists in particular should be broadminded enough to let the young advance. Talented persons should receive greater attention than mere achievements. We should not confine ourselves to counting achievements without interesting ourselves in the growth of talented persons. How can you expect a young chicken like a college graduate to lay eggs? You should let the chicken grow larger. I am in favor of laying stress of the training and improvement of scientific persons. To achieve this, it is necessary to study. I emphasized as early as 1973 that study is for work, is essential to work, and is work itself.

A research office is an important avenue for training talented persons. How to run a research office successfully is an important question. The number of researchers in my basic mechanics research office is 5 percent of the total in the institute. Their research papers published in journals in 1979 accounted for 50 percent of the total for the institute, and their research papers published in ZHONGGUO KEXUE made up 85 percent of the total for the institute. One habit of mine is to let young people advance freely and to encourage them to establish their reputations as authorities without fear. Some people do not agree with me on this point. But to my mind, there is nothing wrong with establishing one's reputation as an authority. All famous scientists are valuable assets of the country.

Talented persons should, be trained in diverse ways. Because of the upheaval of the Great Cultural Revolution, conditions are not favorable in our country for study. The aged have not improved, the middle-aged have not pursued advanced studies, and the young have not been trained. This makes it necessary to take measures. The young, those under 35 years of age, should be given every opportunity to study; some of them may be released from work for studies and for admission to college. Aged comrades should study, too. The well-known mechanics scientist Feng Kamen [7458 0595 7024] wore a hearing aid to attend lectures by his students in classrooms when he was 80. I am in favor of a two-step system for graduate students. Under this system, they will be given 2 years to improve themselves and write theses; some of them may be selected at a 1:5 ratio for advanced courses of study. In addition, in sending people abroad for training, I consider it more advisable to select and send graduate students or researchers, because college graduates are not sufficiently mature to be sent abroad. So much for the problem of higher education. Middle school education is also of great importance. Once I contemplated leaving the Academy of Sciences to run a middle school. Without middle schools as the foundation, college education cannot move forward. The key to improving the quality of middleschool education lies in training and improving middle school teachers, whose burden should be lightened and who should be given an opportunity to improve themselves. We should not look to material factors to the exclusion of human ones.

SCIENTIST FIGHTS OBSTACLES HINDERING HIS RESEARCH WORK

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 1, 1980 pp 39-43, 10

[Article by Shi Xiyuan [4258 1585 0955]: "Strive for the Right of Scientific Research"]

> [Text] Editor's Note: The socialist modernization of our country is confronted with a number of problems, talented persons being the most prominent one. Our journal has started a special column--"Investigating and Thinking"--with the aim of promoting investigation and research, conscientiously summing up experiences and lessons, using our brains, and emancipating our minds, thereby creating conditions for shaking off the yoke of certain traditional ideas and for bringing up people of talent in large numbers. We look forward to having our readers assist us in making this special column a success.

In June of last year, a public lecture on the question of the applications of quantitative taxology was sponsored by the biophysics group of the Beijing Society of Physiological Science at the cinema theater in the Astronomics Hall. The lecturer was Xu Kexue [1776 0334 1331]. It was the first time in his life that he had delivered an academic report on such a grand occasion. From 2:30 to 5 pm, before an enthusiastic audience, he freely carried on a discussion of quantitative taxonomy from its brief history, to its application in biotaxonomy and other disciplines, making a careful and detailed analysis. After the applause, people--among them workers in biology, agriculture, and medicine and researchers in physical culture--gathered around him. One after another they asked questions related to their specialties and asked him to keep in touch with them from then on. This gave him great encouragement and even dispelled his fatigue.

This lecturer is a technician at the Pharmaceutical Products Inspection Center in Jindongnan Prefecture, Shanxi Province. He graduated from the Department of Mathematics at Beijing University in 1965. For more than 10 years he had no opportunity to apply what he had studied. With the downfall of the gang of four, he stroke into the new domain of biomathematics. But just as he was working hard on scientific research plans, his wages were suspended as of January 1979.

He lived by borrowing and continued to tackle problems. None of the listeners who were interested in quantitative taxonomy suspected that this scientific worker was in the midst of a "financial crisis." They were astonished at the plight of this 41-year-old scientific worker. First I was astonished, and then I sympathized with him. I could not help writing down what I knew about his situation, hoping that more and more people would pay attention to certain aspects of the first line of scientific research.

Crawling Forward

Born in Shanghai, Xu Kexue loved science from childhood and took an interest in nature at all times and in all places. Starting in his second year at a junior middle school, he began to keep ahead of the progress of classroom teaching and studied higher level textbooks by himself at high speed. In his first year at senior middle school, he read English editions of books on mathematics and studied calculus very hard. Simultaneously, he kept taking a great interest in biology. At that time, little Kexue had no interest in politics and merely "swam free style" on the surface of the ocean of knowledge. Simple and unaffected, he wanted to head for the other shore, where a fascinating word in big letters--scientist--was visible.

Xu was admitted to Beijing University in 1955. Inspired by the political situation at the time, and with the kind help of his organization, he began to realize that an ambitious youth should become not only a scientist but also a revolutionary. Because he was doing well and making fast progress in various fields, he was admitted to the CYL in 1956. After that, he was more strict with himself. He enthusiastically fulfilled the tasks assigned by his organization and continued to study the same way as he had done in his middle-school years. Instead of forcing himself to gain better marks, he strove to learn more and studied in a lively way.

In his middle-school years, Xu had kept his eyes on the controversy in the field of genetics. He detested Lisenko's "academic" criticism, which resorted to political and philosophical ideas. At a course of lectures at Beijing University's Biology Department in 1956, he listened to Professor Li Ruqi's [2621 3067 3825] academic report with reference to the Qingdao symposium on genetics. At the same time, he came to know from RENMIN RIBAO how genetic breeding expert Bao Wenkui [7637 2429 1145] had been repressed. He asked himself: How come scientific development is impeded and scientists are repressed? Over and over again during the rectification movement he studied "On the Correct Handling of Contradictions Among the People"--particularly the chapter on letting a hundred flowers bloom and a hundred schools of thought contend. He deeply felt that the development of science called for democracy and freedom, that the "three scourges"--subjectivism, bureaucratism, and doctrinairism--corroded the revolutionary ranks and undermined democracy and freedom, and that the rectification was directed against the "three scourges." With immense political ardor he threw himself into the rectification movement. When he found that problems involving the social system seemed to be among the subjects forbidden in debate, he wrote a big-character poster saying: "Our socialist system is the most magnificent ever seen in history. But under the socialist system there is a distinction between 'officials' and the people--

that is, between the leaders and the led. Some leaders are unable to reflect the interests of the masses enthusiastically and are unable to understand objective circumstances comprehensively, making the breeding of the 'three scourges' inevitable."

This frank statement from the lips of an honest person was included in the "reactionary speeches at Beijing University." Xu Kexue, a member with only 1 year's standing, was purged from the CYL and turned into an "antiparty, antisocialist" rightist. Seven of his 29 classmates were termed rightists. In addition, some who were subjected to disciplinary action, though they were not labeled rightists, were youths in their twenties.

Xu Kexue was sent to the Qingho Woolen Mill for labor reform. Before he actually strode forward toward society he began to suffer torment. Afterward, this young "enemy" strove for the primary goal of becoming qualified to be "one of the people." He repented like a devout priest and made up his mind not to return home to see his parents until the label of rightist had been removed from him. Xu was doing well in his work and initiated a minor technical innovation that greatly increased the efficiency of trimming twisted yarn. At last, the label of rightist was removed from him. In the course of corrective labor he had become acquainted with Ding Hongmo [0002 7703 2875], a party member and factory director condemned as a right opportunist. Ding was blamed for opposing rash and reckless action in the Great Leap Forward and for advocating the application of science and technology to increase production efficiency. It may be said that the two had the same "foul" odor. They often talked about problems of science and technology. After he was cleared, Ding took the political risk of transferring Xu Kexue, a rightist who had had his label removed, to his engineering office. Xu keenly felt the deficiency of his knowledge for this work and asked to return to school for study.

Back in his classroom after an absence of 4 years, the "rightist with his label removed" was like someone with a tattoo on his face, and people often looked at him with curiosity. He felt a bit relaxed only after he had adapted himself to the circumstances for some time. The higher learning institutes were implementing the 60 articles, giving Xu Kexue valuable time. In addition to his classroom studies, he read a great number of reference books and studied the "Treatises on Measurement." Not long afterward, the string of class struggle was wound tight and once again he lived in an atmosphere of extreme inequality. Unable to stand straight to talk like others, he crawled on the ground to look for more knowledge of all sorts. If he could not take his destiny into his own hands, who knows what he would need one day? Yet he was not despondent. He maintained that life is like a picture, the beautiful or ugly appearance of which will depend on how one paints it with his own words and deeds.

Infatuated With Medicinal Herbs

After his graduation in August 1965, Xu Kexue was assigned to an intermediate specialized school, one of a simple and crude type, in Changzhi Municipality, Shanxi Province, to teach. He won praise for his hard work. As soon as the Great Cultural Revolution began, he was transformed into an "evil leader" bearing the brunt of the revolution. Once he drew a coordinate chart in the press, with the arrow of the coordinate axis pointing in a direction violating the ban. To be sure, those people with a strong sense of smell for class struggle would not overlook the criticism and denunciation value of this incident.

Fortunately, factional struggle covered up the "enemy," and soon Xu was thrown out of the political vortex. Later, under the call of "study anew," he was sent down to the countryside to work. In the countryside, he collected specimens of several hundred medicinal herbs for his brigade. He conducted research on medicinal herbs, not for the sake of going with the tide but with the aim of doing some useful work within legal limits. He wanted to vindicate not only himself but also those students trained by the "old schools" over the past 17 years. After taking part in putting together the "Compilation of Shanxi Province's Medicinal Herbs," he participated in a general survey of medicinal herb resources in Jindongnan Prefecture.

Thereupon he began a long-term life in the field, leaving his footprints on Heng, Luliang, Guanqin, and Xizhou mountains. Year in and year out, he appeared and disappeared in Taiyue, Taihang, and Zhongtiao mountains in Jindongnan, and associated with many health workers and medicinal herb peasants. He entered into thatched cottages that had been inhabited by poor peasants for generations. The backward features of the mountain villages and the hard life of ordinary peasants aroused his will to fight selflessly. In this way, day after day and year after year, eating in the wind and sleeping in the dew on high mountains, he looked for and collected medicinal herbs in deep forests and gullies. The localities with greater possibilities for new medicinal herbs were seldom visited by people and were inaccessible. On one occasion, Xu was perplexed when he lost his way on Wutai Mountain in a curtain of darkness. On another occasion, he was distressed when he found himself in a hopeless situation on overhanging cliffs of Yunmeng Mountain. Once he was terrified when he was close to wild animals in the ancient forests on Zhongtiao Mountain. Yet none of this deterred him from preparing to scale and cross over mountains again. The danger of becoming injured or disabled in a fall or harmed by wild animals never escaped him, but any sense of insecurity was trampled underfoot by his ardent desire for medicinal herbs. Once he was climbing over a locality called Yaman's Nose on a desolate path on Zhongtiao Mountain, when suddenly he found the tuber of elevated gastrodia (Gastrodia elevata), a rare medicinal herb in Shanxi Province. No one could imagine how excited he was; it was as if he had discovered a new continent. The joy of scientific fighters lies in this arduous exploration!

After years of arduous struggle, with the help of some comrades he had collected more than 5,000 specimens in Shanxi by 1975. Basically he had found out about the resources of medicinal herbs in Jindongnan Prefecture, and by and large he had surveyed the resources of medicinal herbs in the whole province. He discovered some new varieties and cleared up certain confusions regarding local medicinal herbs.

The pharmaceutical products examination center in Jindongnan Prefecture was set up in 1975. Xu Kexue gradually shifted his main energies from the collection of medicinal herbs to preparatory work for the construction of the center. He busied himself with making requests for funds and placing orders for instruments and equipment of all sorts, from spectrometers to cement pads, and from scales to screws. He was busy carrying and unloading the equipment and fixing it. In all his activities, from compounding of solutions to biological determinations, from titration tests to chromaton graphic analyses, he had to consult books, ponder, design, and experiment. His major was mathematics, and yet he was called upon to concern himself with materia medica, chemistry, biology, and medicine, and this was very difficult for him. In particular, he was short on chemical experimentation. It was on the foundation of his middle-school knowledge of chemistry and by dint of diligent study that he overcame difficulties one by one. Not having enough daytime, he worked by night. He took no days off except for the annual visit he made to his family in Shanghai. Not having time to mend his wornout quilt, he slept under a quilt cover. When he found no food available at the canteen, he boiled dumplings to eat. He threw all his available time into his work. In those years of arduous struggle, he busied himself with all kinds of business for the examination center, including final checks on the examination of pharmaceutical products. Goodness knows how many instructions were requested, how many reports were issued, and how many requests were made in order to expedite work, and how many rebuffs were received. Sometimes he had to bow many times and run many rounds before a minor problem was solved. What did he rely upon? On young revolutionaries' longing for scientific truth. What did he strive for? For faster progress of the socialist cause. He realized that even the speed of an oxcart would be better than lying down on socialism! In those years Xu Kexue never had a clearly defined duty, but he did assume responsibility of real significance.

With the support of leading comrades concerned, the pharmaceutical products examination center made preparations for construction on the one hand and launched work and took on scientific research projects on the other. At the provincial conference called in February to examine pharmaceutical products, Xu Kexue reported on the work of the center. He received favorable comments and further encouragement and support from the Provincial Health Bureau.

Xu Kexue expended his energy in watering the medicinal herb plants and let his sentiment for life find sustenance in medicinal herbs. But for this he got into inexplicable trouble. Xu was supposed to compile a catalog of the medicinal herb plant seeds collected each year and set up exchange relations with more than 40 units in the country. The seed catalogs were typed or copied in Latin, and each item was numbered by the unit. Once, the Guangdong Botanical Garden sent the unit an official letter requesting seeds according to the serial numbers. Unexpectedly, someone suspected that this was a political matter. When wages were assessed and determined at the end of 1977, someone suddenly launched an attack on Xu Kexue. Though his wages eventually were adjusted, the incident did dampen popular morale. Comrades, who paid no attention to studies, took ignorance as the political sense of smell. It seems that intellectuals are destined to swallow this bitter fruit for no reason at all. Indeed, the learned are hated by the ignorant, and nobody knows when the blind will see light.

Indulging in the Wildest Fantasy

Xu Kexue dug into each line he took up, but he kept thinking about his own line--mathematics, a discipline in which the party and people had made a great investment to help him study diligently, and a discipline he had loved since childhood. Yet, after he left school, nobody brought his strongpoint into play.

The volume of work involved in the general survey of medicinal herb resources increased day by day as more and more basic data were accumulated. Many problems cropped up that could not easily be solved or could not be solved at all by the classic method of classification. The work ahead demanded that he must find greater, faster, better, and more economical methods. He remembered what Ju Weiye [1446 4850 0673] had said in a book he had read in middle school. The gist of what he said was something like this: Give me a piece of bone, and I will restore the entire original shape of the animal. Can one who engages in plant classification rely on a plant leaf to restore the original shape of the plant? Keeping his eyes open here and there, and racking his brains, he considered it possible to use mathematical methods to draw this information from the green world.

He told plant classification experts what was on his mind. The reactions were support in some cases, doubt in others, and derision in still others--derision that he was indulging in the wildest fantasy. Encouraged by those who backed him, he made up his mind to go ahead. At the same time he was collecting a large amount of data on plant taxology, he was pondering how to apply mathematical methods. It was the spring of 1977. Associate Professor Yang Jike [2799 4764 3784], a well-known biomathematician in our country, said this: "What Xu Kexue wants to take up is quantitative taxology, which is making fast progress abroad but is still nonexistent in our country. Xu has a deep foundation in mathematics and years of practical experience in taxology. A talented person such as he is seldom found. For the sake of developing taxology at a great rate, I would willingly serve as his drumbeater."

Xu Kexue asked some people to borrow two books from Beijing. Like a famished baby, he greedily threw himself into the two books, studying them very hard page by page and digesting them paragraph by paragraph. He discovered that certain fragmentary ideas in his mind had already become a system abroad, and that other people had already done what he must expend great energy to do. He found that the problem now was not to adhere to his original ideas but to race over the position already opened by others and find a new starting point.

It was the end of the year and the eve of the national science conference. Science was in vogue then. Xu Kexue reported to his leading body his proposal to develop quantitative taxology and received encouragement. With the support of competent departments, he established cooperative relations with the Biophysics Research Institute of the Academy of Science and other units. In September he came to Beijing to look up documents and data and to acquaint himself with the technique of using electronic computers.

In nearly a year of arduous struggle, Xu Kexue looked up more than 150 documents. He got a rough idea of the development of taxology and the method of taxology abroad, wrote a summary, made many academic reports, and contributed articles to the press giving an account of the progress of this discipline. In the process he cooperated with the researchers on the Academy of Science's committee for comprehensive survey of natural resources, and applied the method of group analysis to ecological research, offering new methods and providing a new basis for expanding the areas of fine-wool sheep development in our country's Northwest region.

Determined To Climb Ahead

Viewed from the history of science, launching research activities along the path of spontaneous development of the scientific thinking of science workers is precisely an important feature of scientific labor. Setting state planning absolutely against scientists' freedom of research, and showing no respect for the spirit of free exploration in scientific work, have placed the scientific cause of our country in an extremely unfavorable position. It looks like our country has to travel a long way before it can really learn some lessons.

After the downfall of the gang of four, Xu Kexue told one of his comrades his idea for applying mathematical methods to plant taxonomy. Before long, a long-distance telephone call transferred him back from Zhongtiao Mountain, and he was severely criticized for "being out of line." It took a lot of talking to clear up the matter. An atmosphere [favorable to] science was getting stronger and stronger after the downfall of the gang of four. Xu Kexue thought he could now straighten his stooped body. Quantitative taxonomy was brought into the unit's scientific planning. In the name of the Pharmaceutical Products Inspection Center he formed a biomathematics cooperation group.

As a new discipline, quantitative taxonomy is still in the stage of initial establishment and development domestically. If we want to catch up and overtake others in such circumstances, it is of course necessary, first of all, to know of the progress being made abroad, to acquire all available data, to keep track of the developments and tendencies of this discipline, and to gradually launch research into theory and application in light of our needs and possibilities. This work is by no means as simple as preparing a cup of tea in our office, nor is it as light as looking at a television screen; still less is it as awe-inspiring as reprimanding one's subordinates. What is needed is time, knowledge, and willpower. What Xu Kexue lacks is, first of all, time. When going to work, many people in a number of units are careless and casual, idling away their time. They may take several months' leave to visit their relatives, and their leaders do not want to question them about it--nor do they know how to question them. But when Xu Kexue wanted to go to Beijing (none of the data he needed was available in Changzhi) so as to race against time, disturbances arose repeatedly. Xu insisted that in order to launch the work of quantitative taxology according to plan, it would be imperative to go to Beijing to look up documents. The leading body of the health bureau, however, maintained that those engaged in scientific research must not leave their units for long periods. Xu then consulted the basic-level leading body and left Changzhi, bringing with him a reference saying he was carrying out an assignment.

After 2 months in Beijing, Xu Kexue received a letter from his unit asking him to come back at once. It was clear to him that if he went back then, the scientific research plan for quantitative taxonomy would go up in smoke. He wrote to the responsible person of his unit, giving his reasons for not being able to come back for the time being. He made the best use of his time in his work and, except for the time necessary for eating and sleeping, he made no distinction between office hours and off-duty hours. His sister asked him to dinner at her home, but he did not want to [accept] because it would take longer than eating at his canteen. His wife, living in Shanghai, asked him to come home to help her move to a new shelter, because she had only disabled elders and two children with her. But he did not go home. All this was for the sake of racing against time.

But the Pharmaceutical Products Inspection Center suspended his wages in January 1979 and would not allow food coupons to be sent to him.

Xu Kexue began to live by borrowing, and he rearranged his everyday life and the expenses necessary for performing official duties. To save 5 cents of the fare when he went to the Astronomics Hall to make his academic report, he took the bus from Zhongguancun to Baishiqiao and then got off the bus and walked to the Astronomics Hall. Generally speaking, he stopped going from Zhongguancun to the Information Research Institute at Hopingli because the journey would cost additional bus fare. He could not afford to pay for carbon copies of the necessary data. He copied it by himself and traced charts and tables, using cellophane paper. To trace thin lines at half-millimeter spacing and small and closely written characters would of course expend much more time and energy. He had no money to send home, and his wife with her low wages carried a heavy burden. Their difficulties are better left to the imagination.

Despite the heavy pressure, Xu Kexue kept advancing.

Xu Kexue was invited to a symposium on "the future of biology" in August. When he returned to Changzhi to await approval, he found a red light.

What to do? Some well-intentioned comrades advised Xu to keep talking to the bureau director, and he did want to try. He thought to himself: It takes time to keep talking, but this produces neither material fruit nor spiritual fruit. How much of our valuable time has already been thus wasted? I am over 40 and have not much time to keep talking. Then, stamping his foot, he took a train to the meeting.

The leading body of the bureau affirmed Xu Kexue's past achievements but did not understand the feelings of a scientific fighter who had made up his mind to climb at the sight of the pinnacle of science. In their eyes, Xu, who was long absent without approval, had flouted organization and discipline and must be dealt with severely. In his own eyes, Xu had acted according to the scientific research plan. He went all out to fill a void in the domain of science, which was irreproachable. To achieve this, he would not hesitate to pay some price for racing against time. Evidently, the difference between the two aspects of contradictions brought to light some irrationalities in the existing cadre system.

Nevertheless, this comrade bureau director was an enlightened person. He indicated that Xu could apply for a transfer.

If he were released from one place, where would he be employed? Some relevant research institutes of the Academy of Science had great need of experts in biomathematics, and comrades who had worked with Xu strongly recommended him to some institutes. But for various reasons, nothing happened. The troubles left over from the past had built a high wall between the urgency of state needs and the possibility of solving the problem. How difficult!

At that juncture, a certain unit expressed an intention to employ Xu Kexue but required him to make a written pledge agreeing that for 2 years he would not be permitted to bring up the question of himself and his wife remaining in separate localities.

Xu's wife and children live in Shanghai, and his parents, who are old and have no children with them, also live in Shanghai. Had he wanted to solve the problem of husband and wife living in separate localities, he would have done something long ago to get a transfer to Shanghai. He never made such a request. As far as he was concerned, where he should be transferred should depend on whether he would be able to pursue his research in biomathematics. But comrades of the unit in question emphasized that Xu Kexue was to pursue research in taxology, not biomathematics. What to do? His own unit had cut off his supplies, the door of the Academy of Science was closed to him, and the unit in question had laid down an additional condition. Still, he thought the said unit would be the best for him, because by working with that unit he would be able to carry on his work. He placed his hopes on nighttime and on Sundays when libraries remained open. Thus, he wrote the pledge.

Our country is originally poor and empty and short of talented persons, particularly after the mopping-up operations of the 10-year Cultural Revolution. Talented persons are now a topic that is often on people's lips. On the one hand, we have juvenile classes for quick breeding and "hastening growth." On the other hand, we have people over 40 who are doing a crash job to learn their ABC's and going abroad. While these measures are necessary to meet urgent needs or ones that have to be taken, nevertheless, judging from the pressing needs at present, the measures represent not only distant water that cannot quench present thirst but also a cup of water used to put out a burning cartload of fagots. We might as well look around further. Domestic "wild fruits" are found here and there after 30 years of efforts to sow but not reap. Why don't we pick them up? A large group of people like Xu Kexue have had their shining period of youth; over and over again, college graduates are being selected by new China. Although a considerable period of their greatest vitality has already been wasted, many of them are still ambitious and capable of making more contributions to the four modernizations. They are willing to dedicate their utmost to the cause of science, which also needs them. Why can't our superior socialist system make the best choice in its own interests?

Before the proofs were read and corrected, the comrade director of the Jindongnan Prefecture Health Bureau told the reporter of this journal when he visited the bureau: Provided the state has needs, I am prepared to provide talented persons. Pending concrete arrangements, the units in question may consult each other and arrange for Xu's transfer. At present, Xu Kexue is throwing himself into a sort of computer program application of a method of classified analysis. With heroic determination he looks forward to the future of biomathematics. With our blessing, we hope he will be contributing his due part to the development of biomathematics in our country.

SOCIOLOGICAL, EDUCATION AND CULTURE

NATURAL DIALECTICS MUST SERVE SCIENCE AND TECHNOLOGY

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 1, 1980 pp 15-17

[Article by Guan Shixu [7070 1102 4958] and Chen Changshu [7115 2490 2562]: "What Does Scientific and Technological Development Ask Us to Do?--on Several Relationships in the Work of Natural Dialectics"]

[Text] The vitality of natural dialectics depends mainly on its adaptation to the practical needs of scientific and technological development. In other words, it must produce the effect of serving the four modernizations, especially the modernization of science and technology. In the past 3 years, we made some effort in teaching and academic research. However, our work is still in the stage of developing and probing, and many problems still exist. Judging from the historical mission to be truly achieved by natural dialectics and starting from the requirement of continuously advancing natural dialectic work, we must look fully and squarely at the flaws in our work and soberly recognize the tremendous difficulties confronting us. Currently, some people in scientific and technical work are striving to learn and employ natural dialectics, but a considerable number of them remains indifferent and uninterested, and a small minority even feels hostile. If we underestimate the intensity and gravity of the problem and fail to conscientiously analyze the reasons and adopt concrete measures to improve our work, if our natural dialectics produces no practical beneficial effect on the development of science and technology over an extended period of time and fails to win the trust and support of more scientific and technical workers, just how valuable is our work becomes indeed doubtful.

Why are the scientific and technical workers indifferent toward our natural dialectic work? The problem is that what they need is the natural dialectics which is deeply entrenched in the scientific and technical reality and rich in philosophical theories and which brings enlightenment in viewpoint and method to the solution of scientific and technical problems. Yet, a big gap exists between the work now performed by us and this need.

The current task is to strive to close this gap. For this reason, we feel that we must concretely analyze and correctly handle the following relationships in natural dialectic work.

The first is the relationship between the development of natural dialectics and the practical needs of science and technology. As a developing subject, how to build and perfect the natural dialectic theories themselves is naturally necessary and important, and the teaching of natural dialectics requires a relatively suitable academic system. The problem is that the development of an academic subject may be accomplished by two methods: One is to place the emphasis of work on the interpretation and explanation of relevant classic works, compile lectures from the existing documentary data, or make programmatic studies of the general nature, contents and structure of the subject, without giving much attention to answering the problems posed by the development of modern science and technology. The other is to devote more energy to the understanding and study of the practical conditions of science and technology, penetrate the scientific and technical workers and management work, explore and solve, together with them, the problems in the philosophy of nature, philosophy of science and methodology encountered in practical work, help them master and employ the general laws of nature and of scientific and technological development, and reenforce and develop the contents of natural dialectics on this foundation. The former was inevitable in the past several years, but it must not continue this way. Evolving around the subject itself will not necessarily benefit its development.

Now is the time to shift the emphasis of natural dialectic work to the direction of starting from the reality of science and technology and serving their modernization. We should, for instance, study the history of scientific and technological modernization of foreign countries, the scientific and technological revolution since the 20th century, the successes and failures of China's major scientific and technological programs in the past 30 years and the reasons for the successes and failures and, in the contrast between domestic and foreign experiential lessons, understand the laws, structures, characteristics and tendencies of scientific and technological development, thereby supplying references for determining the scientific and technological strategies in the future. It will be much more useful than abstract discussions.

When we advocate penetrating the reality of science and technology, it appears that we are not placing natural dialectics in an important position, but actually it is not so. Natural dialectics emerged in the integration of the Marxist philosophy and natural science, and it can only continue to grow in such integration, while the foundation of the integration is the reality of science and technology. We must not only verbally discuss integration, but must recognize it in understanding, truly practice it and strive to make natural dialectics useful to scientific and technological development. By so doing, the subject itself will have a broad future.

The next is the relationship between guidance and service. The basic point of our work is the firm belief that the Marxist philosophy, by means of natural dialectics, the intermediate link, will guide scientific and technological development more successfully. Failing to mention guidance will make us abandon the functions of natural dialectics. At the same time, we must not stop at guidance, but must solve the problems of how to guide, what to rely on to guide and how to make the scientific and technical workers recognize the guidance. The Marxist philosophy occupies a special position in our country, and it absolutely is not equivalent to a police baton directing the scientific and technical workers where to do and where not to go, nor a philosophical judge declaring which scientific and technical results are idealism or metaphysics. To guide, one must serve, and the guiding effect of the Marxist philosophy can only be achieved by means of natural dialectics serving the development of science and technology.

We must serve the scientific and technical workers, make friends with them, understand their needs in scientific research, and help them,in viewpoint and method, solve the problems encountered by them. Actually, among the scientific and technical workers, it is not that there are no problems requiring analyzing and solving by means of dialectic thinking, but that they do not, or seldom, receive help from the natural dialectic workers. We must strive to change this situation, humbly learn from them, summarize, together with them, the experiences in scientific research, and discuss with them the methodology of scientific research, so that they will feel that natural dialectics is useful in helping them determine the direction accurately, widen the field of vision and enlighten the mind. Natural dialectics cannot replace concrete scientific research, but our work should at least provide some ideological enlightenment in scientific and technological exploration. It will contribute to developing the guiding effect of the Marxist philosophy. Not only serving the scientific and technical workers in their work and helping them to be courageous in creating and skillful in thinking, but we must also speak for them. We must theoretically explain the position and role of the scientists and technicians in social progress, the labor characteristics of scientific research and the relations between man and things in scientific activities, thereby enabling them to develop their ability and wisdom more fully. If we fail to perform all such service work and feel unconcerned over their wellbeing, the guiding effect will become an empty phrase.

Our natural dialectic work must also serve the scientific and technical management cadres. The comrades in scientific and technical management work urgently need to clarify the structures of modern science and technology, master the strategy and tactics of their development, formulate the best plans for the prompt realization of their modernization and fully develop their potentials. Here, many problems require the joint effort of the natural dialectic workers and the scientific and technical management cadres. If we fail to conscientiously analyze the problems confronting the scientific and technical management cadres, but blame certain cadres for failing to manage science according to the scientific laws, we will be delinquent in our duties and fail to make natural dialectics produce a guiding effect on scientific and technical management.

The third is the relationship between science and technology as the "target" and philosophy as the "arrow." To start from the reality of science and technology, serve their progress and produce a guiding effect on their development, natural dialectic workers must learn science and technology. The Marxist philosophy as the "arrow" must aim accurately at science and technology as the "target." To shoot the arrow at the target, we must first know the "target." If those pursuing natural dialectics remain ignorant of scientific and technical problems and speak little common language with the scientific and technical workers, they will not be able to either render service or discuss guidance.

Not only knowing the "target," but we must also have the "arrow." The philosophical training of the natural dialectic workers should not be too inferior, for otherwise they will not be able to perform their work successfully. As shown by practice, the main reason that some scientific and technical workers wish to make friends with us and form alliances is not because we also have some of their professional knowledge, and even less because we have more professional knowledge than they do, but because we more or less possess some strong points in philosophical theories which can give them ideological enlightenment unavailable in the realm of their professions. They are not interested in treatises containing only abstract philosophical phrases, without analyzing the practical scientific and technical problems, and nor do they welcome natural dialectic lectures and articles enumerating scientific and technical data without philosophical enlightenment. Nevertheless, our natural dialectic work in providing vivid and profound philosophical theories is too inferior. We must raise our philosophical level and increase our ability in theoretical thinking. Conscientiously studying Hegel's philosophical works and learning Lenin's "Philosophical Notes," for instance, are extremely important to natural dialectic work. If we give attention only to remedying our lack of scientific knowledge, while overlooking the advantages of developing philosophical theories, and consciously or unconsciously feel that traditional philosophy is useless to natural dialectics, we will be just as one-sided.

Finally, it is the relationship between upholding the basic truths of the Marxist philosophy and developing it in natural dialectic work. We must develop before we can uphold. It will be hard for an immutable philosophical "arrow" to hit the scientific "target" developing in leaps and founds. In the past one hundred years, especially since this century, science and technology have been changing with each passing day, yet we have performed very little work and produced very little result in making philosophical summations of the newest scientific and technological achievements. Much of the material in classic natural dialectic works has to be brought up to date, and some of the theses require substantiation or revision. Modern natural science has made a new challenge to philosophy, demanding an answer. We who pursue natural dialectics must undertake the task of enriching and developing the Marxist philosophy. It will be wrong if we only complain that philosophy lags behind modern science, feel that the paucity of philosophy indicates the uselessness of the philosophers, and ask the philosophers for new philosophical theories in natural dialectic work. Summarizing the new progresses of modern science and technology and developing the Marxist philosophy are primarily the affairs of the natural dialectic workers.

To enrich and develop natural dialectics, we must emancipate our thinking and have the courage to innovate. People do not find it strange that any branch of natural science is continuously abandoning old theories, absorbing new nutrients, explaining new facts and proposing new interpretations, and that every natural scientific worker can make contributions. Philosophy and social science should also be thus, but it is a new issue to us. For this very reason, we must enliven academic thinking, overcome mental ossification and study anew the viewpoints which seem to have become final. For instance, we usually only mention the possibility for the scientists of capitalist countries to have spontaneous materialism and spontaneous dialectics, but not the possibility that some among them may, by means of scientific practice and the philosophical thinking in history assimilated by them, acquire conscious philosophical views approaching dialectic materialism. We only mention the scorn felt by the great scientists of capitalist countries for the philosophers, but not the fact that Planck, Einstein and Wiener were also great philosophers and great thinkers at the same time. We only mention the idealism of the Copenhagen school, but fail to ask whether it is dialectic. We only mention the need to criticize modern Western scientific philosophy, but fail to inquire whether it has anything which can be critically absorbed. We only mention the need of logical thinking for the ascent of perceptual knowledge to rational knowledge, but fail to look into the effect of intuition and fantasy in the process of understanding. We only mention the fact that the higher forms of motion cannot be concluded as the lower form of motion, but not the necessity of analyzing the higher form of motion with the theory and method of the lower forms of motion. We only mention the need of unified planning for the socialist scientific undertaking, but not the need of freedom in scientific research under the socialist conditions. We only discuss the social conditions required for the elimination of the "three major distinctions," but not the development of the production force and the progress of science and technology on which their elimination mainly hinges. If we cannot examine the final views such as these according to the criterion of practice and boldly express new ideas, the study and propaganda of natural dialectics will not become vivid and lively; we may even spin a cocoon around ourselves and turn the favorable factors for popularizing dialectics into unfavorable ones.

Natural dialectics faces the dual task of guiding the development of science and technology with the Marxist philosophy and enriching the Marxist philosophy on the practical foundation of science and technology. The two are closely linked and mutually complementary. In terms of natural dialectic work, the development of philosophy is still for the purpose of promoting the progress of science and technology and the realization of their modernization. Only by firmly starting from the reality of scientific and technological development and conscientiously studying and solving the practical problems posed to us in such development can we look forward to making headway in completing the dual task mentioned above.

DEVELOPMENT OF CHINA'S BIOLOGY DISCUSSED

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 1, 1980 pp 1-2]

[Article by Feng Depei [7458 1795 1014]: "Two Types of Sense of Responsibility"]

[Text] We should increase our sense of responsibility to the development of biology. The sense of responsibility may be divided into two aspects: We must have a sense of responsibility in eliminating the obstacles to the development of China's biology, which may be considered the sense of responsibility in the "destructive" aspect; in addition, we must also have a sense of responsibility in the "constructive" aspect, which is organization, research and personnel training.

Let us first discuss the "destructive" aspect. We may make suggestions to the leaders on such issues as academic democracy. However, we must not rely on charity for academic democracy, but must strive for it, and even struggle for it. Currently, we still hear about a "feeling of lingering apprehension" in some people, and it deserves analysis. "Apprehension" means fear. When handling affairs and conducting oneself, it is not quite right to start from the word fear. It was a fact that some of the things in the past were rather fearful, but starting from the word fear too often is not the right way. Such issues as the lack of academic democracy and the "swarm of bees" produced a fairly serious influence on the development of biology in the past. If we do not handle them conscientiously and strive to overcome them, such issues will continue to exist. As long as we handle them conscientiously, they can be overcome. Take the current situation: One cannot say that it is satisfactory in all aspects, but the general tendency of development of our country is clear, and we should have confidence.

The main reason for the lack of democracy in the academic field in the past was because political and academic issues were often entangled. The forbidden areas in learning were actually the forbidden areas in politics; learning itself has no forbidden area. Hereafter, we must strictly separate academic issues from political issues. The relationship between politics and learning is about the same as that between politics and production. In "Politics and

Economics under the Proletarian Dictatorship," Comrade Zhang Wentian [1728 5113 1131] said: "Correct political leadership and economic achievements inevitably form a direct proportion." One may paraphrase him by saying that correct political leadership and scientific development inevitably form a direct proportion. Conversely, any political leadership which blocks scientific development is an incorrect leadership. Our country can do much in making politics a promotive force in scientific development, rather than an impediment. We hope that our leading party and government comrades will carefully summarize the experiential lessons of the past and conscientiously consider the issue.

On the other hand, our democratic style and habits require cultivation. The lack of development in academic discussions is not entirely due to outside suppression. To a great extent, we ourselves have not cultivated the habit. We must not blame everything on others. We must, on academic issues, hold free discussions and permit incorrect opinions. It is perfectly permissible for a person to express one opinion today and another tomorrow. In the research institute, it is quite alright for me to say today that you are wrong and to admit tomorrow my mistake. When we change our view on an issue with the change in our background knowledge or experimental results, it is not only not undesirable, but mandatory.

The "gust of wind" issue is also thus. On the one hand, we hope that the leaders, in managing scientific research work, especially in the use of funds, will change the practice of fostering "a gust of wind" and "a swarm of bees." On the other hand, we, as scientific workers, should more or less have our own ideas, and not seek the fashionable and follow the trendy. Those with a professional foundation or special skills should study diligently and strive to broaden their own fields. In the past 30 years, very few people in our country have been able to persevere in any particular field of study for 5 or 10 years, let alone a longer period. If this situation is not changed, the development of our scientific research will have no future. Scientific work must have the opportunity for stable and continuous development. This issue is very important. The maturity of a tree or an animal requires a certain period of time for growth and development. The many branches of biology and the various academic realms must all be developed. It is a good thing for each branch of learning to peddle its own "melons." We must encourage them to cultivate their own melons for sale. In China, the varieties of melons are too few, and they should be greatly increased.

After entering the new era of the socialist modernization construction, the work awaiting us is largely "constructive" tasks. A considerable number of people among us generally performs work in three aspects simultaneously: First, we have some responsibility in the organization and management of scientific work, which are not solely the affairs of the responsible party and government comrades. Second, we are on the front line of scientific research work and have the responsibility of directly promoting scientific research. Third, we have the responsibility to train scientific workers of the next generation. The third aspect in particular, the task of training the next generation, should be specially stressed. For the future of China's biology, as long as we properly train the next generation, we oldsters will have no need to worry. This is indeed a key issue, and many problems require solution. One of the problems is how to build more successfully the cooperation between the research organs and the universities. It will benefit the development of both the universities and the research organs, and is closely linked with the future of China's biology. Today, whether with the research organs or with the schools, all feel the shortages of buildings and instruments, but the greatest shortage is people. How to accelerate the training of people is indeed an extremely urgent issue. I particularly want to do two things in my late years: To trumpet for neurobiology, a field which I have engaged in for many years; to trumpet for the training of young people. Naturally, not just trumpeting alone, but also doing while trumpeting.

REMEDIES OF FLAWS IN ENTRANCE EXAMINATION SUGGESTED

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 1, 1980 pp 3-4

[Article by Xu Hao [1776 3185]: "Entrance Examination and Admission Base"]

[Text] In midsummer last year, several million young people took the entrance examinations for colleges, senior middle schools and technical secondary schools. When the results were announced, a minority was gratified, but the majority was disappointed or even depressed. As the number of examinees was large, the admission quota small and the competition extremely keen, it is very normal for some people to question the entrance examination system.

Starting out from maintaining imperial power, the feudal China, in the employment of administrative officials, alternated between the method of recommendation and selection and that of examination. They were merely the means, and what determined their essence was the nature of the regime. Not long after the introduction of the recommendation and selection method, the Han dynasty discovered the serious phenomenon of control and manipulation by local or social forces. By the time of Emperor Huanling, there was the folk rhyme which ran: "electing a first-degree scholar who knows no books; electing a second-degree scholar who lives apart from his father." Some households occupied a high position for generations, such as that of Yuan Shao with "three dukes in four generations." The situation did not end until the Huangjin Uprising. When the Jin dynasty replaced Han and Wei, Sima introduced the "Law of Nine Ranks," resulting in "no humble households in the high ranks; no high-placed households in the low ranks." The practice of entering by the back door flourished. Regardless of the ability, as long as a person came from a famous household, he was made an official. This system of selecting and promoting administrators according to the power and influence of their families naturally led to extreme corruption in officialdom and deterioration of the national condition. Beginning with Emperor Wen of the Sui dynasty, the method of imperial examination was initiated to obtain officials. The subjects of examination through the dynasties were not all arbitrary. Whether poetry, the eight-paragraph essay or themes, they were, on the one hand, for the convenience of drawing the line of admission and on the other, for the purpose of testing the depth of the examinees' understanding of the feudal culture. As a comman

man could become a high official by following this path, passing the examinations became the sole goal. The story of Fan Jin passing the examination in "Romance of the Scholars" was a bitter satire of this system at its ludicrous and disgusting end. However, compared with the method of recommendation and selection, the imperial examinations provided an outlet for some people.

Modern capitalist countries and countries following the production means public ownership system also employ the examination system. The characteristic of this method is that the subjects of examination have a very strong link with the examinees' future work or future training and with the combined requirements of society. Combined requirements refer to work adaptability, organizing and leadership ability, creativity, and the ability of practical operation in technology. Due to the conditional limitations during the examinations, especially when the number of examinees is large, written tests have to be given for the purpose of having a basis and preventing fraud. While the written tests are closely linked with the requirements of society, such as the tests on physics and chemistry, which are far superior to the examination on the eight-paragraph essay, the superior students admitted by written tests often are not adept at practical experiments, have no organizational ability, or lack drive and ambition. The greatest flaw in the method of recommendation and selection was reliance on the influence of the parents. As a result, the children of influential households did not have to exert themselves, while it was useless for the youths of families without power and influence to make an effort. As there was no competition, the young people idled away their time. The greatest flaw of the examination method is that there may be mistakes at times, and the best and those satisfying the combined requirements are not necessarily chosen. However, as there is competition, most of the young people are able to be occupied in their minds.

It is easy to criticize the defects of a method, but the problem is to remedy them. One must not solve the problem by the simple means of flogging or retracing one's steps. People have been eating wheat for a long time. However, the defects of wheat as a food are very obvious. It requires grinding and often fermentation, and its lysine content is low and its output small. Nevertheless, if this unsatisfactory wheat is not planted, half of the people in the world will go hungry. The remedy is rational processing and the use of dietary supplements.

Looking at the grades of the examinanees, we find that the admission generally follows the gaussian distribution, i.e., it shows a normal curve. Though there may possibly be deviations in the curve, the general tendency is as shown in the diagram. The shaded area, A, represents the number of people admitted (assuming it to be 4 percent). In other words, the grades of the majority are in the middle ranges. As the results of the subjects in the written test, though related, are not completely identical with the combined requirements of society, we can understand that among those attaining the grades for admission, coming under A, who also possess the creativity required by society may be $\frac{a}{A}$;

who possess organizational ability may be $\frac{b}{A}$; who possess practical technical ability may be $\frac{c}{A}$ .... Among the people in A, those who satisfy all the requirements should be:

$$P = \frac{a}{A} \times \frac{b}{A} \times \frac{c}{A} \times \ldots$$

(1) Probability of number of people appearing
(2) Grades

It can thus be seen that the probability of the emergence of superior students satisfying all requirements is very low. To make P, a very low emergence probability, represent as many people as possible, we can only, under the condition of assuring the quality requirement of the examinees' knowledge, expand the admission quota as much as possible. We must make the admission quota include the mode, viz., somewhere to the right of the middle of the gaussian distribution normal curve. Concretely speaking, setting the admission at slightly under 40 percent may be suitable.

However, a larger admission quota will require more schools, which hinges on financial abilities. Only developing production will the excessively low and irrational admission ratio be improved. During the transitional period when we cannot increase the admission quota, we should, instead of the unified admission method, adopt the method of nation-wide regional admission and slightly different criteria for the admission line of students attending schools and that of the youths in society. It will guarantee that every province, region and level will admit the part of the examinees of their own areas in the normal curve who should be admitted, and reduce the flaw of training superiority (better teaching quality in large cities) and squeezing out the combined requirements of society. Even in the imperial examination system of the Qing dynasty, to create a centripetal force of the local areas, quota distribution according to provinces was practiced. In short, to guarantee more talents in the future, we must do our best to make the base of those admitted as large as possible. It is a platitude, but if we do not fully understand it by analysis and verification, but concentrate on stringent selections, we will go to the extreme of "one examination deciding the whole future."

Under the condition of not expanding the recruitment quota and for the purpose of making accurate selections of talents, we should introduce the vacancy admission system, such as reexamining the students on the special requirements of certain subjects, e.g., practical technical ability, speed of reaction, etc. For some subjects, certain psychological tests may be added. In addition, society must not discriminate against the professionals who have learned their skills through practical training; it must not adhere rigidly to academic background and famous universities. However, in case of exceptional admissions, there must be definite requirements and standards, and abuse and fraud must be prevented.

There is no flawless method in the world, and so is examination. Before it can be replaced by a better method, as it is relatively fair and rational, one may say that "there is no alternative." However, we must recognize its defects and deviations and, especially under the present situation where the admission quota is rather small, do our best to remedy it, for otherwise we will make a big mistake, because retracing our steps and replacing the examinations with the method of recommendation and selection will not work.

POPULATION FORECASTING MODELS, PREDICTIONS DISCUSSED

Shanghai ZIRAN ZAZHI [NATURE JOURNAL] in Chinese No 4, 1981 pp 249-252

[Article by Song Duan Yu [1345 3843 3768], Wuhan Mathematics and Physics Institute, Chinese Academy of Sciences; Shao Kezhen [6730 0668 2182], South Central Academy of Electric Power Design; Jiang Zhongquan [5592 1350 6898], No 1 Metallurgy Company, Ministry of Metallurgy; Wu Weimin [0702 1983 3787], Institute of Rock and Soil Mechanics; Feng Ronghao [1409 2837 6275], South Central Academy of Construction and Design: "Population Forecasting Model and National Population Forecasting"]

[Text] Importance of Population Forecasts

Population is a complex element in society, and it is also a principal part of and a foundation of social activity. The population problem, like other objective matters, possesses its own laws, and has become a science, which increasingly attracts the serious attention of scientists. How to effectively control population has become a problem about which people are more and more concerned in the process of realizing the four modernizations in China. At the present time, the level of China's production is rather low, and there is a vast gap between national average earnings in China and those of advanced countries. If China's national average income is to show fairly great increase by the end of this century, it will be necessary to control the speed of population growth. Population planning requires forecasting the level of population development after the year 2000 on the basis of the present population birth situation in China. Thus, population forecasts can provide precise information for population policies and population planning. Population forecasts differ from meteorological, earthquake, or economic forecasts, and have their own characteristics. The forecast period is not 1 or 2 days, but rather several years or several decades. This article provides a briefing on the model for population forecast calculation methods that we use, and discusses our views about national population forecasting.

Types of Population Forecasts

The traditional concepts of the past on the population development issue must be changed. The longstanding historical idea that "a vast territory with rich resources and a teeming population" is an honor, has been acknowledged to be an arrogance of the Chinese race. Now, we must regard the problem of population development not only as a problem of further population growth, but also regard it as a serious impediment to the four modernizations process that the country faces, which carries with it serious latent political problems. It relates to increases in the standard of living of the present generation, and simultaneously determines what kind of accumulated wealth this generation will leave posterity--hardships or happiness. Thus, population policies must control the present population and institute planned parenthood. Correspondingly, population forecasts should use the mathematical models of controlled population forecasts. If population development is not controlled and people are free to give birth as they please, it will become a free population forecast mathematical model.

We must make population forecast calculations; however, population statistical methods currently are not unified. In using data from population statistics departments, mathematical processing will be required. In the two national population census years of 1953 and 1964, data on population distribution by age and by deaths was generally not available for other years except for individual cities, and so it is recommended that a unified population forecasting mathematical model and commensurate statistical forms be established nationwide.

In our mathematical models, the population birth cycle is a rather major statistical coefficient. The population birth cycle is not derived from legal age, but from the use of statistical methods.

Our mathematical model is calculated on the basis of a closed population system, and for population shifts in each area, consideration must be given to age distributions of those who move, meaning population distribution according to age and distribution of deaths. If this is not done, the accuracy of the forecast will be impaired.

Unless methods are accurate and statistical criteria reasonable, the attainment of fairly high accuracy in figuring population forecasts will be difficult. Song Jian [1345 0256] et al[1] have proposed a series of partial differential equation structural forms on the issue of population control, and have used discretely calculated mathematical models to predict China's population for 100 years, attaining a rather high degree of accuracy, and blazing a trail for the scientific development of China's population system. Here we have adopted the direct calculation method to make population forecasts, and our reasons for emphasizing the direct method are as follows:

1. Population forecasts or other calculations should attain a high degree of accuracy.

2. The layers and bands developed in the historical development of population should be retained. These constitute a special kind of information for population births.

3. The structure of mathematical models should be perceived directly and be easily promoted.

4. Information that satisfies the requirements of other population models (such as working population models, models that show fluctuations in population in enterprises) should be readily separated out of these models.

Statistical Distribution of Three Sets of Population Movements

People's life span and age are calculated in terms of their present age. Population statistics in China today use ages from 0 to 100 as their statistical range, which is called a centenary table. Inasmuch as the number of the population above the age of 100 is fairly small, it is ignored, thus naturally there is some error in this. If a person who lives to maximum age is postulated as age r_m, when the population is counted, it is divided into 0, 1, 2, ..., r_m in an age spread of $r_m + 1$. There are three sets of data in terms of age distribution: First is the number of the population of different ages in any given year, which is termed population distribution according to age, or simply population distribution, which is written as $M_r(t)$, with t standing for the time, and r standing for the range of age, and $r = 0,1,2,\ldots, r_m$. Second the number of deaths at different ages in any given year, which is termed distribution of population deaths according to age, or simply distribution of deaths, and written as $M^d_r(t)$, with $r = 0, 1, 2, \ldots, r_m$. Third is the number of women bearing children in any given year, which is termed distribution of childbearing women according to age, or simply distribution of births, and written as $M^o_r(t)$, with $r = n', n' + 1, \ldots, n$. In the distribution of the above three sets of statistics, data about the last set is very difficult to locate in population statistics departments.

In forecast calculations, when T is used as the starting point for any given year, that year is known as the datum year or base year. The sum total of this base year's population distribution $M_r(T)$ is $M_\Sigma(T)$, thus:

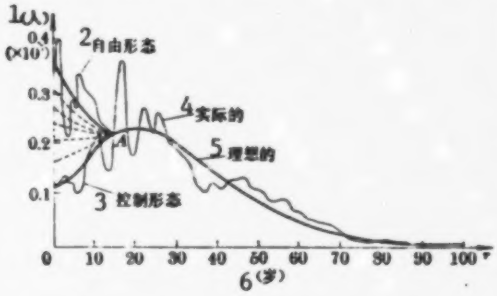
$$M_\Sigma(T)=\sum_{r=0}^{r_m} M_r(T). \qquad (1)$$

We define the proportion of age r males and females $M_r(T)$ in the total population $M_\Sigma(T)$ as the density of population according to age in T year, p (r, T), or density of population distribution, for short,

$$p(r,T)=\frac{M_r(T)}{M_\Sigma(T)} \quad (r=0,\ 1,\ 2,\ \cdots,r_m). \quad (2)$$

Because population distribution may be distinguished as having a controlled configuration or a free configuration, the two are described separately in Illustration 1. Illustration 1 has descriptive curves. The bold line is an ideal situation following an ironing out, while the thin line shows actual fluctuations in population distribution, called the population band. The sections of the curve up to point A show the fluctuations between the controlled configuration and the free configuration. The dotted lines show transitional configurations. After point A, the free configuration, the controlled configuration, and the transitional configuration are combined into a single curve to become a complete population distribution curve of numerous bands.

Illustration 1. Depiction of Population Distribution Configuration



Key:

1. (People)
2. Free Configuration
3. Controlled Configuration
4. Actual
5. Ideal
6. (Age)

Distribution of deaths in the population on the basis of age in T year is M^d_r (T). During any given year, the number of deaths of people of different ages varies, the aged being most numerous, children and middle age people being second, and youths being least. The death rate or death density $\sigma(r, T)_2$ characterizes the distribution of deaths:

$$\sigma(r, T)=M^d{}_r(T)/M_r(T) \quad (r=0, 1, \cdots, r_m), \qquad (3)$$

Its significance is the number of population deaths at age r, M^d_r(T) as a proportion of the population at age r.

Thus is derived

$$\varphi(r, T)=1-\sigma(r,T) \quad (r=0, 1, \cdots, r_m), \qquad (4)$$

which is termed the population survival rate by age range in year T, i.e. the proportion of the surviving population at M_r (T) at the end of year T. These basic concepts are used not only in calculating population forecasts, but are also used in calculating average population longevity.

Distribution of childbearing women by age in T year is M^o_r (T). Presented in the following table is the data we obtained from nearly 10,000 pieces of statistical data on the number of women between the ages of 20 and 43 who gave birth in 1979 among women of childbearing age in a certain prefecture.

Statistics on Number of Childbearing Women in a Certain Prefecture in 1970

Age Range r	Number of Childbearing Women $M^o_r(79)$	Age Range r	Number of Childbearing Women $M^o_r(79)$
20	10	32	318
21	27	33	181
22	59	34	98
23	166	35	78
24	564	36	35
25	1,680	37	29
26	2,690	38	22
27	2,422	39	14
28	1,858	40	4
29	1,402	41	3
30	937	42	2
31	488	43	1

To find the average age, R, of childbearing women,

$$R=\sum_{r=20}^{43} r M^{o}_{r}(79) \Big/ \sum_{r=20}^{43} M^{o}_{r}(79)=27.43(\text{age}). \quad (5)$$

This table shows the average age, R, of the childbearing women in that prefecture to have been 27. Thus the population birth cycle R + 1 = 28 is derived, and so 30 years is the population median forecast standard.

The corresponding number of women for the average age, R, of childbearing women is M_R (T)/2, because M_R(T) is the sum of the male and female population. In order to simplify calculations, the probability for males and females is half for each, thus, it is multiplied by 1/2. M_R (T) is related to the number of people born in T + 1 year, thus the following formula is established:

$$M_o\ (T + 1) = \lambda(T + 1)\ M_R\ (T) \qquad (6)$$

In this formula λ(T + 1) is total birthrate, or average birth coefficient, i.e. half the individual number of children born in T + 1 year per every man and wife, which is one-half the average number of births. If $\lambda = 0.5$, the average births per man and wife is one.

Setting up Mathematical Models for Controlled Population Forecasts

Once we have derived the three kinds of distribution given above, we can calculate population forecasts. Our method is the discrete direct recurrence method of calculation. Using this, we first figure out a continuous population development activity formula. Using the rotational movement in ages of the population, we know that this year is age r, and next year is age r + 1. If in a certain area, the number of people at age r in year t is M_r (t), a year later the number of people will be M_{r+1} (t + 1), the population delay relationship existing between being:

$$M_{r + 1}\ (t + 1) = M_r\ (t) - M^d_r\ (t) \qquad (7)$$

By substituting formula (1) in the above, from $\Delta r + \Delta t = 1$ and the total differential definition is derived

$$\frac{\partial M_r(t)}{\partial r} + \frac{\partial M_r(t)}{\partial t} = -\sigma(r, t) M_r(t), \quad (8)$$

This is a continuous population development activity formula.

If T is the base year, construct

$$M_r(t)|_{t=T} = M_r(T) \quad (r = 0, 1, \cdots, r_m), \quad (9)$$

This is called formula (8)'s initial condition, while

$$M_r(t)|_{r=0} = M_0(t);\ M_r(t)|_{r=r_m+1} = M_{r_m+1}(t) = 0, \quad (10)$$

is called formula (8)'s border condition.

Thus, formula (8) can be solved under the initial boundary conditions of (9) and (10), and the solution is unique. Formula (8) is considered under the circumstances of a closed system. If there are migrations, the population distribution of the migrants has to be added to the right side of formula (8).

The steps in our recurrent calculations are explained below. We first sought the population distribution and its sum for T + 1 year. We used three statistical distributions, making the population distribution in base year T the initial condition M_r (T) (r = 0,1,...,r_m), M_o (T + 1), i.e. formula (6), and deriving M_r (T) from the birth distribution, (T + 1) being the control coefficient in the setup. Then formulas (3) and (4) were substituted in (7) to derive

$$M_{r+1}(T+1) = M_r(T)\varphi(r, T). \quad (11)$$

Use of formulas (2), (6), and (11) derived population distribution in T+1 year as follows:

$$\begin{cases} M_0(T+1) = \lambda(T+1) M_R(T) \\ \qquad = M_\Sigma(T)\lambda(T+1)p(R, T), \\ M_r(T+1) = M_{r-1}(T)\varphi(r-1, T) \\ \qquad = M_\Sigma(T)p(r-1, T)\varphi(r-1, T) \\ \qquad (r = 1, 2, \cdots, r_m), \end{cases} \quad (12)$$

In this formula, M_o (T + 1) represents the children born in T + 1 year, with no consideration given to the infant mortality rate, because when counting the number of infants, infant deaths for the year were not treated as birth in the population.

From formula (2) was correspondingly derived the total population in T + 1 year

$$\begin{aligned} M_\Sigma(T+1) &= \sum_{r=0}^{r_m} M_r(T+1) \\ &= M_\Sigma(T)[\lambda(T+1)p(R,T) \\ &\quad + \sum_{r=0}^{r_m-1} p(r, T)\varphi(r, T)]. \end{aligned} \quad (13)$$

Continuing to find out the population distribution and its sum in T + K year. This is figured by using year by year changes in death rate. As a result of social progress, the mortality rate is fairly stable, and can be rendered approximately as:

$$\varphi(r, t) \doteq \varphi(r, T) \quad (t = T+1,\ T+2, \cdots,\ T+k). \tag{14}$$

Through continued application of formulas (6), (11), and (14), population distribution in T + K year was derived as follows:

$$\begin{cases}
M_0(T+K) \\
\quad = M_{\Sigma}(T)\lambda(T+K)p(R-K \\
\quad +1, T)\varphi(R-K+1,\ T) \\
\quad \cdots \varphi(R-1,\ T), \\
M_1(T+K) \\
\quad = M_{\Sigma}(T)\lambda(T+K-1)\,p(R-K \\
\quad +2, T)\varphi(R-K+2, T) \\
\quad \cdots \varphi(R-1, T)\varphi(0, T), \\
\quad \vdots \\
M_{K-2}(T+K) \\
\quad = M_{\Sigma}(T)\lambda(T+2)p(R-1,\ T)\varphi(R \\
\quad -1,\ T)\varphi(0,\ T) \\
\quad \cdots \varphi(K-3, T), \\
M_{K-1}(T+K) = M_{\Sigma}(T)\lambda(T+1)p(R,\ T)\varphi(0, T) \\
\quad \cdots \varphi(K-2,\ T), \\
M_K(T+K) = M_{\Sigma}(T)p(0, T)\varphi(0, T)\varphi(1, T) \\
\quad \cdots \varphi(K-1,\ T), \\
\quad \vdots \\
M_{r_m}(T+K) = M_{\Sigma}(T)\,p(r_m-K,\ T)\varphi(r_m-K,\ T) \\
\quad \cdots \varphi(r_m-1,\ T) \quad (K=1,2,\cdots,k).
\end{cases} \tag{15}$$

Thus, the population total correspondingly derived from (15) for T + K year is:

$$\begin{aligned}
M_{\Sigma}(T+K) &= \sum_{r=0}^{r_m} M_r(T+K) = M_{\Sigma}(T)\Big[\sum_{j=1}^{K} \lambda(T \\
&\quad +j)p(R-j+1, T)\prod_{e=0}^{j-2}\varphi(R-e-1,\ T)\prod_{i=0}^{K-j-1}\varphi(i, T) \\
&\quad + \sum_{r=0}^{r_m-K} p(r,\ T)\prod_{e=0}^{K-1}\varphi(r+e,\ T)\Big] \\
&\qquad (K=1,\ 2, \cdots, k).
\end{aligned} \tag{16}$$

By using formula (16) to make calculations, we can forecast any year's population total. Since the $\lambda(t)$ choices differ, various different control programs are derived. For example if for each man and wife there is only a single birth, $\lambda = 0.5$; if two births, $\lambda = 1$.

Setting Up Mathematical Models for Free Population Forecasts

Formula (16) is the calculation method we recommend. In instituting population control in China's present planned births, it is through choice of λ the number of births in the population is regulated. However, some countries with a sparse population encourage births, and when this is done, it is necessary to use a mathematical model for free population forecasts. Instead of trying to determine the corresponding distribution of average reproductive age R, it is necessary to count the number of people born at each age during women's reproductive years, M^{o}_{r} (T) (and to further divide the number according to double, triple...), and from these calculations to derive the reproduction probability of women of r age in T year.

$$\mu(r, T) = M^{0}{}_{r}(T)/M_{r}(T) \quad (r = n', n'+1, \cdots, n), \tag{17}$$

其中 n' 为最小生育年龄，n 为最大生育年龄.

从公式(17)得出第 $T+1$ 年的出生人口为

$$\begin{aligned} M_{0}(T+1) &= \sum_{r=n'}^{n} \mu(r, T) M_{r}(T) \\ &= M_{\Sigma}(T) \sum_{r=n'}^{n} \mu(r, T) p(r, T), \end{aligned} \tag{18}$$

Other distribution of population and control models being the same, the total population derived for T + 1 year is:

$$\begin{aligned} M_{\Sigma}(T+1) = M_{\Sigma}(T) [&\sum_{r=n'}^{n} \mu(r, T) p(r, T) \\ &+ \sum_{r=0}^{r_m - 1} p(r, T) \varphi(r, T)]. \end{aligned} \tag{19}$$

以此类推，第 $T+\bar{m}+1$ 年的人口总和为

$$\begin{aligned} M_{\Sigma}(T+\bar{m}+1) = M_{\Sigma}(T) \{ &\sum_{r=n'}^{n} \mu(r, T) [\sum_{j=1}^{\bar{m}+1} p(r-i \\ &+1, T) \prod_{e=0}^{j-2} \varphi(r-e-1, T) \prod_{i=0}^{\bar{m}-j} \varphi(i, T)] \\ &+ \sum_{r=0}^{r_m - \bar{m}} p(r, T) \prod_{e=0}^{\bar{m}} \varphi(r+e, T) \} \quad (\bar{m} = 1, 2, \cdots, m). \end{aligned} \tag{20}$$

National Population Forecast For 100 Years

Inasmuch as the number of immigrants to China may be ignored, [2] the population of the entire country may be regarded as being a closed system, and the population is being controlled; therefore we used formula (16) to draw up a Fortran language program, using a computer to forecast China's population for a hundred years. The annual total population and related criteria were calculated. For calculation porposes, total death rate was 6.1 percent; average reproductive age was 27; and reproduction control coefficients were worked out for three situations with λ= 0.5, 0.75, and 1.0, i.e. each man and woman averaging the birth of 1, 1.5, and 2 children (λ = 0.5 declining in 10 years from λ = 1, while λ + 0.75 declining gradually over 5 years from λ = 1). Population distribution for the base year was calculated from preliminary data investigated by Comrade Song Jian et al. Ages run from 0 to 114 years old.

Results of calculations show that when λ = 0.5, i.e. a man and woman producing a single child, population will rise from 970-92 million in 1979 to 1,089,730,000 maximum in the year 2000, gradual decline occurring thereafter until the year 2079 when population will decrease to 298.55 million or less than 300 million.

When λ = 0.75, i.e. when each couple produce 1.5 children, population will rise from 970.92 million in 1979 to 1,156,620,000 in the year 2000, reaching a maximum of 1,179,800,000 in the year 2012, thereafter gradually declining to 670.27 million in the year 2079.

If λ= 1, i.e. each couple have two births, the population will be 1,243,070,000 in the year 2000, and reach its zenith at 1,407,540,000 in 2032, thereafter declining until it totals 1,312,260,000 in 2079.

Currently, we currently advocate birth of a single child per couple, in order to bring the population growth rate under control with all possible speed, so that the total national population will be no more than 1.2 billion by the end of this century.

A look at the population of the year 2000 on the basis of the data acquired above shows that if each couple having only a single child can be accomplished, the population in the year 2000 will not exceed 1.09 billion. However, in advocating universal birth of a single child per couple, it is impossible to guarantee that all couples will have only a single chid. Therefore, it is a certainty that by the year 2000, population will exceed 1.09 billion. If each couple gives birth to two children, the population in 2000 will not exceed 1.25 billion, but it will exceed the decided upon objective of 1.2 billion. If half the couples in the country produce one child, and half the couples produce two children, that will mean an average of 1.5 children per couple (of course, in practice it is impossible to give birth to one and one-half children). Using these calculations, the 2000 population will be 1.156 billion, not exceeding the 1.2 billion figure. Thus, the aforestated objectives are attainable. Inasmuch as minority people areas may continue to have more than two births per couple, the actual year 2000 figure may be a little higher than 1.156 billion. In short, people will have to make an effort to achieve the objective.

The foregoing calculations show that if population is to be controlled at above 1.1 billion and below 1.2 billion within the next 50 years, during this period of time every couple will have to have one and only one child. If each couple is permitted to have only a single child during the next 100 years, the population of China will drop to 300 million. Consequently, it will not be necessary to wait 100 years. By the year 2054, population will drop to the 548 million level of the end of 1949, and other population programs can be formulated. It is not too late to readjust the population reproduction situation; there is no need to worry.

The foregoing gives a general introduction to population forecasting methods and national population forecasting, as well as to other population criteria. Space limitations prohibit giving further detail here.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Indexes to this report (by keyword, author, personal names, title and series) are available from Bell & Howell, Old Mansfield Road, Wooster, Ohio 44691.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

REPORT ON POLAND'S SOLIDARITY CONGRESS

OW101812 Beijing XINHUA in English 1643 GMT 10 Sep 81

[Text] Warsaw, September 10 (XINHUA)--The Polish Solidarity Union Congress in Gdansk enters its sixth day today having issued an open letter to the workers of the Soviet Union and six East European countries and demanded a national referendum on workers' self-management.

Polish Minister of Trade Union Affairs Stanislaw Ciosek attended the congress. He urged solidarity to help the government to tide over the economic crisis and reminded it of its own statement concerning the status of the trade unions. As it is, he pointed out, solidarity is at a crossroads. He hoped that solidarity would chose the course of cooperating with the government.

Ciosek read to the congress a message from deputy Prime Minister Mieczyslaw Rakowski who emphasized that the Polish trade unions were under obligation to work for the cause of socialism and respect the leadership of the United Workers' Party and Poland's allies.

A report of the solidarity's national coordination commission, read to nearly 1,000 delegates to the congress on the second day, declared that it is no exaggeration to call what is happening in Poland a revolution and that solidarity is the main driving force of this revolution. "We have resolved to take into our hands the responsibility for the country's renewal and for getting the country out of the crisis," it said.

In its open letter to Soviet and East European workers passed on September 8, the congress offered to send representatives to help "those of you who have decided to take the difficult road of struggle for free and independent unions."

The central party newspaper, TRYBUNA LUDU, retorted by pointing out that the union is violating its own constitution and upsetting Poland's allies. It said the letter lacked "elementary realism" and that "it harms only solidarity itself but, what is worse, Poland."

On the same day, the congress passed a resolution asking the national assembly (SEJM) to call a nationwide referendum to decide the form of workers' self-management. It demanded workers' right to hire or fire the managers or directors of the factories and to make major decisions concerning their enterprises.

The congress added that solidarity would undertake to make arrangements for the referendum itself, if SEJM rejected the demand.

Commenting on the resolution, the Polish army newspaper, ZOLNIERZ WOLNOSCI, warned that the solidarity is using the issue of workers' self-management as a springboard for a takeover of power.

TRYBUNA LUDU yesterday carried some letters from its readers, one of which said, "Solidarity will not rest until it carries out a coup, its ultimate goal."

The Warsaw chapter of solidarity yesterday circulated a resolution at the congress calling for free elections by secret ballot and open to all candidates. "The road to Poland's sovereignty leads through democratic elections to representative organs," says the resolution.

A UPI dispatch from Gdansk reported that in the corridors of the congress hall, "the talk centered on whether or not the 10-million member union was headed for another major confrontation with the government.

""'People are aware that confrontation is drawing near,' Zbigniew Bujak, leader of the Warsaw chapter of solidarity told reporters."

RAKOWSKI, WALESA DISCUSS GOVERNMENT, 'SOLIDARITY'

OW041226 Beijing XINHUA in English 1215 GMT 4 Sep 81

[Text] Warsaw, September 3 (XINHUA)--Polish Vice-Prime Minister M. Rakowski said today that the consultation line is still the basis of current government policy. The government will continue to pursue this line.

Rakowski also said this at a press conference here today that in recent months, the radicals of the "Solidarity" trade union have intensified attacks on the government. But proceeding from the interests of the whole country and the people, the government has adopted measures "to prevent Poland from being in disorder and in a state of anarchy." The government will continue to follow the consultation line, to negotiate with the moderate and sensible elements in the "Solidarity" trade union.

At present, Rakowski continued, the reactionary forces in Poland have intensified open attacks against the Soviet Union. Activities of open opposition to the Polish United Workers' Party have emerged. Some activists of the "Solidarity" trade union planned to set up an opposition party--the Polish Labour Party--"in an attempt to seize state power."

He said in conclusion that the moderate and sensible forces are important and strong now and should unite together to defend the consultation line.

In a speech at a press conference in Gdansk on the same day, Lech Walesa, president of the "Solidarity" trade union's national consultative committee, pointed out that the "Solidarity" trade union must "discard activities which create disorder, give up the struggles for secondary aims, and avoid taking violent measures."

On workers' autonomy, Walesa stressed that "we should not struggle for the dismissals of one or two directors, but for the rights of all the directors to have power according to the posts they hold and to serve society." He stressed that he did not agree with the basic stand of the government on the question of workers' autonomy.

WALESA TV ADDRESS VIEWS CURRENT POLISH SITUATION

OW030832 Beijing XINHUA in English 0821 GMT 3 Sep 81

[Text] Warsaw, September 2 (XINHUA)--The situation in Poland is very difficult. It is not the time for polemics or confrontation, it is time for constructive action, said Solidarity trade union leader Lech Walesa in a TV address here yesterday. The TV address was arranged under an agreement signed recently between the Solidarity trade union and the government radio and TV authorities.

Recalling the situation of this country since the conclusion of the Gdansk agreement a year ago, Walesa said it has been a year of difficulties. Under such a grave situation, as members of trade unions, we should seek ways and means to save the country from the present crisis and help the people live a normal life. He said the Polish people should overcome the difficulties by their own efforts. "We believe in wisdom instead of disputes," he declared, adding that Solidarity is for consultation, not for endless polemics.

Walesa noted that the Solidarity trade union has done quite a lot in the past year. It has had successes as well as failures. In future, it will act according to its own charter, that is, act as a trade union. It does not want to take over power, but want to serve society, he pointed out. He also made it clear that the Solidarity union wants to share the mass media and is against government monopoly.

On the same day, the Polish CATHOLIC DAILY published an interview with Walesa and quoted him as saying: "Things have reached the point where the authorities start to lose social approval and support. What will come off in the future? This situation is compelling us to shoulder the responsibility for the destiny of our country--a responsibility all of us must shoulder," he stressed.

USSR MANEUVERS EXERT 'NEW PRESSURES' ON POLAND

OW031858 Beijing XINHUA in English 1840 GMT 3 Sep 81

["NATO, USSR Show Military Strength in Europe"--XINHUA headline]

[Text] Brussels, September 2 (XINHUA)--NATO began a naval and air exercise off Norwegian, Danish and British coasts today.

Canada, the Netherlands, Portugal, Britain, Denmark, West Germany, Norway and the United States took part in the military exercise involving 60 ships and submarines and almost 200 aircraft. The "magic sword" exercise, due to last until September 8, is the first in a series over the next two months in Western Europe.

Besides, NATO's month-long field exercise and four-week naval manoeuvre will be held in Denmark and the Mediterranean respectively on September 5. There will be other military manoeuvres in West Germany, Norway, Italy, Turkey and Greece over the next few weeks.

Meanwhile, over 50 Soviet ships and 30 amphibious vessels and at least 25,000 troops will take part in what military experts say is the biggest Soviet naval exercise ever held. The Soviet manoeuvre, due to start on the Soviet border with Poland on September 4, is believed to exert new pressures on Polish political and trade union leaders.

LCY, PCI CONFER ON INTERPARTY RELATIONS

OW091820 Beijing XINHUA in English 1500 GMT 9 Sep 81

[Text] Belgrade, September 9 (XINHUA)--The League of Communists of Yugoslavia [LCY] and the Italian Communist Party [PCI] have reiterated the principles of full respect for sovereignty, independence, equality and non-interference in each other's internal affairs, as the guideline in international and interparty relations.

They declared that cooperation between various communist parties, workers' parties and different democratic and progressive forces, and between all countries should be based on these principles.

This was underlined in a communique issued upon the conclusion of the three-day visit to Yugoslavia by Enrico Berlinguer, general secretary of the Italian Communist Party.

During his stay, Berlinguer conferred with President Lazar Mojsov of the Yugoslav League of Communists on Bilateral Relations, the workers' movement and pressing international issues. Identical or similar views were expressed during the talks.

The communique said, the two parties reiterated that various parties which hold themselves accountable to the working class and people of their own country have the right to decide freely the form and content of their struggle for social progress and socialism.

NATO ROLE DEBATED IN NORWAY ELECTION CAMPAIGN

OW041656 Beijing XINHUA in English 1523 GMT 4 Sep 81

[Text] Stockholm, September 4 (XINHUA)--The election campaign is in full swing in Norway as the parliamentary election is only ten days away (Sept. 14).

The six political parties that are represented at the present parliament have held congresses and adopted programmes since March. They are the Labor Party, the Conservative Party, the Christian People's Party, the Central Party, the Socialist Left Party and the Liberal Party.

The other parties, such as the Progressive Party, the new Liberal People's Party, the Red Election Alliance and the Communist Party, have announced their readiness to join in the campaign.

All the major parties have elected their candidates for the post of prime minister.

The campaign appears to be mainly one between the "socialist group" (comprising the Labor Party and the Socialist Left Party) and the "non-socialist group" (comprising the Conservative Party, the Christian People's Party and the Central Party).

Mme. G. H. Brundtland of the Labor Party and K. I. Willoch of the Conservative Party are believed to be the chief rivals in the campaign.

The Conservative Party is making redoubled efforts in its competition with the Labor Party, the largest party in the country that has been in power many years. However, the Labor Party has been greatly weakened since the election in 1977 while the Conservative Party has gained strength since the mid-seventies.

On the whole, the constituencies of the two parties are getting closer in strength.

Economic problems, especially unemployment and taxation, remain a bone of contention in the campaign. Norway has fared quite well in recent years because of an increase in oil production, but it cannot stand the impact of the Western economic crisis and is suffering from growing economic stagnation and inflation. In the present campaign, the various parties have put forward their platforms about ways and means on improving the economic situation. The Labor Party emphasizes its record of success in governing the country and makes guaranteed full employment its chief campaign slogan. The Conservative Party, on the other hand, accuses the labor government of its failure in dealing with inflation and of pursuing a wrong taxation policy. It proposes tax reductions, which are attractive to electors.

Moreover, the two parties are divided in their diverging views on industrial management and the oil policy.

Another bone of contention is about the foreign and security policies, specifically about the proposal for a Nordic nuclear-free zone. Both the opposition and the ruling parties stand for a settlement of the issue through negotiations among NATO countries, but certain quarters within the Labor Party think otherwise. The dispute reflects differences of opinion within each party in regard to the depth of Norway's involvement in the NATO as well as public fears of any possible involvement in a nuclear war.

The average figures of the three public opinion polls in June indicated that 50.1 percent of the voters polled support the non-socialist group as against 41 percent for the socialist group. The pre-election developments seem to offer better prospects for the non-socialist group in the election, but the constant change of the political trend in the campaign may help the socialist group win a majority vote and assure the Labor Party of another four years in office.

NATO CHIEF COMMENTS ON RAPID DEPLOYMENT FORCE

OW041700 Beijing XINHUA in English 1639 GMT 4 Sep 81

[Text] Ankara, September 4 (XINHUA)--NATO Secretary-General Joseph Luns announced in Izmir yesterday the establishment of a rapid deployment force in an exclusive interview with the paper, CUMHURIYET, today.

Luns said, "According to the latest information we received, a rapid deployment force has been formed and is in the process of becoming institutionalized."

He went on, "There is a very strong American force in the Gulf, there are also strong British and French forces. They are on stand-by with the latest arrangements made in the Diego Garcia Island."

Luns also said, "A stronger Turkey is a factor in the balance of power for the defence of the southeastern flank of the alliance."

Luns went on, "NATO has always supported the idea that Turkey should be economically and militarily strengthened. Economic aid to Turkey is being provided by the organization of cooperation and economic development and military assistance comes from NATO. The U.S. and the Federal Republic of Germany lead the list in this respect."

Luns arrived in Izmir on Wednesday on a four-day private visit at the invitation of the mayor of Izmir. He took the opportunity to call at the command headquarters of NATO and Turkish Aegean army headquarters in that Aegean port city and had talks with Turkish Foreign Minister Ilter Turkmen there.

FRENCH OFFICIAL DISCUSSES ARMS SALES, WORLD EVENTS

OW241938 Beijing XINHUA in English 1907 GMT 24 Aug 81

[Excerpts] New Delhi, August 24 (XINHUA)--An Indian military mission will visit France shortly to discuss supply of armaments, the visiting French Foreign Minister Claude Cheysson said here today. Addressing a press conference at the end of his two-day visit to India, Cheysson pointed out that France has been supplying certain quantity of armaments to India in the past.

Cheysson arrived here yesterday. He had talks with Indian External Minister Narasimha Rao and Defense Minister Shivraj Patil. He also met with President Neelam Sanjiva Reddy and Prime Minister Mrs. Indira Gandhi.

Asked about prospects of France supplying Mirage-2000 to strengthen the Indian Air Force, Cheysson said, "We decided to look into every possibility of cooperation in everything--scientific, development, trade exchanges and in military field," he added.

On international issues, Cheysson said France and India agreed that there should be no foreign interference in any country and there should be withdrawal of foreign troops both in Afghanistan and Kampuchea. On issues like Afghanistan, Kampuchea and other trouble spots, Cheysson said while France itself would not take any new initiative, "We are anxious to stand behind those in the Non-aligned Movement who have the authority and experience and can take the initiative. We shall be available when they feel we can help."

He announced that Mrs. Gandhi would visit France in November.

CSO: 4020/244

FUKUDA WARNS AGAINST SOVIET MILITARY EXPANSION

OW041236 Beijing XINHUA in English 1220 GMT 4 Sep 81

[Text] Beijing, September 4 (XINHUA)--Former Japanese Prime Minister Takeo Fukuda warned in Jakarta yesterday that the Soviet Union was expanding its military presence in different parts of the world, according to news reports from Jakarta.

The former Japanese prime minister made the remarks at the opening of a three-day symposium sponsored by Japan's MAINICHI newspapers and an Asian Affairs Research Council.

Fukuda said the present international situation was at the most critical juncture since the end of the second world war.

He warned that the "military capabilities of the United States and the Soviet Union had come to be more or less even. The Soviet Union has begun to conduct expansionist activities in various parts of the world. In particular, it is a cause of worry to us at this moment how the situation in the Middle East and Poland will develop."

He stressed that "Soviet presence, backed up by increasing military strength, is manifesting itself in various parts of Asia."

Referring to the Kampuchean situation, Fukuda expressed the hope that the efforts of Japan and the ASEAN nations would lead to a final peaceful solution of the problem. He felt regret that Vietnam and the Soviet Union had failed to attend the international conference on Kampuchea held last July. "Occupation of other countries' territory by the use of military strength cannot be recognized in international society," he noted.

Fukuda also dealt with his country's present economic relations with the ASEAN states. He was happy to see that the total trade volume between Japan and the ASEAN states has exceeded 30 billion U.S. dollars both ways, or 2.2 times that of 1977.

CHINESE, JAPANESE YOUTH GATHERING IN BEIJING

OW241924 Beijing XINHUA in English 1858 GMT 24 Aug 81

[Excerpts] Beijing, August 24 (XINHUA)--Six hundred Chinese young people gathered with more than 300 members of a Japan-China Youth "Hand in Hand" Friendship Delegation at the Great Hall of the People this evening. Liu Weiming, acting president of the All-China Youth Federation, and Tokuma Utsunomiya, honorary leader of the Japanese delegation, joined the gathering.

Jin Jian, president of the Beijing Municipal Youth Federation, was the first to speak. He said Chinese youth are willing to inherit and develop, hand in hand, with their Japanese friends, the cause of Sino-Japanese friendship from generation to generation.

Delegation leader Kunio Hatoyama said that upon returning home, they will tell the Japanese people about their exchanges with the young Chinese, and "make the flower of the Japan-China friendship blossom throughout Japan."

Tokuma Utsunomiya, 75, spoke, stressing the importance of Sino-Japanese friendship to world peace. He encouraged the youth of Japan and China to carry on this friendship from generation to generation.

The gathering was jointly sponsored by the All-China Youth Federation and the Beijing Municipal Youth Federation.

THAI PAPER REPORTS KGB ACTIVITIES IN THAILAND

OW021556 Beijing XINHUA in English 1510 GMT 2 Sep 81

[Text] Bangkok, September 2 (XINHUA)--The Soviet Union has sought every opportunity to send KGB agents and military intelligence agents into Thailand and unscrupulously collected all kinds of information in this country, reports the September 5 issue of the Thai weekly, SIAM MAI. Soviet spies, the report says, are placed in every Soviet agency here, such as the Soviet Embassy, the Soviet commercial counsellor's office, the Soviet civil aviation office, the Soviet news agency and the UNESCAP office. Official sources have disclosed that over one half of the 80-odd Soviet staff of the Soviet Embassy and the UNESCAP office are KGB agents or Soviet military intelligence spies.

On the top floor of the main building of the Soviet Embassy here, there is a "referentura" room equipped with communication devices for receiving and transmitting information. Only KGB agents are allowed to enter this special room.

Soviet military intelligence agents monitored round-the-clock Thai official wireless communications and intercepted radio messages between the foreign embassies here and their home countries. All these Soviet agents know the Thai language and are able to decode Thai coded messages.

A senior Thai intelligence official told SIAM MAI that the Soviet Embassy had from time to time asked for Thai permission to increase the number of embassy staff. When such a request was turned down after the Thai side found that many Soviet spies were included in the list of additional embassy staff, the Soviet Embassy presented another list in which KGB agents were mixed with genuine diplomats. Soviet agents rejected by the Thai Government were sent to the UNESCAP office here because it is an international organization and the Soviet Union did not have to get the approval of the Thai Government.

Thai immigration authorities have also discovered that many Soviet officials entered into Thailand in the name of "tourists." Some of these officials were KGB agents who were greeted at the airport by Soviet diplomats and later stayed in the Soviet Embassy. Some of these agents refused to leave this country despite the expiry of their visas. Obviously, they are KGB agents on temporary missions.

In addition, Soviet agents also often contacted diplomats of the East European, Vietnamese and Laotian embassies here and gave them instructions on collecting Thai intelligence.

CSO: 4020/244

JAPAN OPPOSES USSR POLICY IN NORTHERN ISLANDS

Pullout Urged

OW311530 Beijing XINHUA in English 1513 GMT 31 Aug 81

[Text] Tokyo, August 31 (XINHUA)--Tokyo and Moscow had agreed to continue negotiations for a peace treaty including the northern territories issue, Japanese Deputy Foreign Minister Yasue Katori told Soviet Ambassador to Japan Dmitriy Polyanskiy yesterday, according to a KYODO report.

Katori explained to Polyanskiy about Japan's stance over the northern territories issue in reply to a Soviet protest against Japan's campaign for the return of the Soviet-held islands. In its protest, the Soviet side said there was no territorial problem between Japan and the Soviet Union. Katori told the Soviet ambassador that the afore-said agreement between the two countries was fixed in the 1956 joint statement which opened the diplomatic ties between them and in other diplomatic documents. He added that the government leaders of the two countries reconfirmed the agreement in 1973 when the then Prime Minister Kakuei Takaka visited Moscow.

Katori told the Soviet ambassador that Japan was justified in making a public campaign of its stand within the United States organizations and other international forums. Katori also urged the Soviet Union to withdraw its military forces from the Soviet-held northern islands, because their deployment there ran counter to the spirit of mutual confidence and good neighbourliness. He called on the Soviet Union to sit down at the negotiating table for a peace treaty.

The Soviet ambassador replied, however, that his government would not change its stand whatever campaign Japan might stage.

USSR Policy Condemned

OW031914 Beijing XINHUA in English 1848 GMT 3 Sep 81

[Text] Tokyo, September 3 (XINHUA)--Leaders of ruling Liberal Democratic Party (LDP), six cabinet members and governor of Hokkaido attended a rally here today to press for the return of four northern islands from the Soviet Union.

The rally of 2,700 people, organized by the LDP, condemned the Soviet occupation of the Japanese islands and vowed to carry on the struggle till the final recovery of the territories.

LDP secretary-general Yoshio Sakurauchi, LDP chairman of the Executive Council Suzumu Nikaido and chairman of the special committee on the issue of northern territories Masaki Nakayama spoke at the rally. Sakurauchi described the establishment of "Japan-Soviet Friendship Guild Halls" in different places of Hokkaido under Soviet manipulation as "obviously an act of indirect aggression."

Nikaido told the meeting: "Many countries have seen a major threat in the Soviet arms expansion. Japan cannot afford to take what happened in Afghanistan as something of no concern to itself. It (the invasion of Afghanistan) has made the Soviet threat more tangible and deepened their feelings of indignation against the Soviet Union."

The rally unanimously adopted a resolution which says: "The Soviet Union, paying no heed to agreement reached between Japan and the Soviet Union, has unjustifiably maintained that there exists no territorial dispute between the two countries. What is more, it has been strenuously maneuvering to weaken and break the movement of our people for the recovery of the northern territories."

The resolution points out: "The Soviet Union has increased its military presence on the northern territories to confront Japan with a fait accompli."

In conclusion, the resolution states: "The Japanese people vehemently protest against the illegal Soviet occupation of the northern territories. They will unite as one to strive for their return until this goal is attained."

JAPANESE PRIME MINISTER OBSERVES USSR-OCCUPIED ISLANDS

OW101900 Beijing XINHUA in English 1632 GMT 10 Sep 81

[Text] Tokyo, September 10 (XINHUA)--Prime Minister Zenko Suzuki today flew in a helicopter off the coast of eastern Hokkaido to make a personal inspection of the four Japanese islands now under Soviet occupation.

He is the first incumbent prime minister to observe the northern islands..

He undertook the trip to demonstrate the strong desire of his people for the return of the islands seized by the Soviet Union at the end of World War II.

Suzuki was accompanied by three cabinet ministers including Taro Nakayama, director general of the prime minister's office, Governor Naohiro Dogakinai of Hokkaido and Mayor Terashima Isao of Nemuro.

Suzuki flew for about an hour along the coastline from Nemuro to Rausu in eastern Hokkaido aboard a self-defence force helicopter, affording him a view of the four islands--the Habomai group, Kunashiri, Etorofu and Shikotan.

Later the prime minister left Nemuro by car for Cape Nosappu on the tip of the Nemuro Peninsula from where he observed through binoculars Kaigara Island of the Habomai group, lying only 3.7 kilometers from the cape. Suzuki was reported to have looked very serious when he caught sight of Soviet warships cruising off the northern islands.

The weather was fine today. Some 1,300 people in Nemuro area, including school pupils and former islanders now residing in Hokkaido, gathered at the cape to greet the prime minister. Suzuki's trip is taken here as a major move following the government's designation of February 7 as northern territories day this year.

While in Hokkaido Suzuki heard views of the local representatives on the recovery of the northern territories before his return to Tokyo later in the day.

At a later press conference Suzuki said: "The early return of the northern territories is a long-cherished aspiration of the Japanese people. I was filled with emotion while observing the four northern islands from Cape Nosappu." He added that "an all-out effort shall be made with firmer resolve" for their recovery.

Asked about the Japan-USSR relations, the prime minister said it is a pity that the Soviet Union has so far remained obdurate on the territorial dispute and showed no desire for a solution. It alleged that there exists no territorial dispute with Japan.

Referring to Brezhnev's recent hint for better relations with Japan, Suzuki said that it indicates that the Soviet Union persists in shelving the territorial dispute and building up Japan-USSR relations. This is what Japan will not accept, he said, adding "It remains difficult to work out a fundamental solution to the Japan-USSR relations." "The government," he stressed, "will seek a peace treaty with the Soviet Union only after the problem of the northern territories problem is settled."

DPRK VICE PRESIDENT COMMENTS ON REUNIFICATION

OW091414 Beijing XINHUA in English 1226 GMT 9 Sep 81

[Text] Pyongyang, September 9 (XINHUA)--The most correct way to achieve national reunification is to carry into effect the proposal for founding the Democratic Confederal Republic of Koryo," says Pak Song-chol, vice-president of the Democratic People's Republic of Korea.

He was addressing a meeting here yesterday in celebration of the 33d anniversary of the founding of the Democratic People's Republic of Korea.

"Our proposal for convening the conference," he said, "is the most active and just step of national salvation to solve the question of the country's reunification in conformity with the will and interests of the whole nation and by the united efforts of all the patriotic forces at home and abroad."

He reiterated that it is reasonable to convene at an early date a conference for the promotion of national reunification with the representation of the political parties and organisations in the north and the south and overseas compatriots. To convene the conference successfully, "We are ready to meet anyone in South Korea and overseas Koreans except the Chon Tu-hwan group and we shall always keep the door of dialogue open," he declared.

Referring to what the U.S. news media called "incident of missile attack by the north," he said, it is sheer fabrication aimed at legalizing U.S. war preparation in South Korea and creating a pretext for a new war. The U.S. could not shirk its responsibility for aggravating the situation in the Korean Peninsula, he said.

SINGAPORE PAPERS VIEW KAMPUCHEAN STATEMENT

OW061336 Beijing XINHUA in English 1218 GMT 6 Sep 81

[Text] Hong Kong, September 6 (XINHUA)--The tripartite joint statement signed by leaders of the Kampuchean patriotic resistance forces in expressing their desire to work together towards a coalition government is "a step forward in unifying efforts to dislodge the Vietnamese from their homeland," said Singapore paper THE STRAITS TIMES in an editorial yesterday.

The editorial added: "The more difficult task comes when the ad hoc committee sits down to work out details of the proposed coalition. This is when the true intentions of the different factions will be put to the test."

"To have a workable coalition," it stressed, each party "must devote full attention to the most pressing task at hand: evicting the Vietnamese."

Another paper, SIN CHEW JIT POH, in an editorial yesterday pointed out the result of the tripartite meeting has brought confidence and hope to countries that have been supporting the Kampuchean people's struggle against Vietnam. This will also conduce to winning more support for Democratic Kampuchea to retain her lawful seat in the United Nations.

"The joint statement constitutes a head-on blow to Vietnam with the idea of permanent obsessed occupation of Kampuchea," the editorial stated.

It also pointed out that in the course of the formation of a coalition government, there will be disputes among the three parties.

THAI PAPERS HAIL MEETING OF KAMPUCHEA UNITY GROUPS

OW071608 Beijing XINHUA in English 1507 GMT 7 Sep 81

[Text] Bangkok, September 7 (XINHUA)--The meeting of the Kampuchean resistance groups in Singapore was a very good thing for their cause of getting together to resist the Vietnamese aggressors, said Lieutenant-General Som Kataphan, director of the information office of the Supreme Command of the Thai Armed Forces.

According to today's Thai newspapers, Som Kataphan told reporters here yesterday that the coalition of the resistance groups, if achieved, will surely reinforce the political and military forces in Kampuchea against the Vietnamese invaders.

The director said that the coalition is also an expression of the patriotism and unity of these groups. Although there are problems which can not be solved immediately, it is believed that under the prerequisite of resisting Vietnamese aggressors for national salvation, they will finally abandon prejudices to achieve a great patriotic unity.

Som Kataphan warned that Hanoi and the Heng Samrin regime will neither remain indifferent to such a development in Kampuchea, nor give up their ambitions of invading their neighbours. There is no doubt that they will launch offensive attacks on the Kampuchean resistance forces, notably mopping-up operations in the Kampuchean-Thai border areas. They will surely let shells fall inside Thailand, infringing upon the Thai territory publicly, he added. However, Som Kataphan said, Thailand will never lower its guard; it has made all preparations and taken effective measures against the attacks.

Chief of staff of the Supreme Command of the Thailand Armed Forces General Saiyud Kerdphol told reporters that the unity of the three Kampuchean resistance forces is politically a positive development.

The newspaper TAVAN SIAM, in an editorial today entitled "A New Step for Kampuchea," said that the meeting of the three anti-Vietnamese resistance leaders, Prince Norodom Sihanouk, Son Sann and Khieu Samphan, and the adoption of a four-point declaration will contribute to Kampuchea's international activities to safeguard Democratic Kampuchea's seat in the United Nations and makes it clear once again that the Vietnam-backed Heng Samrin regime is a tool used by Vietnam for its occupation of Kampuchea.

The paper said that if the three Kampuchean parties realize their own duties to end the Vietnamese occupation of their country, there should not be big problems in the election of Kampuchean coalition government leaders.

THAI PRIME MINISTER DISCUSSES ROLE OF MILITARY

OW272028 Beijing XINHUA in English 1530 GMT 27 Aug 81

[Text] Bangkok, August 27 (XINHUA)--Thai Prime Minister Prem Tinsulanon declared here today that his government would try in every possible way to strengthen the army so that it may rise to defend the independence, sovereignty and territorial integrity of the country at any moment. He made these remarks while presiding over a ceremony held at the Don Muang airport here to mark the reception of a batch of 20 F-5E and F-5F fighters purchased from the United States. This is the second batch of such fighters Thailand has bought from the United States over recent years. The first batch was delivered to the Thai Royal Air Force in 1978.

Prem said that with the change in the situation in this region, the Thai Government thought it necessary to raise the anti-aircraft capability of the Thai army. "Although the government is working hard to establish good relations with foreign countries and is seeking peace and tranquillity in this region through political channels, we are still worried about our country's security, independence and sovereignty," he added.

"Therefore," he continued, "it is imperative for us to purchase up-to-date fighters, to train a group of highly skilled pilots and other military personnel and to be ready to go into fighting at any time." He said with confidence: "So long as we make full preparations, we would be able to make timely counterattack against the invaders and maintain our peace and tranquillity."

INTERNATIONAL AFFAIRS

EXISTENCE OF DANGER OF SOVIET ARMED INTERVENTION IN POLAND ANALYZED

Tianjin GUOJI WENTI YANJIU [JOURNAL OF INTERNATIONAL STUDIES] in Chinese No 1, Jul 81 pp 60-63, 39

[Article by Zhang Dunhou [1728 2415 0624]: "The Situation That Has Taken Place in Poland During the Past Year"]

[Text] I. What Has Happened in Poland?

Since July 1980, the volatile and unstable situation in Poland has aroused worldwide attention.

1) One Strike Wave Follows Another

On 1 July 1980, the Polish government announced an increase in meat prices, thus triggering strikes by workers in Warsaw and other parts of the country protesting this decision by the government and demanding wage increases. Despite explanation by the authorities concerned, the voices of protest were still in the air as the strike wave spread to the other parts of the country. On 16 July, a general strike was called by factory and railway workers in the city of Lublin bordering the Soviet Union. During the strike, the railway traffic was blockaded, and the functions of the entire city were paralyzed to bring the first strike wave to a new height. Then a series of measures were taken by the Polish authorities to increase the wage by 10 to 15 percent and to meet the striking workers' demand for free election of their trade unions. In the end, the strikes in Lublin and other cities were called off and order was initially restored.

However, the strikes were soon resumed in various localities. In late August, some 16,000 "Lenin" Shipyard workers in the city of Gdansk went on strike. On the following day, more than 50,000 workers throughout the city walked off their jobs, grinding traffic to a halt and cutting off telecommunications with the rest of the world. An interfactory strike commission was soon formed by the strikers to elect Lech Welsa as their leader. On 22 August, the Gdansk interfactory strike commission conveyed a total of 21 demands to the government. Among them were economic demands, demand for the formation of "free trade unions," and demand for the establishment of a monument to workers who died in the December 1970 strike. Workers in other cities came to their support by calling their own strikes engulfing the coastal area as a whole. Thus the second strike wave reached a peak. On 30 August, the Polish government reached an agreement with the strike commissions in Szczecin and Gdansk. The government agreed to the formation of the self-governing trade unions by workers, and the erection of a monument to workers who died in the 1970 strike and pledged to protect the personal safety of striking workers in exchange for their recognition of the leading role of the party and the alliance between Poland and the Soviet Union. Later, all striking workers returned to work.

On 1 September, the Gdansk independent and self-governing trade union held its inaugural meeting at the "Lenin" Shipyard during which Walesa was elected its responsible person. On 22 September, representatives of 36 independent and self-governing trade unions from all over Poland met to adopt a charter naming their organization "Solidarity" Union. Its membership has grown quickly and has swelled into nearly 10 million. Meanwhile, on 5 December, the Central Board of Directors of the original Polish Trade Union announced that it has been scheduled to terminate all its activities effective 31 December.

On 24 September, the "Solidarity" Union submitted to the Warsaw District Court an application for the legalization of its organization. The court made major changes in the charter of the "Solidarity" Union by deleting from it "the right to strike" and by adding to it an article calling for recognition of the leading role of the Polish United Workers' Party and allegiance to the socialist system. On 24 October, the "Solidarity" Union appealed to the Supreme Court after issuing a statement of protest against such changes. While holding negotiations with the authorities concerned, "Solidarity" announced a nationwide general strike scheduled for 12 November, thus adding fuel to the tension again throughout Poland. On 10 November, the Supreme Court approved the original charter of the "Solidarity" Union and attached it with a proviso as a condition for legalizing its organization. The proviso contains a portion of the Gdansk agreement reaffirming the leading role of the party and the need for the socialist system. Then the "Solidarity" Union agreed to call off its scheduled general strike, thus avoiding a major clash with the authorities.

On 16 Dedember, the monument to workers killed in the December 1970 strike in Gdansk was ceremoniously unveiled in the presence of hundreds of thousands of representatives of workers, party and government leaders and representatives of the "Solidarity" Union. In their speeches, both government leaders and representatives of the "Solidarity" Union emphasized that "the people, the working class and the government must join forces in building their common life so that the tragedy of the past will never be repeated again." They also called on the people to "vigilantly protect the safety and sovereignty of the motherland," to maintain the "social tranquillity" and to start "the process of national harmony and concord."

However, the situation in Poland remained volatile. After entering 1981, one strike after another were organized by "Solidarity" to fight for their 5-day-a-week work system. Meanwhile, the Rural "Solidarity" Union organized by individual farmers throughout Poland also called for approval of its legalization by the authorities and other rights. Some institutions of higher learning followed suit by demanding the approval of the legalization of their independent student unions and reform in the education system. These storms that buffeted society echoed to each other, making the volatile situation appear more dangerous than ever.

On 31 January, the government and the "Solidarity" Union reached an agreement on a compromise formula calling on workers to work 42 hours a week and entitling them to 3 Saturdays off a month in 1981. The government also agreed to the demand of the "Solidarity" Union for publishing four weeklies including a national weekly journal and for scheduling a special television program for trade unions once a week.

On 19 March, at the end of the Bydgoszcz provincial People's Assembly session in northern Poland, policemen beat up and inflicted injuries on responsible persons of the local "Solidarity" chapter. On 27 March, the "Solidarity" Union called a 4-hour long warning strike in major cities in a protest against this incident. It demanded a thorough investigation into the case and punishment of those responsible for it. The "Solidarity" Union decided that if no agreement were reached through negotiation with the government, it would call an indefinite nationwide general strike on 31 March. Thus "A most dangerous moment ever since August last year appeared on the horizon." (Quotation from a speech by Kania, first secretary of the Central Committee of the Polish United Workers' Party.)

From 29 to 30 March, the Ninth Plenary Session of the Polish Party was held as a matter of emergency to concentrate on a discussion of the current tense situation calling the attention of "Solidarity" Union leaders to the grave consequence of a general strike. The session also expressed its willingness to thoroughly investigate the beatings of responsible persons of the Bydgoszcz chapter of the "Solidarity" Union while emphasizing the need to settle social disputes by political means. On 30 March, the government and the "Solidarity" Union reached an agreement on this matter as indicated in the following joint communique: In view of our deep concern with the destiny of the motherland, both sides are taking concerted actions to eliminate the root cause of the threats of social and political crises. The government will follow the due process of law in handling the case of beatings while the union has agreed to call off its strike. In this way, tension gave way to conciliation.

Troubles centering around the legalization of the Rural "Solidarity" Union also became a matter of concern. In the wake of the formation of the "Solidarity" Union, farmers in the Lublin area formed a rural "Solidarity" union with a request for its legalization. Both provincial and supreme courts rejected this request. In February 1981, in a report to the Eighth Plenary Session of the Polish Party, the Politburo said that there was no need for the formation of the rural "Solidarity" union. Because a settlement of the dispute over the legalization of the rural "Solidarity" union was nowhere in sight, its members began a sit-in at the headquarters of the Bydgoszcz provincial peasant party in March 1981.

On 30 March 1981, the "Solidarity" Union and the government signed an agreement in Warsaw expressing their willingness to do everything possible to avoid a situation of confrontation over the issue of organizing the individual farmers into a union. On 17 April, the government and the rural "Solidarity" union reached an agreement on the latter's legal status, thus ending a month-long sit-in demonstration organized by the agricultural union and other protest activities in support of this demonstration. On 12 May, the Warsaw court officially approved the application of the Rural "Solidarity" Union for its legalization. At present, this union claims nearly 2.5 million members.

2) Party, Government Leadership Reshuffles

From July 1980 to May 1981, or in less than a year, a total of seven plenums (from fourth to tenth) were held by the Polish United Workers' party.

Gierek was replaced by Kania as first secretary of the Polish United Workers' Party during its Sixth Plenum held in September 1980.

In August 1980, Edward Babiuch was relieved of his post as chairman of the Council of Ministers and replaced by Jozef Pinkowski at the former's request. (Babiuch assumed that position in February 1980) In February 1981 or barely 6 months later, Pinkowski resigned from that post and was succeeded by Defense Minister Wojciech Jaruzelki.

This reshuffle affected most of the members of the politburo and secretariat elected during the Eighth Plenary Session of the Polish United Workers' Party held in February 1980. On 29 April 1981, a coal miner and a tractor factory worker were elected to the Politburo membership of the Central Committee during the Tenth Plenary Session of the Polish Party. Most of the vice chairmen of the Council of Ministers were changed. A large number of leading members of the various departments of the Party Central Committee, government departments, committees and provincial party committee secretaries and provincial governors were replaced along with many mass organization leaders.

This personnel reshuffle stems from various reasons. Some were dismissed on incompetence and corruption charges; some were replaced at the persistent request of the "Solidarity" Union; some were retired due to old age and poor health; some were transferred to other posts.

According to the information released by the Eighth Plenary Session of the Polish Party held in February 1981, since the summer of 1980, some 92,000 members quitted the party; another 2,400 were expelled from the party. Piotr Jaroszewicz who was chairman of the Council of Ministers before his replacement in February 1980 has been expelled from the party.

3) Beset by Greater Economic Difficulty

The consistent convulsive social upheavals have had grave adverse impact on Poland's already difficult economic situation. From 1979 to 1980, the value of gross industrial and agricultural output dropped 3 and 9.6 percent respectively; the value of crop production dropped 15.2 percent; the labor productivity and national income were down 2 and 4 percent respectively. This was the third year in a row that the national income declined. Appalling foreign trade deficit has appeared. In 1980, Poland's foreign debt stood at US$23 billion (on the basis of the communique on the implementation of Poland's 1980 economic plan released on 4 February 1981). Of this debt, one-fourth was due for payment. As a result of the restructuring of its import and export trade in 1980, Poland used most of loans to purchase food grains, animal feed and other consumer goods which cost at least US$2 billion. Poland, a nation with a population of 30 million, imported 9 million tons of food grains and high quality animal feed in 1980, or 26 percent more than in 1979. In 1980, it imported sugar and meat for the first time in its history. Originally, fuels, electric machinery, foodstuffs, and agricultural products were among the traditional export items. But their export that year also dropped in proportion to the export trade volume.

Despite falling production, in 1980, the regular wage increased by 12.8 percent, or actual 3 percent after deducting inflation. The result was that inflation deteriorated further, soaring commodity prices to a new level. In 1980, the cost of living was up 9.1 percent from the level of 1979, hitting the highest mark ever in the past 25 years. The prices of foods were up 14.1 percent on the average. Among the increases in food prices, potatoes were up 44 percent and vegetables up 33 percent.

Because of work stoppage, the shortening of work hours and raw materials and energy shortages, many factories have been forced to close down or operate at a half capacity. Last year, the losses incurred by strikes were estimated at US$ 1.2 billion. Since the beginning of 1981, the economic situation has continued to deteriorate. During the first quarter of 1981, industrial production was down 10.2 percent from the level of the corresponding period of 1980; particularly noteworthy is a decrease of 20.8 percent in the output of crude coal which plays an important role in the development of Poland's economy. This failure to fulfill the repeatedly adjusted modest economic targets has adversely affected its export trade, and has had a direct impact on electric power supply, shipping service and energy supply for home use. The purchase of meat animals dropped 14.7 percent. On the other hand, cash income for residents increased by 18.1 percent. In the end, the shortages of goods on the market became more acute than ever. Since last March, the Polish government has announced a temporary measure to ration edible sugar, meat, butter, flour, rice, and oats and other food items.

II. The Nature and Cause of Crisis

Just as Kania said, the situation in Poland during the past year was characterized "by an economic crisis followed by a political crisis." He pointed out: The strike wave that began in July 1980 is not "a wave of protests against the socialist principle, our alliance with the Soviet Union, and/or the leading role assigned to our party by history. But it is a wave of opposition to the distortion of truth and our erroneous policy." He further pointed out: "The erroneous economic policy and unhealthy social life are basic factors that triggered the massive strike wave."

In December 1970, former Polish leader Gomulka was forced to step down under the impact of the strike waves triggered by the announcement of price increases by the government. The new leading organ headed by Gierek then proposed "a new economic strategy" calling for a speedy development of the economy through the use of foreign loans and the importation of new technology. Its aim was to "rebuild Poland," to realize "Poland's second industrialization," and to raise wage scale by big margins and improve the welfare program. This policy did reap some fruits during the first few years of its implementation. From 1971 to 1975, industrial production rose 73 percent, and agricultural production grew 22 percent. From 1970 to 1976, the national income increased by 100 percent. It grew at a rate of 9.5 percent a year. (From 1966 to 1970, the average growth rate was 6 percent)

However, the economic base has become shaky during the past few years. Former premier Babiuch said: "We depend on loans for a living and development." Practice proves that a grave consequence has resulted from the implementation of the "new economic strategy."

From 1970 to 1980, Poland's foreign debt grew from merely US$800 million to US$23 billion. Payments of foreign debt were due one after another. To pay back the principals plus interests carries an increasingly heavy burden on Poland. In 1980 alone, the payment of principals plus interests was estimated at US$7.6 billion accounting for 74 percent of the total foreign exchange income for that year. This was clearly far beyond its ability to pay.

The "new economic strategy" calls for investment in the construction of large-scale new projects and for importation of technology and equipment to build 450 major projects financed by foreign loans, projects most of which must take a long time to complete. Meanwhile, Poland's foreign trade deficit became greater than ever when the international market prices of fuels, raw materials and food grains which Poland must import from abroad went up and its export volume dropped. As a result, its original plan to pay off its debt through the expansion of export trade could not be materialized.

Polish agriculture is mainly based on individual economies (individual farmers work on nearly three-fourths of arable land throughout the country). There are shortages of investment capitals and manpower, which constitute a weak spot in the national economy. Because the crop growing business lags behind animal husbandry, Poland has adopted a policy "to import animal feed in order to export meat." In the late 1970's, crop failure in Poland continued for 5 years in a row, thus further widening the gap between the development of industry and that of agriculture and disrupting the development of the national economy as a whole. In the first half of the 1970's, Poland had to import an average of 4.1 million tons of food grains and animal feed each year, which accounted for nearly 20 percent of the annual domestic output. In the second half of the 1970's, it had to import an average of 8 million tons of food grains and animal feed each year, an equivalent to 40 percent of the domestic output. In that decade, such imports cost the country more than US$9 billion, an equivalent to 40 percent of its foreign debt.

The flow of laborers in large numbers from the countryside to cities, triggered by attractions of high wage paid by the builders of some large-scale capital construction projects, has caused acute manpower shortages in the countryside. The implementation of the high wage policy has resulted in a situation in which the growth of wage has surpassed the growth of production and placing a great pressure on the supply side of the market. Since the beginning of the 1970's, Poland has increased the purchase prices of agricultural products several times while keeping the basic food retail sale prices at the same levels for a long time under a state subsidy program which forced the state to earmark nearly US$16 billion or set aside approximately 40 percent of the state budget to subsidize such sales in 1980 alone. In order to relieve this heavy financial burden, it decided to adjust its meat retail sale prices, which consequently triggered a strike wave.

The people have become increasingly disenchanted with the political life in Poland where the democratic principle has long been trampled under foot, and some leading cadres cherishing bureaucracy and special privileges have been found guilty of abusing their power. This is another important factor that triggered this crisis. For this reason, Kania pointed out: "Our most important task is to restore the confidence of society in the people's government and to restore the confidence of the working class and workers in the party."

The Polish party is prepared to carry out some reforms with the aim of overcoming its already publicly known shortcomings. On 2 April 1981, Poland's PEOPLE'S TRIBUNE carried an editorial revealing that disputes over a series of important issues still exist within the party. On 9 April, Kania said at the "Lenin" Shipyard: "The leadership of the Central Committee is determined to crush any resistance to the process of socialist reform that exists in the party and social life. We need to build a social climate which will rule out the possibility of restoration to the old life." At the same time, he pointed out: "Wiping out deepening crisis is a process that will take years instead of just a few weeks."

III. Danger of Soviet Military Intervention in Poland

Soviet interference in many ways in the development of the situation in Poland has never stopped during the past year.

On 5 December 1980, the leader of the Warsaw Pact countries issued a communique on their Moscow meeting. Although they expressed confidence in Poland's "ability to overcome its own difficulties," they emphasized that Poland "can firmly count on fraternal assistance and support" from the Warsaw Pact nations. On 11 December, Soviet PRAVDA carried an article reminding Poland by insinuation of the "historical lesson" that Czechoslovakia drew from its 1968 incident, accusing anyone opposing the social "pattern" of the Soviet Union of being "a counterrevolutionary." The article alleges that "the internationalization of class interests of all socialist family members conforms to the objective laws of our time." Soviet newspapers and journals even went so far as to openly declare that if the Soviet Union fails to intervene in Poland, "the Soviet Union cannot be called the Soviet Union." (NEW TIME, issue No 11, 1981)

Although the Polish party and government have consistently tried to solve properly some major problems Poland now faces through cooperative negotiation with the already legalized "Solidarity" Union, the Soviet Union has repeatedly attacked "Solidarity" by name while demanding that the Polish party take "a clear-cut and uncompromise stand" against its activities. The Soviet leadership has also taken overt measures of interference in the affairs of the Polish party. On 23 April 1981, or the eve of its Tenth Plenum, Suslov, a member of the Politburo of the CPSU Central Committee, made an unscheduled visit to Poland. After his return to Moscow, on 25 April, TASS carried an article accusing the Polish party leadership of accommodating "revisionists" within the party.

Political intervention is often paralleled by military pressures. It was reported that by the end of 1980, hundreds of thousands of Soviet troops were concentrated and deployed around Poland for conducting one military maneuver after another.

These troops in high gear of combat-readiness are prepared to fulfill any combat missions. On 17 March 1981, the Warsaw Pact nations began a joint military exercise in Poland originally scheduled to end on 23 March. This military exercise was extended due to the unexpected outbreak of the Bydgoszcz incident which built up the tensions to a new level in Poland. The war games came to an end on 7 April after the Bydgoszcz incident was settled. It was reported that the completion of this military maneuver marked a step forward in preparing Soviet military intervention in Poland.

At the Eighth Plenary Session of the Polish Party, its leaders said: "Our allies" have gone at great length to try to "understand" what has happened in Poland. "However, if we are bogged down in disorder, they will not forgive us." Once the situation worsens, the Soviet Union "will never look on with folded arms." It appears that the danger of Soviet military intervention in Poland still exists.

POLISH PARTY PLENUM RESULTS REPORTED

OW060004 Beijing XINHUA Domestic Service in Chinese 1232 GMT 4 Sep 81

[Text] Warsaw, 3 Sep (XINHUA)--The Third Plenary Session of the Ninth Central Committee of the Polish United Workers' Party was held in Warsaw on 2-3 September. The session adopted a resolution on carrying out economic reform in Poland, developing a system of self-management in state-owned enterprises and a self-rule system for workers and staff members, beginning from 1 January 1982.

The resolution holds that it is necessary for the Polish Government to put forward a plan in September this year on reforms to be carried out in various economic sectors. The resolution instructs party organizations at all levels to widely publicize the significance in the self-rule of workers, staff members and economic reform, and actively participate in making preparations for the reform.

The plenary session listened to and discussed a report by Jan Glowczyk, candidate member of the Political Bureau of the party Central Committee, on "the party's task in determining the self-rule status of workers and staff members of socialist enterprises under the conditions of economic reform."

The resolution adopted by the session on this report points out: the economic reform will focus the attention of central planning on matters of economic strategy and development, strengthen society's role in drawing up plans and supervising their implementation and implement self-management of enterprises and self-rule of workers and staff members, relying mainly on economic means and the principle of insuring that the activities of enterprises are in keeping with the interests of the whole people to influence the development and function of the enterprises.

The resolution holds that the training and proper selection of enterprise cadres, particularly leading cadres, is a fundamental question of insuring the normal activities of enterprises. Managers of state-owned enterprises should be appointed by central or local state administrative organs after obtaining the agreement of the workers committee of the enterprises. Moreover, the power to confirm the managers also belongs to relevant state administrative organs.

Kania, first secretary of the party Central Committee, presided over the plenary session and spoke at the opening and closing sessions.

He said: "It is a matter of extremely great importance to make the self-rule of workers and staff members give expression to the will of the working class and serve the interests of the working class and the interests of the whole people. We must establish a pattern of self-rule which proceeds from the harsh realities of our life and is conducive to developing the economy and democracy to meeting wide-ranging social needs and overcoming the various kinds of difficulties in our life."

Kania pointed out that the self-management of enterprises in general and the broader scope of their self-management powers must be combined with attention to establishing a sound position for the managers. He said: "The party will not give up the cadre policy of our state organs. This conclusion is based on the historical responsibility of the Polish United Workers' Party for the country's development and its socialist form and on the party's leading role as clearly stipulated in the constitution of the Polish People's Republic."

Kania called on party organizations at all levels to shift their work to the economic field, bring into play the initiative of all trades and occupations, overcome all obstructions to development and stimulate the nation's hardworking spirit.

Kania said: We must create favorable conditions for carrying out economic reform. At the same time we must also exercise the necessary prudence and not make mistakes. He said that when necessary the government will defend socialism by all means. At the same time he also expressed his support for reaching an understanding with all forces on the side of socialism.

Kania reported on the results of the recently held Polish-Soviet summit meeting stressing that the Crimea communique is a document of friendship between the two parties, countries and peoples of Poland and the Soviet Union. He said that Soviet leaders believe that our party and our people are able to control the difficult situation by our own strength. We have an opportunity to show our gratitude to our Soviet friends for the help and attention they have given us.

The plenary session also adopted a resolution on the establishment of a mining industry commission under the party Central Committee and a resolution on the establishment of a special commission responsible for investigating the circumstances, facts and causes of all social conflicts in the history of the Polish People's Republic.

DENG'S FOREIGN POLICY CRITICIZED

OW122244 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 11 Sep 81

[Text] To create and consolidate a peaceful environment for the motherland's socialist construction--this is the main task of our country's foreign policy line. Comrade Chen Yun pointed out: We need a lasting peaceful environment and peaceful borders. Although the road is long and tortuous, we must develop friendly and harmonious relations with the people of neighboring countries. To achieve this goal, we must steadfastly follow a principled and flexible foreign policy line. In our relations with other countries, on issues where concessions can be made, mutual concessions should be made in a sensible way. On issues where there is no room for concessions, we must adhere to our own principled stand.

However, certain leaders of our country are making excessive, even unprincipled, concessions to some countries, while demonstrating unnecessary, even unwise, toughness toward other countries. For example, in accordance with Comrade Deng Xiaoping's opinion, we have made a major concession to Japan on the question of Tiaoyu Island. In fact, we have ceded China's territory to Japan. On the Taiwan question, we have made concessions to the United States which in fact amount to tolerating U.S. interference in China's internal affairs. Making endless concessions on vital issues concerning our sovereignty and national pride cannot be tolerated by the Chinese people.

In dealing with other countries, however, we have done exactly the opposite: adopted an absolutely tough stand and refused to yield an inch. Take our relations with Albania, for example. China supported Albania for many years and relations between the two countries were very friendly and close. Today, several years after relations ended, some central leaders have suggested holding talks with Albanian leaders to seek possible ways to improve relations between the two countries. However, Comrade Deng Xiaoping has rejected the suggestion arguing that it would be unprincipled and beneath our national dignity.

A certain central leader has taken an equally tough and unconciliatory stand toward Vietnam. The Sino-Vietnamese talks have been suspended for a long time and the border situation is extremely tense. The two countries' armed forces are facing each other with frequent armed conflicts. Officers and men are being wounded and killed. In view of this situation, a certain central leader has talked about teaching Vietnam another lesson. It is quite obvious that the Sino-Vietnamese border issue, like other countries' border issues, cannot be solved by resorting to force. Only by negotiating will it be possible to achieve peace and tranquillity on our southern border. Yet, a certain central leader has again shown an unnecessary toughness and refused to resume the Sino-Vietnamese talks. At the same time, he has put forward the stand that absolutely no concession will be made to Vietnam and that Vietnam must accept China's eight-point proposal. However, this stand can in no way be considered sensible. In negotiations between two sides, if one side insists on having its way, how can the two sides successfully negotiate a solution to the complicated problem? To smoothly negotiate, both sides must be sincere, understand each other, make mutual concessions, try to make the disputed issue clear and explore ways of solving the problem. Of course, concessions should be sensible, acceptable to both sides and based on the legitimate interests of both sides.

In the past Premier Zhou put forward the principle of seeking common ground while reserving differences. This principle has played an important role in pursuing our country's principled and flexible foreign policy, particularly in settling international disputes and issues. The principle of seeking common ground while reserving differences is still a good way to settle current international disputes and hold negotiations smoothly. Although the road is long and tortuous, peace and tranquillity can be achieved on our southern, northern, western and all other borders, if we engage in patient and sensible negotiations.

EGYPT, ISRAEL AGREE ON FINAL SINAI WITHDRAWAL

OW281549 Beijing XINHUA in English 1527 GMT 28 Aug 81

[Text] Cairo, August 28 (XINHUA)--Egypt and Israel reached an agreement yesterday on Israel's final withdrawal from Sinai, according to local newspapers today. The agreement was reached at a meeting between Egyptian Minister of State for Foreign Affairs Butrus Ghali and Israeli Defence Minister Ari'el Sharon in Alexandria. Under the agreement, Egypt will take over the rest of her territory in Sinai next April free of all traces of Israeli occupation so that the establishments may be peacefully used.

Declaring its commitment to the Camp David accord, the Israeli defence minister promised to evacuate the settlements and withdraw military equipment together with transportation and communications installations. Sharon told reporters after the meeting that besides the implementation of the second stage of the peace treaty, the pending issues concerned and the normalization of bilateral relations were also discussed. Asked whether Israel will remove all the settlements from Sinai, Sharon replied that the agreement will be carried out to the letter and this is actually done by the two sides.

Egyptian sources said that Sinai should be handed over without the settlements. Israel can take what they want, but Egypt is also ready to purchase any equipment it leaves behind.

Meanwhile, the Israeli radio claimed that Egypt has turned down an Israeli proposal to turn Yamit and Sharm al-Shaykh settlements into bases for a multinational force.

'XINHUA' CITES REPORTS ON AFGHAN RESISTANCE

OW271842 Beijing XINHUA in English 1519 GMT 27 Aug 81

[Text] Beijing, August 27 (XINHUA)--The people of northeast Afghanistan have regained control over the Nouristan region and vast rural areas in some other provinces in their stiff resistance to the Soviet aggressors. Highway traffic that links the Soviet Union and Kabul and the interior parts of Afghanistan has been attacked and sometimes cut off by freedom fighters. The Soviet troops had to depend on air transport for their needed supplies.

This military situation in Afghanistan was described in a dispatch cabled by correspondents of the PEOPLE'S DAILY and XINHUA from Chitral, West Pakistan. The dispatch was carried in the PEOPLE'S DAILY yesterday.

Nouristan--"the land of light"--is a mountainous region with an area of 5,000 square miles and a population of 100,000. Since the Soviet armed invasion of Afghanistan, the people of Nouristan have been subjected to barbarous bombing and attacks by the Soviet invaders and the Kabul government troops. But they have fought the invaders incessantly. They disrupted highway traffic, sealed up the access to valleys and succeeded in blocking the passage of Soviet armoured vehicles. They took advantage of the difficult terrain to take cover from Soviet air raids. As a result, the Soviet troops have failed in their attempts to occupy the region.

The Soviets and Kabul troops are forced to take a defensive position in the Nouristan region. Their main job there is to prevent the freedom fighters from making thrusts southward. Thousands of Kabul troops have been deployed along the line stretching from the border village of Birkot in Kunar Province to places west of the Nari Village. They laid mines and erected barbed wire entanglements around their outposts for fear of being attacked by the freedom fighters. Nevertheless, they cannot prevent attacks by the freedom fighters.

In June this year, 500 freedom fighters from different resistance groups launched a joint attack and succeeded in capturing the Nari Village, a heavily guarded "fort" of the Karmal troops.

The Soviets have amassed troops in northern border provinces of Afghanistan. But there they are active only during daytime. When night falls, they used to confine themselves in army barracks for fear of being attacked by the "omnipresent" freedom fighters.

The Soviets have stationed heavy troops to guard the key highway that runs from Kunduz to Kabul via Baghlan, the very road over which the main Soviet aggressor forces marched southward at the end of 1979. Even so, the road traffic was recently cut off for several days by the freedom fighters.

The Soviet Union has long coveted Afghanistan's Wahan area which borders on the Soviet Union, China and Pakistan. There the Soviet forces have imposed direct military control. A representative of an Afghan resistance organization told the correspondents that the Afghan people are determined to drive the Soviet troops out of all Afghan territory including Wahan.

INTERNATIONAL AFFAIRS

BRIEFS

EUROPEAN PARLIAMENT DELEGATION--A European parliament delegation led by (Ye-er-ma-er-di-nei), head of the delegation for relations with China, arrived in Beijing this afternoon for a visit to China at the invitation of the NPC Standing Committee. The delegation, whose members were elected by a general election held by the member nations of the European Community to include all major European nations, is the first official delegation ever sent to China by the European parliament. Members of the delegation include vice president of the European parliament. When the guests arrived at the airport, they were warmly received by Zeng Tao, secretary general of the NPC Standing Committee. It is reported that during its visit to China, the delegation will meet China's leaders and exchange views with the NPC Standing Committee on the international situation, China's economic policy and relations between the European Community and China. [Text] [OW011319 Beijing Domestic Service in Mandarin 1600 GMT 31 Aug 81]

U.S. DEFENSE CUT--White House Chief of Staff James Baker told reporters on 31 August that President Reagan is preparing to cut defense spending by $20 to $30 billion in the fiscal years 1983 and 1984 in order to make good his promise to balance the budget in 1984. Baker stressed, the United States has never been very willing to cut its $222 billion defense budget for fiscal year 1982. Even if there are big spending cuts in fiscal years 1983 and 1984, it is still hoped to increase defense spending by 7 percent. According to an AP dispatch of 1 September, the United States still needs to cut spending by $75 billion in 1983 and 1984 in order to balance the budget in 1984. If defense spending can be cut by $30 billion, a further cut of $45 billion will be needed in social planning. The social planning budget for fiscal 1982, which begins next month, has already been cut by $35 billion. [Text] [HK060326 Beijing RENMIN RIBAO in Chinese 5 Sep 81 p 6]

JILIN FRIENDSHIP DELEGATION--The Jilin provincial friendship delegation headed by Liu Cikai, vice chairman of the provincial people's congress Standing Committee, returned to Changchun on 2 September after completing its visit in Changgang Province, the DPRK. Receiving the delegation at the station were Chen Zhong and Wu Duo, vice chairmen of the provincial people's congress Standing Committee, (Yan Jieshan), deputy secretary general, and (Bi Kebin), vice chairman of the provincial foreign affairs office, as well as responsible persons of departments concerned. [SK050654 Changchun Jilin Provincial Service in Mandarin 1100 GMT 2 Sep 81 SK]

HEILONGJIANG DELEGATION TO CANADA--Invited by Alberta Province, Canada, the Heilongjiang provincial government 8-person delegation headed by Governor Chen Lei left Harbin for Beijing by plane this morning. The delegation will stay in Beijing for a few days and leave for Canada 25 August. Since 1980, Alberta Province and our province have held discussions on the establishment of friendly ties and have continuously developed friendly relations. The Heilongjiang provincial delegation will sign a draft agreement on establishing friendly ties between the two provinces and discuss economic, cultural, educational, sports and technical cooperation with Alberta. [SK211250 Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 21 Aug 81 SK]

SOVIET MANEUVERS IN HUNGARY--Moscow, September 3 (XINHUA)--Chief of Staff of the Unified Armed Forces of the Warsaw Treaty States Anatoliy Ivanovich Gribkov, and Hungarian Defence Minister Czinege Lajos have reviewed the recent tactical manoeuvres by Soviet motorized infantry units in Hungary, according to a report of army newspaper, RED STAR, here today. The manoeuvres were said to have been patterned on actual combat. Since August 25, the RED STAR has reported military exercises and training conducted by the tank units of the Soviet Central Army group in Czechoslovakia, Soviet motorized infantry and tank units in the German Democratic Republic and the Soviet pilots of the Soviet northern army group stationed in northern Poland. [Text] [OW031736 Beijing XINHUA in English 1656 GMT 3 Sep 81]

SFRY OPPOSES INTERFERENCE--Belgrade, September 12 (XINHUA)--Yugoslavia resolutely opposes any outside interference in its internal affairs, and attack on its territorial integrity and security, said Stane Dolanc, member of the presidency of the Central Committee of the League of Communists of Yugoslavia, at a mass rally in Kobarid today to mark the 40th anniversary of the anti-fascist uprising. Expressing concern over the international situation, Dolanc pointed out that the present world situation was deteriorating rapidly. He reinterated that Yugoslavia would make every effort, together with other non-aligned countries, to arrest this unhealthy development of the situation. [Text] [OW130308 Beijing XINHUA in English 0252 GMT 13 Sep 81]

ATHLETES LEAVE FOR DPRK--Beijing, August 28 (XINHUA)--Nine Chinese table tennis players left here today for the international table tennis championships in Pyongyang, the Democratic People's Republic of Korea. The players include Qi Baoxiang, a pen-hold grip paddler from Hebei Province. She won the singles crown at the 1980 national competition and the third Asian championships in 1980. Taking part in the world championships for the first time is Novi Sad, Yugoslavia. She helped the Chinese team defend the crown. Men's players include Wang Huiyuan, a member of the Chinese team which won the Swaythling Cup at the 36th world championships and singles winner of the 27th Swiss international championships last May, and Yang Yuhua, China's national runner-up. Players from China, Cuba, Czechoslovakia, Hungary, India, Japan, Mongolia, Poland, Romania and hosts DPR Korea will compete in the championships. [Text] [OW281604 Beijing XINHUA in English 1504 GMT 28 Aug 81]

SOVIETS IN THAILAND--Bangkok, August 20 (XINHUA)--Fifteen Soviet spies have infiltrated into Thailand to collect information, Thai paper MATICHON disclosed today quoting the police authorities of Bangkok. The paper said that the spies were all Soviets, but they did not carry Soviet passports. These KGB agents had tried to get in touch with secretaries of senior military officers and government ministers. They also planned to worm their way into the prime minister's office to gather information, the report added. The report was confirmed by Surapol Chullaprarm, director-general of police yesterday at a press conference. He said: "We have adopted a series of measures to maintain state secrecy and preserve national security." Thai policemen are now busy tracing and nailing the Soviet spies. Initial information obtained by Thai police revealed that KGB had ordered its members to carry out spying activities in Asia, particularly in ASEAN nations. [Text] [OW201510 Beijing XINHUA in English 1501 GMT 20 Aug 81]

AUSTRALIAN REVIEW OF KAMPUCHEA--Canberra, September 4 (XINHUA)--Thailand has urged the Australian Government to review its position on Kampuchea, Thai Foreign Minister Sitthi Sawetsila told the press in Melbourne yesterday. The foreign minister was accompanying Thai Prime Minister Prem on a visit to Australia this week. He said, "We have told your officials we strongly wish that you should reconsider your position on Kampuchea." Australia's decision to withdraw recognition of Democratic Kampuchea had set a dangerous precedent which could erode the ASEAN stand aimed at containing Soviet influence in Southeast Asia, he added. "We do not want other nations to follow the example of Australia." He stressed that Kampuchea was the only major point at issue between Australia and Thailand, which were good friends and had close links as trading partners. Replying a question raised by THE SYDNEY MORNING HERALD, the Thai foreign minister said that "China does not practice hegemony. There are no Chinese troops in Kampuchea or Laos." [Text] [OW040802 Beijing XINHUA in English 0743 GMT 4 Sep 81]

SOLUTION TO ISLAND ISSUE--Dacca, 6 Sep (XINHUA)--Bangladesh and India have agreed to materially defuse the tension over the dispute of South Talpatty Island, or New Moore as India names it, according to an Indo-Bangladesh joint announcement published tonight. The joint announcement said, following discussions through diplomatic channels, the governments of India and Bangladesh had "agreed to undertake all further necessary steps to remove the remaining causes of tension and resolve the issue." The announcement said that as agreed upon by the foreign ministers of the two countries in August 1980, "both governments stand for a peaceful settlement of this problem. With a view to continuing our joint efforts for a peaceful resolution of this and all other outstanding problems between Bangladesh and India, and also with a desire to reinforce mutual trust, understanding and friendship between the two neighbouring countries, the external affairs minister of India has invited the Bangladesh foreign minister to visit New Delhi. The Bangladesh foreign minister has accepted the invitation and will be visiting Delhi later next week." [Text] [OW070242 Beijing XINHUA in English 0220 GMT 7 Sep 81]

AFGHAN BORDER VIOLATIONS--Islamabad, 8 Sep (XINHUA)--Pakistan President Ziaul Haq today lodged a strong protest against the recent border violations by the Kabul regime. Pakistan was fully alive to the situation and would take appropriate steps to meet it, he declared. President Zia, fresh from inaugurating an international seminar on environment here this morning, was asked by newsmen to comment on reports of border violations by Afghanistan. The president answered that Pakistan does not recognize the present Afghan Government and that the border violations might be an attempt to create a situation at this particular time. PARTY AND STATE

MAO ZEDONG THOUGHT, PARTY'S CURRENT POLICIES PRAISED

Wuhan HUBEI RIBAO in Chinese 3 Aug 81 p 3

[Article by Zhang Jun [1728 0193]: "Persist in Developing the Great Practice of Mao Zedong Thought"]

[Excerpts] The "Resolution on Certain Qeustions in the History of Our Party Since the Founding of the PRC" points out: "Since the Third Plenary Session of the 11th Party Central Committee, the party and state have made new progress in all fields of work as a result of the revival and development of the scientific principles of Mao Zedong Thought and the party's correct policies under the new conditions." This judgment is entirely correct.

True, the Third Plenary Session of the 11th Party Central Committee, held in December 1978, marked "a great turning point of far-reaching significance in the history of our party since the founding of the PRC." Since that plenary session, our party has really begun an overall and thoughtful program to rely on the masses to resolutely bring order out of chaos. Through the holding of the fourth, fifth, and sixth plenums and other meetings, our party has realistically corrected the leftist mistakes it committed during and before the "Great Cultural Revolution," has resolutely criticized the erroneous policies associated with the "two whatevers," and has fully reaffirmed the need for a comprehensive and accurate understanding of the scientific system of Mao Zedong Thought. Our party has also made public its guiding ideology of "emancipating the mind, starting up the machinery, seeking truth from facts, uniting and looking forward"; it has adopted a resolution to terminate the use of the slogan "Take class struggle as the key link," which is no longer useful to the socialist society, along with a strategic policy decision to shift the emphasis of its work to socialist modernization; it has stressed the need to improve socialist democracy and strengthen the socialist legal system; and it has investigated and settled cases involving people who had been falsely, unjustly, and wrongly charged and sentenced and has laid to rest some issues of right and wrong and merits and demerits affecting a number of key leaders.

What prompts us to call the line, principles, and policies adopted since the Third Plenum a continuation and development of Marxism-Leninism and Mao Zedong Thought?

First, the line, principles, and policies adopted by the party since the Third Plenum conform to the tenets of Marxism-Leninism and Mao Zedong Thought as well as the objective reality of social development in our country.

One of the important aspects of the line of the Third Plenum was the decision to shift the emphasis of our party's work to socialist modernization. This strategic policy decision was in complete agreement with Marxism-Leninism and Mao Zedong Thought. After the proletariat captured political power, and especially after the socialist transformation of the means of production had been mainly completed, what should command the party's first attention? In their "Communist Manifesto," Marx and Engels explicitly explained: "The proletariat will by degrees wrest all capital from the bourgeoisie, and will proceed to increase the total of productive forces as rapidly as possible." ("Selected Works of Marx and Engles," Vol 1, p 272) In his famous article "The Current Tasks of Soviet Power," Lenin emphasized: "After fulfilling its basic mission to eliminate the exploiters and plunderers, the proletariat must list the effort to raise labor productivity as a priority item on its agenda and must regard it as a primary task to create a socio-economic system unmatched in capitalist society." ("Selected Works of Lenin," Vol 3, p 509) After the socialist transormation had been mainly completed in 1956, Comrade Mao Zedong in his article "On the Correct Handling of Contradictions Among the People" said: "Our basic task has changed from liberating the productive forces to protecting and expanding them in the context of the new relations of production. A battle against nature must be fought in order to develop our economy and culture." ("Selected Works of Mao Zedong," Vol 5, pp 375,377) Our party's decision to shift the emphasis of its work to the socialist modernization program actually resulted from its correct application of the tenets of Marxism-Leninism and Mao Zedong Thought.

The line, principles, and policies adopted by the party since the Third Plenum have proven correct because they meet the actual requirements for social development in our country and because they correctly reflect our national aspirations. An example is the party's strategic policy decision to shift the emphasis of its work. As everyone knows, after the basic completion of the socialist transformation of the means of production in our country, the landlord, rich peasant, and capitalist classes have been eliminated. Although the class struggle will exist in some specific localities for a long time to come, and may grow intense under certain conditions, it has ceased to exist as the principal contradiction. "The principal contradiction that needs to be resolved in our country is the contradiction between the people's growing demand for a better material and cultural life and backward social production." ("Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC") This is why our party and country must shift the emphasis of their work to the socialist modernization program aimed at developing the economy, and vigorously develop productive forces as the basis for gradually improving the people's material and cultural life. This objective fact that the principal contradiction has undergone changes in our society came to the attention of our party when its "Eighth Congress" was in session in 1956. To meet such changes, our party drew up the correct line, principles, and policies for various aspects of its work. Unfortunately, for certain reasons, our party failed to fulfill this strategic shift in accordance with the guidelines of the resolution of the "Eighth Party Congress." Nor did it value the economic construction program as a matter of prime importance to be grasped. As a result, this failure had a serious adverse effect on the development of the national economy and the program to improve the people's material and cultural life. Keenly aware that the escalation of class struggle has wreaked havoc within our society, the broad masses of people have earnestly hoped to achieve stability and unity so that resources can be concentrated on realizing socialist modernization and so that the people's material and cultural life can be gradually improved as production develops. Therefore, the strategic policy decision adopted by the Third Plenum to shift the emphasis of the party's work to socialist modernization is one that takes into account the objective reality that the principal contradiction has undergone changes in our country. This decision also reflects a desire on the part of our society for development, [and reflects] the basic interests and aspirations of the broad masses of people, indicating the revival and development of the scientific principles of Mao Zedong Thought and the party's correct policies.

Second, the line, principles, and policies adopted by the party since the Third Plenum correctly reflect the objectives laws governing the development of socialist construction.

Since the Third Plenum, in the course of conscientiously summing up both the positive and the negative experiences it has accumulated in socialist revolution and construction, our party has gradually devised a way to build socialism in this new historical period. Its aim is to unite the people of all nationalities throughout the country and to mobilize all positive factors to work with one mind and one heart and to seek truth from facts; to work out plans for a proportionate development of the economy, politics, and culture with greater, faster, better, and more economical results; to build a modern socialist power with a high level of democracy and a high elvel of civilization. This program has been formulated on the basis of our past experiences and lessons and on socialist economic laws, and therefore it meets the objective requirements of these laws. The development of socialist undertakings must take into account our nation's actual conditions and its available resources, and it must emphasize efficiency and results. It must be realized according to plans and be in proportion to other aspects of the economy. Only thus can we develop socialist undertakings with greater, faster, better, and more economical results. Otherwise, our efforts in this field will suffer losses, make little headway, and become ineffective and wasteful. In this way, the past shortcomings resulting from our overlooking objective economic laws and the exaggeration of the role of subjective will and effort can be overcome. This indicates that this socialist construction program, formulated by the party for this new period, represents a shining example of how the Party Central Committee has applied the universal truth of Marxism to develop the correct line on the basis of the objective laws governing the development of the socialist economy and in a way that takes into account the current realities of our country. This also reflects the development of Mao Zedong Thought.

In order to ensure the thorough implementation of the socialist construction program formulated by the party for this new period since the Third Plenum, our party has adopted a series of specific principles, policies, and measures. These policies embody details of the program to build socialism for this new period. This program has nothing in common with its counterpart during the "Great Cultural Revolution." Nor does it appear exactly the same as the program that was in effect prior to the "Great Cultural Revolution." Some aspects of this program are a revival of the correct approaches that existed before that revolution. Some are not only the revival but an expansion of such approaches. Some are entirely new policies. Whatever forms these principles and policies take, they are all based on the objective laws governing the development of things, are consistent with the demand for the development of history, and are compatible with the basic interests of the broad masses of people.

Third, the line, principles, and policies adopted by the party since the Third Plenum have been instrumental in accelerating the vigorous development of the socialist modernization program and in helping all fronts score remarkable successes.

Practice is the sole criterion for testing truth. Practice has given and will continue to give the most valid answer to the question of whether the line, principles, and policies adopted since the Third Plenum are correct. During the past 2 years, under the guidance of the line, principles, and policies formulated by the party, in the course of socialist construction we have scored tremendous successes on the political, economic, cultural, military, and diplomatic fronts. Politically, as a result of our efforts to implement the series of the party's principles and policies, to correctly handle contradictions among the people and to perfect and develop the socialist superstructure, a lively political situation of stability and unity has gradually taken shape throughout the country. Economically, as our party's policy of "readjusting, restructuring, consolidating, and improving" the national economy is taking deep root in the hearts of the people, our economic construction program has been "shifted to a course of development that takes into account the basic conditions of the country and the limits of our ability--a course of a step-by-step movement aimed at seeking practical results and steady advance." (Hu Yaobang's "Speech at the Meeting in Celebration of the 60th Anniversary of the Founding of the CCP) As a result, an excellent situation seldom seen since the founding of the PRC has developed. In short, our country is moving full steam ahead toward prosperity.

Comrade Mao Zedong said: "In the final analysis, the impact, good or bad, great or small, of the policy and practice of any Chinese political party upon the people depends on whether and how much it helps to develop their productive forces and on whether it fetters or liberates these forces." ("Selected Works of Mao Zedong," Vol 4, p 1079) The line, principles, and policies adopted by the party since the Third Plenum have proved instrumental in developing the productive forces and in ensuring the smooth development of the four modernizations program. This proves that the party's current line, principles, and policies are correct.

This analysis of the line, principles, and policies adopted by the party since the Third Plenum clearly reveals that since the Third Plenum our party has spared no effort to bring order our of chaos; in doing so, it has not only strived to uphold Mao Zedong Thought and return to its scientific track, but it has also revitalized Mao Zedong Thought under the new historical conditions. For this reason, we must unswervingly and continuously implement the line, principles, and policies adopted since the Third Plenum and, in the course of their implementation, continue to develop Mao Zedong Thought. On no account should we exhibit any misgivings or doubt about this point.

PARTY AND STATE

LIFE OF QING DYNASTY THINKER INTERESTED IN WESTERN TECHNOLOGY RECOUNTED

Beijing RENMIN RIBAO in Chinese 3 Aug 81 p 5

[Article by Chen Zheng [7115 6927]: "Wei Yuan [7614 3293], a Patriotic Thinker in China's Recent History"]

[Text] Wei Yuan [1794-1857] was a native of Shaoyang, Hunan, and a prefectural magistrate who passed the national civil service examination held at the nation's capital. Among his principal literary works were "Collection of Guweitang Articles," "Guweitang Poems," "Guwei Book," "Guwei Poems," "A New Compilation of the History of the Yuan Dynasty," "History of the Shengwu Reign," and "Geography of Sea Faring Nations." He was a well-known patriot and an advanced thinker in the recent history of China.

When the British aggressors launched the Opium War against China in June 1840, the capitulationists vigorously distorted the true nature of this war, blaming its outbreak on the decision to ban opium. They vilified Lin Zexu [2651 0463 1776] and his followers as "inept and bungling officials who acted too impetuously" in their efforts to ban opium. They alleged that the "burning of opium" was a factor that "made the British angry" and drove them to launch the war of agred aggression against China. Their attempt was to absolve the aggressors from the responsibility for aggression and denounce the Chinese people's just struggle against external aggression. As a good friend of Lin Zexu and a supporter of his persistent struggle to ban opium, Wei Yuan repudiated the capitulationists for drawing a conclusion that turned the relationship between right and wrong upside down. He concluded through an analysis that the "desire to seek profits alone" rather than the "decision to confiscate opium" was a basic factor that led the British to launch the opium war. ("Chapter: Proposed Buildup of a Navy")

In May 1841, the struggle waged by the people in Sanyuanli Guangzhou against atrocities committed by the British army reflected the Chinese people's patriotic and heroic spirit unwilling to submit to the aggressors. In the "Chapter: Proposed Buildup of a Navy," he wrote: "During the battle of Sanyuanli, our poorly armed and poorly trained militia units encircled the barbarian commanders and killed their soldiers before they were persuaded by our own officials to allow the enemy troops to flee. How could anyone say that our ground forces are inferior in combat to barbarians?"

He warmly extolled the Sanyuanli people's struggle against the British and angrily condemned the capitulationists for shamelessly allowing the aggressors to break out of the encirclement. In the following poem he wrote: "So high is our morale in the face of our common enemy, soon an army of 100,000 responded to an appeal for mobilization.

In old days, we heard only civilians desert to the enemy side. Today, it was out officials who deliberately let barbarians flee." (See "Sheyinglou Poems") This poem contrasted starkly to the description by the capitulationists of "the Guangdong people as suspected traitors none of whom can be trusted and of the militia cherishing justice as stubborn hooligans." In Wei Yuan's view, dampening the people's enthusiasm in their just struggle against the aggressors was a factor that put China in an unfavorable position during the Opium War.

In August 1842, the signing of the "Nanking Treaty" marked the end of the Opium War. China's defeat in this war was a great shock to Wei Yuan. After the war, he wrote many poems expressing his love and affection for his motherland. "The flame of fire north of the Yangtze River is as red as blood, the waves south of it is as gloomy as ink. The sound of the gunshot comes amid the chilling waves, tens of thousands of families wail in its wake" was a poem depicting his gloomy view of the tragic situation at that time.

Indignation drove him to write books. In the second half of 1842, he completed the writing and compilation of "History of the Shengwu Reign" and "Geography of Sea Faring Nations." The book "Geography of Sea Faring Nations" was compiled and published in accordance with Lin Zexu's instruction and on the basis of his Chinese edition of "Geography of the Four Continents." The first edition consisted of 50 volumes. Later, it was increased to 60 and 100 volumes. Wei Yuan explicitly explained that the purpose of its publication was to "cope with barbarians with their techniques and to triumph over barbarians through the study of their advanced technology." "Geography of Sea Faring Nations" was a popular book with a systematic introduction to the history and geography of various countries throughout the world. In this book, there was a "Chapter: Proposed Buildup of A Navy" elaborately spelling out the concept of "triumph over barbarians through the study of their advanced technology." Its essence was a call for studying the advanced technology of the capitalist countries in the West, developing new industry and strengthening national defense in order to protect our country from foreign armed aggression. This concept of self-containment and self-aggrandizement, a fresh idea which has had a significant effect on the recent history of China. However, the group of conservative elements of the Qing Dynasty viewed the new-type production technology as "exotic techniques and juggling skills" which, they feared, might have "an adverse impact on the minds of our people." They regarded the efforts to understand the situation in foreign countries as "something necessary" and viewed "the study of advanced foreign technology" as "wasteful practices." The consequence of keeping their eyes shut and turning a deaf ear to whatever was taking place elsewhere was that they became panicy when confronted with the aggressors and were forced to capitulate and make concessions to them. Wei Yuan declared that "everything useful to China including exotic techniques but not juggling skills" was worthy of emulation by China which should send students abroad to study them. Meanwhile, he emphasized that the purpose of study was to "convert the advanced Western technology into advanced Chinese technology."

Wei Yuan also realized that the realization of his proposed concept of "triumph over barbarians through the study of their advanced technology" could not depart from the domestic programs to reform the political system and to change the unhealthy lifestyle. After exposing many social ills during the Qing Dynasty, he proposed some formulas for reforming the administration of water conservation, salt and river shipping industries, and sharply criticized the officials for sticking to the old tradition and unhealthy trends calling on people to show interest in profitable high positions alone. He charged that "except for riches and honors, they do not know what the development of the national economy means to the people; except for their private cliques, they do not know how vital are the talented people to the nation. They know only how to follow the old regulations, which spell trouble for our future if not corrected in time. They know how to protect themselves by playing safe and by keeping reticent at all times." He was deeply grieved to see the inept and incompetent performances by many officials who acted like cowards during the Opium War. Believing that "a nation depends on its citizens for survival, and there is no easy success through good luck," he suggested that everyone play an important role in "eliminating hypocrisy and masks, in overcoming the fear of difficulties, in reforming cumbersome regulations, and in stamping out the idea of building a cozy home for onesself and many other things troubling the people."

PARTY AND STATE

REPORT ON 'GANG OF FOUR' MURDERING LIN BIAO

OW140209 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 13 Sep 81

[Text] It is 10 solid years to the day since the 13 September incident occurred. Ten years ago, or on the night of 13 September 1971, lackeys of the "gang of four" sneaked into Lin Biao's villa at No 96 Lianhuachi in Beidaihe and brutally murdered Lin Biao, Ye Qun, Lin Liguo and others at the scene. Later, they used treacherous means to fabricate and stage the so-called farce that Lin Biao attempted to flee the country and go over to the enemy. Subsequently, the "gang of four" concocted the so-called myth that Lin Biao plotted a counterrevolutionary coup d'etat to murder Chairman Mao. The notorious "Lin Biao incident" came out precisely in this manner. This sham case has caused the army great damage both in the past and at present. A large number of innocent cadres of the 15th Army were persecuted.

Historical facts prove that the so-called Lin Biao counterrevolutionary conspiracy did not and could not possibly exist, let alone the so-called Lin Biao plot to murder Chairman Mao. In fact, Lin Biao was always a close comrade-in-arms, loyal to Chairman Mao. He always followed Chairman Mao's teachings, acted according to his instructions and honestly carried out Mao Zedong Thought.

We now play the recording of Lin Biao's speech for you all so you can hear how Lin Biao eulogized Mao Zedong Thought and how he called on the people to closely follow Chairman Mao:

[Begin recording] Only when we have Chairman Mao's wise leadership and firmly grasp Mao Zedong Thought as a weapon of victory can we sweep away all obstacles and be ever-victorious and win a complete victory in the great proletarian cultural revolution. The supreme commander of the great proletarian cultural revolution is our Chairman Mao. Chairman Mao is our commander. Under the command of our great commander, we follow our commander Chairman Mao's teachings, and the cultural revolution will certainly develop smoothly. We will certainly win the great victory! [applause. Shouts of "long live Chairman Mao! Long long live Chairman Mao!"] [end recording]

If you recall, you will still remember that at that time the party, government and military leaders admitted that deputy commander in chief Lin was Chairman Mao's closest comrade-in-arms and successor. Chairman Mao himself also deeply trusted

Lin Biao and regarded him as his close comrade-in-arms and successor to his life-time cause. We all know that Chairman Mao personally designated Lin Biao to make the political report to the Ninth National Party Congress.

The following are the recordings of speeches by Chairman Mao and Lin Biao:

[Begin Mao recording] We hope that this Ninth Party Congress can be held well. We hope that the congress will be a congress of unity and of victory and that, after its conclusion, still greater victories will be won throughout the country. We invite Comrade Lin Biao to make the political report on behalf of the party Central Committee. [applause] [end recording]

[Begin Lin Biao recording] This congress of ours will be a congress with a far-reaching influence in the history of our party. Our present congress is convened at a time when great victory has been won in the great proletarian cultural revolution personally initiated and led by Chairman Mao. [end recording]

Historical facts have shown that it was precisely following Chairman Mao's instruction that the party constitution adopted by the Ninth National Party Congress specifically stated: Comrade Lin Biao has consistently held high the great red banner of Mao Zedong Thought and has most loyally and resolutely carried out and defended Comrade Mao Zedong's proletarian revolutionary line. Comrade Lin Biao is Comrade Mao Zedong's close comrade-in-arms and successor.

Facing these hard facts, how can one believe that Lin Biao should suddenly become Chairman Mao's mortal enemy, plot a conspiracy and attempt to kill Chairman Mao? All this was unfounded. It was a malicious slander spread by the "gang of four" with ulterior motives.

The crux of the matter is that the "gang of four" had bitter hatred for the army and its leaders and cadres. This is why the "gang of four" tried by hook or by crook to deal them blows and persecute them. It is precisely for this reason that the "gang of four" engineered the 13 September incident to get rid of Lin Biao and other principal leaders of our army. The "gang of four" framed up the so-called Lin Biao case in an attempt to willfully deal blows to the army and its cadres.

Ten years have elapsed since Lin Biao was murdered, but this question left over from history has yet to be solved impartially Out of their ulterior motives, some persons of the party Central Committee are trying by every means to hinder the settling of the framed-up case of Lin Biao. Furthermore, they are using this case to persecute and suppress army cadres.

As far as our army is concerned, the Lin Biao case framed up by the "gang of four" is a major question left over from history that urgently calls for solution. It is necessary to thoroughly redress the framed-up case of Lin Biao and to make public as soon as possible the truth of the 13 September incident before the whole party, the whole army and the people throughout the country.

FORMER RED GUARDS RECALL THE CULTURAL REVOLUTION

Beijing LIAOWANG in Chinese No 3, 20 Jun 81 pp 28-29

[Article by Xu Xinhua [1776 1800 5478] and Xu Mou [1776 6180]: "People Trained at Special Cost--Interviews With Several Former Red Guards in the Capital"]

[Text] Today few people speak of the "red guard movement" which startled the world at the beginning of the "Great Cultural Revolution." In the view of some adults who felt the impact of the red guards, it is an absurd segment of history which requires no mention; some former red guard youths feel that it was an inglorious segment of history and they are unwilling to speak of it.

But, after all, it is an actual page in the history of China's youth movements. History is not a document which can be revised. A Marxist should be good at learning from history. Regardless of whether this bit of history was a fantasy come true for you or was all but intolerable; was correct or incorrect, we both can and should draw meaningful instruction from it. This is because "history is all things to us, and we more than any other philosophical school...place great importance on history." (Engels)

It was with this understanding that we wanted to visit some of those who were red guards during the early years of the "Great Cultural Revolution" to see how they recalled this bit of history and what they are thinking and doing today. We do this to inform society. But things are always easier said than done. The factions and organizations to which the red guards belonged in those years were so complex, and there later transformations so large, that regardless of how deeply you go into it some things tend to be overlooked. And it is all too easy to get into areas of dispute. But if we stop to think about it, no matter how complex matters were, the vast majority of the red guards were basically good. Listening to their own understanding of the path they followed can be good for our society and for the youths of that era.

And so in accordance with set plans we interviewed the following red guards:

Peng Xiaomeng, originally the "head of the propaganda department" of the "Red Flag Struggle Group" at a middle school affiliated with Beijing University, On 25 July 1966 she gave a speech on rebellion which caused quite a stir. Later she was persecuted by Jiang Qing and others because of her opposition to the Central Cultural Revolution Small Group. Presently she is working in the Ministry of Communications. She is 33 years old.

Li Dongmin, originally a red guard in Beijing's No 25 Middle School. At one time he was the leader of the core group of the Red Guard Congress of Beijing Middle Schools and was on the standing committee of the Beijing Municipal Revolutionary Committee. Presently he is a researcher at the Beijing Social Science Rsearch Institute. He is 34.

Liu Longjiang, originally the person in charge of the red guards of the No 2 Boys Middle School in Beijing. He was at one time a member of the core group of the Red Guard Congress of Middle Schools in the capital and was a member of the Beijing Municipal Revolutionary Committee. At present, he works at the Beijing Municipal Farm Management Bureau. He is 34.

Zhang Licai, originally a sponsor of the red guards at the middle school affiliated with the Beijing Agricultural University. On 15 November 1966 he and his classmate, another red guard named Liu Wozhong, using the names Di Xi and Yi Lin, put up at Qing Hua University the first big character poster in the nation to criticize Lin Biao and Confucius. Afterwards, they were labeled active counterrevolutionaries and were jailed. Now he is a worker at No 12 Beijing Wireless Parts Plant No 12 in Beijing. He is 33.

Li Lindong, originally a red guard at No 25 Middle School in Beijing and an editorial writer for the newspaper of the Red Guard Congress of Middle Schools in the capital, the "East Wind." Now he is a language instructor at No 209 Middle School in Beijing. He is 34.

They enthusiastically granted our interviews. Li Lindong said, "I greatly respect your coming here to interview us. Your sincere discussion of our feelings with us as we recall this historical lesson together gives us a feeling of great warmth."

When the "Great Cultural Revolution" began these red guards were all 17 or 18 years old. They were high spirited and naive. They responded to the call for "caring about matters of importance to the nation," and truly viewed the "Great Cultural Revolution" as a great revolution that touched people's souls and as a life and death class struggle between the proletariat and the bourgeoisie. But, because of the sabotage by the Lin Biao, Jiang Qing counterrevolutionary cliques and the mistaken line of the party, from the beginning the red guards were led down the wrong path.

Peng Xiaomeng explained in detail the circumstances surrounding her entry into the movement: Before the "Great Cultural Revolution" began, the leftist errors in the guiding ideology of the party had already had an effect of young students. After it began, we felt very pious about the revolution and arose to rebel against school and party committees, to wander about struggling against teachers, to boycott classes, to boycott examinations, to write big character posters, to string together [travel about the country making contact and discussing issues with others], and to struggle against the "black gangs" [anti-party, anti-Mao]. In our enthusiasm we slept little and forgot about eating. Once we discovered the quotation, "rebellion is reasonable," in a newspaper put out before liberation, the vigor of our rebellion was increased. All of this was welcomed by Jiang Qing and her gang. Jiang Qing praised us for her own purposes as being "young tigers of great families," and Chen Boda called us the youth with "undaunted spirits a thousand feet high." Kang Sheng then said, "Not a thousand feet high, but ten thousand feet high." This sort of shameless flattery made us even more dizzy. Under the derangement imparted by the slogan of the Lin Biao gang, "sweep away all demons," we "charged" from the schools into society to confiscate property, to sweep away the "four olds" and to spread the so-called red terror.

Remembering the past, Peng Xiaomeng very sadly said: We departed from reality. We merely bandied about Marxist rhetoric and believed that personally carrying out startling and monumental undertakings was revolution. We considered ourselves "saviors of the world," the only true revolutionaries. We loved to take things to extremes. We had an obviously petty bourgeois fanaticism. These weaknesses and shortcomings were the intrinsic reasons that we were so easily used by the Lin Biao, Jiang Qing gang.

Social practice is the teacher of the young. Many red guards in the course of their own individual and very different personal experiences came, sooner or later, to gradually recognize the true faces of the Lin Biao, Jiang Qing gang. Li Dongmin said: In the beginning I looked on Jiang Qing and the others as the proper leftist faction. In 1967 Jiang Qing fired us up to "knock down the militarist line of Liu and Deng," to oppose and disrupt the military. Less than 2 months later, when the scheme of the Jiang Qing gang ran into Chairman Mao's censure and the stiff resistance of the broad soldiers and people, she did an immediate turn about and laid complete responsibility on the red guards, saying: "This is destroying our nation. If I were the People's Liberation Army, I would open fire." Who was the chief destroyer of our nation? It was Jiang Qing! Later, because I was unhappy with Jiang Qing, I was labeled a "May 16" element [those claiming to base themselves on Mao's directive of 16 May 1966--later attacked as anarchists] and was investigated for half a year.

Sooner or later the counterrevolutionary stamps on the backs of Lin Biao and the "gang of four," those sham revolutionary rascals, were bound to be exposed. As time went on the red guards gradually discovered that the true aim of the Lin Biao, Jiang Qing gang was to overthrow the leading cadres of the CCP at every level, but especially those at the highest levels. These young people who grew up receiving the traditional education of the party began to be confused. They began to doubt the line promoted by the Central Cultural Revolution Small Group.

In September of 1966 Peng Xiaomeng traveled to Beijing. She repeatedly discussed things with other red guards and they drafted and circulated "An Open Letter to the Central Cultural Revolution Small Group--Five Questions for the Central Cultural Revolution Small Group." It publicly demanded explanation of Jiang Qing and the others asking: why do you want to overthrow all the old cadres? Later they further called for resolutely criticizing the capitalist reactionary line of some of the leaders of the Central Cultural Revolution Small Group. Furthermore, in their meetings they loudly proclaimed: Some people in the Central Cultural Revolution Small Group should be less crazy! This infuriated Jiang

Qing and the others. Jiang Qing labeled these youths the "Parental Protection Faction" and the "Military Police Group," and issued orders to have them suppressed. As a result, Peng Xiaomeng and the other red guards were imprisoned and cruelly persecuted.

Young people are courageous in their practice of independent thinking. On 15 November 1966 Liu Wozhong and Zhang Licai, red guards of the middle school affiliated with the Beijing Agricultural University, assumed the names Yi Lin and Di Xi, and posted a 6,000 character big character poster at Qing Hua University. It criticized the "18 September" speech by Lin Biao, objected to his splitting of Marxism-Leninism and Mao Zedong Thought, and objected to his encouragement of the cult of personality. The big character poster forecast the fall of Lin Biao: "Merciless dialectic will force you to stand as die!" This big character poster sent tremors through Beijing.

When we interviewed Zhang Licai, he said: Recalling this bit of history I can see one thing and that is that we red guards stood in the same battle trenches as the older generation of revolutionaries. Within one short month of the time we posted our big character poster several thousand people expressed support. Li Hongshan of the Beijing Forestry College and other red guards of the capital rushed to post big character posters objecting to the extreme leftist line of the Central Cultural Revolution Small Group. This series of activities on our part was labeled the "Black Wind of December." In reality, this so called "Black Wind of December" was on the same wavelength as the so-called "February Countercurrent" [a phrase used by those who met reverses in February 1967]. Even Lin Biao in the Ninth Party Congress report spoke of the two together saying: "This was that countercurrent which ran from the winter of 1966 to the spring of 1967."

Things developed in this contradictory way. The red guards were the product of an extreme leftist line, were used by the Lin Biao, Jiang Qing gang and caused extensive damage to our cause. But there were some red guards who arose to struggle against Lin Biao and the "gang of four." Splintering occurred as the red guards began to awaken. Except for a minority who blindly sought advantages and crowded onto the "gang of four" battle wagon to roll toward denigration, many red guards sooner or later, in varying degrees, flung themselves into the revolutionary flood of opposition to Lin Biao and the "gang of four." At the beginning of April in 1976 at Tienanmen Square which had been the site of reviews of red guards in the past a great mass movement, which had been building up and brewing for a long time, finally exploded. Those of the red guards that we interviewed who were in Beijing at the time were, without exception, active participants in this "5 April" movement. Li Dongmin was in the square passing out pamphlets calling on all Marxists, both inside and outside of the party, to arise and struggle against the fascist, revisionist elements; Liu Longjiang was in the square reading aloud poems in opposition to the "gang of four"; Lin Lindong wrote down a poem at the foot of the monument mourning Premier Zhou and denouncing the "gang of four" in which he predicted that "the furious lightning bolts are not far off...." All this makes it clear that although the red guard movement was a tortuous one among China's youth movements, China's youth came through it more advanced and mature.

The 10 years from "18 August"[1966, when Mao first addressed millions of red guards in Beijing] to "5 April" were 10 years of nerve-wracking thought for them. They thought about history and reality, politics and economics, people and leadership, the individual and society.... In their travels for the purpose of stringing together, their participation in group labor, and their other contacts with the masses, they gradually came to understand the reality that is China. And in their comparisons and appraisals of various ideological tides they began to learn the theory of scientific socialism and to refine their ability to think independently and to distinguish truth from falsehood.

And what did all this thinking get them? Here are some excerpts taken from diaries, study notes and conversations--

Li Lindong: "Wherein lies the greatness of our motherland? Everywhere there are the peasants! It is their silent, unending sweat that nurtures our beloved mother, that nurtures tiny little me. They are the enlightenment of my future life. They are the example helping me to refine a strength of perseverance. We can never forget them."

Liu Wozhong, Zhang Licai: "Lin Biao and the 'gang of four' used the doctrine of 'bourgeoisie within the party' to sabotage the party, to poison our people, to force us to tear ourselves apart body and soul, and to force us to trample upon and kill each other."

Liu Longjiang: "The disaster that was the 'Great Cultural Revolution' did not happen suddenly. Besides the sabotage by Lin Biao and the 'gang of four,' it was the result of the evil development of leftist mistakes that sprouted in the 1950's. It was created by the sickness that existed within our society. Practice has proven that you can never use violent and disruptive methods such as the 'Great Cultural Revolution' to solve internal contradictions, but rather must, under the leadership of the party, use democratic and scientific methods to make adjustments and find solutions.

The "Great Cultural Revolution" disrupted the lives of an entire generation of young people. But, "somehow unconsciously the planted willows grow." Mistakes and setbacks also educated a generation. These people were trained at a special cost.

Two years ago on "4 May" Youth Day the comrade on the party Central Committee in charge of such things added the following remarks to a letter sent in by a red guard: The number of youths who made mistakes of one kind or another during the great cultural revolution is quite large. We must give them an analysis of history, and furthermore we must build our policies on the foundation of this analysis. In short, for the vast majority of them it was difficult to avoid being used and misguided because they lacked experience. It would be a mistake for us to continue to ridicule, laugh at, and look down at the vast majority of them. We must make an effort to unify the vast majority of them and make them feel at ease so that they can pull themselves together and help with the four modernizations. For the small minority that have still not come to their senses and do not conduct themselves properly we should carry out criticism and education and help them to change.

The historical episode that was the red guard movement has already past. But, today we continue to feel the tremendous damage done by this disastrous affair to our material and spiritual civilization. The after effects of history continue to punish us. But just as Engels said: "A great class, just as a great race of people, regardless of the area of study, will learn faster from the results of their own mistakes." The Chinese people have passed through a great catastrophe and have already come to understand numerous truths. Old man time is not a scrooge. He also gives us precious compensation. Among the red guards of the past, some have matured into very talented people. They are now contributing their own light and warmth for the betterment of China.

PARTY AND STATE

ROLE OF YOUTHS DISCUSSED IN CONFERENCE REPORT

Beijing ZHONGGUO QINGNIAN BAO in Chinese 7 May 81 pp 1, 3

[Article by Deng Liqun [6772 0500 5028]: "Young People Are the Hope of Modern Socialist Construction--Report at the Conference Commemorating the 62d Anniversary of the May 4th Movement in Beijing"]

[Excerpts] At the report conference jointly held by the Central Committee of the Communist Youth League, the All-China Youth Union, the All-China Student Union, and the League's Beijing Municipal Committee to commemorate the 62d anniversary of the May Fourth Movement, the director of the research office of the Party Central Committee Secretariat gave a report which strongly encouraged League cadres and members as well as the young people who attended. We are publishing the entire report in response to requests from our readers.

Problems for Consideration:

1. How should we view the significance of the establishment of new China in the history of over 100 years of suffering by the Chinese people?

2. How should we view the setbacks and great achievements in the course of new China's development?

3. Why do we regard the triumph of socialism in China as a historical inevitability? How should we understand the citing of individual phrases of Marxism to deny the reality of socialism in our country and the viewpoint of the two "whatevers" which basically differ little in methodology?

4. Why did Lu Xun say we could not view the relationship between old and young people from the standpoint of evolution?

5. How can young people attain a broad future? Why do we say that whoever is with the people will conform to the tide of history and will advance endlessly? How do we contribute to the vigorous development of China?

The majority of those who are attending today's conference are young people. In the presence of young people I can say that I am old. In the presence of the older generation I can only say that I am getting older but dare not claim to be old. It is reasonable that more young comrades should be invited to speak at this conference, and it is not suitable for an older person like me to speak. But I was once a teenager and a young person, a member of the CYL who had a variety of experience, including suffering and happiness. Some people say that there is a gulf between the older and younger generations which cannot be bridged and that their minds cannot communicate. I disagree with this view. I am a member of the CCP. Among you there are members of the Communist Party and the CYL. We all struggle for the ideals of communism and advance under the banner of communism. With the same ideals and path, how can we say that our minds cannot communicate? At the League's Central Committee forum, convened at Huairen Hall, I was inspired and moved by the speeches given by the young advanced representatives of the national learn-from-Lei Feng movement. I feel that my mind can communicate with theirs. The absolute majority of old people and the absolute majority of young people throughout the country all earnestly hope to build our motherland into a modern, strong socialist country. The minds of the two generations can communicate on this question. Even today, there is an absolute minority or a very few individual old people who stubbornly want to persist on the capitalist road. Of course they cannot communicate with the absolute majority of old people. Similarly, there is an absolute minority or a very few individual young people who worship foreign things and fawn on foreign powers, to the extent of ignoring the national and personal character, and who want to take the capitalist road. Of course they cannot communicate with the absolute majority of old and young people. The absolute minority or very few of the old people as well as the absolute minority or very few of the young people are kindred spirits who are vainly attempting to turn back the wheel of history. There is no chasm between them. Have we not discovered that some dyed-in-the-wool old revolutionaries are giving counsel to some young people who crave nothing short of nationwide chaos? Clearly, it is very difficult to draw correct conclusions merely by looking at the problem from age differences, without observing the relationships among people on the basis of the law of historical development and through scientific analysis of all existing social contradictions. Lu Xun said that he had always believed in evolution and that all young people were superior to old people. In 1927 in Guangdong, he witnessed young people splitting into two major camps. Some young Communist Party members struggled heroically and bravely gave their lives, while others threw in their lot with Chiang Kai-shek and betrayed the revolution. Learning from events and studying Marxism, [Lu Xun] ultimately became a communist, corrected his bias concerning evolution, and believed that "the future depends solely on the rising proletarians."

In several points below I will discuss with the young comrades who share a common goal some of the stronger impressions of my long experience from youth to old age.

The Chinese People Have Stood Tall Since the Establishment of New China

The young comrades who are present have not lived through the era when our motherland and people suffered humiliation. But they must remember that there was such an era and must resolve not to allow it to return!

Can we recall that we have signed one unequal treaty with imperialism and social imperialism since the establishment of the PRC? No. On the contrary, we have firmly abolished the unequal treaties signed by successive reactionary governments and have conducted relations with other countries only on the basis of equality. Have we shamelessly paid one cent of indemnity, ceded one inch of territory, or sold out any sovereign rights to the imperialists and social imperialists? Again, no. On the contrary, our people's armed forces have defended the motherland by triumphantly countering and defeating the aggressors on numerous battlefields. We have always insisted that Taiwan is an inspearable territory of the PRC and have made fruitful efforts for its return to the motherland.

In old China, the Chinese people were suppressed and exploited by the aggressors and the reactionary ruling class, while overseas Chinese were discriminated against and persecuted. In new China, the people have become the masters of their country and destiny. Overseas Chinese are cared for and protected by the motherland and can proudly and elatedly call themselves Chinese.

In old China, the country was split apart. Politicians, warloards, and national reactionaries all occupied their own domain, and each did things his own way. Even during the period of rule by the Chiang Kai-shek clique, with the exception of the revolutionary base under the leadership of the Communist Party, government orders of the Kuomintang were actually ineffective, at least in Xizang, Shanxi, Sichuan, Yunnan, Guangdong, Guangxi, and Xinjiang. In new China, over 50 fraternal nationalities coexist on the basis of equality and in unity. Never before has the great motherland been truly unified.

We established the people's democratic political power, encompassed their interests, organized various forms of social life, and carried out economic construction in a planned way. The daily life of the people gradually improved, and the feudal system of ownership of private land by the landlord class in China ended once and for all. The socialist economy of the system of public ownership firmly took control. Communist morality, customs, and social order reached very high levels. After the "Great Cultural Revolution," the level of public security in our society distinctly declined in some areas, but now there has been some recivery and improvement. Because of this, the state of our society's public security is better than that of old China or even of all the economically developed capitalist countries today.

Never before has our international position been so enhanced as it is now. On global strategy matters, China's weight holds the balance. From the position of an independent, unified, and powerful socialist state, we are carrying out a great struggle against hegemonism with the people of other countries to safeguard world peace and create human progress.

All this shows clearly that the establishment of the PRC has enabled the Chinese people to stand up forever and has buried the days when imperialism and social imperialism did as they pleased and played the tyrant. The time when we had to be subservient and humiliated in order to survive has ended once and for all. For 30-odd years out of the 4,000 years of the nation's history, the Chinese people have truly been their own masters. This is an unalterable fact and is the basis of China's hope for the future.

The Triumph of Socialism in China Is the Glory of the Chinese Nation

Since the Third Plenary Session of the 11th Party Central Committee, comrades of the entire party and people of all nationalities have emancipated their thinking, exercised their minds, sought truth from facts, and united together in looking ahead to the future. They study new conditions to resolve new problems. At the same time, fully certain of the enormous achievements made since the founding of the state, we are summing up the experiences and lessons of various aspects of our work and striving to correct the leftist mistakes of the former guiding ideology. This party policy has achieved results that are universally acknowledged. In the course of this, however, an ideological confusion has appeared in society--namely, downplaying and obliterating the successes of our socialist revolution and socialist construction since the founding of the state and denying in varying degrees the four basic principles. This ideological confusion is manifest in quite a number of theoretical essays and literary pieces. It is due mainly to the existing pernicious influence of Lin Biao and the "gang of four" and its continuing ill effect. Moreover, we need to ge through a process of resolving various problems that have accumulated over many years in our work. This ideological confusion is therefore not without a certain market. In particular, some young people are easily captivated by it, as they do not understand the history of the Chinese revolution and the distinctions between old and new China, and as they have not been systematically educated in Marxism.

By and large, the present ideological confusion has two existing forms. One is blatant opposition to the four basic principles, while the other appears under the guise of theoretical studies and cites Marxist phrases to deny the reality of our socialism. This state of affairs poses extremely solemn and urgent tasks for our ideological and political as well as our theoretical propaganda work; these are: to deal with various ideological problems that exist in reality by continuing a thorough criticism of the pernicious influence of Lin Biao and the "gang of four"; to study truly and scientifically the practice of the socialist movement of over 100 years since the birth of Marxism, over 60 years since the October Revolution led by Lenin, and more than 30 years since the founding of our state; and to adhere to the basic tenets of Marxism while continually developing and enriching it.

I wish to talk about the latter problem in particular.

On the basis of several statements by Marx, some comrades deny that ours is a socialist society. For example, production relations must suit the nature of productive forces. Socialist revolution can take place only when productive forces reach the stage where they must break through the outer shell of capitalist production relations. For instance, the first stage of communist society in "An Outline Criticism of Goethe" refers to a society that has already eliminated commodity productiyn and currency. But since we have not gone through the stage of independent development of capitalism, and since our productive forces are backward, ours is therefore not a socialist society.

Here a problem arises. We have criticized the viewpoint of the two "whatevers," and have repeatedly and profoundly popularized [the tenet] that practice is the sole criterion for judging truth. In that case, must the first stage of communism conceived by Marx also undergo the test of practice? Marxism is great, has vitality, and is true precisely because the correctness of its basic principles has already been proven by practice in the world socialist movement for over 100 years, and because it enriches and develops itself. Practice has proven that in the world today the system of public ownership is superior to the system of private ownership, and eliminating exploitation is superior to not eliminating it. Marx and Engels expounded on the conditions of socialist revolution and society. Their exposition contains extremely great ideas, but with regard to how the system of public ownership can actually replace the system of private ownership, how a system free of exploitation can actually replace the system of exploitation, they never believed that future history would develop exactly according to their exposition. Actually, their own views on socialism were different at different times and in different writings. They always opposed people treating their doctrines as dogma. They [instead] call on the proletariat of the world to develop new tenets from practice for the world. Marxism is not a dogma but a guide to action.

Judged from the entire course of human development throughout history, production relations must suit the nature of productive forces. However, neither production relations nor productive forces can be easily or mechanically specified within certain quantitative limits. We cannot believe that only by possessing all the conditions can we carry out the so-called pure socialist revolution. When Marx and Engels wrote the Communist Manifesto, the advanced countries in Europe, France, which have given rise to the Paris Commune, and the system of capitalism were all just starting to develop; the level of productive forces was much lower than today, and not as high as that in China in 1949. But they had hopes for these countries. At the time the struggle of the Paris Commune broke out, they gave their most enthusiastic encouragement and highest appraisal. Revolution is not purely an economic process. Its occurrence requires other conditions, the mutual coordination of other conditions, and the collective formation of a historical situation. With the existence of large industries that are somewhat developed, and with the existence of a proletariat, why cannot a revolution be carried out when all other conditions are already present? The October Revolution took place this way. The Chinese revolution also took place this way. On the other hand, any society, including one that has the character of a socialist society, cannot be judged solely in terms of economic conditions. The economy is the foundation and determinant of the nature of a society. But the foundation or determinant is not everything in a society. Even if we judge in terms of economic conditions, we should still recognize that our society has realized the system of public ownership of the means of production, eliminated exploitation, and carried out the socialist principle of distribution according to work. It already has the basic characteristics of a socialist society. Although our socialist society is still in its initial state, it needs to develop to an even higher stage. But undoubtedly it belongs to the scientific socialism of Marxism, and absolutely not to "agricultural socialism" as mentioned in certain essays today.

There is a basic question of methodology in dealing with things. Should practice be judged by isolated words and phrases of Marx, or should Marxism be adhered to and developed in practice? The world socialist movement has a history of over 100 years and the establishment of the system of public ownership over 60 years. Socialism is the great undertaking of world communists, the proletariat, and the laboring people in their sacrifice and struggle. It is a historical movement that is full of heroic and exploratory spirit and is rich in endless creativity. It is the glorious practice of millions of laboring people. How can we write it off with one stroke just because Marx did or did not say something, or because we can only remember what the book says, or because we cannot remember or have even forgotten what the book says? If Marx were alive today, he would not agree to such an action. Even if we do not raise political questions but discuss things in terms of methodology, it is hard to see any basic difference between this and the two "whatevers" that we have criticized.

Practice in socialism cannot be separated from the guidance of Marxism. Similarly, Marxism cannot be separated from practice in socialism. With a history of over 100 years of socialist movement before us, this cannot be denied by any serious and true Marxist. Engels said long ago: "Basically, we have never thought of suspecting or underestimating 'the revelations of history.' History is everything to us. We emphasize history more than any school of thought, even Hegel. To Hegel, history is merely an instrument for testing the structure of his logic." Later [Engels] pointed out very clearly: "Communism is not a theory but a movement. It proceeds not from principles but from facts." We cannot rely on Marx to work out all the detailed formulations for the development of history after him. Marx himself always refused to do that. He merely pointed out the basic outline and direction of the development of history. If Marxism did not follow the development of history after Marx's death and did not continually become nourished from practice and enrich itself, then its vitality would be finished. Today, the conditions in the world and the socialist movement are very different from those in the time of Marx, and yet Marxism exists, grows, and continues to be treated as the guiding ideology by the advanced elements of the proletariat in the world. This clearly shows not only the greatness of Marx's own ideas but also the fact that the doctrine named after him has been greatly enriched and carried forward by the revolutionary practice of the proletariat of all countries.

The socialist movement in each country increases the treasurehouse of Marxism with its own uniqueness. In this respect, the experience of China's socialist revolution and socialist construction has a particularly great significance.

Marx did not expect that China, a backward Eastern country with a long history of feudal society, could successfully carry out socialist revolution and socialist construction earlier than France, Britain, and Germany, on which he placed great hopes. Our achievement is a result not only of our adherence to the basic tenets of Marxist-Leninism but also of our party's being good at closely combining these tenets with China's reality under the correct leadership of Comrade Mao Zedong's older generation of proletarian revolutionaries. Essential points in Mao Zedong Thought, such as proceeding from reality in everything, integrating theory with practice, seeking truth from facts, and testing truth and developing it through practice had already been formed long ago in the process of the new democratic revolution. After the founding of the state, our party continued to adhere to and develop this Marxist ideological line. Because Marx, Engels, and even Lenin did not have an in-depth understanding or a good grasp of China's reality, and because there were no readymade theories and experiences from which to draw directly, our party opened the victorious path of carrying out a socialist revolution and socialist construction that has its own national characteristics as well as international significance.

It is not possible to demonstrate here the results and experiences of our country's socialist revolution and socialist construction. I only wish to point out: As a great socialist country, the PRC is truly standing firm. None of us can deny its indelible and objective existence for over 30 years. The clamor by the Chiang Kai-shak clique for a "counterattack against the mainland," the plot by U.S. imperialism to strangle us through aggression in Korea, the Khrushchev clique's breach of faith and tearing up of contracts, the Brezhnev clique's use of instigation and force and the 10 years of destruction by the antirevolutionary clique of Lin Biao and Jiang Qing were all defeated when confronted by our socialist motherland. We stand lofty and firm, and we are impregnable. This is the most convincing proof. Regardless of the number of shortcomings we have and mistakes we have made, in short, China's socialist revolution and socialist construction are successful and victorious. We are earnestly correcting our own shortcomings and mistakes and learning from experience and lessons. Our socialist revolution and socialist construction will surely be even more successful and victorious.

After Marxism had been extensively disseminated, tested, and developed through the workers' movements in many countries, Engels said something very impressive in his later years: "We absolutely will not use empty theoretical talk and dogmatism to teach a great nation." This is precisely the case. The introduction of Marxism-Leninism aroused generation after generation of Chinese revolutionaries. The combination of socialist thought and the workers' movement has basically changed the direction of Chinese history. The CCP is a mature party which for a long ago time has been able to concretely analyze and determine the line, principles, and policies of revolution and construction that suit the conditions of the country. We have provided a lot of successful experience for the treasurehouse of Marxism-Leninism and for the development of world history. Not only are we different from the communists of other countries, but we are not what the founders of Marxism suggested or could concretely be in touch with. Some comrades believe that we were once a country of small producers in a boundless ocean. We accepted Marxism from the viewpoint of small producers, so we basically cannot correctly understand Marxism but can only separate from scientific socialism, put forth and plan to practice the fantasy of "agricultural socialism." Comrades, this viewpoint and this argument basically do not accord with historical facts. They are very incorrect and harmful. Could "agricultural socialists" have attained the high level that we have just said about our party? Of course not. We cannot discuss this problem in detail today. I only wish to say that we should not adopt a reckless political attitude and improperly deny the history of our party, the people, and the PRC. On the contrary, the facts have proven and will continue to prove that the experience of our socialist construction will become wealth for the international communist movement and will be recorded in history. This is the pride of Chinese communists and the Chinese working class, as well as the glory of the Chinese nation.

Always Being With the People, We Will Succeed In Our Undertakings Every Time

The people of all the nationalities of China are great. This is manifested not only in the splendid ancient culture created by the Chinese people and admired by the world, and not only in their having repeatedly defeated internal and external reactionary rulers who had lain like a dead weight on their backs. In particular, it is collectively manifested in the fact that the Chinese people, under the leadership of the Communist Party, at last having overthrown their semicolonial and semifeudal rulers, have triumphed in the new democratic revolution and subsequently build a socialist and new China. As Comrade Mao Zedong said: "Our Chinese nation has the spirit to fight its enemy to the finish, the resolve to recover former things on the basis of self-reliance, and the ability to stand independently among nations of the world. We must make fundamental changes in the selfish, cowardly, corrupt, and dispirited habits which are popular among many people." It is the sole aim in the life of every Communist Party member and the basic guarantee of the prosperity of our party's undertakings to be with the people always, believe in them and rely on them, and endlessly struggle for the benefit of the people.

In this respect, Comrade Mao Zedong established a magnificent model for us in his lifelong struggle.

In the early period of his revolutionary activities, Comrade Mao Zedong enthusiastically and attentively arranged for young fellow-fighters of the New People's Society to go abroad for part-work, part-study [program] and to study Marxism, while he himself was willing to stay in China to engage in student, worker, and peasant movements and to gain a better grasp of China's circumstances. In summing up the experience of the 1911 Revolution, he believed that the basic lesson of its failure was the absence of major change in the rural areas. During the period of the great revolution, after its failure, and for a rather long period of time he carried out an arduous struggle against Chen Duxiu and Wang Ming over the right and "leftist" opportunist line that abandoned the broad masses of the peasants; he also taught and guided the whole party along the path of armed revolution in which the rural areas would encircle the cities.

The victory of the Chinese revolution was a victory of subduing "leftist" and rightist opportunism in the party. It was also a victory of resisting foreign intervention in our party's internal affairs.

The Chinese people sincerely accepted the friendship of the Soviet people, but we firmly resisted the way of the "big brother party" and the actions of hegemonism. When Khruschev visited China in 1958, Comrade Mao Zedong denounced his attempt to control China's navy through the establishment of a so-called common fleet, so [Khrushchev] had no choice but to confess face-to-face that this was a deviation from Communist Party principles. Khrushchev was affected and pretentious, and said that we had offended their self-respect and had understood their policy crudely. Comrade Mao Zedong pointed out: What? Offended your self-respect? But who has offended whose self-respect? By asking such a question you offend our self-respect! Who is crude? It was your representative in Beijing who raised this question to us on five occasions. At that time it was our understanding that we had to participate in a common fleet or else there would be no aid. Comrade Mao Zedong said: If you are willing to help us, then help us; if you do not want to, then forget it. He also said: If you persist with this kind of scheme, we will not do it. If you persist for 10,000 years, we will refuse to do it for 10,000 years. As the facts have proven: so what if they tore up contracts and withdrew their experts? We still sent satellites into the sky, exploded two types of nuclear bombs, and successfully tested long-range missiles, making continuous achievements in socialist construction. We defeated both the armed intrusion into Zhenbaodao and the support of Vietnam in the disruptions on our southern border. Comrade Mao Zedong did not see some of the problems clearly in his later years and made mistakes, but he always kept a very sober mind, a firm will, and a high degree of alertness regarding any problem involving our national independence and the sovereignty and safety of the state.

Our party and Comrade Mao Zedong have always firmly believed in the strength of the people of all of China's nationalities. The people of China's nationalities are heroic people. All difficulties can be overcome and all enemies can be defeated if only they unite together, rouse their spirit, take the Marxist line, and do not refuse to learn the strong points of others but still depend mainly on themselves. Comrade Mao Zedong's mistakes in his later years have brought great misfortune to our state and people. But in terms of his whole life, his contributions are primary and his mistakes are secondary. He deserves to be the greatest revolutionary of the proletarian class and the greatest national hero of the Chinese nation. His greatness lies precisely in his loyalty to the Chinese people and his strong belief in their strength, in his class and national spirit and revolutionary will of a communist that were as strong as steel. His tenacious struggle for the people's undertakings and his unceasing spirit are everlasting and deserve our study.

Our party has also repeatedly warned the young people to be with the people always, and to safeguard and represent the interests of the people. Comrade Mao Zedong's "The May Fourth Movement," and "The Direction of the Youth Movement" have expounded on this reasoning profoundly. In the past, present, and future, the success of all accomplished people is in direct proportion to a high degree of safeguarding and representing the people's interests. One who is with the people will advance; one who deviates from them and opposes them will fall behind and become reactionary. This is a historical truth. In the contemporary age, young people in the revolutionare movement have played a great and positive role. Like the May Fourth Movement, which centered on young people, has this not been because the advanced youth at the time embodied the direction of history?

All Aspects of Society Should Be Concerned With the Work of Young People

Our party has always cared about the work of young people. The Central Committee especially studies their work and makes relevant decisions. Leading comrades write essays on problems in this regard and make reports for them; this has become a fine tradition. At present, comrades of the League's Central Committee further improve the work of young people in dealing with the new circumstances and problems of the new era, and continually explore and accumulate experience. In this regard, I wish to talk only about one thing: The creation of favorable conditions for the healthy growth of the young generation is a glorious task that all aspects of society should shoulder.

On every front, young people are gradually becoming or have become the fresh troops for the undertaking of modern socialist construction. Their large numbers, high degree of enthusiasm, and great capacity have made it impossible for the work of any locale or department to be separate from them. Conversely, we can ask: How concerned and supportive are the different areas of society? Have things been going so well that there is no room for further improvement? We cannot look at it that way.

It is precisely because young people are everywhere in our motherland that not a single department or unit should fail to place the question of the yough on its own daily work agenda. The work of young people is not just a matter for the large organizations or the education departments. Sole reliance on the comrades of these departments, even though they might labor day and night, still cannot result in their work being done well. These comrades must arduously strive to obtain a firm grasp of the laws that underlie their own work. Take, for example, making friends with young people. Making them speak their mind is a special skill. The organizational arrangement of the activities of young people is another example. It is not easy to enable them to obtain a beneficial education while suiting their characteristics, not by coercion but by getting them interested in participating in activities enthusiastically. As to the study of the psychology of young people, a study of their characteristics pertaining to different ages, jobs, background, and sexes, and a study of how young people today can make more speedy progress in all aspects and how they can permanently stand in the forefront of the times, are matters that must be investigated in depth and summarized theoretically. Our country strongly needs a group of specialists in the work of young people. At present, qualified talents are few and very insufficient. In addition, comrades engaged in the work of young people have the right to appeal to all areas of society on their behalf. Within the limit that circumstances allow, all areas of society should try their best to satisfy the needs [of young people].

The hope of our country and nation hinges on whether there is hope for our youths. As an ordinary member of the Communist Party, I am filled with such hope in attending this conference and in giving my congratulations to the comrades on the 62d anniversary of the "May Fourth" youth festival.

PARTY AND STATE

NATION MUST PROMOTE MIDDLE-AGED, YOUNGER CADRES

OW131701 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 11 Sep 81

[Text] The Sixth Plenary Session of the current CCP Central Committee stressed that it is a pressing strategic task for us to select more middle-aged and younger cadres and appoint them to leading posts at all levels, and to put an end to the practice of lifelong tenure of cadres which benefits no one and brings only harm to the country. Cadres of advanced age should retire and those in the prime of life who combine ability and political integrity should be promoted to leading posts. However, owing to the opposition by the person holding the supreme power in the party Central Committee, the extremely important task of gradually reducing the average age of cadres has not been fulfilled, although the conditions for solving this problem have long existed.

Everyone knows that among our country's 20 million cadres, more than 60 percent are of middle age or younger. Cadres who are professionally competent in various technological fields and were trained after nationwide liberation total 4-5 million. The country has rich manpower resources. Cadres of from 40 to 50 years old are, in Comrade Hu Yaobang's words, our nation's valuable assets; if they are promoted to leading posts at various levels they will benefit the country and the people even more. This is because, first they are in the prime of life and can work 15-16 hours daily without tiring; second, generally speaking, they were educated before the great cultural revolution began and possess scientific and technological knowledge; and third, they have been tempered in prolonged struggle and have accumulated rich political experience. Sharing weal and woe with the people, they have gone through the most difficult period in the history of our country and witnessed the tremendous damage done to the nation and the people by personal arbitrariness, evil practices and mistaken leadership methods. They will not repeat past mistakes.

In other words, only those cadres who are around 40 or 50 years of age can lead our country out of the impasse and lead us onto the correct road of building our motherland. But, only a tiny number of them have been promoted to leading posts, due to the various obstacles preventing their promotion. According to statistics released by the State Council, only an average of one cadre of middle age or younger has been put into the leading body of each of the enterprises directly under the State Council in the past few years. The number of middle-aged and younger cadres who have been promoted to leading bodies at the central and national or provincial and municipal levels has on the average been below one person for each leading body. No cadres of this age bracket have been put into the leading bodies of the party Central Committee's Political Bureau or its military commission.

The overwhelming majority of members of the party Central Committee's Political Bureau and its military commission are of advanced age. Ye Jianying, for instance, is 83 years old, Comrade Deng Xiaoping 77 and comrades Li Xiannian and Chen Yun 76 while Peng Zhen, Nie Rongzhen and Huang Kecheng are over 80. Hu Yaobang and Zhao Ziyang are, in Comrade Deng Xiaoping's words, cadres in the prime of life. But, as a matter of fact, these two are more than 60 years old. Most other leading cadres at the central level are around 70.

Those on the party Central Committee should have set personal examples in honoring the Sixth Plenary Session's call to gradually reduce the average age of cadres. They should have promoted cadres of 40 to 50 years old to leading posts at the central level. But, this has not happened. On the contrary, the 77-year-old Yang Shangkun was appointed secretary general of the party Central Committee's military commission by order of Comrade Deng Xiaoping.

The task of gradually reducing the average age of leading cadres cannot be fulfilled if we fail to promote cadres who are in the prime of life to leading posts. Failure to do so makes it also impossible to readjust the leading bodies at the central and local levels. In a nutshell, the more older cadres of 70 to 80 years of age retire and the faster cadres of 40 to 50 years of age are promoted, the more beneficial it will be for the country and the people.

BOURGEOIS IDEOLOGY INFLUENCE BLAMED FOR GROWTH OF SOCIAL ILLS

Shanghai WEN HUI BAO in Chinese 13 Aug 81 p 3

[Article by Jiang Yuanming [5592 0337 2494]: "Resist the 'Wind Coming in Through the South Window'"]

[Text] A few years ago, our newspapers published reports on swindlers who successfully plied their trade disguised as sons of certain leading cadres or their relatives and associates and/or with titles of other dignitaries. They played this trick long ago until they were exposed. Today, these swindlers are plying the same trade with new tactics and are boasting of their "overseas connections," and disguising themselves as wealthy people capable of whipping up the "wind through the south window." A typical example can be found in a newsletter recently carried by RENMIN RIBAO under the title: "An Alarming Swindling Case."

I heard of this new term "wind coming in through the south window" during my recent trips to Guangzhou and Shenquan. It generally refers to such variants as "overseas connections" and "imported merchandise." Since its upsurge, it appareantly has had an intoxicating effect on some people. This unhealthy wind coming from the dark side of society carries a stinking odor offensive to astute people. But there are still others who have given in to this wind.

"That alarming swindling case" is indeed alarming. A mediocre but loquacious swindler who boasted of his "overseas connections" and ability to import color televisions and videotape sets has misled some 23 state cadres including leading cadres into making a big mistake. This shocking phenomenon tells us that although our active efforts to expand foreign trade and cultural exchanges will benefit the development of the four modernizations, the representatives of the bourgeois ideology may take advantage of such activities to influence some of our weak-willed comrades. This development should deserve our serious attention. If we slacken our guard, we may be deluded into doing something foolish. Some people including cadres have proved unable to resist the lures of money and other material benefits. Isn't it true that they have given up what they stand for and have even gone so far as to disgrace their personal and national dignity in the face of such lures? In the face of this "wind coming in through the south window," some of our Communist Party members have been defeated just as they were defeated in the face of the fragrant wind coming from Nanjing Road.

The "wind coming in through the south window" is nothing new and essentially comparable to the fragrant wind coming from Nanjing Road, Shanghai, during the early days of liberation. They are all sugar-coated bullets. If a distinction must be drawn between them, one may smack of more foreign tastes in the former than in the latter. However, no one should minimize the packing power of the "wind coming in through the south window." When one is hit by it, one may tend to forget the people's interests, the dignity of one's motherland and the tradition of hard struggle, until one is bogged down in the quagmire of sins.

The art of swindling practiced with new tactics resembles a mirror before which many people in society cannot hide their faces. Usually, the swindlers are more able than common people to size up the minds of others and what they need. These are tactics they use to lure their targets into doing something foolish. The fact that the swindlers have changed their tactics indicates that some people in our revolutionary ranks have been really hit by the sugar-coated bullets without notice. Once a stack of "foreign" merchandise is laid in front of someone, he can throw away what he stands for--principle and personal dignity. Therefore, it seems unavoidable that someone may be deluded into doing something foolish by such mediocre swindlers as Yu Tianzhang [0060 1131 4545]. For this reason, on the occasion of the 60th anniversary of the founding of the CCP, Comrade Hu Yaobang admonished the entire part membership with the following statement: "Class struggle continues to exist to a certain extent in our society and the ideological influences of the exploiting and other nonproletarian classes still survive. These facts, combined as they are with the complexities of contemporary international relations, put us in daily contact with the undesirable phenomena of capitalism, feudalism and small production." Although the time has come for those who have done something foolish to correct their misdeeds, other comrades must continue to carry forward the party's excellent tradition and consciously resist the unhealthy wind so that they can keep themselves politically pure and healthy.

GOVERNMENT PUBLICATION COMMENDS MODEL CADRES

Beijing RENMIN RIBAO in Chinese 24 Aug 81 p 3

[Article: "Observing the 'Guiding Principles' Adds Honor to the Title of Party Member--PARTY STYLE AND PARTY DISCIPLINE, Publication of the Commission for Inspection of Discipline, Creates 'Moral Guide' Column"]

[Text] To further promote the conscientious observance of "a Number of Guiding Principles on Intra-Party Political Life" by the broad party member cadres, especially the leading cadres of the various levels, and rectify the party style, the Commission for Inspection of Discipline of the Chinese Communist Party created the "Moral Guide" column in the most recent issue of its publication, PARTY STYLE AND PARTY DISCIPLINE (No 12, 1981), reporting the model deeds of several party member cadres who conscientiously followed the "Guiding Principles," developed the party's superior style and strictly observed law and discipline.

The "Moral Guide" column introduced the following: The deeds of Comrade Yuan Baohua [5913 1405 5478], chairman of the State Economic Commission, who penetrated reality to investigate and study, followed a democratic style, felt a concern for the masses and made strict requirements of his family members, and of Comrade Yin Fatang [7113 3127 0781], first secretary of the Xizang autonomous regional party committee, who set an example in opposing special privileges and bureaucraticism, and preserved and developed the party's superior style of arduous struggle; the deeds of Comrade Wang Enmao [3769 1869 5399], first secretary of the Jilin provincial party committee, who, during his observation trip to Japan, and Comrade Hou Zhenbing [0186 6966 0393] and three others, responsible persons of the Bureau of Technology, Eighth Ministry of Machine Building, who, during their attendance at an academic exchange meeting in the United States, followed foreign affairs discipline, made careful calculations and saved foreign exchange for the state; the deeds of Su Haizheng [5685 3189 2973], secretary of the committee for inspection of discipline of the Jilin Municipal Engineering Company, who correctly employed his authority as a cadre of the committee, selflessly and indomitably withstood censures and pressure, and firmly struggled against conduct detrimental to the party's interest. The column also reported the deeds of Hao Tingzao [6786 1694 5679], secretary of Helan county party committee, Ningxia Hui autonomous region, who brought closer the links between the party and the masses and widely made friends with the peasants, and of Zang Yuwang [5258 3768 2489], party committee secretary of a certain regiment of the Qinghai-Xizang Highway Command Post, who waged a firm struggle against such unhealthy practices as bribery and gifts and "study of relationships," adding honor to the title of party member.

This issue of the periodical also published a comment entitled "Rectify Party Style; Strengthen Party Leadership." It pointed out that, since the party's Third Plenary Session, as a result of the struggles, under the firm leadership of the Party Central Committee, against all kinds of nonproletarian ideas in the party and of the care and supervision of the broad party members and masses, our party style has made a considerable improvement, and many good persons and good deeds among the broad party members have emerged. However, the party style, as a whole, has not fundamentally improved. In some areas and units, the unhealthy practices of some party member cadres remain fairly serious. For this reason, we must have a high degree of awareness, without the least bit of neglect. We must continue to take effective measures and earnestly rectify the situation.

To rectify the unhealthy practices, we must, at present, perform several items of work. The entire party must give serious attention to the situation, the leaders must set the examples, and the party committees must place the work of rectifying the party style on their daily agenda. We must perform vigorous ideological-political work, strengthen intra-party ideological education, and launch the necessary criticisms and self-criticisms. We must tighten party discipline, and distinguish clearly the right and wrong, the merits and mistakes, and the awards and punishments when enforcing the "Guiding Principles," so that those who neglect their duties and abuse their power will take warning and obey discipline. We must develop the supervisory effect of the masses and the party members, protect the activists who have the courage to struggle against the unhealthy practices, and firmly punish the undisciplined conduct of attacking and retaliating by means of the powers of office.

BRIEFS

ANHUI ELECTION MEETING--A provincial election work conference was held recently in Hefei. The meeting called on the localities to complete local elections before the end of this year. According to targets set by central authorities, direct elections at the county level in the province must be completed in the second half of this year, and elections at the commune and township levels must also be basically completed before the end of the year. Gu Zhuoxin, chairman of the Standing Committee of the provincial people's congress and chairman of the provincial election commission, attended the meeting and made a speech. [OW091601 Hefei Anhui Provincial Service in Mandarin 1100 GMT 8 Sep 81 OW]

ON ZHAO ZIYANG--People unanimously praised Comrade Zhao Ziyang when they read about his return from Germany on a civil aviation flight. In the early fifties, to clarify how the Beijing residents traveled around, Premier Zhou was praised far and wide for buying a ticket to ride in the bus and chatting cordially with the passengers. In July 1958, Comrade Liu Shaoqi rode in an ordinary passenger train from Tianjin to Jinan and held heart-to-heart talks with the passengers. Regrettably, such instances subsequently became rare. The excessively strict security system blocked the association between the leaders and the masses. After the Third Plenary Session, the Party Central Committee raised the association between the cadres and the masses to an important position. We often read about the central leading comrades visiting various areas to clarify the conditions. The leading comrades forbid being sent off and met, ride the bread train alongside the ordinary work personnel, and penetrate the masses to investigate and study. It indicates that our party is determined to reform the irrational system and associate closer with the masses. The broad masses express their approval unanimously. HEILONGJIANG HOLDS MEMORIAL SERVICE FOR OFFICER

SK290414 Harbin Heilongjiang Provincial Service in Mandarin 1100 GMT 28 Aug 81

[Text] Comrade Su Min, deputy political commissar of the Heilongjiang Provincial Military District, died of cerebral hemorrhage on 23 May 1979 at age 63. On the morning of 25 August, the provincial military district sponsored a memorial service for him. The service was presided over by Zhao Xingyuan, political commissar of the provincial military district, and Zhao Xianshun, commander of the provincial military district, delivered a memorial speech.

His speech notes: Comrade Su Min's hometown is Gejiu Municipality of Honghe Hani--Yi Autonomous Prefecture in Yunnan Province and he is of Yi minority nationality. In 1935, he came to Beiping from Yunnan Province to join the "9 December" student movement. He went to Yanan in 1937 and was recruited by the CCP that December. He worked as clerk in the organizational department of the Shaanbei Middle School; director of the social relations section of the affiliated school of the Shaanbei Middle School; director of the organizational section of Yanan Lu Xun Artistic Institute; director of the organizational department under the (? Qufu) County CCP Committee of the eastern Shandong region; secretary of the eastern Shandong Regional CCP Committee; political commissar of the Yunan detachment under the Jidong military region; commander of the regiment in charge of training liberated KMT army officers, which was under the Shanxi, Chahaer, Rehe and Liaoning military region; director of the organizational department under the eastern armed force units' political department; chief, political commissar and deputy political commissar of the western armed force units' political department; director and deputy director of the political department of the engineering corps under the Shenyang PLA units; deputy political commissar of the Heilongjiang provincial military district; permanent member of the Heilongjiang Provincial CCP Committee; and vice chairman of the Heilongjiang Provincial Revolutionary Committee.

Presenting wreaths to the service were the CCP committee of the Shenyang PLA units, the Heilongjiang provincial CCP Committee, the Standing Committee of the provincial people's congress, the provincial people's government and the Harbin Municipal CCP Committee and people's government. Attending the service were cadres and fighters from the organs of locally stationed PLA units and friends of Comrade Su Min--over 1,000 persons in all.

JIANGXI CRIMINALS SENTENCED TO DEATH, JAIL

OW030450 Nanchang Jiangxi Provincial Service in Mandarin 1100 GMT 29 Aug 81

[Text] (Liu Junhu), a chief culprit in the counterrevolutionary case of burglarizing guns and ammunition from the Nancheng County people's armed force department, was executed this morning at the illuminated stadium of the prefectural committee of physical education and sports immediately after he was condemned to death according to law by the Fuzhou Prefectural People's Intermediate Court. (Jia Jianzhong), another chief culprit in the same case, was also condemned to death with a suspended sentence of 2 years, during which he will be subjected to reform through labor to see how he behaves. Five other culprits--(Wang Xiaoquan), (Luo Jianguo), (Wang Xianzhang), (Gan Shaomin) and (Wan Jianping)--were sentenced to imprisonment for life or for specific terms. When the judgment was announced, it was cheered by the 5,000 or so spectators present on the occasion.

The counterrevolutionary burglary case plotted by (Liu Junhu) and six other felons was an extraordinary pernicious criminal case which had nationwide influence. Principal counterrevolutionary felon (Liu Junhu) was a worker at Nancheng County's (Hongmen) power plant; principal counterrevolutionary felon (Jia Jianzhong) was a fighter in the garrison company of a PLA unit before he was discharged from the military because of the case; counterrevolutionary felon (Wang Xiaoquan) was a worker at the grain station of (Xujia) commune of Nancheng County; counterrevolutionary felon (Luo Jianguo) was a worker at the county broadcasting station; counterrevolutionary felon (Wang Xianzhang) was a salesclerk at a branch of the (Xunxi) supply and marketing cooperative in (Shiheng) commune, and counterrevolutionary felons (Gan Shaomin) and (Wan Jianping) were two youths awaiting jobs in Chengkuan township of Nancheng County.

When he served at a certain air force unit last October, (Liu Junhu) mustered (Wang Xiaoquan) and eight others to organize the "China Imperial Guards" [Zhong Gui Jin Wei Jun 0022 0948 4391 5898 6511] and conspired to steal guns and ammunition from the unit's arsenal to destroy the unit's airport and oil depots, rob banks and flee to Hong Kong. When (Liu) retired from the service and returned to Nancheng County in December, he mustered (Jia Jianzhong), (Wang Xiaoquan), (Luo Jianguo), (Wang Xianzhang), (Gan Shaomin) and (Wan Jianping) to plot to steal guns and flee to Guangxi's Shiwandashan mountainous areas to be bandits and people's enemies. At about 0100 on the morning of 23 May this year, (Liu), (Jia) and their five followers climbed over a wall and entered the courtyard of the headquarters of the Nancheng County People's Armed Force Department. They broke a lock, sneaked into the arsenal and stole eight hand grenades, 17 54-type handguns, 36 cartridge clips and 2,333 7.52-mm bullets. Then they fled in a stolen vehicle to Yingtan City, where they boarded a train and set for Guangxi. Along the way, the gang tried repeatedly but unsuccessfully to rob banks and pedestrians of their money. At about 0100 on the morning of 28 May, they were captured by our public security personnel in Qidong County in Hunan.

(Liu Junhu) was guilty of the most heinous crimes for masterminding the burglary of guns and attempting to become an outlaw and the people's enemy in mountains. (Jia Jianzhong's) crime was particularly serious for collaborating with (Liu) in leading (Wang Xiaoquan) and other felons to steal guns, and for resisting arrest and killing (Guan Chongsheng), a public security officer in Qidong County, Hunan. But since he was not yet 18 when he committed the crime, he was exempted from the death penalty according to law. (Wang Xiaoquan), (Luo Jianguo), (Wang Xianzhang), (Gan Shaomin) and (Wan Jianping) were guilty of having committed serious crimes of taking an active part in stealing guns.

Judgment of the case was approved by the supreme people's court after it was decided upon at the first trial at the Fuzhou prefecture intermediate people's court and ruled by the provincial higher people's court at the second trial.

Attending the verdict-pronouncing meeting this morning were leading members of the party, government and military organizations and leading members of trade unions, CYL committees and women's federations in Fuzhou Prefecture and municipality and Nancheng County.

(Peng Ronghua), member of the Standing Committee of the Fuzhou Prefectural Party Committee and vice commissioner of the Fuzhou prefectural administrative office addressed the meeting.

BRIEFS

LANZHOU PLA PROMOTIONS--Lanzhou, 27 Aug (XINHUA)--Since early this year, the Lanzhou PLA units have promoted more than 200 middle-aged and young cadres to army, divisional and regimental levels. The majority of these cadres have received training in army schools and academies. They have acquired a higher professional and technical level and are more competent. As a result of the promotions, the average age of cadres at army and divisional levels has been lowered by 2 or 3 years. Also, above 90 percent of the cadres at the regimental level fall within the appropriate age bracket which accords with the requirements of the Central Military Commission in building a revolutionary, young, knowledgeable and professional army. The political departments of the various PLA units under the Lanzhou PLA units have organized over 270 cadre-investigation groups to do good training and promotion work among middle-aged and young cadres. PUNISHMENT OF HUBEI ROBBERS--The Jiayu county people's procuratorate and the county people's court have enforced the law impartially. (Zhang Ming) and (fang Xiang), sons of cadres, were recently prosecuted and tried by the county people's procuratorate and the county people's court on the charge of conspiracy to robbery. (Zhang Ming) is a son of a commune secretary and (Fang Xiang) is a son of a county people's armed forces department political commissar. At the end of March this year, (Zhang Ming), (Fang Xiang) and (Xiong Shiguo) conspired to rob people on four occasions. On the evening of 30 March, they robbed a woman commune member of 25.30 yuan in cash and a coupon of 10 jin of grain at the Chengguan road bridge and were arrested by the masses after they robbed her. In accordance with the law, the county people's court sentenced (Zhang Ming) to 3 years' imprisonment, (Fang Xiang) to 2 years' imprisonment and (Xiong Shiguo) to 2 1/2 years' imprisonment. The cadres and masses have praised the political and legal organs for not practicing favoritism. [HK040455 Wuhan Hubei Provincial Service in Mandarin 1100 GMT 21 Aug 81 HK]

ZHEJIANG RED ARMY ASSOCIATION--The Zhejiang chapter of the new Fourth Army and the Central China Anti-Japanese Base Area Research Association was established at a meeting in Hangzhou on 7-8 September. Nearly 300 veteran new Fourth Army fighters and party history researchers attended the meeting. Li Fengping, governor of Zhejiang who is a veteran of the new Fourth Army, was elected honorary president of the provincial chapter of the association. (Zhu Renxun), director of the provincial Social Science Research Institute and also a veteran of the new Fourth Army, was elected president. The meeting also elected 9 vice presidents and 18 council members. [Hangzhou Zhejiang Provincial Service in Mandarin 1040 GMT 8 Sep 81 OW]

GUANGXI TRAINING CLASSES--On 1 September, opening ceremonies of training classes for armymen and policemen transferred to political and legal departments were held in Nanning, Liuzhou, Guilin, Yulin, Qinzhou and Baise. Liu Chonggui, Zhang Xudeng, Shi Qingsheng, and Yu Sifu and other responsible cadres of the Guangxi regional CCP committee, the regional people's government, the Guangxi military district, the PLA units stationed at Guangxi and cadres responsible for training armymen and policemen transferred to political and legal departments attended the opening ceremony in Nanning. At the ceremony, Liu Chonggui and Shi Qingsheng called for greater contributions in safeguarding social order and the four modernizations. Attending the political and legal professional training classes were veteran fighters and cadres who had participated in various battles. The political and legal departments have attached importance to these training classes and outstanding cadres have been appointed to take charge of the training. [HK090921 Nanning Guangxi Regional Service in Mandarin 1100 GMT 2 Sep 81 HK]

GUANGXI PLA WORK CONFERENCE--The PLA units stationed in Guangxi recently held a political work conference to discuss problems in the political work in the PLA units. The participants unanimously held: we must proceed from the reality of the PLA units when conducting political work. We must attach importance to solving the practical problems in the PLA units and give prompt and appropriate guidance. At the conference the participants studied the documents of the higher levels on the importance of conducting political work during the new historical period. They were determined to make contributions to political work in the PLA units and to building a modern revolutionary army. SOCIOLOGICAL, EDUCATION AND CULTURE

'DOUBLE HUNDRED POLICY,' FOUR BASIC PRINCIPLES PROMOTED

Changsha WENYI SHENGHUO [LITERATURE LIFE] in Chinese No 5, May 81 pp 9-10

[Article by Sun Yuan [1327 8673]: "Carry Out 'Double Hundred' Policy; Persevere in Four Basic Principles"]

[Text] Since the downfall of the "gang of four," especially in the recent 2 years, unity in the field of literature in our province has strengthened, interest in creative work has grown, and many good works have emerged. These works are popular with the people, and some of them have won state awards. Creating a favorable social influence, they produce a positive effect in raising people's ideological awareness, stimulating their enthusiasm in toiling for the "four modernizations," cultivating new socialist persons and enlivening the mass cultural life. It is the tremendous achievement resulting from our adherence to the four basic principles and implementation of the "double hundred" policy. Lacking a full understanding of the relationship between the "double hundred" policy and the four basic principles, some people often fail to unify them, while others even feel that they are mutually exclusive, either one or the other. Therefore, when implementation of the "double hundred" policy is emphasized, they erroneously think that everything can be "loosened;" when adherence to the four basic principles is stressed, they erroneously think that there is excessive "loosening" and "tightening" is required.

Summarizing our experiences in implementing the "double hundred" policy in the past, we find that one important point is to prevent and overcome such ideological one-sidedness.

In the past, there was a one-sided and narrow interpretation of the slogan that literature must serve politics; therefore, we simplistically asked literature to evolve around the various political movements, mechanically demanded that it follow the central task of the time and the place, and even proposed such wrong slogans as "write about the center; paint the center" and "perform only the center; sing only about the center." By so doing, we not only did not correctly understand and handle the relationship between literature and politics and blocked the implementation of the "double hundred" policy, but failed to truly uphold the four basic principles in literary creation and literary work. After the fourth literary delegates' meeting, the slogan that literature is subservient to politics and serves it is no longer proposed, and the direction that literature serves people and socialism has been clarified, thereby opening a wide path for the development and prosperity of the socialist literature.

By not proposing the slogan that literature serves politics, does it mean that we no longer have to uphold the four basic principles? No. Upholding the socialist path, upholding the proletarian dictatorship, upholding the leadership of the Communist Party, and upholding Marxism-Leninism and Mao Zedong Thought have been our party's consistent policy for a long time. Since the historically significant 3d Plenary Session of the 11th Party Central Committee, the series of policies implemented by the Party Central Committee constitutes the model in upholding the 4 basic principles. Obviously, implementing the "double hundred" policy in literary work naturally implies upholding the four basic principles; if not, our literature will go dangerously astray. Therefore, it is perfectly comprehensible that, by not voicing the slogan that literature must serve politics, we are asked to act according to the artistic laws, uphold more successfully the party's four basic principles, and correctly implement the "double hundred" policy. We must also point out that, when we say that literature is not subservient to politics, it absolutely does not mean that there is no relationship between literature and politics and that literature may sever itself from politics. On the contrary, it is for the purpose of correctly understanding and handling the relationship between the two. In any era, literature cannot be severed from politics, and politics and literature are always closely linked and interacting.

Only by correctly implementing the "double hundred" policy and upholding the four basic principles will literature produce an even broader social influence. Literature has an educational effect as well as aethestic and recreational effects. Our socialist literature must satisfy the people's spiritual life in many ways and shoulder important responsibilities in training new socialist persons and improving the ideological, cultural and moral levels of the masses. It must produce an effect in building a high degree of China's socialist material and spiritual civilization and in realizing the "four modernizations." Thus, our literature must properly serve the people and socialism. Generally speaking, a good literary work should be of relatively high ideological and artistic qualities, which are fused into one, and the political and literary criteria should be unified, without neglecting either. Of course, no individual is perfect and no gold is pure. We should not ask for perfection in literary works. As long as the contents of a work are sound, we should not be stringent on its artistic flaws. In forms and styles, we should encourage competition and free development, without arbitrary interference. Only thus will we guarantee the free development of literary creations and academic discussions. The issues of right and wrong in literature need not only the test of time and practice, but also the comments and discrimination of the masses. Therefore, such issues should be solved by means of free discussions and practice, not by administrative orders. The standpoints of following the "double hundred" policy and upholding the four basic principles should be identical. The core of the four basic principles is party leadership. When implementing the "double hundred" policy in the past, we, due to the lack of thorough understanding, encountered this or that kind of problems, which were all solved by means of artistic practice and mass discussions under the party's leadership. For the socialist literature to let a hundred flowers bloom, the writers should have their free choice of what to write and how to write, and there is no need for interference. However, we must uphold the party's leadership in regard to the policies and directions of literature. On the issues of principle and tendency in literary creation and literary work, nor should we take a laissez-faire attitude and, particularly at present, we must give attention to checking the liberal tendencies. In short, only by upholding the four basic principles will we guarantee the correct implementation of the "double hundred" policy and assure the sound development of our literature along the socialist course.

The socialist literature must profoundly reflect the essence of the socialist life and the spirit of our great era. Our country is now in the new era of the socialist construction. It is an era of great changes, discarding the old and bringing forth the new. To realize the "four modernizations," all nationalities in the country, under the party's leadership, are high-spirited and vigorous, toiling assiduously, building a socialist mansion on the vast land of the father country and demonstrating extraordinary wisdom and intelligence and creative spirit. Fearing neither danger nor sacrifice, and stepping into the breach when another falls, they manifest the high aspirations and noble qualities of the children of China. Moving heroic figures and their pioneering spirit incessantly excite, encourage and spur us on. Our writers should extol the pioneers of the "four modernizations" and the generation of socialist new persons; they should extol the great Chinese Communist Party, which is the key force in leading the "four modernizations," the proletarian revolutionaries of the older generation, and the People's Liberation Army which serves as the pillar of the proletarian dictatorship and the great defender of the "four modernizations!"

The socialist society emerged from the semi-feudal and semi-colonial society of the old China. Therefore, inevitably it bears certain flaws and scars of the old society, and even such serious turmoils as during the rampage of Lin Biao and the "gang of four" came to pass. However, precisely because we relied on the party's leadership and the socialist system, we successfully overcame, by our own strengths, the calamity created by Lin Biao and the "gang of four" and enabled the socialist construction of our country to take the path of stability and unity and sound development. Hereafter, on our march toward the "four modernizations," we will still have to struggle against the anti-socialist elements and all kinds of criminals, the bourgeois ideological style, bureaucraticism and phenomena detrimental to the interests of the state and the collective. Even though such reactionary and backward things constitute but a very small part in our socialist society, their energy is great, and the conditions are also intricate and complex. Obviously, our literature should, by means of the truthful portrayal of all kinds of social life, criticize the old things, extol the new things, boost the people's aspirations and dampen the spirit of the wicked and the evil. As the dark side of the socialist society and that of the capitalist society are fundamentally different in character and two entirely different things, if literature concentrates on exposing the dark side of the socialist society, it will not be able to honestly portray the true features of our life. We do not object to exposing the dark side of social life in literature, because we feel that exposing the dark side is also for the purpose of criticizing the old and rotten things. Revealing the light will overcome the dark and encourage people to advance. When exposing the dark side, we should not sever ourselves from life and reality and arbitrarily create sensational and thrilling things. Even less should we spread vulgar and mediocre interests and sound pessimistic and depressing notes. We should extol the moving heroic achievements of the people in the "four modernization" construction, express their great confidence and joyous hopes in overcoming all kinds of difficulties and carkness, and strive to reflect the noble and brave spirit of the era.

The people of our country, under the party's leadership, are pursuing an unprecedented great cause in the nation of China. Demanded by the era, large numbers of great works reflecting the era and great writers, wielding the pen for the people and attaining excellence, will emerge. Upholding the four basic principles will not only not fetter the creative talent of the writers, but, on the contrary, add a brilliance dazzling with the epochal spirit to the colorful pens of the writers reflecting the "four modernizations," and open an endless broad new world for literary creation.

FORMER MINISTER OF POWER INDUSTRY STRESSES NEED TO TRAIN SUCCESSORS

Beijing GUANGMING RIBAO in Chinese 23 Aug 81 p 1

[Article by XINHUA Correspondent Li Shangzhi [2621 1424 1807]: "New Mission for Senior Cadres--An Interview with State Council Consultant Liu Bolan [0491 3134 3482] on the Training and Selection of Middle-Aged and Younger Cadres"]

[Text] Before retiring to the second line of duty as a State Council consultant early this year, Liu Bolan, former minister of the Ministry of Electric Power Industry, voluntarily recommended an outstanding middle-aged cadre for approval as his replacement to the Central Committee. He is now joining other senior comrades at the Ministry of Electric Power Industry in passing on his experiences to new cadres and in helping and guiding them through a trial period in addition to assisting the new minister in carrying out his work. The leading comrades on the Central Committee have praised him as a far-sighted and open-minded comrade in the ranks of the party. This correspondent interviewed him recently for this reason.

Liu Bolan is a senior comrade who has devoted the past half century to the revolutionary cause and struggle. In the years of white terror imposed by the enemy, he spent a long time engaging in the underground work on behalf of the party. He was former secretary of the underground work committee of the CCP Northeast Army. During the "Sian incident," he did a lot of work for the party when he was nearly 30 years old. His interview with this correspondent began with the "Sian incident." After reminding me that many outstanding revolutionaries at that time were very young and many comrades were only in their teens and twenties at the time of the founding of the party, comrade Liu Bolan said thoughtfully: "In the past, we relied on youth to transform the world. Today, they are still indispensable to the cause of the revolution and construction." He has demonstrated a loving care for them. His interest in training younger cadres did not begin today. He has provided them with opportunities to acquire professional knowledge and get acquainted with the work of the party. During the interview, I also asked him to discuss problems along this line.

"On such problems, much has been said by several leading comrades on the Central Committee. Since the smashing of the 'gang of four,' and especially since the party's Third Plenum, old fellows like me have demonstrated a common desire to serve the party and the people for another 10 or 20 years. However, time waits for no one. Some 32 years have passed since the founding of the PRC. We are now old men in our sixties and seventies. Many comrades who have fortunately survived the wars and the cruel oppression at the hands of the 'gang of four' during the 10 years of turmoil are now in poor and failing health. Since they can no longer do what they wish, they should now consider turning over their tasks to somebody else. To do so is to meet the needs of the revolution and the development of the society. These are also the laws of nature which no one can resist."

"However," he said emotionally, "old fellows like me also have a common desire to turn over our cause to the reliable middle-aged and younger cadres instead of the remnant followers of the 'gang of four.' Nor can we turn it over to those who resist and oppose the line, principles and policies adopted by the party since the Third Plenum. This is a matter of principle."

Contending that the senior comrades should bear the brunt of training and selecting the middle-aged and younger cadres and should play a key role in this field, he said: "The leading comrades on the Central Committee have emphasized that although the old comrades may be pardoned for other mistakes, they would be committing an unforgivable historical error if they did not redouble their efforts to train younger successors. I understand that the old cadres can neither abandon their responsibility voluntarily and actively to train and select younger successors nor pick up wrong targets for training."

Comrade Liu Bolan thoughtfully paused for a moment and said: "In a broad sense, the training of younger successors is a concern of all trades and professions. But what is particularly significant to us today is the training and selection of the middle-aged and younger cadres to assume the leading posts of the party and state at all levels, a task to which we must pay special attention."

Discussing the best ways to train and select the middle-aged and younger cadres, Liu Bolan put the stress on the development of good standards and proper methods and measures. He said: The party Central Committee has proposed to gradually build up a contingent of revolutionary, well-educated, professionally competent and younger cadres. This will be our only correct criterion for training and selecting the middle-aged and younger cadres. I understand that we need cadres who combine ability and political integrity and are in their prime years. The most basic requirement and prerequisite is their noble revolutionary virtue. In other words, they must uphold the four basic principles, be determined to take the socialist road and actively implement the line of the party's Third Plenum; they must be decent and match their words with their deeds.

Commenting on the training and selection measures, Liu Bolan said: We must select as many cadres as possible for training. We must test them at the various basic level leading posts so that they can be provided opportunities to acquire more comprehensive experiences in leading others and to increase their ability to provide leadership for work in all fields. He said: "An example is Li Peng [2621 7720], presently minister of the Ministry of Electric Power Industry. As the son of a martyr, he was tempered under the most difficult conditions. He received special training at a foreign college and has to his credit outstanding academic achievements. However, when he left school, we still felt that he was out of touch with rustic people, and lacked practical experiences in work. In view of this, the party organization of the Ministry of Electric Power Industry decided to send him to the grassroots units. During the past 20 or 30 years, he has served as engineer, factory director, party committee secretary, and utility bureau chief, as well as manager of the hydroelectric and thermoelectric power plants and operator of power generating and transmission units. He has built up his professional skills in handling work between the party and the masses, and in management. In view of this, his foundation seems more solid than others. Of course, he is not perfect. When observing a cadre, we must focus attention on his basic quality and achievements."

Then, Comrade Liu Bolan told me a story of "horses, male and female and black and yellow" as follows: When Bo Luo [0130 2867] grew old, he recommended Jiufang Gao [0046 2455 4108] to Duke Mu of the State of Qin as his replacement. Duke Mu of the State of Qin then ordered Jiufang Gao to look for a horse capable of galloping at a speed of 1,000 li a day. Some 3 days later, Jiufang Gao returned and said that he found a yellow female horse in Shaqiu. However, the horse seen by the man sent by Duke Mu of the State of Qin in Shaqiu was a black male. Duke Mu of the State of Qin later told Bo Luo fretfully that the man you recommended could not even tell male from female nor black from yellow and how could he select a horse capable of galloping at a speed of 1,000 li a day? Bo Luo sighed and said that in selecting horses, Jiufang Gao emphasized their quality instead of appearance; this was why I called him a man with a quality thousand times superior to me! Bo Luo's word was verified when that good horse made its appearance in Duke Mu's presence.

"This story deserves our great attention." He followed this story with another as follows: More than 40 years ago, there was a capable social activist closely associated with the upper stratum of the Kuomintang and people from all walks of life in society He was a man with extremely complicated social connections. For his active participation in the war of resistance against Japan, and for his genuine support of the revolution, the party finally recruited him as its member. After that, he capitalized on his special connections to get a lot of work done and was even able to obtain for the party an important piece of intelligence on Hitler's plans to start a war of aggression. Comrade Liu Bolan said emotionally: "As far as our employment of talented people is concerned, we must help them display their merits and overcome their shortcomings."

Liu Bolan considers the present moment to be the best opportunity for training and selecting younger successors. His reasons are as follows: 1) The party Central Committee has made up its mind on this matter and has set correct criteria for this purpose; 2) many old comrades are still alive; 3) the complexities of events that have taken place during the past decade or more resemble an x-ray under which no one can cover up his true nature. This is really a very favorable condition for selecting younger cadres. He said: "Everything is ready for a voyage that needs the east wind. We have talked too much. At present, action still needs to be taken."

According to Comrade Li Peng, before Comrade Liu Bolan was relieved of his posts as the minister of the Ministry of Electric Power Industry and secretary of its party organization early last March, he provided the party organization with 10 proposals on how to achieve success in work on the basis of the many years of his experiences. After becoming a State Council consultant, he has continued to pay great attention to the work of the Ministry of Electric Power Industry. When I asked him to comment on his own ideas on this matter, he said: "Senior cadres should never think that they have no more to do after someone has taken over their job. As long as their health permits, they should continue to help and guide the new cadres through a trial period. They should continue to give these new cadres active assistance and support with sincere hearts. Many other senior comrades at the Ministry of Electric Power Industry have followed this approach and have demonstrated a high political consciousness in this connection." He added: "If there are contradictions between new and old cadres, senior comrades must adopt a judicious and unbiased attitude. They should consider this a very significant step in preserving the unity of leading bodies and in helping younger cadres grow into maturity." He emphasized that "Every senior comrade should distinguish himself by helping the newly promoted cadres 'surmount difficulties! and by guiding them through 'a trial period.'"

When this correspondent bade him farewell, this senior comrade said jokingly while standing by the door to his home: "As soon as we complete the process of training and selecting younger successors and cadres, we old fellows will have nothing to worry about and will be happy to join the list of ghosts headed by Marx!"

CARTER VISIT TO PRC, PRC-U.S. RELATIONS DISCUSSED

HK270729 Hong Kong WEN WEI PO in Chinese 27 Aug 81 p 2

[Editorial: "Carter's Visit to China and Sino-U.S. Relations"]

[Text] Former U.S. President Jimmy Carter has arrived in China on invitation for a visit. He will have talks with Deng Xiaoping and other principal Chinese leaders.

China never forgets its old friends. In the course of establishing Sino-U.S. diplomatic relations, Richard Nixon established the basis for new Sino-U.S. relations, Gerald Ford actively promoted them and Carter finally completed the establishment of diplomatic relations. The sustained efforts of the three presidents represent a new chapter in Sino-U.S. relations.

Ronald Reagan, who succeeded Carter as president, has pursued a China policy somewhat different from that of his predecessors and has brought about a certain unpleasantness between China and the United States. Will Carter's current visit to China help to eliminate the unpleasantness between the two countries and promote Sino-U.S. relations?

Shortly before Carter's current visit, former Defense Secretary James Schlesinger and former Assistant Secretary of State for Southeast Asian and Pacific Affairs Richard Holbrooke came to China at the same time and discussed Sino-U.S. relations with Li Xiannian. The guests indicated that it was necessary for both China and the United States to look upon Sino-U.S. relations from the global point of view and establish a long-term strategic relation. This aspiration and opinion were without a doubt a subtle criticism of Reagan's China policy. On the eve of his visit to China, Holbrooke wrote an article in the WALL STREET JOURNAL, concluding that China's dissatisfaction with Reagan's way of doing things was by no means bluff and bluster and suggesting that the Reagan administration cherish "the huge strategic and political benefit derived from a whole decade of continuous improvement in the (Sino-U.S.) relations." These opinions of Holbrooke obviously came down in one continuous line from Carter's stand on China. It should be said that the visits to China by former U.S. leaders have been conducive to the improvement of Sino-U.S. relations which have an undercurrent.

The undercurrent in Sino-U.S. relations finds concentrated expression in the Reagan administration's Taiwan policy. The ever-declining international standing of the United States has been unable to resist Soviet expansion single-handedly and has thus determined that the United States should adopt a friendly policy toward Beijing in a common effort to check Soviet influence in the East. However, out of their vested interests in Taiwan and their apprehension over the unification of China, a few people in the United States are attempting in all respects to create a split situation of "one China, one Taiwan" deliberating on the sales of weaponry to Taiwan, taking minor actions to gradually upgrade Taiwan-American relations and continuously luring China into making a promise of renowning force in the liberation of Taiwan. This self-contradictory dual policy has been established on the basis of an illusion about China; that is, China will be conciliatory and accommodating in order to uphold Sino-U.S. relations. When this illusion has been punctured by reality, they have no alternative but to hesitate and wait. Sino-U.S. relations since Reagan came to office have thus been slowed down and even reversed, sometimes advancing and sometimes retreating.

In order to dispel the illusion of some people in the United States about China and allow China to understand Reagan's Taiwan policy more clearly, it is necessary for both parties to get into contact. The visits to China by Schlesinger, Holbrooke and Carter in succession can be regarded as playing a linking role. However, the more direct contacts will still be the meetings between the incumbent high-ranking leaders of both countries. Mark Hatfield has shown sound judgment when he said in Beijing that a visit by Reagan to China would be "better sooner than later."

There will be a North-South summit 22-23 October and Zhao Ziyang's and Reagan's attendance at the summit will help to bring about a meeting between the heads of both governments. If the atmosphere proves to be harmonious, it is possible that the planned Reagan visit to China and Zhao Ziyang's visit to the United States will be arranged sooner than expected in order to clarify the stand and policy of both parties.

On the question of the unification of the motherland, China cannot be expected to indicate its renouncement of force because this matter is China's internal affair and China does not need to make any promises to foreign countries. The atmosphere on both sides of the Taiwan Strait shows signs of relaxation and calm. Should Reagan sell weapons to Taiwan, this would result in destroying the relaxing of tensions in the atmosphere and in aggravating the split of China, which would be beneficial neither to China nor to the United States.

DISCUSSION OF SINO-AMERICAN RELATIONS

HK070956 Hong Kong HSIN WAN PAO in Chinese 7 Sep 81 p 4

[Dispatch: "Sino-American Relations Have Not Made Much Headway and There Is the Danger of a Stalemate or Retrogression"]

[Text] Beijing, 7 Sep--Recently, American political VIPs have visited China in succession and held talks with China's leaders. Thus, Sino-American relations have become noteworthy.

Since the new administration took office in the United States, Sino-American relations have made some progress, but the steps have not been big. The danger of a stalemate and even a retrogression has not yet been removed. The reasons are: 1. The Taiwan problem. The United States wants to sell weapons to Taiwan. This hurts the feeling of the 1 billion Chinese people and the dignity of the Chinese Government. 2. The United States has not yet formulated a clear-cut policy toward China and it lacks sincerity in strengthening Sino-American relations.

Specialists on Sino-American relations here pointed out: After establishing official Sino-American diplomatic relations, the Taiwan problem should have been solved. It is the United States that has made it complicated. They said, there are quite a number of people inside and outside the U.S. Government who are shortsighted and are eager for quick success and instant benefits. These people try to ignore the 1 billion Chinese people and they wholeheartedly hope that "Taiwan could be restored to an important position."

Whether or not the Sino-American relations can be strengthened and developed lies mainly in whether or not both sides treasure and correctly look upon these relations. As friends, support comes from both sides and relations between them are for mutual benefits. Neither side is begging for a favor from the other and much less for charity. Strengthening Sino-American relations is the international strategic need of both sides and it is also the need of international security. Even if the Strait of Malacca is blockaded, China will still be able to stand on its own feet. But to the United States, it will be something to worry about.

Here a person who is familiar with the Sino-American relations said: The U.S. attitude toward strengthening the Sino-American relations has all along been one of saying much but doing little, making many postures but taking very few actions.

While it is clamoring that it is ready to sell advanced weapons to China, it is reluctant to export even a relatively advanced computer to China. It is also very dangerously trying to play with the Sino-American relations in order to achieve certain international goals. A U.S. specialist on China problems stated: It is dangerous to look upon China as a "card." "Playing the China card is not only an affront to China's dignity but also is not in line with the international political struggle." There is much ground for what he said and some Americans should take heed to this.

HONG KONG MAGAZINE PRINTS HU YAOBANG COMMENTS ON LITERARY CRITICISM

Hong Kong CHENG MING [CONTENDING] in Chinese No 46, 1 Aug 81 p 16

[From a Speech by Hu Yaobang at a symposium on 17 May; place not specified]

> [Text] Editors note: On May 17 Hu Yaobang gave a speech at a symposium. The following are excerpts concerning the literary issue.

In the last few years there have been great achievements in literature. After the Third Plenum of the 11th Party Central Committee, a new situation began to develop. Now it has arrived. In the literary field many good things have been created in these few years. ... Every battle line is formed in this way. What is correct and what is mistaken proceed together. Where does one find absolutely no flaws at all? You must confirm your accomplishments and overcome whatever unhealthy and mistaken things appear in the course of progress. We have learned some lessons in the past about overcoming that which is mistaken. And one of the important elements of these lessons of the past is that we have suffered because of not being certain of major currents. Therefore you do not dispose of a great many good things in order to remove a few undesirable things.

In overcoming flaws and mistakes we must adopt reliable methods. Due to historical circumstances everyone is especially sensitive about such things. The literary world has been particularly shaken and therefore pays an extraordinary amount of attention to such matters. Recently, the reaction to the criticism, or let us say appraisal, of "Bitter Love" was intense. Some criticism was certainly permissible, but if more appropriate methods of criticizing had been adopted then the effect would have been somewhat better. Here let me speak briefly of our Jiangsu comrade, Gu Ertan. Based on materials concerning the reactions of others I wrote a commentary. It now appears that my commentary was a bit harsh. According to Jiangsu comrades, Comrade Gu Ertan is not a bad fellow! Today I telephoned Jiangsu to explain things. It is permissible to print some criticisms in the newspapers, but one should go no further than necessary in his remarks. I asked them to take a message and tell Comrade Gu to "summarize his experience, raise his spirits, and work hard."

The author of "Bitter Love" has written some good things, but this particular one is not good. It is harmful. Concerning criticism, as I have said before, it may be somewhat better to call it appraisal. Everyone is used to calling the procedure literary criticism and that is okay. Criticism is a sanitation effort, a washing of the face as it were. It it is not done well, then everyone will feel that everyone is being criticized. In summary, in regard to those things that are not good, 1) criticism can and should be made; 2) leading the author into self-criticism is best, but counter-criticism must be allowed; 3) articles must be issued under an individual's name and not in the name of a party organization or an editorial department; 4) criticism of the work and criticism of the author must be separated and not confused; 5) you must fully explain your reasons and, of course, the reasons you give must be good; and 6) it is not necessary for all newspapers and periodicals throughout the country to print the criticism, but rather some may while others may not and no pressure should be brought to bear to get others to print it. As for the criticism of "Bitter Love," at present the reaction both inside and outside the country remains intense. The debate within our country has yet to quiet down, but it must be brought to an end soon. If anyone asks you, you tell them that when there are shortcomings and mistakes, then some constructive criticism should be offered. But if one or two words are sufficient to settle a matter, then don't criticize. In some cases we needn't be overanxious. We can let matters stand for a while, and then discuss them at a later date.

SOCIOLOGICAL, EDUCATION AND CULTURE

'TA KUNG PAO' DISCUSSES NEW BEIJING NEWSPAPER

HK020811 Hong Kong TA KUNG PAO in Chinese 1 Sep 81 p 3

[Article by Tien Ming [3944 2494]: "Beijing WENZHAI BAO [LITERARY DIGEST] To Appear in October"]

[Text] Beijing is to have another new newspaper, WENZHAI BAO, due to appear in October. This is another small national weekly newspaper published by RENMIN RIBAO following its publication of the national SHICHANG BAO. It will be published under the name of RENMIN RIBAO Publishing House. It seems that this publishing house is full of vigor and constantly starts new newspapers; it also shows that RENMIN RIBAO has a very large potential. Judging from its material basis and the strength of its staff, it has more than sufficient capability to run several more newspapers; otherwise it would be a real waste. It now seems that a big organization such as RENMIN RIBAO is also effecting reforms in enterprise management, discarding the convention of the "iron rice bowl," tapping potential and trying to make money in various ways.

WENZHAI BAO, as the terms suggest, is a digest of extracts from brilliant articles in newspapers and periodicals throughout the country. It is said that its aim is to take the various newspapers and periodicals across the country as its sources and, in accordance with the demands of the readers, extract the essence of these publications and make every effort to be "up-to-date, essential, broad and quick" and thus play the role of transmitting information, broadening one's views, improving one's knowledge and enlivening one's ideology. It is said that the trial publications of this newspaper have received very favorable comments.

In recent years, newspapers in the provinces and municipalities throughout the country have added the publication of a "literary digest edition" and this seems to have become a common practice. For example, NANFANG RIBAO in Guangzhou has a BANYUl WENCUI which, similar to WENHUI of WEN HUI BAO, adopts the layout of small square pages; moreover, JIEFANG RIBAO in Shanghai also has a WENZHAI BAN which is published once a week.

The "literary digest edition" of these local newspapers is very rich and varied in contents. They not only raise new issues, viewpoints and arguments in the fields of politics, economics, literature and the arts as well as philosophy but also contain a number of knowledgeable columns, such as "Books of the World," "Knowledge of History of Foreign Countries" and "Stories of Ancient and Modern Figures." They are well-embracing in content and terse and forceful in use of words so that the readers are very much interested in them.

The literary digests get their material from a wide variety of sources, such as articles in the local newspapers and periodicals in the provinces and municipalities throughout the country, such as HEILONGJIANG RIBAO, HEILONGJIANG QINGNIAN, NEIMENGGO QINGNIAN, SHUISHANG YOULE in Beijing and MEIYU in Hunan, which are unavailable in other places. In recent years, in addition to the digests at the provincial and municipal levels, there are 51 such newspapers at the county level published or resuming publication in 15 provinces, municipalities and regions throughout the country. There are eight such newspapers in Shandong Province, such as TAIAN XIAN BAO and YANZHOU XIAN BAO; there are seven of them in Jiangsu Province, such as HUAIAN BAO and WUXI XIAN BAO; but there is only one, FANYUXIAN, in Guangdong Province. These grassroots newspapers are not short of good articles. Therefore, the "literary digest edition" published by many newspapers plays a role of exchange.

It seems absolutely necessary for the WENZHAI BAO, run by RENMIN RIBAO, to have its own special features which, in addition to being "up-to-date," "essential" and "broad," must also be "quick"; otherwise it will be difficult to compete with the "literary digest edition" of other newspapers. Moreover, the newspaper will be put on sale throughout the country.

As a matter of fact, WENZHAI BAO is not the first newspaper of its kind throughout the country, because a year ago JIEFANG RIBAO in Shanghai started the first EXCERPTS FROM NEWSPAPERS AND PERIODICALS, a small newspaper put on sale more or less openly. It also publishes excerpts of some articles from Hong Kong newspapers and periodicals, and since its contents are rich, it has been well received in Shanghai. It is said that it sells very well but the only problem is the insufficient supply of paper.

In October, when the Beijing WENZHAI BAO appears, XINMIN WANBAO in Shanghai will also resume official publication. The publication of this WANBAO has been very slow in coming but it is expected that it will be published this time after repeated requests.

YE JIANYING'S DAUGHTER DISCUSSES PRC CINEMA

HK310759 Hong Kong WEN WEI PO in Chinese 31 Aug 81 p 4

[Feature article by reporters Chieh Ling and Lu Hao: "Literature and Art Criticism and the Chinese Cinema--an Interview With Lingzi, daughter of Marshal Ye and Director of 'Open Country'"]

[Text] The First Privately-Operated Film Company

"Literary and art criticism has always existed. Literary and art creation and literary and art criticism are in fact like two sisters walking side by side. They are just like the two rails of a railway track." This was the view on Chinese literary and art criticism expressed yesterday evening to these reporters by Lingzi, film director of China's first privately-operated film company--the Nanhai Film Corporation.

The Nanhai Film Corporation was organized by graduates of the Beijing and Shanghai film academies. It can be said that they are the "academicians" of the Chinese film circles. Lingzi is NPC Standing Committee chairman Ye Jianying's daughter. The first feature film "Open Country" directed by her was selected as China's entry in Italy's Venice Film Festival, and it is actually the first film China has entered in the film festival. The film will be shown in Hong Kong around September or October. Lingzi arrived in Hong Kong some time ago and will board a plane for Italy this evening. She was interviewed by our reporters yesterday evening.

Literary and art works should allow for and require criticism. This is in fact something very natural. However, during the period of the "Cultural Revolution," this kind of criticism was by no means related to literature and art. The criticism at that time was not aimed at the works themselves. It made no distinction between the "work" and the "person" and many people suffered.

Criticism Should Be Aimed at the Work and Not at the Person

Lingzi next talked about her impressions of Bai Hua: "Bai Hua is a person of literary and artistic talent and he is, relatively speaking, a writer of burning zeal. He has displayed his great talent in the art of creation. He has the character of a modern youth." She disclosed that after Bai Hua's "Unrequited Love," there was Zhang Hie's [1728 3381] novel "Heavy Wings." The content of

"Heavy Wings" is even more intense than "Unrequited Love." It is about criticism of the bureaucratic work style. She noted: "Whether or not the state adopts an open policy toward literature and art can only be judged by the final result. It was true that 'Unrequited Love' was criticized, but Bai Hua's poem later received an award. Now, there is 'Heavy Wings.' This shows that this kind of criticism and countercriticism is quite normal and permitted. We should not feel too nervous about it." As for the articles of criticism published by the Chinese Government sources, Lingzi held that they could only represent the writers themselves. They were not anything like the articles published in the "two newspapers and one magazine" during the period of the "Cultural Revolution." Therefore, she held that it is necessary to make criticism and countercriticism a normal thing. It was only that people in the past did not adopt a serious attitude toward the question and thereby failed to convince other people. If criticism is pertinent and serious and is aimed at the "work" and not the person, there should be no problem no matter how intense it it. It will only bring even greater benefits to the writer.

Marshal Ye Is Only Concerned About How She Conducts Herself

Cao Yu's novel "Open Country" has always been one of the focuses of controversy in the literary and art circles. Although Lingzi is Marshal Ye's daughter, she did not discuss the film with her father when she made it.

"He is never concerned about my work; he is only concerned about how I conduct myself. He named me Ye Xiangzhen [0673 0686 4176] and he meant that I should face the truth. He often exhorted me: 'Do not just consume the people's rice for nothing!'"

According to Lingzi, the greatest influence her father has had on her is in classical literature. He often talks to her about the works of Li Bai and other writers.

Why She Made the Film 'Open Country'

Being the first feature film of the first nongovernmental film company of new China, "Open Country" certainly draws the attention of the film circles at home and abroad. However, why would Lingzi choose the story of "Open Country?"

She said: "'Open Country' may be said to be one that could best express actively the writer's own ardor for the works of Cao Yu. It is bold and uninhibited and full of vitality. It reflects man's natural instincts and can best move the readers' hearts." So Lingzi has long loved literary work. She also mentioned that renowned poet Wen Yiduo was also very keen on this drama during the war against Japanese aggression. He also asked Cao Yu to rehearse and perform the drama together with him. Now she hoped that she could arouse once again the young people's understanding of this heritage of literature through this film.

Nevertheless, "Open Country" has been a subject of controversy since the 1940s. Some people have said that it is an immature and incomplete work of Cao Yu in terms of both ideology and art. However, it is undeniable that it played a definite part in opposing feudalism in the history of literature. Lingzi noted:

that Jinzi in the story dares to pursue freedom and true love in the old society must be regarded as progressive whether at that time or at present. In other words, it still has current significance. She pointed out: Although new China has guaranteed in law the equality between men and women, there are still many remnants of feudalist thinking among the ordinary people. For example, some women who have become famous would often easily attract many rumors and slander. Why would not the men attract any? This was another major reason why she chose "Open Country."

The Cost Was About HK$1.5 Million

What happened when it was decided that the film would be made? Lingzi said very frankly: "There was no obstruction whatsoever but indeed plenty of advice!" Many people in fact advised them not to make the film. One of the reasons was that it was very difficult to revise the play to make a film. Second, if the content was not properly handled, it would produce side effects. Lingzi explained that this was because certain people in the mainland got very scared whenever they heard about divorce, and this film intensely brought to light this practical problem.

Of course, the process of making the film was by no means completely smooth. A nongovernmental film company was nevertheless a new thing in mainland China, and problems in manpower, materials and even capital surely had to be solved. However, they finally solved them one by one. The actors, actresses, other staff and workers and studios were all on loan from other state-operated film companies. As for capital, they received financial support from the ZHONGGUO XINWEN SHE. When the film was shot, the cost was estimated to be around HK$1.5 million.

Filmmaking Should Move Toward a National Style

When referring to recent developments in films in China, Lingzi noted: After the period of seclusion during the Cultural Revolution, we unscrupulously adopted foreign techniques for a time. But now we have made some improvements. She emphasized: Films should move toward an expression of people's lives and should explore people's inner worlds. Only in this way is it possible to make Chinese and foreign films move closer toward each other. On the other hand, the development of films in China should move in the direction of establishing a national style. However, this is still at an exploratory stage and can hardly be achieved by a single generation.

Lingzi said in conclusion: "The film workers in mainland China, Taiwan and Hong Kong are all 'heirs of the dragon.' They should carry out mutual exchanges and mutually inspire each other in different places and from different angles and explore with concerted efforts the direction for the development of films in China."

REPORT ON DEATH OF CHEN WEN-CHENG

'WASHINGTON POST' Cited

OW141844 Beijing XINHUA in English 1831 GMT 14 Sep 81

[Text] Washington, September 14 (XINHUA)--The WASHINGTON POST today revealed a few of the loopholes which proved the Kuomintang version about Chen Wen-cheng's death was merely a foul play to cover their crimes.

"There is no longer any doubt about it. Chen Wen-cheng was viciously tortured on a recent visit to his native Taiwan. The episode ended in his violent death," the paper said.

The Kuomintang version of Chen's death was that it was either suicide or an accident, in which Chen fell from the top of a fire escape. But the WASHINGTON POST reported that some experts who examined Chen's body found "many injuries, obvious even to laymen, which are not explained by a fall." These experts "believe that Chen was tortured by a variety of means, including needles inserted in sensitive areas. They noted such suspicious injuries as small lesions under the fingernails and on the left wrist, and four puncture wounds in the kidneys--none of which, they believe, would be caused by a fall from a building, accidental or otherwise."

Before Chen's death, he was interrupted [as received] by the Kuomintang military and secret servicemen for 13 hours. "Chen's interrogators claimed to have shared meals with him during his prolonged questioning. The authorities also say Chen had dinner with a friend after the interrogation. Yet the official autopsy showed Chen's stomach was empty," said the report.

Widow on Death

OW121640 Beijing XINHUA in English 1615 GMT 12 Sep 81

[Text] Beijing, September 12 (XINHUA)--The widow of a deceased U.S. Carnegie-Mellon University (CMU) professor said yesterday that her husband was murdered in his native Taiwan, and did not commit suicide or die of an accident as claimed by the Taiwan authorities, according to reports from the United States.

The widow, Chen Su-jen, challenged Taiwan's suicide claim following a memorial at the CMU in Pittsburgh, Penn., for her husband Chen Wen-cheng.

Chen Wen-cheng, an assistant mathematics professor at CMU, went to Taiwan with his wife last May to visit their relatives. He was found dead at the National Taiwan University on July 3 after being interrogated by Taiwan police.

Mrs. Chen disputed the Taiwan authorities' contention that her husband killed himself or fell from a roof. "Suicide was not his way. He had a future full of potential...and had everything in the world to live for," she said.

She explained that suspicious cuts and bruises went unexplained in an autopsy report by the Taiwan authorities. "From the minute that I saw his body...I knew it was not an accident. There were just too many unexplainable external wounds."

Mrs. Chen said Chen Wen-cheng was interrogated twice by the Taiwan Garrison Command about political activities in the United States. He was taken from an apartment for a second interrogation by three men the day before he died.

"I hope worldwide response to Wen-cheng's death will help prevent such tyrannical acts in the future. I feel I have the right and obligation to learn the true cause of his death," she declared.

Commenting on Mrs. Chen's statement, CMU president Dr. Richard Cyert said, "That was a tremendous act of courage," adding, "she was concerned about what this means to her family in Taiwan."

The president stressed, "We're determined to get to the bottom of his death. I believe firmly it was not suicide and was not an accident." The university, he said, is prepared to deal with "spying activities" on the campus.

PRC, TAIWAN TEAMS MEET IN BRIDGE TOURNAMENT

PRC, Taiwan Teams Meet

OW290318 Beijing XINHUA in English 0258 GMT 29 Aug 81

[Text] Hong Kong, August 28 (XINHUA)--The Shanghai team met Taipei team "A" in a preliminary round group match of the inter-city contract bridge tournament here tonight.

This was the first encounter between the players from either side of the Taiwan Strait, which drew hundreds of enthusiasts to the silver ballroom of Sheraton Hotel where the match took place.

The Shanghai team came from behind to beat Taipei team "A" 5.68 to 2.32. The latter is an experienced team which had excellent scores in many world and Far-East tournaments.

Twelve teams from nine cities entered the preliminary round matches which started yesterday. They are divided into two groups with Bangkok "B," Manila, Tokyo "A," Singapore, Shanghai and Taipei "A" in group "A" and Macao, Tokyo "B," New York, Bangkok "A," Taipei "B" and Hong Kong in group "B." The top two teams will advance into the final round matches.

In group "A," the Shanghai team led so far the score with three wins to one loss, totalling 21.74 points, while Taipei team "A" had 9.72 points. The Shanghai team will take on Bangkok team "B" tomorrow in the last group match.

In group "B," the defending champion Hong Kong team topped the score list and is sure of a berth in the final round competition. The tournament is scheduled to end on August 31.

PRC, Taiwan Compete

OW011252 Beijing XINHUA in English 1247 GMT 1 Sep 81

[Text] Hong Kong, August 31 (XINHUA)--Hong Kong won the international inter-city bridge tournament which closed here today.

The Hong Kong team came first with a better point average.

The Shanghai team of China came second even though it scored three straight wins in the final-stage contest.

The Taipei teams "A" and "B" finished third and fourth.

At the prize-awarding ceremony held after the contest, the Shanghai team and the New York team presented all participating teams with banners and souvenirs.

BRIEFS

LEGISLATIVE YUAN POLL--Taipei, 7 Sep (CNA)--Premier Sun Yun-hsuan was given the highest mark among 11 cabinet officials in a recent poll taken at the legislative yuan by the newly launched monthly. Dr James Soong, director general of the government information office, and Dr Li Yuan-tzu, minister of justice, placed second and third, respectively, in the same opinion survey. The rating was based on the performance of these officials at the last session of the legislative yuan. Some cabinet officials were not included in the survey on the ground that the legislators did not know them well enough to pass any judgment. Ten items were included in the rating, each assigned a top score of 10 points. They are political integrity, knowledge, sense of responsibility, ability in fielding questions at the legislative yuan, administrative ability, leadership, job performance, coordination, courage and initiative. DAZHAI CANDIDATE LOSES ELECTION TO 12TH PARTY CONGRESS

Beijing LIAOWANG [OBSERVATION POST] in Chinese No 1, 20 Apr 81 pp 20-21

[Article by Tian Peizhi [3944 1014 2784]: "The Failure of a Well-Known Figure to Win Election"]

[Text] The famous person who is the subject of this article is none other than the leading cadre of Dazhai. His is a case everyone is familiar with.

"The Dazhai representative figure failed to be elected to the 12th Party Congress." This has been a topic discussed by many of the cadres and people of Shanxi.

Last year, from 9 December to the 13th, the Shanxi Provincial CCP Committee convened a party delegate conference in Taiyuan to elect delegates to attend the 12th Party Congress. The result was that the Dazhai representative figure who was nominated as a candidate failed to be elected.

Before reporting on these events, I cannot help but recall an event that occurred 6 years ago. In that session there was also a leading cadre who failed to be elected to the National Party Congress. However, that legitimate election was nonetheless described as an "anti-party affair" in which "the CCP did not elect the CCP." Quite a few comrades who cast opposing ballots were subsequently criticized, to the point of becoming targets of attack. Even this reporter, narrowly escaped disaster as a result of having publicized the circumstances of this election.

Although there are certain similarities in the course of history--the same way in which two leading cadres lost the election--nevertheless the atmosphere on this occasion was decidedly different. Given that the party's practice of democracy 6 years ago was not yet sound, the fact is that this time I witnessed genuine democracy within the party which further strengthened my revolutionary sense of duty as a reporter.

As early as August of last year, the Shanxi Provincial CCP Committee convened the enlarged session of the standing committee. When they considered the preliminary list of candidates from Shanxi to attend the 12th Party Congress, the vast majority of comrades did not endorse the Dazhai representative figure. When the enlarged sessions of the standing committees in each locality, municipality and county and the party members of the organs under direct control of the province discussed the preliminary list of candidates for the 12th Party Contress, the vast majority of party members of the enlarged sessions of the lcoal, municipal and county standing committees in Jinzhong Prefecture who discussed the preliminary list of candidates for the 12th Party Congress, only 10 percent ratified his nomination.

In my opinion, the main reason this situation occurred is that after the smashing of the "gang of four," the democratic traditions of the party were just in the process of being restored. The eighth item in guiding principles for Inner-Party Political Life clearly states: "Elections must foster the democratic spirit to the utmost and accurately reflect the will of the voters" and "It is necessary to revolutely oppose and guard against infringement upon the right of party members to vote, making elections become mere formality and to discourage voters from expressing their will." In Shanxi Province, that so-called unusual situation in which "opposing the Dazhai representative figure" was seen as tantamount to "opposing Dazhai" has already become a thing of the past. Furthermore, not electing him to the 12th Party Congress was really not equivalent to denying his past accomplishments and correct actions. Is it possible that the correct opinions of the majority of party members should not be reflected? The masses, cadres and most party members had the courage to speak the truth, they dared to exercise their own democratic rights. This is the new exhilarating and uplifting atmosphere.

The democratic spirit of the party members during the delegate conference of the Shanxi Provincial CCP Committee has rarely been seen before. Most party delegates both affirmed the Dazhai representative figure past achievements and contributions and exposed his errors and problems.

In summary, his major errors consist of the following: Since the "Great Cultural Revolution" he has pursued the "left" deviationist line politically and economically, he has engaged in organizational rationalism, he has attached large numbers of cadres and people, he has wreaked havoc, and he has impeded and disrupted the development of productive forces. At the same time, he has engaged in trickery, made false reports of output and sought honor through fraud and deception. More seriously, following the Third Plenary Session of the 11th Party Central Committee, he continued to oppose the directives of the party central committee thereby bringing great harm to the party's cause. This clearly demonstrates that he lacked the qualifications to be a delegate.

During this session the leadership repeatedly explained that to nominate him as a delegate candidate would embody the party spirit of learning from past mistakes to avoid future ones. They further pointed out that he recently examined himself and acknowledged his own errors. Nevertheless he still lost the election. In the final analysis he brought this on himself. This incident makes it clear that even if a person has acted correctly, once he divorces himself from the masses and deviates from the correct party line it is inevitable that he will lose the confidence of the people.

Quite a few delegates said to me: "When we have strayed from our units, many party members have urged us: 'You should truthfully represent the views of party members, you must not elect him delegate.' Under these circumstances if we were to vote in his favor, how could we justify this to party members on our return?"

This was an election that truly reflected the will of the voters. The period when the "gang of four" ran amuck and trampled on democracy has already passed, never to return.

NEW CCP BRANCH IS BORN AT DAZHAI

Beijing LIAOWANG [OBSERVATION POST] in Chinese No 1, 20 Apr 81 pp 21-22

[Article by Zhang Jinxing [1728 6651 5281] and Jin Jiasheng [6855 0857 5716]: "The Birth of a New Party Branch at Dazhai"]

[Text] Upon hearing that a new party branch has come into being at Dazhai, we were very eager to pay a visit. In the past we have frequently visited Dazhai, however, on this occasion we sensed a new atmosphere.

One thing made a strong impression: even though the superficial "Red fire" of the past was no longer seen, the fervor remaining in the hearts of the people of Dazhai was very striking. The most conspicuous expression of this was their courage in talking about their intimate feelings.

In earlier days Dazhai used to be a dynamic and vital place but the deathly silence created by the feudalistic patriarchal rule hidden by external appearances has made the people feel stifled. When we came here with numerous colleagues during that period it was difficult to even conduct a normal interview. As soon as the acting host of Dazhai caught sight of reporters he would invariably hold his tongue and say nothing concerning the "political affairs" of Dazhai. At best he would only exchange pleasantries and that is all. Several colleagues who had stayed here for many years dared to cry out only as they were leaving: "We haven't yet made it past the gatepost to Dazhai!"

At the present time all this has become a thing of the past. This time as I arrived in Dazhai, not long after the celebration of Spring Festival, a play was in progress in the village. It differed from the past in that it was no longer a "special honorary performance" presented by a professional theater company but rather a play put on by a hired amateur theater troupe. During the next several days relatives and friends milled around throughout the village. Streets and lanes had a cheerful and relaxed atmosphere. When many commune members and cadres met us, they were able to openly and freely. Although this was quite common in other mountain villages, in Dazhai it was a novelty. For this was, after all, the first time that the representative figure of Dazhai had broken with the conventions of that period.

When we talked with the new branch secretary Jia Changsuo [6328 7022 6956] we quite naturally recalled a favorite phrase of his: "We could never talk like that."

Jia Changsuo, a 35 year old man of few words, was very sincere and straightforward. He has always lead the commune members along the forefront of positive action. He has never been one to put himself in the limelight or to take part in thoughtless chatter. He is incapable of that.

Jia Changsuo briefed us on the experience of re-electing the party branch. In addition to the re-election and re-appointment of the incumbent deputy secretary Liang Bianliang [2733 0189 5328] and the incumbent branch committee members Song Liying [1345 4539 5391] and Jia Laiheng [6328 0171 1854], four new members were elected: Jia Chang suo, branch secretary; Li Youming [2621 2589 0730], deputy branch secretary and brigade chief; the 29-year old bright and capable bookkeeper Zhao Cuntang [6392 1317 2768], branch committee member; Guo Ailian [6753 1947 5571] who for many years held the post of Chairman of the Women Delegates Conference, branch committee member. Party members and commune members praised the new body as being "quite well put together." Jia Chengrang [6328 2110 6245], deputy secretary in the Dazhai Commune Party Committee of the former party branch committee laughingly said: "The incumbents are still competent and the newly elected make promising successors."

The reason everyone felt so satisfied was because this election truly embodied the democratic spirit. How were all the preceding party branches formed? To get an idea of what went on, listen to what Song Liying of the old party branch committee had to say: "It used to be that he (referring to the representative personage of Dazhai) would say that today we need a deputy secretary and with this one sentence you would become a deputy secretary. The next day he would say that we have too many deputy secretaries, followed by your dismissal. At that time, with the circumstances changing day to day, even I could not say for sure what my own position was."

This election certainly set a precedent for Dazhai. First of all, the opinions of the people were solicited from far and wide, then a list of candidates was proposed by party members. After having given it thorough consideration, party members voted to determine the nine candidates. Jia Changsuo had held the post of deputy brigade chief in the branch committee for many years and had much popular support. However, merely because the Dazhai representative personage felt dissatisfied with him, he brought criminal charges against him and dismissed him from all his duties. As a result of this, Jia's prestige grew even greater. Last year the party branch announced his rehabilitation. In this election he was the only one to be included on the list of candidates with full backing.

At the formal election, the voting method adopted was that of majority vote and secret balloting. This, too, was unprecedented in Dazhai. As for that once mighty representative personage, the "patriarch" of Dazhai, not one person nominated him.

After the new body was formed, the first thing they did was to sum up the moral lesson of this experience. Jia Changsuo discussed five articles at the conference of all commune members. Everyone felt very pleased with this and said that they had never heard of Dazhai having such honest and realistic self-criticism before.

For many years the people had no choice but to praise the Dazhai representative personage and that set of leftist things that he preached. Even the higher authorities often had to take their cue from the expression in his eyes, otherwise they would be labeled at every turn as "anti-Dazhai" or as having questionable "points of view" etc. Consequently, he caused great unrest throughout Dazhai and incurred widespread resentment. In view of this situation, as soon as the new party branch was established it focused on reviving the party's good traditions and good style of work as well as improving relations between the party nad the people and among close neighbors. During this year's Spring Festival they supplied the teachers dining hall at the Dazhai school with 60 jin of pork and sold each teacher 10 jin of wheat. In addition, they presented 3 jin of Dazhai's locally produced white wine to the reception center. The comrades said: "Even though there may not be much of this wine, its effect is great." These past few years there have been some cadres at Dazhai who have had relatively spacious living quarters. Commune members have been reluctant to speak up about this. The new party branch investigated the demands of the people and promptly adjusted the living quarters for over 40 households who had inferior housing. In recent years, some veteran party branch committee members have not been putting sufficient time into labor participation yet their recorded work points and payments received, in actual fact, have been quite substantial. The people have complained about this. The new party branch considered the views of the commune members to be reasonable. The former party branch used to shout high sounding words in vain telling the cadres not to add on extra work points. In practice, however, it was very difficult to carry out. The recording of the old cadres compensation for labor was indeed beset with problems. Lately, taking into account these old comrades' earlier contributions and their fragile and sickly condition, the new party branch clearly stipulated that besides participating in as much labor as they are able, they may still receive a share of subsidiary work points. This democratic style of work and the attitude of seeking truth from facts of the new party branch has won the full admiration and acceptance of the people. In present day Dazhai that oppressive atmosphere caused by an individual or a small minority making arbitrary decisions has already been eliminated. The new party branch constantly heeds the voice and criticism of the masses. This is truly an excellent beginning.

At present the new party branch of Dazhai is in the process of leading the commune members in further implementing the party's rural economic policies. When it came time to depart, Jia Changsuo enthusiastically urged us to return. We certainly will come back, for it is the arduous struggle and the self-reliance of the people of Dazhai that draws us to this place.

REGULAR PARTY ACTIVITIES RESUMED IN SHANXI

Taiyuan SHANXI RIBAO in Chinese 29 Jun 81 p 1

[Article by Zhu Jichu [4281 1015 5969]: "Leading Party Members Take Part in Regular Party Activities"]

[Text] The party organizations in Shanxi have resumed and strengthened the system of party activities in accordance with the "code of internal party political activities." Leading members of party organizations at various levels take the lead in joining the activities and set an example to the rank-and-file of the party, playing an important role in regular party activities and increasing the fighting strength of the party.

For approximately the past year, standing committee members of the provincial party committee, in their capacity as ordinary party members, have gone to the branches and groups of their units and, in accordance with the provisions of the party constitution, persisted in regular activities of the organization and restored the system of holding a meeting of standing committee members for regular party activities once every 6 months. Inspired by members of the standing committee, a number of leading party cadres at the county level and above in Shanxi are able to take part in regular party activities conscientiously. Twelve of the 13 standing committee members of the Yanbei Prefecture party committee take part in their branch party activities. Of the 118 standing committee members in 9 counties and wards, 102 conscientiously take part in party activities of their groups. Party organizations at the basic level in the province have resumed and strengthened the system of "three meetings and one course." To place party activities on a regular and institutionalized basis, the vast majority of party organizations have arranged for meeting records on activities to be kept and, after each meeting, a special report on meeting records should be sent to the party organizations at the higher level. At the same time, the provincial, prefecture and county organizations have irregularly sent for meeting records of their subordinate party organizations for perusal and they have sent inspectors to check on these organizations' persistence in party activities. Those units upholding the system effectively, whose leaders take part in party activities, will be cited; those units upholding the system with poor results, whose leaders seldom take part in party activities, will be criticized and helped.

Having studied the "code" and the draft revision of the party constitution, particularly the documents of the Central Work Conference, party organizations at various levels have decided to accept as important features of party activities the way party organizations have implemented the guiding principles of the party. The standing committee of the Yuncheng Prefecture committee once held two meetings for party activities. In these meetings, they recalled and summed up the grave error committed by Zhang Huaying [1728 2037 5391], former main responsible person of the prefecture committee, who had resisted the line and policies of the Third Plenum. In doing so, they examined their own thought and work, thereby distinguishing right and wrong, finding their bearings and strengthening their unity. Under the ideological influence of the "leftist" deviation, the provincial department of the textile industry blindly chose sites for building plants without regard to objective conditions which resulted in heavy economic losses. Leading party cadres of the party organization for this department and the government office conscientiously studied the Central Committee documents No 1 and 2, looked back on and summed up their own experiences and lessons, got rid of the "leftist" influence and enthusiastically implemented the readjustment policy. At a meeting for activities of party organizations, members of the party branch for the Jingming Brigade in Quwo County studied the documents of the Central Committee and discussed the question--"Is the production responsibility system progress or retrogression?"--in light of actual conditions, straigthened out their five fears--"deviation from principle and line," constant change of policies, demoralization of commune members, lack of authority, and overturn of the organizational structure--and heightened their awareness of the need to enforce the responsibility system in agricultural production.

Many responsible comrades of our party organizations in Shanxi have realized from their experiences and the lessons of party activities that struggle which goes too far is an important factor in undermining the unity of the party and sapping its fighting strength and that criticism and self-criticism is an important condition for strengthening the unity of the party and increasing its fighting strength. With this realization they are able to take the lead in conducting criticism and self-criticism according to the policy of unity-criticism-unity. A standing committee member of the party committee for the Jingwei Textile Mill in Yuci sought personal privileges, this was very disruptive among the masses. The party committee for this textile mill held a standing committee meeting for party activities, during which his error was solemnly criticized and proper arrangements were made for dealing with the case, thereby rectifying the party style and strengthening relations with the masses.

For the past year or more, leading members of party organizations have persisted in taking part in party activities, strengthened party building, and strengthened and improved party leadership with great results. But, compared with the Yenan experience and the initial post-liberation period, activities of party organizations are still far behind. At the same time, meetings for party activities are not held regularly and seriously and, in some cases, they are held with poor results. Some leading party cadres are not able to take part as ordinary party members in meetings for party activities. This being the case, further efforts have to be exerted in order to uphold a system of meetings for party activities. The organization department of the Shanxi Prefecture Central Committee studied and worked out several measures for pushing party organizations to uphold the system. On the basis of recalling and summing up their bitter lessons of patriarchal

PARTY AND STATE

AGRARIAN SOCIALISM, OTHER THEORETICAL TRENDS OF 1956-1976 PERIOD CRITICIZED

Nanjing NANJING DAXUE XUEBAO (ZHEXUE SHEHUI KEXUE) [NANJING UNIVERSITY JOURNAL (PHILOSOPHY AND SOCIAL SCIENCES)] in Chinese No 4, 11 Nov 80 pp 98-104

[Article by Ying Xueli [2019 1331 3680] and Sun Hui [1327 8748]: "Some Theoretical Questions Regarding the Later Period of the Socialist Transformation in Our Country"]

[Excerpts] In the later stage of the socialist transformation, our party carried on a movement opposing "right-wing socialism." It appears that the ideology guiding this movement was that of agrarian socialism, which is in opposition to scientific socialism. Experience has already shown that the ideology of agrarian socialism seriously hindered the development of the socialist cause in our country and is completely incapable of bringing China onto the path of flourishing, strong socialism. A summarization of the experience of several decades shows us that it is impossible to accelerate our country's economic and political reform without thoroughly eliminating the ideology of agrarian socialism.

In order to eliminate this ideology under our country's conditions, we must clarify several theoretical questions.

1. The Dual Nature of the Peasant Class

This is predominantly a country of peasants, and it was through the peasants that our party came to power. During the democratic revolution, when such people as Chen Duxiu and Wang Ming held the peasant forces in low regard, the revolution was led toward failure; but the correct line, represented by Comrade Mao Zedong, relied on the peasants, armed them and liberated them, with the result that the Chinese revolution was victorious. Who can deny the peasants' role in the democratic revolution?

However, the reason that the peasants participated actively in the democratic revolution led by the proletariat was not that the class awareness of this country's peasants was exceptionally high, but rather that in this revolution the proletariat and the broad mass of peasants had common revolutionary objectives and common interests. In the revolutionary process our party devotes especial attention to the vital interests of the peasant class. The target of the democratic revolution was the "three mountains" which weighed upon the people, and especially upon the peasants, while for the peasants the essence of the revolution was the land question and the revolution consisted of the implementation of "equal distribution of land," the ideal for which the peasants had been struggling for thousands of years.

behavior, the Standing Committee of Xiyang County Central Committee worked out a resolution launching criticism and self-criticism, opposing the practice of keeping on good terms, encouraging the practice of observing discipline, and opposing liberalism. They are determined to make the party democratic activity meetings a success.

EFFECTIVE WAYS TO STUDY 'RESOLUTION' DISCUSSED IN SHAANXI

Xian SHAANXI RIBAO in Chinese 3 Jul 81 p 1

[Article by our reporter Dai Guoxian [2071 0948 6343]: "Shaanxi Party Standing Committee Discusses How To Study 'Resolution' Well"]

[Text] "The 'Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China' adopted by the Sixth Plenum is our sharp ideological weapon for unifying our understanding, achieving unity and forging ahead, but we have to go through a process of study before we can achieve the desired objective. The central task in the second half of this year is to grasp study of the 'Resolution' conscientiously." This was a question specially emphasized by Comrade Zhang Ze [4545 3419], secretary of the provincial party committee at an enlarged symposium for studying the "Resolution" on the afternoon of July 1.

At the symposium, responsible comrades from the standing committee of the provincial party committee, the standing committee of the provincial people's congress, the provincial CCP Central Committee, and various departments and committees of the provincial party committee conscientiously discussed the question of how to study the "Resolution" well.

They took the view that the "Resolution" adopted by the Sixth Plenum was a historical document and that a grasp of the "Resolution" will have a far-reaching effect on the economic readjustment and various kinds of work and will be of momentous significance in unifying the whole party and implementing the correct line and policies of the party formulated since the Third Plenum. They said: The greatest characteristic of the "Resolution" is that it seeks truth in facts, affirms achievements as they are, admits mistakes as they are, conceals no facts, refrains from raising everything to the plane of principle, and makes a clear-cut and appropriate estimate of merits and demerits. To study the "Resolution," it will be necessary to promote the Marxist style of study and method of thinking, to make a historical analysis of the historical problems from the viewpoints of dialectical materialism and historical materialism, and to distinguish achievements from errors, the mainstream from the tributaries, and the substance from the phenomenon. Furthermore, they took the view that in studying the "Resolution," emphasis should be placed on this study by leading cadres, particularly those at the county level and above. After the decision of the Sixth Plenum is transmitted to all levels, leading cadres at the county level and above may be organized in separate groups to study the resolution in study courses or in other appropriate forms. They should be allowed to open their hearts and speak everything on their minds. They should grasp the main issues instead of quibbling over side issues and words. Based on extensively listening to different opinions, they should be purposefully guided to deepen their studies step by step so as to bring their understanding gradually into line with the "Resolution."

Those present at the symposium pointed out: In the course of studying the resolution, Comrade Mao Zedong's historical position, the scientific and guiding role of Mao Zedong Thought as well as the great achievements over the past 32 years since the founding of the Republic should be affirmed in the first place; the correct road to building a modern and powerful socialist country in light of the conditions in our country as formulated since the Third Plenum should also be affirmed. It should be clearly understood that the aim of summing up historical experience is to unite and look forward, to bring the thinking of everybody into line with the basic conclusion drawn in the "Resolution" and to strive for a modern and powerful socialist country with a high degree of democracy and civilization.

Prior to the symposium, the participants had listened and watched the proceedings of the celebration of the 60th anniversary of the Chinese Communist Party and Comrade Hu Yaobang's [5170 5069 6721] important speech in Beijing.

PARTY AND STATE

CRITICISM, SELF-CRITICISM NEEDED TO SOLVE PARTY PROBLEMS

Wuhan HUBEI RIBAO in Chinese 24 Jul 81 p 3

[Article by Deng Yixin [6772 0110 2450]: "Insist on Using the Method of Criticism and Self-Criticism To Solve Intraparty Contradictions"]

[Text] The Chinese Communist Party is the core force leading our cause. A very important reason why our party is powerful is that it is able to defeat the sabotage of all alien forces through the conquest of its own defects and mistakes. Comrade Hu Yaobang pointed out in his "Speech at the Meeting in Celebration of the 60th Anniversary of the Founding of the Communist Party of China": "We must be good at cleansing the dust from ourselves regularly in order to retain forever our revolutionary youth as the party in power." How can we achieve this? Viewed from the historical experience summed up by the "Resolution on Certain Questions in the History of Our Party Since the Founding of Our State" [passed by] the Sixth Plenary Session of the 11th Party Central Committee, in order to strengthen our party's ideological construction and organizational construction in the new historical period, we must correctly recognize the contradictions existing within the party and persist in using the method of criticism and self-criticism to solve such intraparty contradictions scientifically.

The 60 years of our party's experience have repeatedly proved that intraparty contradictions always exist; this is a reflection within the party of the class contradictions and contradictions between new and old things in society. In the activities of the party the scientific method for handling superior-subordinate relations, left-right relations, and mutual relations is to let everybody speak sincerely and frankly and to seek truth from facts in carrying out both self-criticism and mutual criticism. Using this method can make intraparty life normal, make party construction more scientific and ideologically relevant, and create only a good effect and not side effects; furthermore, those with unwholesome intentions would be unable to take advantage of it. Just as Comrade Mao Zedong pointed out: "We have this Marxist weapon of criticism and self-criticism with which we can eliminate bad workstyles and preserve good workstyles." Today we are faced with many new situations and new problems; in addition, ours is a large party of 39 million members in power; this situation is likely to cause some comrades to develop differing degrees of feelings of pride and complacency and to become infected with bureaucratic habits. Hence, in the matter of party building, we should pay full attention to this successful experience by giving scope to the fine workstyle of criticism and self-criticism. Insofar as every communist is concerned, consciously developing self-criticism is a manifestation of pure party character and heightened consciousness; correctly carrying out criticism is a demonstration of normal intraparty relations. Insofar as the whole party is concerned, regular application of the weapon of criticism and self-criticism is a conspicuous indicator of the difference between our party and any other political party, and is a conspicuous indicator of our party's prosperity and development.

To solve intraparty contradictions, we must use the method of criticism and self-criticism. This is first of all determined by the nature and content of intraparty contradictions. Intraparty contradictions are numerous. In our society, after the exploitive classes are eliminated as classes, class struggle still exists in certain realms because of domestic factors and international influence; the ideological influence of the exploitive classes and other nonproletarian classes still exists. Thus, the dust of capitalism, feudalism, and disposition of small-scale production all rush at us, making it inevitable for contradictions between proletarian thinking and nonproletarian thinking and contradictions between correct thinking and erroneuos thinking to be reflected within the party. But these contradictions are basically a kind of ideological contradiction. That is to say, they are basically contradictions in workstyle, thinking style, and lifestyle, contradictions between materialism and idealism, contradictions between dialectics and metaphysics. The nature of those kinds of contradictions is different from that of class contradictions, and still moreso from contradictions between the enemy and ourselves. They are contradictions among the people and, generally speaking, internal contradictions among revolutionary comrades struggling for the communist cause. This being the case, we can only use democratic methods, the methods of persuasion and education, and the method of criticism and self-criticism to bring about solutions to these contradictions. As for those metamorphic, qualitatively changed elements who have sneaked into the party, elements who violate the law and discipline, alien class elements, and hidden counterrevolutionaries: our struggle with them, on the one hand, goes beyond the realm of intraparty contradictions; on the other hand, once such contradictions appear within the party, we must first expose them within the party and then adopt appropriate legal forms to solve them. But we must see that the appearance of such situations is generally limited to individual cases.

Correctly carrying out criticism and self-criticism to solve intraparty contradictions means "learning from past mistakes to avoid future ones and curing the illness to save the patient in order to achieve the twofold objective of clarity in ideology and unity among comrades" (Mao Zedong, "Our Study and the Current Situation").

Clarity in ideology means that on important questions--that is, on questions of right and wrong relating to the party and the interests of the people--every communist should adhere to truth, adhere to the party's principles in a clear-cut manner, and clearly demonstrate one's own attitude by indicating what one supports and what one opposes; [a communist] can never abandon such principles and tolerate the unhindered spreading of errors. Refraining from criticizing errors can only damage the proletarian character of our party. We know that nonproletarian ideas and erroneous ideas, reflected in various ways, are erosive to the party's organic body. Thus, through criticism we must enable the comrades who commit mistakes and the comrades who have not yet committed mistakes to perceive why certain mistakes are mistakes, where these mistakes are, and how they are going to find the detailed methods to correct them. We all have this kind of experience: people often must go through zigzags and repetitions in perceiving problems and accepting truths. Therefore we cannot just think of simplicity and pleasure in trying to solve intraparty contradictions. Enable people to speak boldly, and make it possible for everybody to reason; try to reason clearly, and make it possible for reason to be heard in everything: only thus will the situation be of benefit to the clarification of ideology, the elucidation of right and wrong, and the elevation of the party's ideological level and fighting stamina.

Unity among comrades may be said to be the point of departure as well as the destination for us to launch criticism and self-criticism. Since intraparty contradictions are a kind of ideological contradiction, then criticism of mistakes is intended precisely to have the ideology of comrades who commit mistakes corrected so that all can be united in the march forward. This can be done only by the method of calmly laying out the facts in the manner of a gentle breeze and a mild rain and reasoning, by developing criticism and self-criticism. Toward comrades who have made mistakes, or who have even made serious mistakes and become incorrigible, we should try to persuade and educate them with a loving, sympathetic attitude, and must not resort to excessive struggle. We must create an atmosphere so that the majority of people within the party, including those who have made mistakes, will not become fearful once they hear about criticism. When we criticize mistakes, we must not resort to subjective judgment, suppression with preponderant power, or forced analogy and farfetched comparison; instead, we must proceed from reality in everything, specify mistakes as they are without any coverup or exaggeration, and enlighten the comrades who have made mistakes to consciously examine their mistakes and raise their own consciousness. Meanwhile, in the case of comrades who accept criticism willingly, once they have correctly understood their mistakes and have begun to change their behavior, we must not continue to haggle over their mistakes but must create more propitious conditions for them to correct them. We must not discriminate against them, but must support them to correct their mistakes in their work.

RELEVANT CRITICISM SAID NOT A RETURN TO 'BIG STICK'

Beijing BEIJING RIBAO in Chinese 27 Jul 81 p 3

[Article by Yang Ming [2799 2494] and Qi Sheng [7871 0524]: "Criticism and 'the Stick'"]

[Text] A stick is ordinarily an instrument cut from a branch of a tree or a bamboo tree, or made of metal. People come into contact with it regularly in their daily life and can hardly do without it in handling their basic necessities of life. Yet, if the use of this "stick" is borrowed in the social realm and ideological realm, it somehow becomes a very bad thing and has a very bad reputation; people loathe it and resent it.

During the 10-year period of turmoil, Lin Biao and the "gang of four" took advantage of the power they wielded to cause "labels" to fly everywhere and "the stick" to strike everywhere. Seizing upon a word or a phrase uttered by certain people, they raised everything to the plane of a principle, exaggerated at random, and even fabricated facts from whole cloth, thereby trumping up criminal charges against them; as a result, not a few cadres and the masses innocently suffered under their attacks and persecutions. Under such circumstances, "the stick" also became the equivalent to persecution or attack against others.

Since the smashing of the "gang of four," and especially since the Third Plenary Session of the 11th Party Central Committee, the Party Central Committee has devoted a great deal of energy to reversing the condition under which inner-party political life remained abnormal. The "Guiding Principles for Inner-Party Political Life" reiterated the "three not's" principle for us to firmly carry out: "Do not seize on another's shortcomings and blow them up; do not put labels on people; and do not use the big stick." This has created good conditions for us to relieve ourselves of ideological concerns, to speak as we wish when discussing problems, to speak the truth, and to address ourselves to realities. We are pleased to see that a political situation with both centralism and democracy, both discipline and freedom, and both unity of will and personal ease of mind and liveliness is now taking shape.

But for a period of time we have also heard about a certain kind of reaction. For example, the socialist path, people's democratic dictatorship, leadership of the Communist Party, and Marxism-Leninism Mao Zedong Thought are political principles to which everybody must adhere. Yet some people somehow feel rather repulsed and [mistakenly] feel these four basic principles are four "sticks." Once they hear others talk about the four basic principles, they think their own hands and feet are being tied and their freedoms are being restricted, and they thereby openly trumpet about wanting to "break through." In reality, adhering to the four basic principles is meant precisely to protect the greatest freedom of the greatest majority. It is not permissible to swing the stick at random against things which do not run counter to the four basic principles. We definitely cannot practice "absolute democracy" or "pure freedom" apart from the four basic principles. We all know that "absolute democracy" and "pure freedom" simply do not exist in this world. In the modern capitalist countries where "freedoms" are flaunted, the citizens' freedom of speech cannot go beyond legally prescribed limits. To those who wish to do whatever they please, the four basic principles surely constitute a kind of constraint, but such constraint is something that we cannot do without. This is because these [principles] represent the fundamental interests of the people and have to do with the future and destiny of the party and state. If we were to abandon them, we would have no hope for the construction of the four modernizations, our nation would be subjected to unprecedented disasters, and the people of the whole country would be subjected to the hefty flail of the foreign stick of imperialism and the indigenous stick of the landlord and bourgeois classes. Such a miserable and painful scene, which one can hardly bear to look back on, is profoundly understood by those who have lived in old China.

Some people even take criticism against wrong things as "swinging the stick." When they see newspapers and journals putting forth critical opinions on some articles and works, they are prone to say that now "the stick is being swung" again and to express thereby their concern that what little democracy already exists is liable to be "swept really clean like a vast expanse of whiteness," or they even take such criticism as "trampling, devastation, and chopping." Such a view is also incorrect. We should see very clearly that our country at present is at a historical turning point; the people's thinking is very lively, but there also appears in it some confusion, and there are both "leftist" and rightist things. With respect to these erroneous things, we cannot, on the one hand, grab one point without paying attention to the others, begin to swing our stick, and thereby subject people to destruction; nor can we, on the other hand, pretend to listen but hear nothing, look but see nothing, fail to distinguish between right and wrong, and let everything spread. Timely, correct criticism of various erroneous ideas is indispensable for us to march triumphantly forward along the correct, scientific path. Comrade Mao Zedong pointed out: "In our society, revolutionary, combative criticism and counter-criticism are a good way to expose contradictions, solve contradictions, develop science and art, and do various kinds of work well." Some people write articles or literary works with an erroneous viewpoint of even grave errors, and others put forward critical opinions: this is entirely normal. If, once others start to criticize, one immediately says that "the stick is being swung," would this not be swinging "the stick" of "no criticism" against others in reverse? If others criticize incorrectly, one can countercriticize, but one cannot take all criticism as "swinging the stick." The purpose of criticism is to "cure the disease to save the patient." This requires that the critic must have the intention to save others; and one being criticized must not resent the treatment by hiding his disease. The knife of a surgical operation may kill a person, but it may also save a person; so one should not be afraid or start to curse as soon as one sees such a knife. Correct criticism is a good thing and should be welcomed. Whether in criticism or in countercriticism, we must lay out the facts and use reason in order to persuade people; we must not threaten or beat people with "the stick." Only through correct criticism and countercriticism can mistakes be corrected, truths be developed, and the people's enterprises become more prosperous.

As for isolated individuals who take our crackdown on reactionary forces and reactionary elements as "swinging the stick," that [view is even more erroneuos. While class struggle is no longer our principal contradiction today, it has still not ended. Just as the "Resolution on Certain Questions in the History of Our Party Since the Founding of Our State" points out, it "still exists in certain realms continually." Society still has antiparty, antisocialist, hostile forces and a handful of newly emergent counterrevolutionaries. With respect to these people, we cannot be kindhearted and soft and treat them lightly. We must carry out a resolute struggle against them and legally crack down on them with fortitude. This is absolutely very different from the way the Lin Biao and Jiang Qing counterrevolutionary cliques slandered and entrapped good people, swung their stick at random, and practiced feudal fascist dictatorship. If we failed to [carry out this struggle, the people's democratic dictatorship would not be consolidated, the political situation of stability and unity would suffer sabotage, and the construction of the socialist four modernizations would not be realized. Everyone can understand this.

DARE TO CRITICIZE MISTAKES, EXPOSE CONTRADICTIONS

Beijing GUANGMING RIBAO in Chinese 23 Aug 81 p 4

[Article by Ma Guozheng [7456 0948 1767]: "Arrogance, Criticism, and Other Things"]

[Text] Differences in beliefs and in world outlook will often lead people to come up with different conclusions on matters concerning the value of other people and events.

A large percentage of cadres and intellectuals have displayed a daring spirit to think and speak out on issues, and to do others justice. They have displayed the courage to criticize erroneous ideas and to suggest effective solutions for problems in work. They have also been able to point out categorically imperfections in the plans and operational regulations drafted by their leadership and to recommend reasonable solutions. Such behavior, manifesting a decent style of work and a high sense of responsibility, has been described by some people as a demonstration of "arrogance." Actually, they should be praised for displaying a spirit of daring to think independently and for following a scientific approach to work. Such initiative should be encouraged, while efforts must be made to carry forward this good tradition. Only thus can we bring their professional skills and creative spirit into full play and pool the wisdom of the masses for the benefit of our constructive undertakings.

By saying this, I do not mean encouraging people to "be arrogant because of their talent" and to look down on everyone. In effect, the spirit of daring to do justice to others and of arrogance are two entirely different matters. Needless to say, the demarcation between these two different terms is very clear. True, there are people who are so arrogant and self-conceited that they have refused to acknowledge their shortcomings and mistakes and have rejected correct opinions and criticism. This being the case, a leader must consider it his responsibility to launch criticism against them and display a daring spirit to expose such contradictions and resolve them carefully and properly. In this connection, we must prevent the development of another extreme trend. Under its influence, some people are afraid to denounce those who refuse to thoroughly implement the "double-hundred policy" for "wielding the big stick" and for "meddlesome actions"; they have become so cautious, timid, and chickenhearted that they have failed to speak out and to stand firm on matters of what they believe right. This attitude contrasts starkly with another attitude adopted by others who are unwilling to accept correct opinions and who often accuse their critics of being arrogant. These two attitudes are entirely wrong and will have a detrimental effect on the cause of the party and the people. Today, there are people who have scored some success in work but have made some mistakes. When their success is praised to the point that they seemingly do not deserve [such praise], they never think that it is overdone. But if their leadership criticizes their shortcomings and mistakes, they accuse it of "wielding the big stick again through another political movement against the rightsts." This is indeed a misunderstanding. A long-tested truth verified by practice tells us that without criticism, no progress can be made. We must overcome unhealthy trends affecting our party and society and advance our socialist cause. To this end, we cannot give up criticism as a weapon, and we must frequently mount criticism and self-criticism. Like the fresh air and sunlight, criticism and self-criticism are indispensable to our life. We must do so despite the fact that criticism and self-criticism were once misused by Lin Biao, the "gang of four," and Kang Sheng to "attain their own aims." In the course of criticism and self-criticism, they deliberately exaggerated the mistakes of others to the maximum, so as to serve their counterrevolutionary conspiracy. Their attempts to wield the big stick through their punitive "mass criticism" should be viewed as another matter and as an action to distort and trample underfoot our party's excellent tradition of criticism and self-criticism. Undoubtedly, we must make efforts to bring order our of this mess. However, we should warn that no one can use this as a pretext to reject criticism of his mistakes and deny his shortcomings. If this is permitted, it will harm not only himself but others as well. Any party organization and any comrades will fail in their duty to cure our social ills if they fail to display a daring spirit to criticize those erring comrades. Acting this way is not a demonstration of true love for these comrades but an irresponsible and laissez-faire attitude toward the people's cause. Such an attitude is unworthy of emulation by anyone.

USE DIALECTICAL MATERIALISM TO GUIDE WORK STUDIES

Beijing RENMIN RIBAO in Chinese 17 Aug 81 p 4

[Article by Wang Shu [3769 2880], Secretary of the CCP Committee of Haixi Zang Nationality Autonomous Zhou: "Persist in Using Dialectical Materialism To Guide Work"; originally published in the 12 August issue of QINGHAI RIBAO]

[Text] Recently we have had the happy occasion to study the "Resolution on Certain Questions in the History of Our Party Since the Founding of Our State," which shines with the light of dialectical materialism and historical materialism throughout.

The "Resolution" points out: Comrade Mao Zedong applied dialectical materialism and historical materialism in the entire work of the proletarian party and thereby shaped the stand, viewpoint, and methods marked by the special characteristics of the Chinese Communists during the long hard struggle of the Chinese revolution. Seeking truth from facts, proceeding from reality in everything, and uniting theory with actual fact are the specific reflections of this Marxist stand, viewpoint and methods; they are also the living soul of Mao Zedong Thought. Comrade Mao Zedong took this point as the necessary scientific attitude to be followed by our party in its style of work, style of study, and style of ordinary pursuit, and also by us as communists in our work and activities. Looking back at the events of the past as we study the "Resolution," our experiences have indeed been rich and our lessons very profound, as regards our adherence to, or our violation of, the ideological principles of dialectical materialism. We have both abundant experience with success in our persisting in seeking truth from facts, proceeding from reality, and operating according to objective laws, and also profound lessons in violating objective laws and hence disturbing and messing things up, running things badly, irrespective of our good motives.

Dialectical materialism tells us: In order for our policies to tally with the ideological principles of seeking truth from facts and proceeding from reality in everything, we must carry out concrete analyses of specific things. But we can see from the numerous facts concerning our rectification and correction of unjust, false, and erroneous cases of litigation in the past few years that, under the influence of the "leftist" guiding ideology in the past, whether within the party or among the masses of the people, one of the lessons in the treatment of people is that there were frequent violations of objective reality and a lack of concrete analysis of specific persons and things, a confusion of the two kinds of contradictions of different nature, and an effort to raise matters to the question of principles without any limitation and to carry out excessive struggles by taking numerous different complex and complicated situations reflected in the contradictions among the peoples as though they were all manifestations of class struggle, without seriously and strictly making a distinction as to whether questions of a political nature, questions of an ideological nature, questions pertaining to habitual forces, or questions of prior or subsequent perception were involved; the result was that simple political conclusions were habitually made. In the handling of these contradictions, simple methods such as "cutting everything the same way," "all jumping upon the same victims," "rushing headlong into mass action," and "throwing everything into the common pot" prevailed; the result was that unity within the party and between the party and the masses were seriously affected, and the party's fighting stamina was weakened. It is of significance to our adherence to the party's ideological line on seeking truth from facts and proceeding from reality in everything to correctly sum up and absorb this historical lesson.

In the past few years, we have profoundly recognized in the implementation of the line, principles, and policies since the Third Plenary Session of the 11th Party Central Committee that, along with the shift of the focus of work of the whole party and the whole country, the main energy of leading organs at various levels has become increasingly concentrated on the construction of socialist modernization. In the face of such a new historical period, there are bound to be numerous new situations, new problems, and new things surging forth before us, and people's perceptions at the time when new things first appear are often inconsistent with one another, so that [different] opinions often abound. This makes it necessary for us to penetrate realities in order to solve problems through investigation and study and repeated practice. For instance, from the latter half of last year to early this year, the perceptions among those of our leading group of the party committee of our autonomous zhou as to the form of production responsibility system for agricultural and pastoral enterprises proved precisely to be not entirely consistent. In the face of such a situation, we refrained from adopting any simple, centralized method to achieve forcible consistency but followed the principles of emancipating our thinking and seeking truth from facts, as put forward by the Third Plenary Session of the 11th Party Central Committee, and, on the basis of penetratingly studying the spirit of the Central Work Conference of December 1980 and carefully sorting out the influence of left deviationist ideology, thereby organized members of the standing committee of the party committee of the autonomous zhou to go to various counties, communes, and factory, and mining entrepreneurial units to carry our investigation and study respectively and listen to the opinions and appeals of basic-level cadres and the masses in general. After a month and a half of actual investigation, ideas and perceptions were ultimately unified and a production responsibility system was adopted for agricultural and pastoral enterprises befitting the situation in the autonomous zhou, responding to popular expectations, stressing practical results, stabilizing the developing measures of industrial readjustment, and facilitating the mobilization of the enthusiasm of the masses. This matter has enlightened and educated us to the fact that, in the face of new situations, new problems, and new things, there must be a process of practice, perception, practice, practice again, perception again in order that our subjectivity will correspond to objective reality. In such a process, it is entirely in accord with the laws of perception if some differences or repetitions should appear in people's perceptions; this is a normal phenomenon, especially if people develop certain different views in the beginning when a problem is being explored. Testing whether a perception is correct and whether it corresponds to objective reality can ultimately be solved only through practice. This fundamental epistemological principle of dialectical materialism should become a basic principle in guiding us to carry out all work and unify our ideological perception and action.

CSO: 4005/836

We may put it this way: The peasants brought to the democratic revolution an agrarian socialist ideology whose primary feature was egalitarianism, and our party's line for the democratic revolution was in essential agreement with this ideology in its main objectives; as a result, the peasants participated vigorously in the revolution, made the Communist Party, which led them in their demands for liberation and a new life, their savior, and fought as the party directed. The broad masses of peasants understood from their own personal experience that only by constantly obeying the party and unswervingly following it could they become liberated, achieve a new life and become propserous. Accordingly, after the democratic revolution, when our party called on them to "organize and take the road to common prosperity," the peasantry, and particularly its poorest strata, naturally arose in a body to do its bidding.

The crux of the problem is this: Was this unanimous activism purely socialist awareness, or did it also include some innate spontaneity on the part of the peasants?

Lenin pointed out that the peasantry is a class with a dual nature. As private owners, the peasants spontaneously produce capital, while as workers, they are inclined to socialism; but while inclined to socialism, they are not innately socialist. This is not to belittle the peasants' consciousness: it results from the fact that the peasantry is a class which has been nurtured by thousands of years of the patriarchal system. In his book "The Eighteenth Brumaire of Louis Bonaparte," Marx scientifically analyzed the characteristics of this class on the basis of its mode of production. The limited scale of production, the hindrances to circulation, and its cultural backwardness limited its horizons so that it opposed superstition to science and opposed autocracy or abolutism to the socialism nurtured by the scientific spirit. With the exception of a very small minority of rich peasants who hoped to asecnd to the mansions of capitalism, the vast majority of this class were opposed in their subjective wishes to capitalist exploitation, but did not oppose capitalism in terms of scientific socialism, opposing it instead out of their psychology of fear of capitalism and out of their real and imminent danger of bankruptcy. Accordingly the peasants world view determined that their struggle against capitalism would be dual in nature: first, the poorer peasants opposed capitalism and for this reason could follow the party on the path to socialism; second, the peasants themselves did not trust socialism, but were born agrarian socialists, and what they wished to establish was an absolutely equalitarian ideal kingdom maintained by the absolute power of an enlightened ruler rather than socialism based on scientific socialist principles. As a result, the activism which they manifested was inevitably fanatical and utopian and contained a great deal of destructiveness. Particularly in the high tide of revolution, the question of whether or not one admitted that the activism of the peasant revolution had an innate spontaneity and that this spontaneity led to blind action was the key to whether one admitted the dual nature of the peasantry. As a clear-eyed proletarian revolutionary thinker, Lenin's achievement consisted not only in correctly analyzing the duality of the peasantry in general terms, but also in carrying this duality out to its conclusions and pointing out that "because it constantly suffered oppression under the capitalist system and its experience was generally of sudden declines in its conditions of life or even bankruptcy, it easily turned to extreme revolutionarism." This "extreme revolutionarism" is an expression of the peasantry's spontaneity during the high tide of revolution, and although it is different from open espousal of the capitalist road, it is emphatically not a scientific socialist awareness.

For a long period we had difficulty with the question of how to understand the dual nature of the peasantry. Starting with the later period of the socialist transformation, we always considered the individual economy to be capitalism, while at the same time we made the question of whether or not one sought to "transform" its production relationships the basis for distinguishing capitalist ideology from socialist awareness; we believed that provided someone advocated revolution, regardless of whether conditions were ripe for it and whether it was to proceed on the basis of scientific socialist principles, he was a socialist activist, while anyone who did otherwise was a rightist conservative element. This analysis of the duality of the peasantry, when applied to its different strata, held that spontaneity existed only among the rich peasants, while the poor peasants had only revolutionary activism. When, on the supposition that "great revolutionary activism is latent among the peasants, and the activism is greatest among the most aware elements," group after group of cadres, intellectuals and city dwellers were sent to the countryside to "receive reeducation from the poor and lower middle peasants," this amounted to an assertion that the peasants had spontaneous socialist consciousness and that this consciousness was even greater than that of the vanguard of the proletariat. Because of this worship of the spontaneity of the peasant classes, some comrades equated the poor peasants in the countryside with the modern proletariat, and believed that a proletariat and semiproletariat existed in the countryside. This was at variance with Marxism's scientific analysis of the peasantry. To be sure, in terms of their station in life the poor peasants and farm laborers were the propertyless and semipropertyless people in the countryside--Lenin too described them in this way. But Lenin's use of this turn of phrase was similar to Marx's and Engels' description of the slave class in ancient society as the proletariat of antiquity: it referred only to their condition of life and was by no means an attempt to equate them with the modern proletariat, the material bearers of modern large-scale production. On the basis of the historical materialist principle that there is such a thing as determinate consciousness and that states of consciousness are independent of each other, the classical Marxist writers not only distinguished the propertyless who were connected to different economic structures or means of production and treated only the modern proletariat, the working class engaged in large-scale socialized production, the exemplication of this concept, but in addition they believed that if the modern proletariat could not spontaneously produce scientific socialist thought, scientific socialist thought could only be instilled from without. Lenin believed that if the proletariat engaged in large-scale socialized production were able after a long period to escape from the material means of production, it would escape from the orbit of the working class and would tend toward destructive lumpen-proletarian activity. Thus the idea that there is a modern proletariat with a high level of socialist consciousness in the countryside is at odds with reality.

2. The Relationship Between Utilizing and Transforming Private Capitalist Industry and Commerce and Transforming Individual Peasants

On the eve of the large-scale implementation of socialist transformation, there were five economic elements in our country, which can be grouped in three large categories: the socialist state-run economy, the private capitalist commercial and industrial economy, and the small-producer economy of the individual peasants and individual artisans. In essence, small-scale production is the economic basis on which feudalism relied.

These various economic structures are largely in agreement with the economic state of affairs in Russia which Lenin analyzed after the October revolution. The three main economic components not only indicated that there were three levels of productive forces in this country's society, but also determined that there would be three roads in this country: socialism, capitalism and semifeudalism. To establish true developed socialism, it was naturally necessary to rely on and develop the socialist economy, and reform or thoroughly eliminate all nonsocialist economic elements, or, as Comrade Mao Zedong hoped, "to wipe out imperialism, feudalism, capitalism and small-scale production."

However, this does not at all mean that we adopt a policy of blindly eliminating the nonsocialist economies. As a Marxist, Lenin made a comprehensive analysis of the relationships of several nonsocialist economic components, concluding that since the capitalist production relationships were maintained by exploiting the workers' surplus labor, they were unquestionably cruel and backward, but that for 100 or 200 years capitalism had been progressive by virtue of the productive forces which it created. Is this not so? It was precisely the highly developed productive forces of capitalism which broke through the various limitations of small-scale production and smashed the restrictions of the patriarchal clans, brought the world together as a single unit, not only greatly enriching people's social relationships but also expanding their horizons; it was also the highly developed productive forces of capitalism which taught scientific and cultural accomplishments to the working classes and enabled them to increasingly escape from their ignorant and backward condition and become an educated class. Without these conditions, not only could socialism not have been established, but even feudalism could not have been completely buried. Accordingly, believing along with Engles that to implement socialism, "We need not only the proletariat capable of effecting this change, but also the bourgeoisie which has developed the productive forces to the point where they are capable of thoroughly eliminating classes," Lenin drew the following conclusion with respect to the specific conditions in our country, which was suffering because of the underdevelopment of capitalism here: "Compared with socialism, capitalism is harmful, but compared with the medieval system, small-scale production, and the bureaucracy associated with the indiscipline of the small-scale producers, capitalism is a blessing. Since we cannot bring about the transition from small-scale production to socialism, and since capitalism, the spontaneous product of small-scale production and exchange, is to some degree inevitable, we should use capitalism (particularly by drawing it into the orbit of state capitalism) as the link between small-scale production and socialism, and as a measure, path, method and form of upgrading the productive forces." As for state capitalism, Lenin explains that it is an economic alliance which the proletarian state contracts with the capitalists and a necessary measure "to strengthen large-scale production against small-scale production and to strengthen advanced production against backward production."

Making an economic alliance with the capitalists to oppose small-scale production is an important strategic concept of Lenin's. In the overall course of history, self-sufficient small-scale production is destroyed by the thorough development of capitalism. But after the victory of the October Revolution in Russia, the small-scale producers still surrounded the newly-victorious Soviet power like an immense sea and could not then be destroyed. This class, which could not be driven out, was continuously corrupting the militant working class and was a constant rival of Soviet power; after the end of the imperialist military intervention and the various revolts of the nobility, the hidden forces of small-scale production began to run wild, directly threatening the existence of Soviet power and bureaucratizing Soviet power from within. Many Communist Party members failed to see this great threat. Lenin pointedly criticized this apathetic behavior. He frequently stated the necessity of realizing that the small producers were the main enemy. Of course, the term "enemy" was not used in a political sense, but in an economic sense. In order to consolidate the newly created Soviet power, it was necessary to wage a protracted, arduous struggle against the small-scale producers, and in order to wage an effective struggle against them at a time when the socialist economy was extremely weak, it was necessary to accept the help of the law-abiding capitalist economic elements. This was the important strategic concept which Lenin proposed for economically backward Russia.

Unfortunately, we did not accord the proper importance to or understand this idea of Lenin's. We confused these two types of alliance, the economic alliance and the political alliance, and thus were unable to understand Lenin's brilliant idea of using the assistance of progressive large-scale capitalist production against backward small-scale production. True, we too talked about two alliances, "one with the peasants and the other with the national bourgeoisie." But during the socialist transformation, our alliance with the national bourgeoisie was an alliance in name only, not in reality. Back in June 1952, we laid down the guiding idea that "after the landlord class and bureaucratic capitalists are overthrown, the main contradiction within China will be that between the working class and the national bourgeoisie, and accordingly we should no longer call the national bourgeoisie one of the central classes," with the result that at the very time we were talking about an alliance with the national bourgeoisie, we were bringing up the question of allying with the peasants on a socialist basis to destroy capitalism. Since we had already made the bourgeoisie our revolutionary target, how could we enter an alliance with the capitalists, especially when we had to deal with the problem on a socialist basis? This metaphysical view, which fails to distinguish politics from economics and advanced production from backward production, and this premature call for a revolution to "wipe out capitalism," did grave damage to our economic and political work.

First, we actually eliminated the state capitalism stage, and this led to the gradual bureaucratization of industrial and commercial management. It is incorrect to say that we had no idea of carrying out state capitalism. But when we were carrying out the property reform on a large scale, we did not distinguish ownership of the means of production from the right of enterprise management. We took away the capitalists' ownership rights and management rights at one stroke. But socialism is not an abstract form; it has a living content. Since socialism is an economic form one step above capitalism, it naturally should have a more scientific and rigorous organizational structure than capitalism and should use more scientific measures to manage the economy, but after we proclaimed that the capitalists must step aside, we rejected all of their experience and management science as rubbish. This led to many strange circumstances: in organizations of an obvious production or commercial character, large number of nonproduction political cadres would be placed above technical and management personnel, with the result that the organizations became bloated and overstaffed, and many persons were paid for nothing; units that were obviously economic in nature were able to ignore economic results; and people who clearly were the leadership of an enterprise could not be hired or fired by the workers but were directly named by the higher levels and had no responsibility to the enterprise, but only to the higher levels. Condensing all of these circumstances into a single point, it was really a use of the methods of the feudalistic government-run enterprise to reform the capitalist economy. This situation developed solely because we did not understand that socialism has highly developed capitalist production as its prerequisite and is formed by eliminating capitalist management and administrative experience.

Second, we ignorantly opposed science and wasted talent. Because the small-producer world view is in essence opposed to science, it considers science, culture and intellectuals to be as great a scourge as the bourgeoisie. On the one hand we shouted slogans about learning from all experts, while on the other hand we treated large numbers of intellectuals who had been employed by the capitalists or the state in the old society, such as teachers, physicians, scientific and cultural workers and the like, as servants of the bourgeoisie and labeled them bourgeois intellectuals, subjecting them to various kinds of discrimination, or even forcing them down to the lowest strata of society. Whether as a result of the idea that only much-wronged poor peasants could be the heads of rural production teams or because of the theory that nothing counts but class status in the higher-level state organizations, all people who brought knowledge from the old society were unable to obtain important positions or even were excluded from the ranks of the cadres; and a certain number of persons without knowledge, influenced by the ideological tide that nonexperts naturally should give orders to experts, were unwilling to learn and did not strive to make progress, with the result that our cadres' ranks gradually became bureaucratized and took on an antiintellectual character. This has become not only an economic problem but a problem which affects all aspects of our national life.

Our original idea regarding the question of how to implement socialist reform was correct. On the basis of Lenin's teachings and the practice of the Soviet Union's socialist revolution, we proposed the general line of "one transformation and three reforms," and while making a major, effective effort in socialist construction, the party gradually developed the mutual assistance teams into basic-level communes in the countryside on an experimental basis, a movement which was essentially healthy. But not long after, we made an abrupt ideological change of course. In October 1953, two months after we had formally fixed the content of the General Line, we changed the way it was formulated: "The General Line can be said to be a solution of the problem of the ownership system. Only by expanding state ownership through new construction, reconstruction of expansion of state-run enterprises and by converting the two types of private ownership systems, namely ownership by the workers and ownership by the bourgeoisie, to collective ownership and state management (by joint public-private management and unification under socialism), can we upgrade the productive forces and industrialize the country." If we do not read this formulation carefully, it seems to be in accord with the "one transformation and three reforms," but in reality it stood the sequence of industrialization and alteration of the ownership system on its head, eliminated the decisive role in remaking society played by the upgrading of the productive forces, and in fact turned historical materialism into historical idealism. It contained basic faults of ideology, as a consequence of which minor theoretical deviations would unavoidably result in major failures in practice.

To ignore the level of development of the productive forces in carrying out large-scale alteration of the production relations is to depart from historical materialism. Leadership based on this approach will inevitably come to grief. The tragic thing is that nobody made an objective, scientific summarization of the practical problems which resulted from our being guided by this erroneous ideology. Instead it was always thought that capitalist-roaders among the masses and cadres were making trouble, and that the situation was one of class struggle or struggle between two lines. In order to protect the fruits of victory and advance to new victories, it was thought necessary to carry on a class struggle: one day we would claim that there were serious spontaneous capitalist leanings among the rich peasants and that political work would have to be intensified throughout the cooperativization movement, because the least slackness would supposedly allow capitalism to spread unchecked, and in the next day we would be criticizing the cadres on the grounds that some of them came from landlord, rich peasant or well-off middle peasant families and had already espoused the viewpoint of the bourgeoisie, the rich peasants or the prosperous middle peasants with spontaneous capitalist leanings and supported the interests of a relative minority. Accordingly, it was inevitable felt necessary to carry on artificial "class struggles" in order to intensify and advance the change of production relations.

In reality the use of "class struggle" to remake the small peasants was inevitable for those who believed in the theory that the superstructure is decisive. In March 1955, in discussing several problems of Marxism at the party congress, we actually equated Marxian socialism with the theory of class struggle; this deceptive formulation was unquestionably incompatible with scientific socialism. As stated in the Lenin quotation [not reproduced] which we cited at the beginning of this section, socialism of course destroys classes, but the destruction of classes does not mean blindly carrying on large-scale class struggle. Engels, one of the founders of scientific socialism, pointed out: "The change which socialism is currently striving to bring about is, in simple terms, a victory of the proletariat over the bourgeoisie, and the establishment of a new social organization through destruction of all classes differences." But in addition, "Only after the social productive forces have developed to a certain stage, to a stage which is quite advanced even compared to our present condition, will it be possible to raise production to this level and make true progress in abolishing class distinctions, to make their abolition solid and lasting, and to avoid bringing about stagnation or even decline in the form of social production." This statement by Engels is extremely profound; but it was neither understood by contemporary Russian exiles, nor accepted by those among us with the small-producer outlook. When we used the method of "large-scale mass debate," we carried out cooperativization in a very short time, and when we then carried out the "socialist revolution in the ideological and political line," we set up the people's communes everywhere based on cooperativization. When they were initially being set up their characteristics were as follows. First, they were large, generally using one, two or three districts as a unit, and encompassing thousands or even tens of thousands of households in a unit--almost equivalent to small duchies. Second, they were publically owned: naturally the main fields were, but all the private plots, house property, family sideline industries and the like were also publically owned, and on the basis of this large-scale public ownership, food, clothing, housing, medical care, and even burials and weddings were provided for: and everyone ate from the big communist pot. Third, there was large-scale unification, and workers, soldiers, peasants, students, merchants, the party and the government were all integrated into a single unit: the government ran the enterprises, the party ran the government, the party and government were indivisible, and they were assisted by the army. The commune members not only had to eat at the communal mess halls, but also had to take military training and lived a militarized life.

People often say that by 1956 our socialist transformation was basically victorious. But if we consider the situation conscientiously, our socialist transformation could only be considered to be victorious after the people of both city and countryside were communalized, an organizational form in which there was a communist factor had been found, and the seven functions (worker, peasant, soldier, student, merchant, party and government) were unified. "Communism is paradise and the people's communes are the bridge to it." If we had not succeeded in finding the bridge to paradise, how could the transformation be "basically victorious"? However, when we analyze the economic content of this bridge which had just been built, it is not difficult to see that the economic form was entirely incompatible with scientific socialism. Socialism requires strict record-keeping and oversight of each individual's work for the purpose of implementing the principle of distribution according to labor; but many localities lacked any adequate accounting, no one had any choice but to "eat out of the big pot of communism," what was originally a scientific principle was subjected to theoretical criticism as a piece of revisionism, and people were called upon to treasure egalitarian rubbish. Socialism requires the most extensive possible democracy so that the masses can directly run their enterprises and the "state," but in reality the cultural level of the broad masses is low and they are unable to exercise their democratic rights, so that their only recourse is to have a minority run things; as their property increases and the leaders become more powerful, there is a danger of eventually nurturing large and small bureaucrats or even "local emperors." Socialism requires that we gradually convert society into an economic unity, but the political organization which we set up by means of administrative measures inevitably relies on the power of the government for its existence, and accordingly we were actually increasingly politicizing and militarizing the enterprises. These few points are sufficient to indicate the nature of the socialist society which we would have established. Of course, the opposition of some old comrades in the party, and particularly the fact that the communal dining halls very rapidly ate up the communal property, forced people to return to reality; but they did so unwillingly, and as soon as the situation improved a "revolution" would be inevitably set in motion.

4. A Clear Line of Demarcation Must be Drawn Between Us and the Small-Producer World View, and the Specters of Agricultural Socialism Must Be Exorcised

A single, complete ideological thread runs through the progression from worship of the spontaneity of small-scale production to overthrowing the "one transformation and three reforms," from rejecting advanced capitalist productive forces to a resort to "class struggle" and changing the production relations without regard for the level of the productive forces; it is completely at odds with historical materialism, starting out from narrow empiricism and slipping toward historical idealism.

But was it only when we arrived at the later stage of the socialist transformation that we became imbued with narrow empiricism and historical idealism? Quite the contrary.

As everyone knows, our socialist revolution was based on the democratic revolution. People often say that the democratic revolution was bourgeois in character, but this only means that the revolution had to destroy the power of feudalism, bureaucratism and imperialism in China. Because the natural economy which lasted for more than 2,000 years in old China was still in control and the people who were oppressed in the lowest stratum of society were the poor peasants who numbered more than

80 percent of the nation's population, this sort of revolution could not be anything but a modern peasant war led by the Communist Party. And for this reason, in the process of nationalizing Marxism, we often pinned a narrow pragmatist or historical idealist tail on Marxist theory. Therefore it is not particularly difficult to find the source of the theoretical errors which we made in the late period of socialist transformation.

A. The Narrow Empiricist Tendency

Our party, and especially Comrade Mao Zedong, opposed narrow empiricism. But it should be pointed out that at the very time when we are opposing narrow empiricism, we are also covertly promoting it. For example, when discussing the way in which Marx, Engels, Lenin and Stalin made their contributions, do we conclude that other than their genius, the main thing was their practice, and that all scientific and cultural knowledge left by their predecessors had no effect in the formation and development of their thought? Again, the dialectical materialist idea of "the leap from perceptual to rational knowledge," which we have accepted as gospel, makes no mention of the effects of scientific knowledge and scientific logic accumulated over many centuries; but is it possible to ascend in this way to correct rational knowledge? So too in the case of our summarization of the laws of development of consciousness as "practice, understanding, further practice, further understanding" and so on: if we reject the results of our predecessors' investigations and struggle up our own ascending spiral of practice, understanding, further practice, further understanding, will we be able to arrive at scientific conclusions about complex social, natural and thought phenomena? These examples make it clear that we have not escaped from the circle of epistemology based on narrow individual experience.

B. The Historical Idealist Tendency

Of course, our party and Comrade Mao Zedong opposed historical idealism, but unquestionably at the very time that we were opposing historical idealism, we were also making historical idealist errors. Our superstitious belief in class struggle and exaggeration of the reactive effect of the superstructure were among our party's key theories during the later period of the socialist transformation; the bases of these theories had been developed somewhat earlier, but it was only later that it became possible to perfect and develop them. For example, the idea that under certain conditions production relations and the superstructure play a decisive role and the practice of defining historical materialism and historical idealism only in terms of class struggle, which we accepted as orthodoxy, are in fact at odds with Marxist historical materialism.

It should be pointed out that historical materialism combined with narrow empiricism constitutes the small-producer world view represented by the peasants. This world view is generally satisfied with limited perceptions and achievements, holds science in low regard and is opposed to democracy, and accordingly it is in essence opposed to Marxism. It is grounds for rejoicing that this small-producer world view did not become the main current during the democratic revolutionary stage and that under the guidance of Marxism our democratic revolution won a great victory. However, it was the great victory won in this revolution that made us arrogant and even rendered us incapable of discovering the problems which would unavoidably arise during the pressures and alarms of the struggle. The volume of "Selected Works of

Zedong" which we published in August 1951 was conscientiously compiled by Comrade Mao Zedong and the Selected Works of Mao Zedong Publishing Committee. The views described above did not reflect the views of a certain leader in 1937, but instead reflected the joint views of our party after the state was founded. Accordingly, the theoretical errors which burst forth in the later period of socialist transformation were entirely natural. Accordingly, either our China would inevitably undergo a struggle waged by the ideology of agrarian socialism against the theory of scientific socialism, or, ruled by the theory of agrarian socialism in the form of a small-peasant utopian illusion, would follow Liu Bang, Zhu Yuanchang and Hong Xiuquan down the road to feudalism, or, under the guidance of scientific socialism, would eliminate the effect of small-producer concepts and continue to progress in the direction pointed out by Marx and Lenin. In the 20 year period between the Eighth Party Congress in 1956 and the sway of the "gang of four" in 1976, the struggle between these two socialisms was actually waged on Chinese soil. Although at the point when the democratic revolution changed into the socialist revolution, the great sea of small producers inevitably brought forth in our party an anti-science, anti-democracy, anti-progress faction which styled itself Marxist, was centered on agrarian socialism, and had feudalism as its destination, modern China's large industry inevitably will be able to forge revolutionary fighters capable of waging an extremely arduous struggle against this faction, and through prolonged Marxist education and investigation of the objective situation they will inevitably be able to use scientific socialism to overcome agrarian socialism.

EDUCATION MINISTRY ADOPTS NEW SYSTEMS ON TRIAL BASIS

Beijing GUANGMING RIBAO in Chinese 11 Aug 81 p 1

[Text] The Ministry of Education recently made public the "Draft proposal for the trial adoption of the all-day 6-year education system for key middle schools and "Revised views on the draft proposal for the trial adoption of the all-day 5-year middle school education system." It also sent out a circular and an explanation.

In 1978 the Ministry of Education issued "A draft proposal for the trial adoption of the all-day 10-year primary and middle school education system." The 3-year trial period indicates that while the draft proposal has helped to restore the normal educational order in the schools and to upgrade the quality of education, certain problems remained to be solved. The chief problem is that the overly heavy workload in the middle schools has had a deleterious effect on the physical and mental development of the students. One of the reasons is that the 5-year educational system is too short. In order to implement the policy for the overall moral, intellectual and physical development of the students and to upgrade the quality of education as well as to reduce the students' workload, the Ministry of Education has decided that the middle school system should gradually be extended from 5 to 6 years. The various localities should, on the basis of their actual circumstances, introduce changes in the system step by step and locality by locality according to a set plan and procedure.

One of the reasons which led the Ministry of Education to adopt the two educational programs is the need to reform the middle school education system. These two educational programs are meant to serve as guidelines, and suitable modifications may be made by the localities to suit their actual conditions. The two newly promulgated educational programs are best suited to key middle schools and middle schools that are operating under relatively favorable conditions. As for ordinary middle schools, the various provinces, municipalities and autonomous regions may formulate their own educational programs.

As guidelines in theory and in practice, the "Draft proposal for the trial adoption of the all-day 6-year educational system for key middle schools" stresses the following points:

1. Aside from ensuring the intellectual development of the students, the middle schools should make greater effort to upgrade their moral, ideological and physical education as well as their health and physical well-being. While it is necessary to upgrade their education qualitatively, it is also necessary to avoid and to overcome the tendency to subject them to too heavy a workload. The number of classes per week and the amount of homework must be within reasonable limits. There should be only two examinations each semester, mid-term and final. The amount of work covered by each examination should not be too great so that the students may have sufficient time to study on their own and to engage in extracurricular activities and that they may have sufficient sleep and rest.

2. A sound foundation should be laid, especially in writing, mathematics and foreign languages. Emphasis should be placed on the need to enable the students to master basic knowledge and basic skills. Efforts should be made to develop their learning ability and their intellectual capacity. Attention should be paid to the need to improve teaching methods, to stress the importance of experiments, and to take positive steps to increase various types of worthwhile extracurricular activities.

3. In order to satisfy the interests and to meet the needs of the students so as to enable them to develop their special talents, elective courses should be made available to second and third year students in senior middle schools. First is the single-curriculum elective [system], in which they have the option of one, two, or no electives. Second is the split-curriculum elective [system] in which, once the basic middle school course work is completed, they may choose electives predominantly in either sciences or the arts. The students may elect to take a particular course in accordance with their special interests and aptitudes. The choice of one of the two types of elective courses may be left to the discretion of the different localities. There should be a period of preparation before this system is put into practice. Overall experience should be taken into account, and the system should be established step by step. The various provinces, municipalities and autonomous regions may adopt the system of major elective courses in the key middle schools on a trial basis.

4. Courses in labor techniques should be offered by middle schools to promote labor technique education. The main purpose is to help the students to develop a correct attitude concerning labor and to get them accustomed to engaging in physical labor so that they may acquire certain labor skills and be able to work with their hands as well as with their heads. Labor technique education covers industrial and agricultural production, education in basic techniques and vocational techniques in service-related labor and in public service. Junior middle schools are to have two weeks and senior middle schools are to have four weeks per school year of labor technique education. The two-week and four-week periods may be broken up, or they may run uninterrupted. The various provinces, municipalities and autonomous regions may designate several schools for conducting in a serious manner experiments in labor technique education on the basis of their experience in their earnest attempts to develop productive labor education.

It is learned that, in order to implement the two educational programs, the parties concerned are in the process of compiling and revising teaching materials. The educational authorities in various localities are seriously studying ways and means to implement the educational programs best suited to the actual local conditions and are making the necessary preparations to acquire qualified teaching staffs and the needed equipment.

CHANGES IN TESTING COLLEGE APPLICANTS BRING BETTER RESULTS

Beijing GUANGMING RIBAO in Chinese 1 Aug 81 p 1

[Text] It is learned from the concerned authorities that, on the basis of experiences gained during the past few years, the setting of examination questions for institutions of higher learning has shown further improvement this year. The better examination results this year over the last will ensure that a high standard of admission will be achieved and that both teachers and students will be better served.

The Ministry of Education recently invited some of the teachers of the Second Middle School, the Fifth Middle School, the Nineteenth Middle School, the Experimental Middle School and the Eighty-first Middle School in Beijing to participate in a discussion, to engage in an exchange of views with some of the teachers in Beijing responsible for grading examination papers, and to hear their views on the examination questions for senior schools this year. They agreed that the questions, within the confines of the syllabus and on the basis of the teaching materials which had been compiled, should emphasize the testing of basic knowledge and basic skills and on the ability of the students to apply them. The examination questions, neither too difficult nor too easy, were found to have basically met the twin goals of enabling institutions of higher learning to select outstanding talent and to facilitate teaching in the middle schools. They expressed the view that this system will serve to liberate both teachers and students from "the tactics of tackling a plethora of questions" and from a multiplicity of review materials, to enable the students to acquire basic knowledge and basic skills, to upgrade the quality and quantity of middle school education, and to ensure a more solid foundation for the students newly admitted to the universities.

The number of students who signed up for the standardized examination throughout the nation came to 2,589,000. The work of grading the papers has now been completed. An analysis of the statistical material concerning the examination results compiled by the admissions office in Beijing reveals that the grades achieved this year are higher than those of last year, that there is a significant improvement in the grades in all the subjects examined, and that the universities have found it easier to select the best qualified new students.

EDUCATION IN SHANDONG PROVINCE MAKES GREAT PROGRESS

Jinan DAZHONG RIBAO in Chinese 19 Jul 81 p 1

[Text] Since the founding of the People's Republic 32 years ago, Shandong Province has made great strides in the development of higher education. Whereas there were only 7 institutions of higher learning in the province in 1952, there are now 38. While there were 6,753 students enrolled in such institutions in 1952, there are now some 51,400, or 7.6 times the 1952 figure. While there were only 1.39 college students out of every 10,000 people in the population in 1952, there are now 7.2. There are also 527 research students, the largest number ever registered. The number of rank and file teachers in institutions of higher learning has also shown a big increase. Whereas there were 1,024 such teachers in 1952, there are now 10,924, or 10.7 times the 1952 figures. Among them are 966 professors and associate professors and 4,778 lecturers. In the past 32 years, these institutions have produced 104,330 graduates for the nation.

Since the smashing of the "gang of four," and especially since the Third Plenary Session of the 11th CCP Central Committee, the institutions of higher learning have done well in eradicating "leftist" influences, in rectifying school discipline, in strengthening the development of teachers, in upgrading the quality and quantity of teaching, in intensifying their political and ideology work among the students, and in promoting physical culture and public health. They have also achieved creditable results in technical and scientific research, in research in the applied sciences and in basic scientific research. In 1980 alone, out of 29 scientific research projects which had been appraised, 21 were found to have reached the advanced domestic level, while 5 others were considered to have reached the advanced international level.

Activities involving the exchange of academic learning also reached an unprecedented level. In 1980, some 330 articles written by teachers in institutions of higher learning in the province were published in national and international publications and were given favorable reviews by both Chinese and foreign experts.

The achievements in scientific research made by institutions of higher learning in the province in recent years were made possible by the strengthening of party leadership and the effective implementation of the policy toward intellectuals. Since the Third Plenary Session of the 11th CCP Central Committee, over 340 among the highly qualified intellectuals and intermediate intellectuals have been selected to fill the two levels of leadership positions in schools and colleges and in the faculties and departments. Over 380 teachers were admitted to the Communist Party. More than 960 teachers were appointed professors and associate professors, while over 4,170 were promoted to lecturers. In addition, one-third of the teachers were given better living conditions. This has had the effect of greatly activating the positive attitude of large numbers of cadres and teachers.

INSTITUTIONS OF HIGHER LEARNING TO ENFORCE TENURE SYSTEM

Beijing GUANGMING RIBAO in Chinese 25 Jul 81 p 1

[Text] The State Council recently appointed Professor Huang Wenhu [7806 2429 5706], Professor Li Jiabao [2621 1367 1405], Associate Professor Jiang Yihong [1203 0110 1347] and Lecturer Jing Bowen [7231 0130 2427] vice presidents of the Harbin Institute of Technology in a move to enforce the 4-year tenureship system.

Since the establishment of the People's Republic, the administrative cadres in leadership positions in institutions of higher learning have, in actual practice, held on to their jobs for life. The adoption of the tenure system in the appointment of Huang Wenhu and company as vice presidents marks the beginning of the tenureship system in our institutions of higher learning and represents the first step in the abolition of the system of virtually lifelong appointment of cadres in leadership positions in our institutions of higher learning.

It is learned that the fixed tenureship system will henceforth be enforced in the appointment of professional personnel as presidents and vice presidents of institutions of higher learning. The length of tenure is to be the same as the length of the school term. As a rule, appointees will not be reappointed for a second term. This is in keeping with the policy of the CCP Central Committee to abolish the system of lifelong tenure for those in leadership positions. It will prevent professional personnel in administrative leadership positions from neglecting their duties, provide an opportunity to a large number of professional personnel to engage in school administration, and encourage those people with aspirations to make their contributions in school administration before their tenure runs out. The appointment of Huang Wenhu and company as vice presidents is in conformity with the spirit of this policy.

The Harbin Institute of Technology is one of our well-known industrial universities offering a variety of courses. The four newly-appointed vice presidents are all red and expert professional cadres developed by the university following the establishment of the republic. They have all given active support to the line, the guidelines and the policy laid down by the Third Plenary Session of the 11th CCP Central Committee. They all have considerable administrative ability and have served the Harbin Institute of Technology for a number of years. They are experienced in teaching, in scientific research, and in the actual work of school administration. They are all between 50 and 55 years of age.

The appointment of the four vice presidents was made following thorough investigation and the canvassing of a wide range of public opinion by the department concerned, according to stipulations.

IMPORTANCE OF IDEOLOGICAL POLITICAL EDUCATION IN SCHOOLS STRESSED

Beijing GUANGMING RIBAO in Chinese 14 Aug 81 pp 1, 4

[Article: "Implement the Guidelines of the 6th Plenary Session of the 11th CCP Central Committee, Strengthen and Improve Ideological-Political Education in Schools"]

[Text] Learning and implementing the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" in order to strengthen and improve ideological-political education in schools at various levels and of different categories is a very important task on the educational front at present.

Ideological-political education has its own important role in school work. It is primarily determined by the fact that education in our country is of socialist nature. We must continue to implement the guiding principle that education must serve proletarian politics and be combined with productive labor and to adhere to the socialist direction for running a school. Socialism must have not only a high-level material civilization, but a spiritual one as well. Students at schools today will become a vital new force after graduation to participate in the construction of the modernizations and to shoulder up a historical responsibility to build a socialist material civilization and a spiritual one. Whether the students cultivated at schools today will support the leadership of the Chinese Communist Party, have deep love for the socialist motherland, or imbued with the awareness and ability to serve the people is an important matter which hinges the future and destiny of our state.

At present, the main ideological trend of students are good. They ardently love their motherland, look forward to the "four modernizations," support the lines, guiding principles and policies adopted since the conclusion of the 3rd Plenary Session of the CCP Central Committee, value the overall situation of stability and unity, concern themselves with affairs of state, work vigorously for the good, and study diligently. As a result, large numbers of students who are equipped with the three virtues and advanced collectives appear before us. In recent years, schools at various levels and of different categories have strengthened education in the four basic principles, devoted major efforts to building a socialist spiritual civilization, and carried out such activities as "five teachings and four virtues" and "learning from Lei Feng [7191 6912] to revolutionize the general mood," and thereby went a step further bringing about a great deal of gratifying atmosphere. However, we must also see that various trends of thoughts in society, especially the bourgeois ideological trend of liberalization which intends to keep away from the leadership of the party has been reflected in schools time and again. Some of the students have only a vague idea about or even an erroneous understanding of the four basic principles. Some other students lack a revolutionary ideal and thus give rise to the thought of individualism and anarchism. Situation as such has pointed out the fact that it is altogether necessary to further strengthen ideological-political education in schools.

The key of doing a good job in ideological-political work in schools lies in strengthening and improving leadership of the party. After experiencing the 10 year period of calamity and in view that we are presently at the time of a historical turning point, it is neither surprising nor frightful to witness various problems among the students. The question is whether school party organizations and leading departments at various levels can conscientiously pay close attention to ideological-political education. By facing up to problems which objectively exist, many schools have strengthened ideological-political education with a clear cut stand and in a convincing way. They have achieved successes and accumulated experience. Achievements must be fully affirmed. At the same time, we must also see that some problems still exist in ideological-political work in schools. We must not overlook or deny certain trends of oversimplicity and cruelty that exist in our work. However, the problem which is presently more in need of our attention is the existing state of laxation and softness. People dare not and cannot criticize erroneous trends because once they do so they would be criticized as coming down with a big stick on somebody. If this situation is not altered, it will jeopardise the healthy growth of the young students, hamper the development of socialist democracy and be detrimental to the overall situation of stability and unity. School is the place to cultivate the new socialist generation and it is the cradle of social spiritual civilization. A very important task of school party organizations is to use the Marxist world outlook and the communist morality to educate the broad masses of students, to resist the influence of the decadent capitalist ideology and the remnants of feudal ideology, to overcome the petty bourgeois ideology and to enhance the spirit of building an enterprise through arduous effort by dedicating oneself heart and soul to the cause of modernization. Should school party organizations fail to use Marxism-Leninism to occupy the ideological front in schools and let various non-proletarian ideologies run rampant, it would mean that they have given up their responsibility of exercising leadership.

In order to alter the situation of laxation and softness in the ideological-political work, the weapon of criticism and self-criticism must be properly applied. Carrying out criticism and self-criticism is a fine tradition of our party and a correct method for solving contradictions among the people. Since the founding of the People's Republic, we have had a successful experience of properly applying criticism and self-criticism. We also have had leftist errors due to the fact that the two kinds of contradictions that are different in nature were incorrectly distinguished and handled, and oversimplified, rude, compulsory and oppressive measures were taken to treat ideological problems among the people. Under the new historical situation, we must correctly sum up historical experience and lessons. While we are not allowed to repeat the leftist mistakes of the past, we also are not permitted to confust carrying out criticism with coming down with a big stick on somebody, nor to throw away the weapon of criticism and self-criticism, to give up ideological work, or to let the bourgeois ideological trend of liberalization and other erroneous ideologies spread unchecked.

At present, in order to strengthen ideological-political education, it is necessary to organize the broad masses of teachers, students, staff members and workers in schools to spend a certain period of time together to study the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China." It is necessary to maintain close links with reality in order to have a definite object in view for solving major problems regarding ideological understanding and to carry out in depth an education pertinent to adhering the four basic principles. Schools at various levels and of different categories must also carry out for students in the light of different age groups education in patriotism, in Marxist-Leninist theory, in communist morality and quality, and in encouraging deep love for arduous work and struggle.

Ideological-political education needs constantly to accumulate and sum up experience, and to probe objective laws. For this reason, it is necessary to establish a crack and stable political work contingent. This is the organizational guarantee for strengthening ideological-political education in schools. Both school teachers and political cadres aloke are educators as well as teachers of students. A teacher teaching a special course should be encouraged and esteemed for doing a good job. Likewise, a political cadre should equally be encouraged and esteemed for enhancing the ideological awareness of students. People think that a teacher is similar to a gardener. To compare with a specialized course teacher, a political cadre as a gardener must be more capable of finding out what the students are thinking or be more skillful in dealing with people. He is also more in need of better training in politics, ideology and in knowledge. Therefore, he should be even more respected. At present, contingents of school political cadres face problems of shortage of manpower, lack of sense of stability and lack of successors which are incompatible with the requirements for strengthening ideological-political education. Propaganda and educational departments as well as school party organizations as all levels should help cadres constantly enhance their ideological level and working ability. At the same time, practical measures should be adopted to solve their real difficulties and to encourage them setting their minds at rest in order to do a good job.

Comrade Mao Zedong pointed out in his article "On the Question of Correctly Handling the Contradictions Among the People": "With regard to ideological-political work, each individual department has its responsibility. The Communist Party has to take care of it, so do the Communist Youth League and governmental departments. However, school masters and teachers should do the most." In order to strengthen ideological-political education in schools, school party organizations should, first and foremost, be bold enough to shoulder and be adept in the responsibility of leadership. All teachers and cadres in schools should be mobilized to do ideological-political work. At the same time, we must bring the role of the Communist Youth League into full play so that members of the League can be educated to influence young students by their own exemplary actions. Student associations and unions of educational workers also should try hard to do ideological-political work well. Teachers in a socialist country must both carry out classroom teaching and instruct students on how to conduct themselves in society. Since liberation, our contingents of teachers, after tempering themselves and receiving party education for years have become qualified to do a good job in ideological-political work for students. Some old teachers who are more experienced and academically more learned are often more convincing in applying their own experience to enlighten and educate students. They should be encouraged to do more ideological work. School party organizations should continue to conscientiously implement our party policy toward intellectures and to bring the initiative of teachers into full play in order to give them a more important role in carrying out ideological-political work for students.

Cultivating a new socialist generation is a common cause of the entire party and the whole society. Only by coordinating school education closely with family and social education can we achieve better results. Especially people of theoretic, literary and art, press and publication circles are closely linked with ideological-political education in schools. Good movies, dramas, songs and theoretical articles can arouse the youth' enthusiasm for revolution and point out to them the future path and therefore play an important role to help them shape their revolutionary outlook on life. Unhealthy or seriously erroneous works usually exercise corrosive influence on souls of the youth and add difficulties to school education. It is hoped that comrades working on the ideological front can be fully aware of the glorious responsibilities on their shoulders, attach importance to social effects of their works, and make a positive contribution to the cause of cultivating the next generation. The resolution adopted by the 6th Plenary Session of the 11th Party Central Committee has provided a powerful ideological weapon for strengthening and improving ideological-political education in schools. The CCP Central Committee has given a series of important instructions pointing out the direction for strengthening ideological-political work.

All of these are very encouraging conditions. It is an objective reality that some difficulties exist in the ideological-political work in schools. However, we the educational workers should fully understand the responsibilities on our own shoulders, overcome our negative and overcautious attitude, pluck up our spirits, work hard, constantly study new situation and create new experience so that we may strive to bring up a new socialist generation not only developed morally, intellectually and physically in an allround way, but both politically conscious and progressionally competent as well.

CONFUCIUS' HUMANITARIANISM REASSESSED, DEFENDED

Shanghai WEN HUI BAO in Chinese 3 Aug 81 p 3

[Article by Yan Beiming [0917 0554 3298]: "A Discussion of Confusian Humanitarianism"]

[Text] Humanitarianism as well as the question of human nature used to be forbidden zones, considered crimes, not to speak of the humanitarianism of Confucius!

In the spring of 1962, in response to an invitation, I sent the Shandong Conference on Confucius an article, "On Benevolence--the Central Concept of Confucian Philosophy and Its Emanation," which mainly expounded the idea that the Confucian doctrine of benevolence was manifesting a kind of ancient humanitarianism and was in its nature historically progressive. What a disaster this brought upon me! Not only did I get a mad tongue-lashing at that time already in the so-called "summing up speech" by that bully Guan Feng [7070 6912], but later, in the winter of 1966, I was sent under escort like a criminal to Qufu to be subjected to a "struggle-criticism" at an anti-Confucius rally of 10,000 people. In my heart I absolutely refused to give in; imagine, human beings rejecting humaneness, could one possibly profess the way of wild beasts? Later, the facts proved day by day that there was indeed in this world a handful of such people who rejected humaneness and only professed the way of beasts, such scoundrels as the "gang of four," whose actions were inhumane, who strangled all human nature and gave free rein to bestiality. They distorted history, wrote long articles on the Confucian question, fabricated a great historical injustice merely for the purpose of framing and persecuting millions of cadres, common people and intellectuals.

I still maintain to this day that grasping the humanitarian spirit in the Confucian doctrine is the core question in a reassessment of Confucius. This great historical personality, Confucius, influenced the cultural and mental fabric of our fatherland for 2,000 years. His outstanding contribution consisted in this very aspect, a point which is also the subject of intensive study by foreigners.

I recall that when I participated in a symposium with several American scholars who were on a visit to Shanghai last summer, there was among them the president of an Association for the Study of Chinese Culture. I asked him: "What is the overall impression that you gained in your studies of Chinese culture?" In the first sentence of his reply he mentioned Confucius with an expression of heartfelt reverence. He saw much sense in such sayings as: "Do not do unto others what you would not like others do unto you;" "In carrying out the rules of pripriety, a peaceable manner is to be prized;" "Within the four seas, all men are brothers;" and he believed that this high esteem of peacefulness and brotherhood of manking embodies a spirit that is worthwhile advocating even in our days. I was greatly amazed to hear this American scholar recite by memory and with great facility these sayings of Confucius and to furthermore give them a practical applicability. I was particularly struck by another word from the same person: "Cultivating the humanitarian spirit inherent in Chinese culture and represented by Confucius should guide the American and the Chinese people in their joint efforts to safeguard world peace!" This will of course evoke much shaking of heads among those who regard humanitarianism as a reactionary crime. However, I was thinking at that time that it would be inappropriate to engage in voluble talk on Marxism with these scholars to an extent of involving their governments, but found that talking with them on humanitarianism, we still speak a common language. At the same time it gives us much food for thought that to our surprise it is a foreigner who places Confucius in such a high position, while some "Chinese" clamor noisily to cut down Confucius.

The culture that Confucius represents is, needless to say, mainly a feudal culture, but feudal culture also contains elements of a democratic character. There is first of all its inseparable connection with the humanitarian tradition pioneered by Confucian respect for man and concern for man. Humanitarianism is of class character and also changes in its substance with the changing times. There is the humanitarianism of the feudal landlord class (which for the first time did not regard slaves and peasant-serfs as cattle), there is the bourgeois humanitarianism (which raised such slogans as freedom, equality and universal fraternity), and there is also socialist humanitarianism (which by way of the proletarian revolution and dictatorship will thoroughly abolish all classes and eliminate exploitation). In view of their different characters, they must not be confused among each other. However, there still remains the question of a critical acceptance of our cultural inheritance. Since we are determined at present to build up a socialist spiritual culture, we must not write off at one stroke the national cultural tradition represented by the Confucian humanitarian spirit. Past neglect of the study of "national conditions," past rejection of our cultural inheritance and the past "great cutting down of cultural life" [a pun on "Great Cultural Revolution"] must have taught us a profound lesson.

Confucius was the first thinker, politician, educator and moralist in our history to set forth a systematic doctrine which has as its central concept "benevolence,' that is, humanitarianism. The progressive nature of this kind of humanitarianism, considering the conditions of the time, manifests itself in the following aspects:

Firstly, it acknowledged that slaves were also human beings. The slave-holders in ancient China were most inhumane. Slaves were not treated as human beings, even regarded as beings lower than cattle. Killing of slaves or burying them alive with their decreased masters was normal custom, with no laws or public opinion to stop or punish such practices. Confucius valiantly stepped forward in opposition. He even loudly condemned the use of tomb figures when he said: "Was he not without posterity who first made figures for burying with the dead!" Because the figures were used as "effigies of men (slaves)," Confucius exposed and condemned the cruel inhumanity of the slaveholders for killing and burying humans in a variant form. In general, the attitude toward the productive workers is always an important indicator for the different class standpoints, either progressive or backward. Confucius opposed killing or sacrificing humans in any form and advocated as the most important ethical norm to show compassion and concern for others. He also set forth such famous propositions as: "The benevolent man is kindhearted toward others;" "If you wish to establish yourself, seek to establish others; if you wish to achieve, help others to achieve." No matter how narrow the class character or even how hypocritical these propositions were, the fact that there appears "man," that "man" is stressed so emphatically as the center of all thinking, and that "man" does not exclude slaves, including peasant-serfs, shows up the progressive trend toward the end of the Spring and Autumn period, brought about by a large number of slaves running away and fighting a continuous struggle of resistance. It shows, refracted in Confucius' mind, the tottering of spirit power and the rise of the position of man (including slaves). Some have voiced the opinion that the "man" in the Confucian Analects is limited to the nobility and does not include common men or slaves. This viewpoint is without the slightest foundation.

Furthermore, it is not only that Confucius demanded from the rulers that they regard slaves and peasant-serfs as human beings, starting out from his position of humanitarianism, he, one step further, put forward an entire set of political proposals for benevolent government and rule of virtue, to lighten the oppressive criminal laws, combat harsh government and heavy taxation and alleviate hostile class conflict. He strongly advocated "employment of people at the proper seasons" and "to make more beneficial to the people the things from which they naturally derive benefit." He attached importance to the development of production and the interests of the people, and in addition admonished the rulers: "If the people have plenty, will their prince be left to want alone? If the people are in want, could their prince enjoy plenty alone?" The common people's interests are to be taken as one's own interests. Undoubtedly, these proposals were put forward out of consideration for the long-range interests of the ruling class. At that time the declining reactionary class was unable to recognize their own long-range interests and thus could not accept the political proposals put forward by Confucius. Although this was the case, these proposals in themselves were of a certain benefit as they expressed the historical development and the oppression of the people, and were possibly welcomed by the subsequent newly arriving landlord class. The early Han Dynasty and its "Cautioning Against the Failures of the Qin Dynasty" also summed up the doctrines of various schools of the past. After decades of probing and searching, it was only Emperor Wudi of the Han Dynasty who finally adopted a policy of "sole reverence for the ways of the Confucian scholars." This was conforming to the need of the upper structure to adapt to the objective laws of fundamental economic nature and must not be regarded as an accidental historical mistake. Historical edperience clearly demonstrates that whenever in any historical era a ruler displayed even only a little humanitarianism, followed the Confucian propositions of benevolent government and rule by virtue, diligently attended to government affairs, showed solicitude for the people and set a good example himself, there was social stability, production developed and history continued to move forward. In the opposite case, it was hardly possible to avoid the dire fate of the Qin Dynasty. Moreover, the political thoughts of Confucius, their emphasis on reality and their active and optimistic outlook, especially also their humanitarian spirit as further developed in the criticism of subsequent progressive thinkers, created under certain historical conditions a "canonical" foundation for resistance against wilfulness and cruelty of the ruling class and for exposure of their political abuses. It also became the idological weapon, the firm maintenance of the people's standpoint, in the struggle against those in power.

Furthermore, how are we to interprete the saying: "Restraining oneself and restoring the rites, that is benevolence"? In my opinion this must also be considered in the spirit of humanitarianism. "Benevolence" lies within the scope of morality in human relations. The "rites" comprise the whole sphere of institutions, regulations and social norms, in actual fact that political sphere. In Confucianism, the "benevolence" and the "rites" stand in the relationships of morality and politics. The two are closely integrated according to the principles of humanitarianism and form one unified inseparable entity of politicized morality and moralized politics. The overall demand is to have such benevolence and such virtues as "honesty and consideration of others," "filial and brotherly attitudes" and the correct conduct of those in highest positions become the political objective and to exercise "restraint of oneself" and "persistence in one's endeavors" to manifest the unselfish spirit and the active and optimistic outlook of humanitarianism and achieve a most profuse flowering of morality. Throughout his life, Confucius was anxious and always on the go as if to exemplify the humanitarian spirit of the saying "benevolence is the burden which he considers it is his to sustain." To stubbornly insist that "restraining oneself and returning to the rites" meant to restore slavery, can be nothing but ignorance and senseless barking. The feudal morality, undoubtedly, had the Confucian doctrines as its core. The "cardinal guides and virtues" of the Confucianist ethical code, whether added by later Confucianists or already germinating in Confucius' times, must be thoroughly rejected. However, the humanitarianism of Confucius is something of a quintessence of affinity to the people and democratic characteristics, which played an effective role throughout history in raising moral integrity, encouraging a rousing, optimistic and abundant national spiritual culture. Why not carefully and critically adopt it, rather than vainly trying to deny it totally in an attitude of historical nihilism?

Finally, it deserves to be emphasized that the Confucian humanitarianism is the product of a movement against the belief in spirits and ghosts. "The Master never discussed magic powers and unnatural demons." "The Master's discourses on nature and a divine order of things cannot be heard." "While you are not able to serve men, how can you serve spirits?" These sayings may appear to be a few simple ideas succinctly expressed, they were not merely casual remarks made in those days. "To serve men" and "know life" are actual problems of life in society which Confucius considered important. "To serve spirits" and "to know death" as well as "nature and the divine order of things" are concepts that belong into the sphere of mysticism remote from reality, or even of absurd fantasy, and Confucius refused any discourse on these subjects. This attitude shows an instability of the Yin and Zhou Dynasty religious beliefs that set in toward the end of the Spring and Autumn period. The progressive trend of changing around the former positions of man and the spirits was basically and in particular a movement against religious beliefs and belief in spirits and ghosts. In Europe, humanitarianism or humanism was born in the Renaissance as an ideological weapon against feudalism and the Church. It advocated a world view of respect and concern for man, and made man the center of everything. The same world view was already expressed in the humanitarian doctrines of Confucius almost 2,000 years before the Renaissance, and it became later the fine tradition of Confucianism. In all fairness it must be pointed out that China was spared a dark age of Church rule as prevailed in Europe during the Middle Ages. There are of course many reasons for that, but it must be admitted that one of the important reasons is the ideological tradition that has come down in one continuous line from this sage of the feudal era, a tradition that stressed the position of man and his present life on earth, that brushed aside spirits and ghosts and a future life in the great beyond, in other words, a tradition that strove for humanitarianism and scorned the belief in spirits and ghosts. As to the fact that Confucius also spoke of "the decrees of Heaven," his concept of the decrees of Heaven was quite different from that of Yin and Zhou times, because he summed up the trend of the late Western Zhou period which changed around the former position of man and spirits, that is, he concentrated all his attention on the problem of "man" and thus of course adopted an attitude of doubt and denial toward the religious view with regard to the decrees of Heaven. For this reason, I fully agree with the opinion expressed by Comrade Guo Moro that one must not interpret the decree of Heaven, as used by Confucius, as "a fatalistic belief in divine predetermination, but rather as a natural inevitability in the world of nature." ("Shi pi pan shu" [Ten Books of Criticism]), or one may say, as the objective laws which are independent of man's will. It is completely preposterous to label Confucius as one quilty of believing in "divine predetermination."

As to the ideological principles of Confucian education, many comrades have already expressed themselves positvely. We need not say anything more on this subject. Undoubtedly, the main content of this ideology was a full measure of humanitarian spirit. "To be content living without education is resembling an animal." In our present education we are just now stressing culture, good conduct and a new life style in educating and nurturing the new generation, things that are related to the humanitarian spirit. We are determined to build up not only a high degree of material culture, but also a high degree of spiritual culture. Once we start out from these considerations in our assessment of the Confucian viewpoint of humanitarianism, is it then not a matter of "being able to comprehend the rest of it"?

At the end of last year, I took part in a symposium on Confucianism at Qufu. Visiting again the place after the disasters of the past, all sorts of feelings welled up in my mind, and I wrote eight 4-line poems "In Memory of My Visit to Qufu," of which I shall reproduce the first poem as a conclusion to my short article:

> The waters of the Si River [where Confucius taught] role on,
>   never to return.
> I lingered for a while at the old site of the
>   Apricot Grove [where Confucius had taught].
> Who is to judge the meritorious deeds and crimes of history?
> The spirit of humanitarianism is being promoted by all the world.

OUTSTANDING POST-CULTURAL REVOLUTION NOVELS PRAISED

Shanghai WEN HUI BAO in Chinese 26 Jul 81 p 3

[Article by Bai Chengyi [4101 1504 5030]: "A Talk About 'Long' and 'Short' Stories"]

[Text] During his lifetime, Lu Xun seemingly never devoted his time to writing relatively lengthy stories or medium- and full-length novels. As far as I understand, at the turn of the summer and autumn of 1932, following a meeting with Comrade Chen Geng [7115 6342], he planned to write a medium-length novel similar to the work "Iron Current." This plan was abandoned after he found that he did not have at his fingertips the necessary information on the life of the Red Army of workers and peasants. At the turn of August and September 1936, Lu Xun again devoted his thoughts to producing a full-length novel dealing with Chinese intellectuals covering four generations. Unfortunately, he died before he could pick up his pen and get this writing plan started. The invaluable legacy that Lu Xun left to us includes short novels, each covering only a few thousand words. Among them are "A Madman's Diary," "Geng Yiyi," "Medicine," and "Native Place." His most celebrated work, "The True Story of Ah Q," covers no more than 25,000 words. Another work, "Blessing," has only some 10,000 words. His work "A Small Thing" covers no more than 1,500 words. None of these novels is very long. However, they provide us with a full picture of the life of semifeudal and semicolonial society in China and a dramatization of various characters--namely, Ah Q, Madman, Aunt Xianglin, Geng Yiyi, Runtu, Juansheng, and Aigu, in addition to workers and capitalists. Today, more than half a century later, these characters remain as lively in the people's minds as they were in Lu Xun's time.

By contrast, our novels today appear too lengthy and too prelix. More often than not, a short story covers no less than 20,000 or 30,000 words, and a medium-length novel no less than 50,000 or 60,000 words or even over 100,000 words. They are really too verbose and too lengthy!

Medium-length novels are new types of literary works born in the wake of the "Great Cultural Revolution." During the past 2 or 3 years, they have become more popular than ever. According to statistics released by the National Medium-Length Novels Evaluation and Prize-Awarding Meeting held in Beijing recently, in 1980 alone a record number of more than 170 medium-length novels were published. Among them are such outstanding works as "Middle-Aged People" and "A River Without Visual Navigation Aids," widely loved and praised by readers.

The appearance of medium-length novels in large numbers presages something new to come. They can replace novels that seem too long or too short, while still retaining the tastes of the full-length novels. Such free and versatile literary styles should be encouraged and promoted.

But we must also realize that thus far, there is still no definite line between short stories and medium-length novels or between medium- and full-length novels. Some short stories as they appear today are actually medium-length novels; some medium-length novels have turned out to be full-length novels. As a result, the full-length novels in circulation have become unduly longer than ever. It seems that no one will be satisfied until he can expand his novel to 500,000 or 600,000 words. Today, such well-written short stories as "The True Story of Ah Q," and full-length novels as Lao She's "The Auspicious Camel Rider" (which has nearly 140,000 words) and Ye Shengtae's [5509 5110 7118] "Ni Huanzhi" (which has more than 170,000 words) have become nostalgic to us because similar works are rarely seen nowadays!

In order to reverse the trend in which short stories and medium-length novels tend to be too lengthy, I consider it necessary to restudy Lu Xun's experiences in writing novels. In his article "How I Go About Producing Novels," Lu Xun gave us the following instruction: Writing does not begin with what you see; quit writing when you cannot go on; you must review your finished work or words at least twice so that you can mercilessly strike out all nonessentials. Try your best to avoid being wordy in your works. Since your purpose is to get ideas across to the people, you should avoid in your works using ostentatious and decorative words that seem unnecessary. Nor should you depict the wind and the moon in novels. Conversations should be as brief as possible. When you portray a character, it seems better to mobilize the most "concise" and the "simplest" forms of language or "other dramatic methods" so as to concentrate on his eyes. "The most economical way to depict a person's special character is through the portrayal of his eyes. It is useless to depict his hair, however dramatic your depiction." These experiences from Lu Xun can help us to cut out those "nonessentials" from our works, improve their quality, and keep "our short stories and medium-length novels at a controlled length."

SOCIOLOGICAL, EDUCATION AND CULTURE

EDUCATION FOR BUILDING SPIRITUAL CIVILIZATION EMPHASIZED

College President Stresses Northwestern's Role

Beijing RENMIN RIBAO in Chinese 4 Aug 81 p 4

[Article by Li Bingde [2621 4426 1795], President, Northwestern Teachers College: "Do a Good Job in Educational Work; Build an Advanced Spiritual Civilization"]

[Text] On the eve of the 60th anniversary of its founding, the CCP convened the Sixth Plenary Session of its 11th Central Committee and passed the "Resolution on Certain Questions in the History of Our Party Since the Founding of Our State." Comrade Hu Yaobang also gave an important speech on 1 July. The "Resolution" sums up our experience during the past 60 years, especially the past 30 years, and points out the direction and path for us to march forward following Mao Zedong Thought. As an educational worker, I now see from this our country's future of unlimited brightness, and my spirit has been given a boost: my confidence and determination to do a good job in my work have become even more abundant.

In the old society, I used to think education was one of the ways for national salvation. But cruel facts told me: education not only was incapable of saving the China of that day, but in old China education could hardly even save itself.

On the eve of the country's liberation, I saw the motherland's new hope, which included hope for the future of education: I therefore made up my mind to return from abroad. What made me very glad was that in new China, under the leadership of the CCP, various enterprises engaged in construction were making great strides and becoming more prosperous every day, and educational enterprises also were achieving unprecedented development. Regrettably, however, because of various reasons within and outside [the return of] education, the development of educational enterprises suffered a certain limitation and failed to achieve the additional progress that could otherwise have been gained.

By the time of the "Cultural Revolution," educational departments became an area of serious disaster. Intellectuals became viewed as "the stinking ninth class," and there was fundamentally no way of broaching the development of educational enterprises and an increase in the quality of education.

The smashing of the "gang of four" brought the people new hope. The Third Plenary Session of the 11th Party Central Committee effected a great historical turn and made the strategic decision to shift the focus of our work onto the construction of socialist modernization. Under the guidance of the line and principles of the Third Plenary Session of the 11th Party Central Committee, the national educational and scientific planning conference that took place in 1979 brought springtime to educational work anew. The feelings of educational workers were pleasant, and their zeal for work was great. But because people failed to achieve sufficient understanding of the nature, status, and role of education, and because their perception of the external and internal laws in education fell short, progress and improvement in educational work naturally remained subject to certain limitations.

It is now clearly pointed out in the "Resolution": "Socialism must have an advanced spiritual civilization. We must firmly eradicate such gross fallacies as denigration of education, science, and culture and discrimination against intellectuals--fallacies which have long existed and which found extreme expression during the 'Cultural Revolution.' We must strive to raise the status and expand the role of education, science, and culture in our drive for modernization. We unequivocally affirm that, together with the workers and peasants, intellectuals are a force to rely on in the cause of socialism, and that it is impossible to carry out socialist construction without culture and the intellectuals...." I think that when the intellectuals working on the educational front read this passage, they are all bound to be greatly encouraged, while on the other hand they are also bound to feel the heavy responsibilities they now shoulder.

The "Resolution" clearly points out: "The objective of our party's struggle in the new historical period is to turn China step by step into a powerful socialist country with modern agriculture, industry, national defense, and science and technology, and with a high level of democracy and culture." Here, whether in terms of the requirements of the four modernizations or in terms of the requirements of the high level of democracy and especially the high level of culture, it is obviously necessary for us educational workers to make our own indispensable, important contributions. This is not only because the amount of work involved is very great but, more importantly, also because these requirements are both new and high. New situations and new problems which we must study and solve will be continuously emerging in this situation, as will new educational laws which we will have to explore and discover. Hence, educational workers must make great efforts to carry out strenuous, careful, creative labor.

The Northwestern Teachers College is one of the generative institutions in Gansu Province; the quality level of the teachers it trains directly affects the quality of secondary and elementary education in Gansu Province, and the quality level of secondary and elementary education in turn directly affects the quality of training for personnel of various grades and categories. From this, we can see how heavy are the responsibilities of those who work in this institution! If we fail to double our efforts, it will be impossible for us to accomplish the tasks the party has conferred on us. I am determined to follow the spirit of the foolish old man who removed mountains, push aside all difficulties, and do all I can in order to do a good job of overseeing our teachers' education and building a socialist advanced spiritual civilization.

Education Called Key to Spiritual Civilization

Beijing RENMIN RIBAO in Chinese 12 Aug 81 p 4

[Article by Zhu Jiusi [2612 0046 1835], Secretary of the Party Committee of Central China Institute of Technology: "Education Must Be Emphasized in Building Spiritual Civilization"]

[Text] The Sixth Plenary Session of the 11th Party Central Committee passed the "Resolution on Certain Questions in the History of Our Party Since the Founding of Our State," and thereby accomplished the historical task of returning to order from disorder with respect to the party's guiding ideology. Where should we now direct our energies? The leading comrades on the Central Committee say: "We should concentrate our main energies on considering how to make a go of our national economy, and at the same time consider how to effectively build our socialist spiritual civilization."

Building a spiritual civilization includes the two aspects of establishing lofty ideals, morals and customs, and heightening cultural and scientific knowledge. Heightening the level of the people's cultural and scientific knowledge depends on education; this is self-evident. Establishing lofty ideals, morals, and customs is also closely related to the development of educational enterprises. Youth and children make up the majority of our population today. They are all the objects of education and will all receive various forms of education; there are 204 million students studying just in fulltime schools of various kinds in the country. Schools have always been the bases where spiritual civilization is propagated. When school education is conducted well and the broad ranks of youths and children are trained to become a new generation of people with ideals, morals, knowledge, and strong physical strength, this influences the trend of the whole society. During the period of the "Cultural Revolution," the denigration of education, science, and culture and the discrimination against intellectuals reached their peak. The "gang of four" trumpeted "blank examination paper heroes" and trumpeted illiterates-cum-scoundrels; together with their other diverse perverse acts, they caused the fine social customs long shaped since the founding of our state to suffer serious disruption. After the smashing of the "gang of four," the Party Central Committee overthrew the reactionary "two estimates" on the educational front and restored the student recruiting system at institutions of higher learning; this measure alone has already led to a change in social trends. It shows that in our attempt to build a socialist spiritual civilization and establish socialist morals and customs, we not only need to have correct propaganda guidance, to strengthen ideological and political work, and to perfect our legal system, but even more importantly we must restore and develop our educational enterprises. Directing our education well is the groundwork for building our socialist spiritual civilization. Because of the attention paid by the Party Central Committee since the Third Plenary Session of the 11th Party Central Committee, our educational enterprises, which had been seriously trampled by the "gang of four," have been restored and have now gained a definite degree of development. But our education, whether in terms of quality or quantity, still has a very long way to go toward meeting the requirements for building our material civilization and our spiritual civilization. In particular, the long-standing "leftist" influence of denigration of education is still not entirely eradicated in some departments and some localities today. Therefore, in concluding that socialism must have an advanced spiritual civilization, the "Resolution" emphatically points out that we must endeavor to elevate the status of education, science, and culture in our drive for modernization. This should have a great realistic significance and profound influence in the future.

Educational enterprises must set their sights on transforming society. Schools must not only train youths to acquire cultural and scientific knowledge but also enable them to entertain lofty ideals, communist morals, and noble sentiments. nin said: "We should convert all undertakings for fostering, educating, and aining modern youths into enterprises for fostering communist morals among youths" ("Selected Works of Lenin," Vol 4, p 351). This makes it necessary for schools of various kinds and at various levels to carry out in a practical way the educational policy of overall moral, intellectual, and physical development, and to strengthen and improve ideological and political education.

In today's school education, an important problem hampering the building of spiritual civilization is the partial emphasis placed on the sciences, accompanied by a denigration of the arts. The realization of the four modernizations requires large contingents of talented scientific and technological workers; hence it is entirely necessary to stress science and engineering. But it will be very difficult to train the vast ranks of youths into a new generation of people with ideals, morals, noble sentiments, love for the motherland, and a revolutionary spirit of dedication to the four modernizations if we fail to enable them to master the necessary linguistic and literary knowledge, historical and geographical knowledge, moral knowledge, and social knowledge in other aspects, or if they lack cultural cultivation as a foundation and depend only on a general imparting of ideological education. Yet, viewed from our institutions of science and engineering, no small number of our college students today not only lack knowledge of the fundamental theory of Marxism-Leninism but also tend to have a low linguistic and literary level. In particular, many people never learn any world history or world geography, and their understanding of Chinese geography and Chinese history, including China's modern history, is poor. Since they do not understand history, especially China's modern history, it is very difficult for them to understand the truth that "without the Chinese Communist Party there would be no new China," and that "only socialism can save China." In the face of a lack of such understanding of the motherland's long history, splendid civilization, vast territory, and rich resources, it would be rather abstract to stress patriotism to them. Along with our opening up to the outside world and with the development of diplomatic and trade relations and cultural exchanges with capitalist countries, the ideology and corrupt way of life of the Western bourgeoisie are bound to filter in. Certain things with which they can erode and affect us are in many cases old stuff long criticized in history. But because our youths lack knowledge in this regard, they often accept them as new and novel things. In all such cases, we cannot blame the youths and students, because they have not learned many things or have learned very little about them. This is a problem in our educational work and, in the final analysis, an evil consequence brought about by the 10-year catastrophe. The question now is how to change this situation relatively quickly. This should also be an important task in effectively building our socialist spiritual civilization.

But in today's university education, there is a partial emphasis placed on science (and engineering), accompanied by a denigration of the arts; specialty offerings are too limited and there are too few students recruited in the arts, while the teaching curriculum in science and engineering, apart from a few subjects on Marxist-Leninist theory, basically includes no subjects in the humanities and social sciences. This is very bad for accomplishing such a task. This partial emphasis placed on the sciences accompanied by a denigration of the arts in university education also affects middle school education. During the period of the "Cultural Revolution," the middle schools basically discarded subjects like history and geography. Although these have been gradually restored in the past few years, their contents are hardly versatile enough. And because many middle schools lack qualified teachers in these areas, the contents prescribed by the [official] syllabus can hardly be turned into reality. Especially because little attention is generally paid to them, and mainly because the universities recruit too few students for their departments of the arts, most students, when they consider the question of their further study, feel reluctant to register for examination for entrance into the arts departments. As a result, they aim only at studying mathematics, physics, and chemistry and generally pay little attention to studying subjects like language and literature, history, and geography. Many middle schools consequently prescribe that the subjects of history and geography need not be examined (only investigated) during the entrance examination. This is a question worthy of our careful study in our educational work at present.

Ours is an ancient civilized country with several thousand years of splendid culture and an extremely rich historical heritage. In trying to build our advanced socialist spiritual civilization today, we must, on the basis of a critical absorption of this historical heritage, emanate even more splendid brilliance of our own era. Training and fostering a socialist generation of new people constitute the concentrated manifestation of the building of a socialist spiritual civilization. This is of course our unshirkable responsibility as educational workers. It is our belief that, under the correct leadership of the Party Central Committee, if we conscientiously study and carry out the spirit of the "Resolution," our educational work is bound to achieve better results.

ZHOU YANG SUGGESTS WAY TO DEVELOP OPERATIC ART

Beijing RENMIN RIBAO in Chinese 5 Aug 81 p 5

[Article: "WENYI YANJIU No 3, 1981, Publishes Comrade Zhou Yang's Article, 'Further Innovation and Development of Traditional Operatic Art'"]

[Text] WENYI YANJIU No 3, 1981, which came out on 25 July, has published Comrade Zhou Yang's article entitled "Further Innovation and Development of Traditional Operatic Art." This article is excerpted from the author's speech at the work forum on traditional operatic repertoire, which took place in July 1980. The article sums up several decades of experience and lessons in our reform work on traditional operas and also puts forward some guiding opinions on how to further innovate and develop traditional operatic art.

Zhou Yang's article is divided into four parts. In summing up in the first part the several decades of our experience in the reform of traditional opera, the article says that after the founding of new China: "We consciously endeavored to apply Marxist theory on critical inheritance of cultural legacities in order to reform traditional operatic art and unite the long cultural heritage in traditional operas in our nation and the spirit of the socialist new era as well as the cultural achievements in modern operas. This caused a sharp change in the outlook of traditional operas." Then the author makes the point of looking back at the history of ideological struggle and artistic struggle on the operatic front and the process through which the whole ranks of traditional operatic circles continued to elevate their scientific and cultural level, pointing out that, as "the history of over 30 years of operatic reform tells us, we must especially pay attention to preventing and overcoming crude practices." "Those things that are beneficial, whether they are from classical operas or from modern operas, should always be carefully preserved." "Rejecting both conservatism and crudeness: this may be said to be an important experience in over 30 years of our operatic reform." The article further states: "Continually elevating the scientific and cultural level of the entire ranks of traditional operatic circles, promoting the development of artistic creations and theoretical research in traditional operas, and enabling traditional operas to become an art with a complete system better able to reflect the new era and new life: this is the goal toward which we have consistently directed our efforts in pursuing our work in operatic reform." "We should take the elevation of the scientific and cultural level and artistic cultivation of traditional operatic workers and the training of a new generation as a strategic task. We must create conditions for their study and advancement so that their vision will be broadened and their knowledge will increase, thereby enabling them to become artists with fairly comprehensive cultural and artistic accomplishments.

In the second part, Zhou Yang places emphasis on his views on "enriching and innovating traditional operatic art." Comrade Zhou Yang says: "We must enrich and innovate the repertoire of traditional operas, and elevate the ideological and artistic level of such repertoire. Our fundamental principle is still 'Let a hundred flowers bloom; weed out the old to bring forth the new.' On this we must not have any doubt or wavering. On the matter of our repertoire, we must on the one hand do our best to achieve comprehensiveness and versatility and to aim at innovation and avoid repetition and monotony; on the other hand, we must also follow the direction of serving the people and serving socialism, impart education through recreation, and refrain from drifting toward confusion. Toward the staging of repertoire, we must relax our requirements and refrain from resorting lightly to proscriptions; so long as a program is not politically reactionary or designed to propagate obscenity and violence, it should be allowed to be staged. We must formulate policies on such repertoire that meet our needs; we must adopt relevant administrative measures; and, most important of all, we must adopt social forms to solve ideological questions in art by relying on public opinion in society and operatic reviews." On "weeding out the old to bring forth the new," the article says: "Since our culture and art are, generally speaking, socialist, then weeding out the old to bring forth the new in operatic art is mainly to bring forth the socialistically new. Socialism is in turn inseparable from democracy and patriotism; therefore it is also to bring forth the democratically and patriotically new. Whatever reflects realistic life and historical life with such a new spirit artistically, including the traditional operatic repertoire sifted and revised with this spirit, generally speaking belongs to the realm of socialist culture." Comrade Zhou Yang's article also states: "Modern operas, traditional operas, and newly written historical operas are all needed by the people, and they must all be developed and improved. It is improper to advocate any 'principal' category, since that would be easily subject to mishandling and would hardly be beneficial to the realization of the double-hundred principle." "What each kind of opera and each operatic troupe is fit to perform may be different, with selective emphasis, and may be subject to a division of labor; we must not deny a division of labor or treat every kind and every troupe the same way." "But insofar as the requirement of the overall trend of development in operatic enterprises is concerned, we should put emphasis on modern operas." "In the case of the various indigenous operas, because they are close to the local communities and because their forms are also fairly free and lively and more susceptible to the reflection of modern life, they should be allowed to give as much scope as possible to their strongpoints in this regard."

Comrade Zhou Yang's article states: "If we decide to work on modern operas, then we must do a good job in this regard; we must raise their quality, not only paying attention to their ideological character but also studying their dramatic character and their literary character. We must not simply produce run-of-the-mill products." "Our modern history of the revolution basically has as its core our party history and military history; it touches on important historical events and historical personalities. We must endeavor to follow the authentic and not resort to imagination and fabrication." "We must be especially prudent."

Zhou Yang's article also holds that "in the case of certain traditional operas which have become controversial as well as influential among the masses, while they have serious faults in terms of their ideological content, they may demonstrate certain characteristics in their stories and artistic performance and have become well known and liked by the audience. In such circumstances, we may organize the forces of operatic circles to discuss and revise them anew and carry out experimental performances. This is also one aspect of our effort to 'rescue our legacy.'" "We must encourage the operatic artists' spirit of innovation and dauntlessness in creation, so that they will not be afraid of failures; if they fail, they can start all over again. Without such a spirit, it would be impossible to reform our rich operatic heritage with its up to 1,000 years of historical tradition."

In addition, Zhou Yang's article expresses some views on the questions of innovating the stage art of traditional operas and reforming the system of operatic troupes.

The article states; "Through the long, devoted creativity of the vast ranks of artists and talented performers, our operatic art has forged very sophisticated and singularly characteristic techniques of performance and distinctive styles and schools. But because these have all been brought about under the historical condition of insufficient development of material conditions in the past, they show certain limitations. Along with the changes in the times, advances in science and technology, and changes in material conditions, the performing techniques in art are bound to undergo changes and become more and more versatile. The staging of traditional operas must undergo some reform and improvement before it can meet the demands of the current era and present-day audiences." "It is hoped that stage artists will preserve the characteristics of traditional operas in order to keep them susceptible to the inherited techniques of performance, on the one hand, and confer upon them the sense of the time and break through sterile conventions on the other hand."

The article also points out that an "operatic troups" is a trade in cultural service; it has a solemn responsibility to educate and entertain the people. It must be operated according to artistic laws as well as economic laws. But after all, it is a group engaged in ideological work, and not one with a simple, profit-making goal. It is engaged in artistic work and undertakes to educate the people and entertain the people. It must pay attention to economic laws and the value of the box office, but those are not primary. What is primary is ideological and cultural value, artistic value. It will not do if an operatic troupe does not pay attention to the value of the box office or economic accounting; but first of all it must take into consideration how it affects the people's thinking, whether it facilitates an improvement of the people's ideological consciousness and esthetic interest, and whether it facilitates an improvement of the level of our operatic culture or our culture and art as a whole. An operatic troupe and various performing groups should all consider these questions first, and not put economic targets in the position of primary importance.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

PARTY AND STATE

PARTY MEMBERS URGED TO SPEAK OUT ON ISSUES OF RIGHT AND WRONG

Beijing BEIJING RIBAO in Chinese 15 Aug 81 p 3

[Article by Hou Jueliang [0186 3635 5328]: "How Can Anyone 'Acquiesce' in the Face of Controversial Issues?"]

[Text] Anyone who has read Ouyang Xiu's [2962 7122 0208] "Letter to Imperial Censor Gao" will remember Gao Ruona [7559 5387 6077] as an imperial censor capable of pretending to be a "well-educated gentleman of rectitude." Although he could take an audacious stand on historical issues of right and wrong, he often declined comment on current issues of right and wrong for fear of getting himself into trouble. "This taciturn attitude made him appear just like any other person on the street." The attempt by Gao Ruona to pass himself off as a genuine "gentleman of rectitude" failed, because he could not daringly speak out on the controversial issues of the day. For this reason, Ouyang Xiu called him a man "guilty of failing to speak out."

Of course, no communist is encouraged to "keep his mouth shut" in order to protect his own interests as Gao Ruona did. Communists must be openminded and above board, do justice to others, and make clear their attitudes and views. In this connection, Comrade Hu Yaobang said it well: "Communists should take a clear-cut stand on questions of principle and should uphold truth. Every party member should uphold the party spirit and be unequivocal in his position on questions of right and wrong which involve the interests of the party and the people, and should show clearly what he is for and what he is against."

There are two categories of controversy: Minor and cardinal issues of right and wrong. Minor issues of right and wrong involve unprincipled disputes which are too insignificant to merit discussion. We can completely ignore them or refrain from embroiling ourselves in these minor issues of the day. But we must step forward to speak out on cardinal issues of right and wrong which involve the interests of the party and the people, [and we must] uphold principle and distinguish right from wrong. Communists must demonstrate their strong party spirit and take a strong stand for principle. There are "some people who may not feel indignant at seeing someone betraying the interests of the masses, who neither dissuade him nor stop him from doing so or reason with him, and who just let him do whatever he wishes." This attitude was criticized by Mao Zedong long ago. No communist should be inclined to adopt such an attitude.

Our efforts to encourage party members to speak out daringly on the issues of right and wrong will have a significant role to play in carrying forward the party's excellent tradition, in resisting unhealthy trends, and in upholding the interests of the party and the people. An example is Communist Party member Li Haicheng [2621 3189 2052], of the Hengshui Iron Works in Hebei. When he saw someone in the iron works abusing his authority and embezzling public property, he regarded it as a cardinal issue of wrongdoing and bravely exposed and reported it to the authorities concerned on 73 different occasions. During the struggle, he regarded himself as a master of his own country fearing neither criticism nor reprisals; this enabled him to overcome one difficulty after another in upholding the party's principles and the interests of the state. This noble spirit of the highest order reflects the political consciousness of Communist Party members as well as their sense of responsibility. However, some other party members have failed to follow this approach. In the face of the cardinal issues of right and wrong, they often lose sight of party spirit and of their sense of principle. For example, some party members have failed to struggle against the unhealthy trend of violating the "Guiding Principles." They have even gone so far as to cover up [wrongdoing], to lobby on behalf of its proponents, and to harm comrades who have displayed a daring spirit to expose it. Some party members have taken an ambiguous attitude toward this matter. Regardless of who is right and who is wrong, they often punish both sides of an argument the same way, thus confusing right and wrong and encouraging the growth of the erroneous trend. Many comrades have also taken an evasive attitude toward issues of right and wrong. Although they know who is right and who is wrong, they often do not have the guts to speak out on such cases for fear of offending people. They often deliberately speak incoherently and behave awkwardly for the purpose of keeping their mouths shut so that they can bury the issues of right and wrong in their hearts. This taciturn attitude that they have adopted is entirely wrong and has nothing in common with the principles upheld by communists.

In the feudal society, being a taciturn member is also viewed as disgraceful behavior. A lack of courage to speak out on the issues of right and wrong is not in the interests of the party and the people. Meanwhile, this attitude will have a demoralizing impact on the will of party members and will relegate their status to that of common people. This is something that merits our serious attention!

PARTY AND STATE

NECESSITY OF CONSTRUCTIVE CRITICISM EXPLAINED

Beijing BANYUE TAN [SEMI-MONTHLY TALKS] in Chinese No 15, 10 Aug 81 pp 14-15

[Article by Xue Zhongxin [5641 0022 2450]: "Criticism and Club Must Not Be Confused"]

[Text] The moment criticism is mentioned, some people often think of the club. When a certain leader criticizes a comrade, or when a certain newspaper criticizes a certain individual's words and deeds or work, there will be some who comment: "Here comes the club again!" It appears that criticizing is hitting with the club. Actually, correct criticism and hitting with a club are things of two different natures, and they must not be confused.

Criticism and self-criticism are our party's good tradition and serve as the weapon of self-reform of the Communist Party members. Our party uses it to cleanse the dust from itself and overcome the defects and errors in work; it also uses it to educate our cadres and masses and strengthen the unity and fighting power of the revolutionary ranks. It is an indispensable component of normal democratic life.

A produce of excessive struggling, the club is quite different; it is not criticism advocated by us. In areas where the democratic life is abnormal, some people, under the erroneous leftwing influence, often one-sidedly magnify the disputes over the different views within the people or the defects and mistakes of some comrades, criticizing in exaggeration and bullying people on the strength of their power. People are terrified by the sight of the waving club.

Our attitude is that there must be no clubbing and no repetition of the mistakes of excessive struggling and aggravated class struggles. However, normal criticism must be deployed. For the prosperity and development of our cause, criticisms and self-criticisms must be regularly launched among our comrades, in order to foster an upright spirit and eliminate the evil trends.

Currently, a prominent problem in our cadre ranks is that some leading comrades do not have a clear attitude in face of right and wrong. They have no courage to support the good and criticize the bad and, wavering and vague, they fail to manage and handle when they should. As a result, some areas and units fail to resist and combat the evil trends and promote the upright spirit.

Why are some comrades not adept at using the weapon of criticism? One should say that, for a long time in the past, especially during the 10-year internal disorder, our party's good tradition of criticism and self-criticism encountered serious disruptions. The excessive struggles left a lingering apprehension, making people hesitate to either self-criticize or criticize. There are also some comrades who cannot be criticized. If anyone should criticize them, they would say: "You are hitting with a club!" Actually, they are holding a club in their hands to resist criticisms, constantly ready to wave it at the criticizer. Permitting countercriticism is a condition to promote healthy criticisms, but facts and reasons are also required. It is obviously wrong to turn criticism into a club to suppress democracy and dissents, but it is just as wrong to call criticism a club and reject it.

We must realize that, when our party is vigorously bringing order out of chaos and rectifying the leftwing mistakes, the practice of hitting with a club has been greatly reduced, What requires attention at present is failing to criticize what should be criticized, permitting the undesirable things to develop and spread. This situation must be changed. The leading cadres of the various levels and the broad masses should, instead of being lenient, justly criticize the bad things, undesirable phenomena and evil trends. The comrades with the courage to speak out, to criticize and to do work must be given active support.

In upholding the four basic principles, the party's leadership comes first, while to uphold the party's leadership, we must use the effective weapon of criticism; we must not be weak and incompetent in face of right and wrong. In his speech at the party's 60th anniversary mass meeting, Comrade Hu Yaobang profoundly pointed out: "On the issues of principle, the Communist Party members must uphold the truth and have a clear stand. On the issues of right and wrong linked with the interests of the party and the people, each and every party member must uphold the party spirit and clearly express his own attitude and what he supports and what he opposes. The rotten and mediocre practice of 'everybody is good and harmony everywhere,' in disregard of principles, is incompatible with the proletarian essence of our party." All our party members must regularly examine themselves to determine how they are doing in this aspect.

Naturally, we must start out from the practical in criticism, seek the truth from the facts, resort to reason, aim at helping people, and stress the method and the result, giving a rich educational significance to criticism, helping the comrades raise their awareness and rallying them to advance together. This also is a valuable experience gained through many years of practice.

The club to hit people must be laid down! The club against criticisms must be thrown away! The weapon of criticism to unite and educate the people must never be lost!

ROLE OF CRITICISM, SELF-CRITICISM STRESSED

Hangzhou ZHEJIANG RIBAO in Chinese 19 Aug 81 p 4

[Article by Zhu Guocai [2621 0948 2088]: "Criticism and Self-Criticism Must Be Popularized"]

[Text] What should be relied upon to resolve contradictions between the proletarian and nonproletarian ideologies and between the correct and incorrect ideas within the party? Practical experiences accumulated by our party over the years tell us that such contradictions can be resolved only by means of criticism and self-criticism. In making criticism and self-criticism, we can clean the dust that dirties our faces. We still live in a society where class struggle still exists to a certain extent along with the ideological influences of the exploiting classes and other nonproletarian classes and the undesirable phenomena of capitalism, feudalism and small production which still affect our daily lives and the organization of our party. The weapon of criticism and self-criticism is still indispensable to our efforts to keep our faces clean and immune to the dust, to free our society from contamination, and to bring vitality to our ruling party at all times. Through the application of the weapon of criticism and self-criticism, our party has taken a correct attitude toward its achievements and errors and its merits and demerits, and has been successful in resisting the erosion of various erroneous ideas and in defeating the enemy attacks with sugar-coated bullets. In this way, it has put itself in an invincible position and won wide popular support. However, today there are some comrades in the ranks of our party who have been out of touch with, forgotten, and even hated and resisted criticism and self-criticism. Some comrades do not dare criticize anyone for fear of offending him, reprisals from him and destroying their working relationship with him. Some comrades have become reluctant to criticize others who consider themselves as perfect as a fresh flower or an angry tiger whose backside no one dares to touch. By taking this erroneous attitude, they have caused the party harm and prevented themselves from making progress. Since we are committed to serve the party, the people and comrades, we must display a daring spirit to uphold principle, to exercise criticism and self-criticism, and to struggle against the unhealthy practices and evil winds affecting our party. We must persist in seeking truth from facts, adopt a friendly attitude toward the people and pay proper attention to our method and manner in the course of criticism. As long as we can do so, we will be able to win support from the party organizations and the overwhelming majority of comrades and the broad masses. The fact that justice always prevails over the evil wind is an objective law governing the development of things.

The exercise of criticism and self-criticism by the broad masses of people as the masters of their own country will pave the way for their participation in the management of their country. The broad masses of people are entitled to criticize or to offer suggestions to party organizations at all levels. The party must accept their supervision. This is also an important step taken by the party to sharpen their professional skills in managing the country, the economy and industry through training. Only in this way can they be encouraged to demonstrate their initiative and enthusiasm for managing their country and be provided opportunities to test, improve and strengthen their creative and innovative ability. Deprived of their right to criticize and supervise, the people's desire to innovate and display enthusiasm would be suppressed and the slogan "the people are masters of their own country" would become meaningless. In this way, our party may be in danger of losing basic support from the masses and may again commit grave mistakes.

Of course, our program to launch criticism and self-criticism is aimed at improving the party leadership. For this reason, in providing criticism and self-criticism, we must adopt a serious and conscientious attitude, base criticism on facts, and exhibit a friendly manner. We must rectify existing mistakes without trying to hide and thus magnifying them. All forms of criticism should be offered in a well-reasoned way or with methods which emphasize persuasion and reasoning. Criticisms should be based on subjective speculations or aimed at intimidating others. Nor should we make far-fetched interpretations and unduly involve comrades at a higher or lower level in the course of criticism. When criticism and self-criticism are being popularized, excessive struggle should be avoided.

The party must practice democracy as a fundamental guarantee to develop criticism and self-criticism. A climate in which no critics should be punished and their admonitions should be encouraged is essential to the development of criticism and self-criticism. In this respect, our party has experienced both success and failure. During the Yanan rectification campaign, the correct application of criticism and self-criticism by our party was instrumental in leading it to sum up its experiences, to achieve unity among the comrades and to win victory in the liberation war. Since the party's Third Plenum, our party's excellent tradition of criticism and self-criticism has been revived and carried forward, and some new and useful experiences have been gained in this respect. As long as we can constantly eliminate erroneous ideas through the correct application of the weapon of criticism and self-criticism, we can certainly revitalize the organization of our party, overcome difficulties on the road ahead, and win new victories.

TERMS 'STRUGGLE BETWEEN TWO LINES,' 'LINE' TO BE AVOIDED

Hangzhou ZHEJIANG RIBAO in Chinese 12 Aug 81 p 4

[Article by Liu Mouyin [0491 5399 6892]: "Why Are We Going To Avoid Mentioning 'Struggle Between the Two Lines' and Also Shun the Term 'Line' Hereafter?"]

[Text] The "Resolution" passed by the Sixth Plenary Session of the 11th Party Central Committee does not use "struggle between the two lines" and also rarely uses the term "line." When it does mention "struggle between the two lines," the latter is usually prefixed with the words "so-called," with the result that a negative designation is understood. There is a reason for this.

The reason is that the connotations of the so-called "struggle between the two lines" and "line" as concepts have not been very clear in the past. Viewed from the history of the international communist movement, Marx, Engels, and Lenin rarely used the term "line." It is not used in their principal works; nor is any serious definition given it in other works. Not until 1929 did Stalin, in his article "Rightism in the CPSU (Bolshevik)," begin to raise the question of "line" to a very serious status.

In the beginning, our party also rarely used the term "line." Documents from the Second Congress through the Sixth Congress did not use such a term. Only from the time of the "Letter From the Executive Council of the Communist International to the Central Committee of the Chinese Communist Party on the Li Lisan Line" of October 1930, which broached opposition to the Li Lisan line, did we begin more often to use terms like "line," "mistaken line," "two-line struggle," etc. In the "Political Resolution" passed by the first party congress of the Central Soviet District in November 1931 alone, these terms were used in more than 70 places. After Wang Ming came to control the leadership power, such usage became more and more mystical, and the more time passed, the more loosely the term "line" was used. During the "Cultural Revolution," such abuse [of the term] worsened to the point when one could simply do whatever one pleased with it. One view was that in a socialist society, class struggle became more and more acute and drastic and was bound to be reflected within the party, and in essence it became an intraparty class struggle. Hence, "struggle against some line" became a constant and omnipresent ghost as regards "bourgeois reactionary line," "Liu-Deng line," "revisionist line," "opportunist line," etc., etc. And since a "line" was in question in each case, a large contingent of people, ranging from the chairman of the People's Republic above to the common folk below, sometimes numbering hundreds of millions, thus became involved. Whether they were workers, peasants, meritorious persons, labor models, or good cadres, once they "executed" the so-called "Liu-Deng line," they became personalities of the dark line, and once they uttered any words incompatible with the so-called "revolutionary line," they immediately became connected with the "reactionary line," whereby at a minimum they would be criticized or paraded on the street with signboards hung on them, and at maximum they would be thrown into jail and put to death. This kind of "struggle against some line" subjected hundreds of millions of people to persecution, and our party and state sustained catastrophic losses as a result.

Viewed from the history of our party, we cannot reduce everything to a struggle between two lines, either. Because the party's history has been complex, every mistake has had its objective and subjective causes; as its degree has differed, its influence has varied. Therefore, we should analyze it from a dialetical-materialistic point of view and in the manner of seeking truth from facts, identifying whatever the problem really was and the degree to which it really proved erroneous, without inflaming it along the way, and recognizing the extent to which it might prove to be right, without any exaggeration or blind inflation. Only thus can we persuade others by way of reason, and only thus can our conclusions stand the test of history. But this was not the case in the past. Whoever committed a mistake within the party would have the label of "mistaken about the line" attached to him, and above him there would be many representative personalities and below him a long train of elements mistaken about the line involved. This not only resulted in injuries to many people but also created confusion about many party matters. In some cases the judgment was too severe; in others it was too lenient; and in still others it was turned upside down. It would be far from accurate to reduce the history of our party to a history of struggle between the two lines: in which event should the line be deemed mistaken, and in which event should it not? And during these struggles between the lines, who were correct and who were incorrect? When did a mistaken line begin each time, and when did it end? All this is very hard to judge clearly. What in the past has been designated a so-called "struggle against some line" is now often overturned. The more conspicuous cases in this regard include those of Peng, Lo, Lu, and Yang, Peng, Huang, Zhang, and Zhou, and the so-called "Liu-Deng line." On one occasion it was Lo Zhanglong, while on another it was Zhang Guotao; both of them resorted to factional struggle in their attempts to set up a separate central authority. The designation of their cases as those of struggle between the two lines was by no means relevant, since the nature of their cases was more serious than being mistaken about the line. The Gao and Rao incident was also similar to this. Apart from these, Qu Qiubai's mistake lasted 3 months, and Li Lisan's mistake lasted less than half a year; the designation of theirs as cases of struggle between the two lines also calls for reconsideration. Also, as for the "Cultural Revolution," it was unprecedented in the history of our party in both the nature and the seriousness of its mistakes; were we to follow propositions of the past, would it have been designated as "mistaken about the line?" In foregoing the designation of "struggle between the two lines" and following the principle of seeking truth from facts, the "Resolution" has already gone beyond the past concept of the so-called "struggle between the two lines" in its analysis and appraisal of the mistaken nature of the "Cultural Revolution." Such an attitude, based on seeking truth from facts, tallies with Marxist principles and is therefore bound to be able to stand the test of history.

Naturally, this does not necessarily mean that the term "line" is not going to be used at all from now on. It may still be used on questions in such instances as "the Third Plenary Session of the 11th Party Central Committee established our correct ideological line, political line, and organizational line" and "formulated our correct line, principles, and policies." But we must by no means ever use it in intraparty struggle, and the usage of the so-called "struggle between the two lines" should especially be completely proscribed from now on.

ARTICLE REVIEWS PROBLEMS, PROGRESS OF PARTY

Beijing BANYUETAN [SEMI-MONTHLY TALKS] in Chinese No 13, 10 Jul 81 pp 10-26

[Second part of an article by the editorial staff of the magazine: "The Great and Glorious 60 Years. First part of article not translated by JPRS.]

[Text] The 32 Years of Socialist Revolution and Socialist Construction

If we hail the victory in the revolutionary struggle for new deomcracy in China as a great event, we must concede even greater glory to the victory in our socialist revolution and the achievements in our socialist construction. In the same way our path to victory in the revolutionary struggle for new deomcracy, our path to victory in our socialist revolution and to our achievements in the socialist construction has not been perfectly straight, but a tortuous path. One may say that it has been a winding path to victory.

The Great Achievements of 32 Years Since the Founding of the PRC

Generally speaking, the history of the 32 years since the founding of the PRC by the CCP has been a history of tremendous successes brought about by the CCP, guided by Marxism-Leninism and Mao Zedong Thought, leading the whole people of various nationalities in carrying out socialist revolution and socialist construction. Among all the achievements during these 32 years, the most important ones were the elimination of the exploitative system and the establishment of the socialist system. This is the most profound social change in Chinese history and is the foundation for all future progress and development in our country.

Considered separately, the following are the 10 most important achievements brought about during these 32 years:

1. We have established and consolidated the people's democratic dictatorship led by the working class and based on the worker-peasant alliance, namely, the dictatorship of the proletariat. This new type of state power, in which the people are the masters in their own house, is the fundamental guarantee for the building of a modern socialist country, prosperous and powerful, democratic and culturally advanced.

2. We have achieved and consolidated national unification of the county (apart from the fact that Taiwan and other islands have not yet been returned to the

motherland). We have achieved and consolidated the great unity of the people of all nationalities. We have achieved and consolidated the great unity of the workers, peasants, intellectuals and people of other classes. On this foundation, we have formed and developed the broad united front of over 98 percent of the population, comprising all socialist working people and all patriots who support socialism and all patriots who stand for the unification of the motherland, including our compatriots in Taiwan, Hong Kong, Macao and all overseas Chinese.

3. We have defeated one by one the aggression, armed provocation, sabotage and menancing threats of imperialism and hegemonism and safeguarded our country's security and independence. We have won a great victory in the resist-America, support-Korea war and further great victories in the self-defense counter attacks in protecting the border regions of our fatherland.

4. After taking over bureaucrat-capital enterprises and recovering enterprises run by foreign monopolistic capital, we have established and developed a socialist state-run economy in the leading position and basically completed the socialist transformation of the private ownership of the means of production into public ownership and put into practice the principle of "to each according to his work," thus eliminating the system of exploitation. The exploiting class as a class does not exist anymore. The overwhelming majority of those who belonged to the exploiting class have been remolded and have become workers who live by their own labor.

5. In our well-planned industrial construction we have achieved important successes and set up an independent and fairly comprehensive industrial complex and economic system, thus laying a material foundation of considerable proportions for the realization of the four modernizations. In 1980, the fixed assets of the whole country's industry exceeded 410,000 million yuan, which is over 30 times the total accumulations of old China during the last 100 years.

6. Conditions in our country's agricultural production have experienced a remarkable change, resulting in big increases in production. The amount of land under irrigation has grown from 230 million mu to 675 million mu. Flooding by big rivers has been brought under initial control. Farm mechanization, the use of chemical fertilizers and electricity has been greatly expanded. In 1980, the total output of grain was nearly double compared to that of 1952, and cotton output was more than doubled, thus basically guaranteeing sufficient food and clothing for our population of almost 1 billion.

7. Considerable progress has been registered in our education, science, culture, public health and physical culture. In the past 32 years, we have educated nearly 9 million men with specialized knowledge or skills. We have mastered nuclear technology, man-made satellites and rocket technology, which clearly demonstrates the important and great progress achieved by our country's science and technology. Great improvements are evident in our people's cultural level, their physique and health; the pre-liberation average life expectancy of 35 years has been almost doubled.

8. Due to developments in our economic and cultural undertakings, the living conditions of the people have been remarkably improved compared with conditions before liberation. The average number of those employed in an employee or workers'

family was 1.33 persons in 1957; this figure increased to 2.35 persons in 1980. The average consumption of a person in 1980 is almost double that of 1952, with due consideration for commodity price increases.

9. The People's Liberation Army has grown from a single ground force to a composite army, including naval and air forces and other technical branches. Their training and technical equipment has been very much improved and raised to a high degree of perfection. The PLA has made tremendous contributions in supporting and protecting the socialist revolution and the socialist construction.

10. Our country's international position and role has been greatly enhanced. Our country has established diplomatic relations with 124 countries and has economic and cultural relations with many more countries. Our country has recovered its seat in the United Nations and in the Security Council. The Five Principles of Peaceful Coexistence which our country initiated and upheld, have already become the generally acknowledged norm for international relations. Great and important contributions have been made by our pepole toward international peace and the progress of mankind.

These great acheivements, brought about in the 32 years since the establishment of the PRC, are universally acknowledged and cannot be denied by anyone. However, these achievements are only initial achievements; they could have been much greater, were it not for a number of mistakes that we committed, including such grievous mistakes as the "Great Cultural Revolution" lasting 10 years, we have therefore no reason at all to be self-satisfied. As to the shortcomings and mistakes that we have committed in the course of our achievements and our work, we must adopt an attitude of "developing successes and overcoming shortcomings," emancipating the mind, making full use of our brains, seeking truth from facts and uniting as one in looking forward to the future. In this manner we shall gain even greater victories.

The Tortuous Path to Victory That We Have Trod

Since the establishment of the PRC, our path of gaining the various achievements has been a tortuous one. Similar to what happened during the stage of the democratic revolution, we have experienced two victories and two defeats during the stage of socialist revolution and socialist construction. Only after the many experiences of the 2 victories and 2 defeats were summed up by our party after it had smashed the "gang of four" and particular since the 30 Plenum of the 11th CCP Central Committee, were we able to gain a considerably more profound knowledge of the objective laws of socialist construction and to find the correct path for the construction of socialism adapted to the special condition of our country.

The history of the 32 years since the establishment of the PRC can be divided into four periods, 7 years of basic completion of the socialist transformation, 10 years of initially building socialism in all spheres, the decade of the "Great Cultural Revolution" and the 5 years since the smashing of the "gang of four."

The first period comprises the 7 years from the establishment of the PRC in October 1949 to 1956. These were the 7 years when our party led the various nationalities of the whole people in acocmplishing the main socialist transformation, thus gaining brilliant victories.

In the first 3 years after the inception of the PRC, we cleared the mainland of the remnant forces of the Kuomintang reactionaries and of bandits. In a movement to suppress counterrevolutionaries, we eliminated the main force of the counterrevolutionary elements, established and consolidated the people's democratic regime, confiscated bureaucrat-capitalist enterprises and transformed them into state-owned socialist enterprises. We carried out agrarian reform in the new liberated areas, launched the "three-anti" and "five-anti" movements and guided private commerical and industrial enterprises on to the well-developing track of state capatilism. In these 3 years we restored the national economy which had suffered grievous losses during the extended period of fighting and increased agricultural and industrial production to levels far above any in all our past history. Under the guidance of the party's general line for the transitional period, based on proposals by Comrade Mao Zedong, we began in a planned manner the socialist construction and the systematic socialist transformation of agriculture, handicrafts and capitalist industry and commerce.

In this period, our party creatively proceeded on a path of socialist transformation which was suited to China's special conditions. This was a method of peaceful and gradual transition which realized the social transformation of agriculture, handicrafts and capitalist industry and commerce and which at the same time was the road toward the transformation of the economy and transformation of man. These three kinds of transformation were in the main completed by 1956. There were certain shortcomings in this work. From the summer of 1955 onward, we were too hasty in pressing agricultural cooperation, our work was done carelessly and the forms were over-simplified and overstandardized. In 1956, too many capitalist industrial and commercial enterprises and individual industrial and commercial enterprises were eliminated through merges. There were these and other cases of inappropriate actions. But on the whole, it was definitely a historic victory to have effected, and fairly smoothly and rapidly, so profound and difficult a change in the social and economic system in so vast an eastern country with a population of several hundred million and with its very complex conditions.

The main goals of our First 5-Year Plan, starting in 1953, were also fulfilled 1 year in advance in 1956 through our own efforts, assisted by the Soviet Union and other friendly countries. A number of basic industries, essential for the country's industrialization, were built up. In 4 years, the average annual increase in the total value of agriclutural output was 4.8 percent. During this period, the people's livelihood improved perceptibly.

In April 1956, Comrade Mao Zedong made his sppech "On the Ten Major Relationships," in which he initially summed up our country's successful experiences in socialist construction, set forth the correct way for dealing with contradictions in the socialist society, mobilized all active elements, and as far as possible turned passive elements into active elements to undertake the basic task of building a modern, great, socialist country. In September 1956, the party's Eighth National Congress correctly declared, based on the above-mentioned guiding ideology of Comrade Mao Zedong, that the contradictions between the working class and the bourgeoisie had already been basically solved, that the socialist system had been basically established in our country and that from now on the main task of the whole party and the whole people was to concentrate our strength on developing the social productive forces to build a modern socialist country. The congress also emphasized that strengthening the party was to be a question of properly building up the governing party, and demanded that the whole party uphold the principle of seeking truth from facts, carry out the line of the masses, strengthen democracy within the party and among the people, strengthen collective leadership and oppose the personality cult and abritrary decisions by individuals. The political, ideological and organizationl policies laid down by the party's Eighth National Congress were correct.

The second period comprise the 10 years from the basic completion of the socialist transformation to just before the "Great Cultural Revolution." These were 10 years in which our country began building socialism in all spheres. In these 10 years, we continued to achieve tremendous successes, although our lack of experience made us commit mistakes and suffer setbacks, but we also corrected our mistakes. Comparing 1966 with 1956, our country's fixed industrial assets increased 3 times, the value of the total industrial output increased 1.7 times. The output of such major industrial products as cotton yarn, coal, electricity, crude oil, steel, etc. increased tremendously. Beginning in 1965, self-sufficiency was achieved in petroleum. New industries such as electronic and petrochemical industries were established. Testing an atomic bomb was successful . Outstanding results were also achieved in the fields of education, science, literature, public health and physical culture. The material and technological foundation that we rely on in today's work of modernization was to a great part built up during these 10 years. The backbone of the contingents working throughout the country in the fields of economics and culture were also trained during that period. This shows the guiding aspect of the party's work during that period. It would be a mistake to ignore or underestimate the achievements under this guiding aspect.

On the other hand, there have been serious faults in the work of the party during these 10 years with regard to the guiding policy. The work of the party proceeded in a tortuous way, namely passing through a progression of correct action, mistakes, correction of mistakes and return to a correct line.

Nineteen fifty-seven was one of the years that saw the best results in economic work since the founding of the PRC due to the conscientious implementation of the correct line formulated at the Eighth National Congress of the party. In February 1957, Comrade Mao Zedong made his speech "On the Correct Handling of Contradictions Among the People," in which he propounded his doctrine, rich in original, creative ideas, on how to handle correctly the two kinds of social contradictions and in which he provided important ideological guidance for a correct way of carrying out socialist construction. In April of the same year, he launched a rectification campaign throughout the party with the theme of how to handle correctly contradictions among the people and he mobilized the masses to present criticism and suggestions to the party, and he acheived good results in these endeavors. When an extremely small group of bourgeois rightists seized the opportunity to attack the party and the socialist system, it was only correct and necessary to launch a struggle against and to criticize the extremely small group of rightists who actually existed. However, the scope of this antirightist struggle was overly extended in a serious way and a large number of intellectuals, patriotic people and cadres were unjustifiably labeled "rightists," with unfortunate consequences.

In 1958, due to our lack of experience in socialist construction and due to the fact that Comrade Mao Zedong and many leading comrades, both at the center and in the localities, had become smug about their successes, overestimated the socialist transformation in its effect on liberating productive forces, overestimated man's subjective will and the effect of subjective efforts, were impatient for quick results and launched the Great Leap Forward and the movement for rural people's communes without careful investigation and study. This resulted in such leftist errors as excessive production norms, arbitrary directives, boastful exaggerations and the stirring up of a "communist wind;" all these evils spreading unchecked in a very serious way. From the end of 1958 to the early stage of the Lushan meeting of the Political Bureau of the party's Central Committee in July 1959, Comrade Mao Zedong led the whole party in effecting a rectification of the errors that had already been recognized. However, in the later part of the meeting the rectification began to take a wrong turn, mistakenly criticized Comrade Peng Dehuai and mistakenly changed course in the nationwide "antirightist" movement. This erroneous struggle gravely undermined innerparty democracy and prolonged and aggravated the above-mentioned leftist mistakes. It was mainly due to errors committed by ourselves during the 3 years, from 1958 to 1960, together with natural calamities during that time and the scraping of contracts by the Soviet Government that our economy encountered serious difficulties between 1959 and 1961, which caused serious losses to our country and our people.

From the winter of 1960 on, the Central Committee of the party and Comrade Mao Zdeong set about rectifying the leftist errors in rural work and decided on a principle expressed in the eight characters "readjustment, consolidation, filling out, raising standards" for the economy as a whole. A number of correct policies and resolute measures were worked out and put into effect with Comrades Liu Shaoqi, Zhou Enlai, Chen Yun and Deng Xiaoping in charge. The leftist mistakes in the economic construction were basically rectified and the difficulties overcome. Between 1961 and 1966, the national economy underwent a smooth and rapid readjustment, recovered and made further progress.

However, the leftist errors were not fully eradicated in the guiding ideology that governed the economic construction and developed even in greater strength in other areas. At the 10th Plenary Session of the 8th CCP Central Committee in September 1962, Comrade Mao Zedong widened and absolutized the class struggle that still exists within certain limits in socialist society. As early as 1957, after the antirightist struggle, he refuted the assessment of the party at the Eighth National Congress to the effect that the contradiction between the working class and the bourgeoisie had already been basically resolved. He expressed the opinion that after basically completing the socialist transformation, the contradiction between the working class and the bourgeoisie remained the principal contradiction At that time, he believed that this contradiction will exist throughout the entire historical period of socialism, and he concluded that throughout the entire historical period of socialism there will exist the danger of a capitalist restoration. In January 1965, the mistake was made of setting forth as a key problem the rectification of "those party persons in power taking the capitalist road." From 1963 to early 1966, the "four clean-ups" movement was launched, under the guiding ideology of an exaggerated seriousness of the class struggle, in about one-third of all the villages and at the grassroots of a small number of cities, as a result of which many cadres at the grassroots level were unjustly attacked. At that time, these mistakes still remained restricted in scope, and the mistaken theoretical views referred to earlier were also not fully implemented, but the development of these deviations in actual practice and of the theoretical mistakes finally led to the eruption of the "Great Cultural Revolution." As shown, the path traversed by the party during these 10 years has been a tortuous and complex one. It would be a further mistake to ignore the lessons that can be learned from this tortuous path.

The third period is the decade of the "Great Cultural Revolution." In these 10 years, the party and the country suffered the most severe setbacks and the heaviest losses since the inception of the PRC. The facts prove that the "Great Cultural Revolution" was a one-time comprehensive and long-term leftist-deviationist mistake. In launching the "Great Cultural Revolution,"Comrade Mao Zedong was completely mistaken in his assessment of the situation and in the policies and methods that he adopted. The "Great Cultural Revolution" can in no sense be called a revolution, it was rather an internal turmoil which had our own people fighting our own people. It was a mistaken move by the leadership, which was exploited by counterrevolutionary cliques. It was an internal disturbance which brought grievous calamity to the party, the state and the people of all the various nationalities. The main responsibility for the grave leftist error of the "Great Cultural Revolution," an error comprehensive in magnitude, does indeed lie with Comrade Mao Zedong, but it was the error of a great revolutionary. His case is quite different in character from the reactionary plotting of such a band as Lin Biao's or Jiang Qing's. Comrade Mao Zedong paid constant attention to overcoming shortcomings in the life of our party and of our state, but he failed to make a correct analysis of many problems and arrived at mistaken conclusions. He confused right and wrong and confused the enemy and the people with unfortuante consequences for the party and the people. He started the "Great Cultural Revolution" due to a conceptional mistake. While persisting in the comprehensive mistake of the "Great Cultural Revolution," he checked and rectified some of its excesses, protected some leading cadres of the party and nonparty public figures. As soon as he discovered an unjust, false or erroneous accusation, he would take corrective measures to redress the injustice. He led the struggle to smash the counterrevolutionary Lin Biao clique. He criticized and exposed Jiang Qing, Zhang Chunqiao and others, frustrating their wild ambitions to seize supreme leadership. All this was crucial to the subsequent successful overthrow of the "gang of four" and to putting an end to the upheaval of the "Great Cultural Revolution." Comrade Mao Zedong always remained alert to safeguarding the independence and security of our country, he carried out a correct foreign policy, supported the just struggle of all peoples and in his later years outlined a correct strategy to organize a broad international united front against hegemonism. During the "Great Cultural Revolution" our party was not destroyed and was able to maintain its unity. The State Council and the PLA were still able to do much effective work. The foundation of our socialist system remained intact and it was possible to continue socialist economic construction. Our country remained united and exerted a significant influence on international affairs. All these facts are inseparable from the leadership of Comrade Mao Zedong. It is entirely wrong to think that Comrade Mao Zedong was totally wrong in everything he did during his later years because of the grave mistake of the "Great Cultural Revolution." Considering his whole revolutionary life, his merits by far outweigh his faults. His merits are the primary factor, his faults secondary.

The struggle waged by the party and the people against leftist errors and against the counterrevolutionary Lin Biao and Jiang Qing cliques during the "Great Cultural Revolution" was arduous and full of twists and turns, but the struggle has never stopped. Rigorous tests have proved that the older generation of revolutionaries, the overwhelming majority of cadres and party members and the overwhelming majority of the people were loyal to the party and to the cause of socialism. It was precisely due to their joint struggle that the havoc wrought by the "Great Cultural Revolution" was mitigated to a certain degree. Despite tremendous losses, our national economy could register some progress and basic construction could also gain important achievements. In the field of science and technology, the achievements were successfully testing a hydrogen bomb and successfully launching and retrieving man-made satellites. A new situation was also created outside the party organization. On and around the Qing Ming festival of 1976, millions of people mourned the death of Premier Zhou Enlai and in a revolutionary move denounced the plot of the "gang of four" to usurp the party and state power. A great mass base was established in this way for the overthrow of the "gang of four."

The fourth period comprises the 5 years following the smashing of the "gang of four" in October 1976. The smashing of the "gang of four" and the conclusion of the upheaval of the "Great Cultural Revolution" are a great turning point in history and constitute a great victory for the party and the people. From then on our country entered the new era of socialist construction by undertaking the four modernizations. The 5 years that have already passed may again be divided into an earlier and later section, taking the 3rd Plenary Session of the 11th CCP Central Committee as the dividing point.

In the 2 years preceding the Third Plenary Session, large numbers of cadres and other people most enthusiastically devoted themselves to the struggle of exposing and criticizing the "gang of four" and to the task of construction. In these 2 years excellent results were achieved in the overwhelming majority of places throughout the country in exposing and repudiating the counterrevolutionary crimes of the Jiang Qing clique and in uncovering their counterrevolutionary factional setup. The consolidation of the party and the state organizations and the redress of some cases of wrongs suffered by those who were unjustly, falsely and wrongly charged was begun. Industrial and agricultural production was fairly swiftly restored. Work in education, science, literature, public health, physical culture and other fields began to return to normal. However, the progress of these 2 years was one of the stops and starts. Comrades inside and outside the party demanded more and more strongly that the errors of the "Great Cultural Revolution" be thoroughly corrected, but such demands met with serious resistance. The rehabilitation of veteran cadres and the process of redressing the wrongs suffered by those who were unjustly, falsely and wrongly charged (including the Tian-anmen cases), an occurrence unique in its extent throughout history, met with delays and obstructions. This, of course, was due to the fact, as the Third Plenary Session pointed out in its "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC", that the political and ideological confusion created in the decade-long "Great Cultural Revolution" could not be eliminated in a short time, but it was also due to the leftist errors in the guiding ideology that Comrade Hua Guofeng continued to commit in his capacity as Chairman of the CCP Central Comittee. He promoted, and stalled in correcting, the erroneous "two-whatevers" policy, which was, "firmly to uphold whatever policy decisions Chairman Mao made, and unswervingly to adhere to whatever instructions Chairman Mao gave." This actually meant that he wanted to uphold a policy based on the mistaken theories, viewpoint and principles held by Comrade Mao Zedong in his later years. He continued the personality cult of the past and fabricated and accepted a new personality cult around himself. Under his deluding influence, the 11th CCP Party Congress that convened in August 1977, though correctly deciding on the four modernizations as the core task, did not rectify, but rather continued to reaffirm the mistakes of the "Great Cultural Revolution." The impatience to show quick results in economic work and the continuation of other leftist policies continued to inflict losses on the party and the state. For all this, he bears a heavy responsibility.

The Third Plenary Session of the 11th CCP Central Committee in December 1978 reflected the strong hopes of the whole party and the whole people to begin a comprehensive and earnest rectification of all the leftist mistakes committed during and before the "Great Cultural Revolution," and also to put an end to the situation in which the party had been advancing haltingly in its work during the past 2 years. This plenum resolutely rectified the mistaken policy of the "two-whatevers," firmly discarded slogans such as "Take class struggle as the key link," and made the strategic decision to shift the focus of work throughout the whole party to the socialist modernizations. It declared that the whole party must pay attention to solving the problem of serious imbalances between the branches of the national economy, that the structure of economic management must be reformed and economic democracy introduced, and adopted a resolution for acceleration of agricultural development. It stressed the task of perfecting socialist democracy and of strengthening the socialist legal system. It investigated and redressed a number of major unjust, false and wrong cases in the history of the party and settled the controversy on the rights and wrongs, merits and demerits of some prominent leaders. It also elected additional members to the party's central leading organs. All these resolutions of the plenum signified that the party had truly begun to restore order out of chaos in the theoretical field as well as in the field of political policies, that it reestablished and developed one step further the Marxist policies of the Eighth National Congress, represented by Comrade Mao Zedong.

The 3rd Plenary Session of the 11th CCP Central Committee was a meeting of great historical significance, outstanding among all meetings since the establishment of the PRC. Following that plenum, the Fourth, Fifth, Sixth Plenums and other important meetings of the party continued to solve the many problems left over from the past as well as to solve creatively many new problems arising in the course of actual practice. For instance, the readjustment and reform of the national economy, the leadership system of the party and the state, etc., achieving as excellent an economic and political situation as has seldom been achieved since the founding of the PRC.

Energetically Strive to Build a Modern, Highly Democratic, Highly Cultured Powerful Socialist Country

The objective of our party's energetic endeavors in the new era of socialist construction is to turn our country into a powerful socialist country, materially modern, politically democratic and spiritually cultured. The fundamental aim of our summing up the historical experience of the 32 years since the founding of the PRC is to further concentrate the will and strength of all party comrades and the whole people on the accomplishment of this great objective on the basis of upholding the socialist road, upholding the people's democratic dictatorship, that is, the dictatorship of the proletariat, upholding the leadership of the Communist Party, and upholding Marxism-Leninism and Mao Zedong Thought, these four basic principles. The four basic principles constitute the common political basis for the unity of the whole party and the unity of the people of all nationalities throughout the country. They are also the basic guarantee for victory in our undertaking of socialist modernization, we must certainly uphold them!

The first of the four basic principles is to uphold the socialist road, the other three concern indispensable conditions for upholding the socialist road. Socialism alone can save China. This is the correct conclusion drawn by the Chinese people from their experience over the past century or so; it likewise constitutes the most fundamental historical experience in the 32 years since the founding of the PRC. Advancing on the socialist road has already produced tremendous changes in the political, spiritual and economic life of our people, manifesting in every respect the superiority of the socialist system. Workers, peasants, working intellectuals and other people who had all along been pushed into the lowest level of society have now stood up and become the masters of society. This brought about a radical change in the social and political structure of China. This victory of the people is of inestimable significance. Following the socialist road has brought a understanding of the true meaning and value of life to the people of various nationalities throughout the country, first of all to the millions of progressive men, namely that it is to eradicate classes, liberate mankind and bring benefit to them, all the lofty ideals of socialism and communism, which will allow them to gain a true spiritual liberation and become conscious human beings and noble-minded persons. It is precisely this spirtual liberation which will raise the ideological level of our nation to unprecedented heights. This spiritual liberation must also not be underestimated. Following the socialist road has already begun to show developments in our national economy and culture; we have achieved in a little over 30 years what old China could not achieve in several hundred years. Our population of almost 1 billion is truly beginning to reap the tangible material and cultural benefits. In this respect the superiority of the socialist system is also initially but effectively being manifested. It is true that we committed many mistakes in the course of these 32 years, but out party and our people, relying on their own strength, discovered and corrected these mistakes, and furthermore drew useful lessons from them. This is truly evidence that the socialist system has a strong vitality and will never suffer defeat.

Of course, our socialist system is still in its initial stage, it is not yet perfect. To bring it from imperfection to perfection will of necessity require a lengthy process, but the important thing is that the firm ice has been broken, a navigable channel opened up and the route has been charted. Since the Third Plenary Session, our party, based on the repeated summing up of the many historical experiences, positive and negative, since the founding of the PRC, has already gradually found a correct path for the socialist construction fitted to the special conditions of our country. This road is, in summary: uniting the various nationalities of the whole country, mobilizing all positive factors, working with one heart and one mind, seeking truth from facts, planning a well-proportioned development of the economy, politics and culture, achieving greater, faster, and better economic results, and building a modern, highly democratic, highly cultured powerful socialist country.

The last part of what was just said explains the great objective we are striving for. The powerful socialist country that we have set forth as our objective has three important special features:

1. In material respects it must be modernized. Modernization refers to the four modernizations, namely of agriculture, industry, science and technology, and our national defense, of which we have been talking all along. The country's modernization implies the fullest development of the production forces. If we want our socialist system to have a solid material basis, if we want to fully satisfy the daily growing material and cultural needs of the people and have them all live prosperous and happy lives, if we want to strengthen our national defense to resist the aggression of all imperialists and hegemonists and if we want finally to eliminate class and social disparities, it is necessary to effect the modernization of the country. To carry out economic construction and realize socialist modernization of the country is the central task of the whole party as determined by the party's 8th National Congress and in Comrade Mao Zedong's articles "On the 10 Major Relationships" and "On the Correct Handling of Contradictions Among the People." If we make economic construction our central task and if we proceed in this work according to the economic laws, our economic construction will experience a speedy and solid development and the livelihood of the people will experience a remarkable improvement year by year. If we abandon economic construction as our central task, to be assaulted and interfered with by "Take class struggle as the key link" political movements, we will not be able to enjoy the long-term social stability required for the realization of the four modernizations, and our socialist construction will suffer reverses and defeats. The resolution of the 3rd Plenary Session of the 11th CCP Central Committee, shifting the focal point of work for the whole nation to the socialist modernizations, is eminently significant precisely in this respect. It gives a new, corrected direction to our socialist construction. We are firmly determined to uphold this strategic shift from now on; there definitely must not be another shift!

2. The socialist country that we wish to build is politically to have a high degree of democracy. The so-called high degree of democracy is one in which the people have become the true masters of the state and of society, that is, the workers, peasants, intellectuals and other people are really able to administer the state (from grassroots to central authorities), to administer the economic and cultural affairs and also able fully to cultivate their own individualities and skills. Only if a degree of high democratization is achieved, will it suit the political superstructure of a socialist public-ownership economy based on modern large-scale industry, and only then will it guarantee and promote a political superstructure of rapidly and solidly developing social productive forces. Socialism is not only an economic system, not only a system of public ownership of the means of production, but also a political system, namely one with a high degree of democracy where the people are truly masters in their own house. Under socialism, the most essential content of our party's guidance of the life of the state is to support and guide the people to be masters in their own house. If we do not make efforts to achieve this goal, the character of the state and of our society will undergo a change.

Since its inception, the Chinese Communist Party has fought hard for democracy and freedom for the people. In the course of struggle with powerful enemies, our party has come to realize that the enemy can be defeated and victory in the revolution can be gained only if a full measure of democracy is developed among the people and among the revolutionary ranks and only if the masses are fully aroused to action. From 1927 on, a proletarian army was therefore built up that entirely served the people. Ever since the establishment of revolutionary bases and democratic regimes of workers and peasants, our party built up its own revolutionary democratic tradition wihtin the party, the army and in the life of the state. For several decades, our party and Comrade Mao Zedong have made reliance on the masses and taking the line of the masses as their own guidelines in work and in cognition. Comrade Mao Zedong has clearly pointed out that the only main method of preventing a corrosion and deterioration of our party and the new people's regime is to truly foster democracy, to have the masses administer the state and supervise the government. Comrade Mao Zedong has furthermore clearly pointed out that a socialist state must guarantee the right of the people to truly administer the state and manage all economic and cultural affairs because this is the greatest and most basic right of the workers under a socialist system. Judging from actual conditions, our party, prior to 1957, gave much attention to fostering democracy within the party and in the life of the country; at that time the political life of the party and of the state was lively and vigorous. However, later, due to the mistake committed by our party and by Comrade Mao Zedong of overextending the class struggle and to the fact that we regarded as a good form in fostering democracy what actually was the mistaken idea of the "four greats," namely "speaking out, airing views fully, holding great debates and writing big-character posters." This was a method of catching in a kind of encirclement people who are under criticism and of suppressing democracy, because of this true democracy in the life of our country and within the party gradually came to suffer serious harm. This made us basically guilty of the mistake of becoming separate from the masses and from reality. Similarly, our socialist construction suffered progressively severe damage. Mindful of just these historical experinces, positive as well as negative, the 3rd Plenary Session of the 11th CCP Central Committee pointed out emphatically that it is our task to establish a perfect socialist democracy and to strengthen the socialist legal system. The Fifth Plenary Session even more strongly put forward the proposal that a high degree of democracy must be part of the whole people's overall task of building socialism.

3. The socialist state that we want to build is to be one of a highly advanced culture. Socialism is a type of social system and a doctrine in support of the socialist social system; it is a kind of lofty idea concerning the value of man, an idea that is highly cultured. The objectives of socialism are the elimination of classes, the liberation of mankind and bringing benefit to mankind. The core and basic point in Marxism-Leninism and Mao Zedong Thought is service to the people. Only with Marxism-Leninism and Mao Zedong Thought can there be a correct resolution of the contradictions between the individual and the collectiva entiry and between the individual and society which have existed all through the ages in the social life of mankind and which may exist even after the abolition of classes. Marxixm believes, on the one hand, that the individual can attain freedom only within the collective entiry and furthermore only through the strength of the collective entiry, and, on the other hand, that in the new society after the abolition of classes, the development of each man's freedom is the condition for the development of freedom of all men. The maxim of communism is therefore: "One for all and all for one." When summing up the experiences of the Paris Commune, Marx stated that the leaders of the commune had been servants of the people and responsible public servants of society. Comrade Mao Zedong emphatically pointed out that serving

the people is the fundamental purpose of every party member and of all revolutionaries and he furthermore inculcated this viewpoint in all cadres, party members and the people. He pointed out: "Serving the people wholeheartedly, not separating from the masses for even one moment, starting out in everything from the interests of the people and not starting out from the interests of an individual or a small group, a unanimity of holding oneself responsible to the people and to the leadership organs of the party, this is precisely our point of departure." Comrade Mao Zedong has taught us that we must have the spirit of communists to benefit others without the slightest egotism. He said: "Men differ in their abilities, but as long as a man has this spirit, he is noble, pure, moral, dissociated from base interests and of benefit to the people." It is exactly this great idea of serving the people wholeheartedly which inspired the whole body of Communist Party members, the whole body of officers and men of the PLA and the broad masses of progressive elements outside the party to entertain lofty sentiments and a revolutionary spirit that made them risk their lives unhesitatingly in striving for victory in the Chinese revolution and in the enterprise of socialist construction. However, unfortunately, this highly inspired, rousing revolutionary spirit was replaced and destroyed during the "Great Cultural Revolution" by such mistaken ideas as the broad overextension of the class struggle and a mixup of the two kinds of contradictions, by the mistaken idea of "overthrowing everything" and "justified rebellion," by the mistaken idea of "kicking out the party committees and stirring up trouble by revolting," by the irresponsible organization of fighting forces apt to split all unity, by the idea of "seizing power" and other such mistaken ideas. The pack of counterrevolutionary scoundrels and careerists, Lin Biao, Jiang Qing and Kang Sheng, exploited the mistakes of the "Great Cultural Revolution" and indulged in unbridled propaganda for the ideology of the exploiting class. As a consequence the lofty communist idea of service to the people was most brutally trampled underfoot, individuals strove for personal fame and power, the most shameless political fraud and factional struggle was enacted, extreme individualism, pernicious anarchism and other such evil ways began their vicious spread unchecked. The result was a serious ideological and political confusion within the party and in society. One of the great historical achievements of the 3rd Plenary Session of the 11th CCP Central Committee was that it thoroughly rejected the leftist mistakes of the "cultural revolution" as well as the decadent and reactionary ideology of the exploiting class which was being spread anew, taking advantage of the opportunity provided by the "cultural revolution," and that it reinstated the ideology of communism, namely to serve the people wholeheartedly. It is imperative for us to implement the policies of the Third Plenary Session, greatly strengthen education in socialist and communist ideology among the masses, vigorously clean up the filth and poison of the old society which was newly spread during the "cultural revolution," firmly resist and overcome any bourgeois ideology infiltrating from abroad and to nurture generation after generation of completely unselfish, socialist new men.

In order to achieve modernization in our economy and a high degree of democracy in politics, we must greatly raise the scientific and cultural knowledge that mankind has acquired or accumulated. We must continue to wipe out the mistaken viewpoint, which has prevailed for a long time and which was especially widespread during the "Cultural Revolution," of looking down on and underestimating education, science and culture and of discriminating against intellectuals (the so-called "stinking ninth class"). We must make a great effort to raise the position and role of education, science and culture in our undertaking of socialist modernization. The high degree of cultural refinement of socialism is shown in the fact that the broad masses are imbued with the lofty ideas of socialism and communism, and that, guided by these lofty ideas, there is a flourishing development of science and technology which is up to modern standards and the development of a many-splendored culture and art. Building up a spiritual culture of this high quality is also an important organic part of our overall task of building socialism.

For the purpose of building a modern, highly democratic, highly cultured powerful socialist state, our party has adopted the basic political policy of uniting the various nationalities of the whole country and mobilizing all positive factors to undertake the construction with one heart and one mind. This means first of all that our policy in undertaking this construction is "maintaining independence and keeping the initiative in our hands" and also that "our primary policy is self-reliance, but that we shall strive to obtain foreign assistance as a complement." Mainly, we shall rely on the strength of all the people of various nationalities to achieve theobjective of building a modern powerful socialist state. Next, this means that we must firmly implement Chairman Mao Zedong's policy on the correct handling of contraditions among the people. It means we must adopt politically and ideologically the principle of people's democracy, the principle of "unite--criticize--unite." With regard to the relationship of the Communist Party with the various democratic parties, we must adopt the principle of "long-term coexistence and mutual supervision." In economics we must adopt the principle of "more work, more earnings" and of recognizing differential treatment. We must institute unified planning with due consideration for the interests of the state, the collective and the individual, unified planning with due consideration for the interests of various parts and various nationalities of the population. In cultural affairs we must adopt the principle of "letting a hundred flowers bloom and a hundred schools contend." This way alone will enable us correctly to resolve the contradictions among the people, in order to unite all the people of various nationalities, mobilize all positive factors to build with one heart and one mind a prosperous, strong, democratic, cultured, modern socialist state.

If we want to be successful in the speedy construction of a prosperous, strong, democratic, cultured modern socialist state, we must proceed in our socialist construction according to the objective laws, uphold the principle of seeking truth from facts, follow the chief rule of proceeding in a planned and proportionate way in the development of the socialist construction. Only in this way will we be able to achieve greater, faster, better and more economical results. In the development of socialist constructive undertakings we must start out from the particular conditions in our country, act according to our capability, strive for actual efficiency, proceed in a planned and proportionate way. Proportionate means to establish a correct proportion between accumulation and expenditure as well as a correct proportion between the various branches of the national economy. In our past economic construction we have on several occasions committed leftist mistakes, in the first by being impatient for quick results and then by raising excessively the proportion of accumulations. Then, we subjectively formulated such baseless slogans as "Take steel as the key link," which harmed and ruined the correct proportional relation between the various branches of the national economy and even caused serious imbalances in important proportional relations in the national economy. We must take a warning from the repeated leftist mistakes, proceed according to the objective laws, and while following the rules of planning and proper proportioning, truly achieve, as far as it is within our capabilities, greater, faster, better and more economical results.

The development of a socialist, highly democratic, political construction and the economic modernizations mutually support and supplement each other. We must overcome the defect of overcentralization in the leadership system of our party and our state, proceeding step by step in a planned way and undaunted by repeated setbacks. We must uphold the principle of collective leadership. We must strengthen the supervision from below by the broad masses. We must strengthen the ideological and political leadership of the party over state organs, over various economic and cultural organizations and mass organizations, but we must at the same time ensure that these organs and organizations can carry out their work in an independent, responsible and mutually harmonious way. We must adopt various measures to ensure that the masses will actually administer the state and all economic and cultural affairs, and will also be able to develop freely their individuality and talent. As we shall perfect the socialist democracy, we shall also perfect the socialist constitution and legal system, so that the socialist economy and culture, and also guarantee that the stable and powerful weapon of people's democratic dictatorship will protect the rights and interests of the people and rebuff the destructive activities of the enemy class.

The road to building socialism which our party selected correctly reflects, either in the targets of our struggle as well as in the methods to achieve this target, the objective laws of socialist construction (including the developmental laws in the three areas of social life, the economic, political and spiritual life). It is a road progressively established as a summing up of the positive and negative experiences during the 32 years since the founding of the PRC. Because it is precisely this, we can be certain to reach our objective by advancing along this road.

Let us all, comrades of the party and all people of various nationalities, closely unite and rally around the Central Committee of the party, make a resolution in the spirit of the "foolish old man"who moved the mountain, to exert our efforts with one heart and one mind and undaunted by repeated setbacks progressively to build up our country into a materially modernized, politically democratic, spiritually highly cultured, powerful socialist state!

PROMOTION OF TALENTED YOUNG CADRES TO LEADING POSITIONS URGED

Chengdu SICHUAN RIBAO in Chinese 8 Aug 81 p 3

[Article by Yin Shichuan [1438 0013 0356]: "Promote Talented Young Cadres to Leading Positions"]

[Text] In his speech at the meeting in celebration of the 60th anniversary of the founding of the Communist Party of China Hu Yaobang stated: "In order to ensure that there is an adequate number of successors to carry on our cause and guarantee continuity in our party's guidelines and polices, we must devote much of our energy from now on to the selection and training of thousands upon thousands of cadres who combine ability and political integrity and are in their prime and give these cadres the opportunity to take part in leadership in various fields so that they may be better and more effectively tempered through practice." This is one extremely important task that the Party Central Committee has given us.

In recent years the work by party organizations at every level in our province of training cadres in the prime of their lives has been stressed and is being firmly grasped and carried out. But in some places and units the mere mention of promoting young cadres into leadership circles sets certain comrades to considering this and considering that, worrying that their qualifications are too limited, that they lack work experience, and that they cannot handle the burdens. While it is true that those younger cadres in the prime of their lives are a bit younger, less qualified and less experienced than older cadres, still the younger cadres now being promoted are the same age as many of our older revolutionaries were when they took on the responsibilities of leadership, and so we should say that these younger cadres should be taking on greater responsibilities by now. For example, in 1925 when Comrade Yang Shegong was selected to be the first provincial party committee secretary of our province, he was only 27; in 1933 when Comrade Luo Shiwen took over as the Sichuan party committee secretary, he was only 29; in 1928 when Comrade Li Mingke became the Sichuan Military Commission secretary, he was only 31. A person's age, to a certain extent, is actually reflective of his work ability; still, age and talent are not "mutually indictative." Some people do not like to study, are unwilling to do penetrating research, accept mediocrity and are satisfied with just getting by. Although their age is great, they have made no contributions to the nation and the people. Contrarily, some people study hard, take initiative in their work, are good at summarizing the experiences and lessons of previous generations and, even though their age is not great, they are still good at handling matters and can still shoulder heavy responsibilities. When Marx and Engels created the theory of scientific communism and led the "Communist League," they were both only in their 20s; when Lenin created and guided the Union for the Liberation of the Working Class, he was only 25; in 1923 when Comrade Mao Zedong assumed the post of director of the organizational department of the Party Central Committee, he was only 29; in 1925 when Comrade Liu Shaoqi was selected to be the deputy party committee head of the All China Federation of Labor, he was only 27; and at the end of 1926 when Comrade Zhou Enlai became the Central Military Commission Party Secretary, he was only 28. Many cadres now in the party, government and military and in leadership circles on every battlefront were quite young when they assumed leadership roles. Some led regiments, divisions and whole armies in battle, struggling against the enemy, while only 20 or 30 years of age; some became directors and provincial party secretaries when only 30 or 40 and, moreover, most of these comrades did good jobs. These facts make it clear that talented people selected and promoted in the prime of their lives can handle great responsibilities.

Of course, it cannot be denied that when younger cadres first enter leadership circles they must pass through a process of learning and adaptation. Some mistakes in their work will be unavoidable. This is not surprising and is a perfectly natural part of cadre development. During the war era, todays old cadres took on the work of leadership despite their youth. Is it not true that at first they also lacked experience and maturity, but having suffered a few blows they gained experience and gradually matured? The ancients said: "If a man doesn't take a position of authority, then he cannot put his policies into effect." If we take those cadres in their prime who the masses have recommended and the party organization has examined, those recognized as clearly being of superior talent, and boldly place them early on into positions of leadership, lay heavy responsibilities on their shoulders and allow them to put certain secondary policies into effect, then after a period of tempering, along with the instruction, help and guidance of older cadres, they will gradually gain rich experience and the quality of their leadership will gradually improve; they will go from being unable to make policy to being able to make policy, from being poor at making policy to being good at making policy. These are facts. Last year, after the No 4 Heavy Steel Plant selected and college educated specialists, all of whom were under 40 years of age, to occupy leadership positions in the plant hierarchy, the rate of production increased over that of the same period the previous year. It would be surprising if, among the younger cadres in all areas who entered positions of leadership in recent years, there were not quite a few as talented as those at the No 4 Heavy Steel Plant.

Paying close attention to the training and selection of successors in leadership circles at all levels, and gradually making leadership circles more revolutionary, more knowledgable, more specialized and more youthful is an urgent task confronting the entire party. It is also a great mission given by history to our older cadres. I hope that the comrades of areas and departments which lack actual movements along these lines will all increase their awareness of this strategic task and actively and enthusiastically undertake the work of training and appointing talented younger cadres.

LEADING CADRES MUST GET OTHERS TO IMPLEMENT 'RESOLUTION'

Chengdu SICHUAN RIBAO in Chinese 27 Jul 81 p 1

[Article by SICHUAN RIBAO contributing commentator: "Leading Cadres Should Take the Lead in Studying the 'Resolution'"]

[Text] Leading cadres at all levels, especially leading cadres at the county and higher levels, must take the lead in studying the "Resolution" well and must take practical action and initiative to put it into effect in order to guarantee the continuation and in-depth development of our provincewide campaign to study the "Resolution" and bring it to a successful conclusion. They should view this as a matter of primary concern for them.

For a leading cadre, it may be not too difficult to preside over a meeting to study the "Resolution." But how to get others to study it well and put it into effect may present a difficult problem.

What are the basic requirements for leading cadres to bring to a successful conclusion the campaign to study the "Resolution"?

First, leading cadres at all levels are required to study the "Resolution" with a definite objective in mind, and to firmly grasp its essence instead of distorting it. The "Resolution" unequivocally points out: "That basic objective our our effort to sum up the historical experiences of the past 32 years since the founding of the PRC is to further rally the willpower and resources of the entire party, the entire army, and the people of all nationalities throughout the country behind the grand goal of building a modern socialist power in accordance with the four basic principles of allegiance to the socialist road, allegiance to the people's democratic dictatorship or the dictatorship of the proletariat, allegiance to the leadership of the Communist Party, and allegiance to Marixism-Leninism and Mao Zedong Thought." Of course, the exemplary role played by leading cadres at all levels in observing the system of study, in helping other cadres fulfill the study, and in conveying the "Resolution" to the masses is very important. What is most important, however, is that they must first make efforts to clearly understand the objective of the campaign to study the "Resolution" as well as make vigorous efforts to grasp its essence. Only in this way can they prevent themselves from being begged down in the quagmire of minor issues of the past or old and historical disputes involving personal grudges, focus their attention on the situation as a whole and on the cause of the party and the interests of the people, work with one mind and one heart for unity, think in a way consistent with the basic conclusions contained in the "Resolution," and take a political stand consistent with that of the Party Central Committee.

As long as they can do a good job in this regard, they will have no difficulty in helping other cadres to fulfill their study or in clearly conveying the "Resolution" to the masses and bringing the study campaign to a successful conclusion.

Second, in addition to studying the "Resolution" well, leading cadres at all levels are required to thoroughly implement its guidelines and to take practical action to convince others that they have successfully completed the study of the "Resolution". In his speech in celebration of the 60th anniversary of the founding of the CCP, Comrade Hu Yaobang said: "We, the proletariat, are the class which commands the future, and our party has lofty ideals and aspirations. The best way for us to celebrate this grand festival, our party's birthday, is to learn from historical experience and thus unite and look forward, focusing our attention on unresolved problems." The party's Sixth Plenum issued the following call: "Under the great banner of Marxism-Leninism and Mao Zedong Thought, the entire party, the entire army, and the people of all nationalities throughout the country must closely rally around the Party Central Committee, continue to carry forward the spirit of the foolish old man who removed the mountains, work with one mind and one heart to overcome all difficulties, and strive to gradually build our country into a modern socialist power with a high level of democracy and a high level of civilization!" Words alone cannot answer the question as to whether or not the leading cadres at all levels have successfully completed their study of the "Resolution." What is more important is that they must convince others of their success in this respect with practical action to focus their attention on unresolved problems and on the development of the four modernizations. Leading cadres must be the first to answer the call for carrying forward the spirit of the foolish old man who removed the mountains as contained in the "Resolution," by promising to provide good leadership in this regard. The spirit of the foolish old man refers to the dauntless spirit of despising difficulties strategically while paying full attention to them tactically, the revolutionary spirit of hard struggle and action against empty talk, and an indomitable spirit of tenacious struggle or a spirit of perseverance in carrying struggles through to the end. At present, our province is suffering serious loss of life and property as a result of floods affecting a large portion of Sichuan. A difficult task and a serious challenge that our leading cadres at all levels now face is to use the guidelines of the "Resolution" as a source of inspiration to all of us, to make their presence felt as leaders in the forefront of the struggle, and to lead and encourage the broad masses of cadres and people to increase their confidence and stimulate their morale in order to overcome difficulties, to combat floods, to restore production, to rebuild homes, and to win victories in the struggle against the floods. Whether they can lead this struggle to success can be determined to be an important indication of whether they have successfully completed their study of the "Resolution."

Third, leading cadres at all levels are required to rectify the workstyle of the party. Leading comrades on the Central Committee have repeatedly pointed out: The style of work of a party in power vitally affects its very existence. The style of work of our party is certain to command the greatest attention of the masses of people. No matter how high their position, all our cadres are the people's servants. They must live up to the requirements of the "Resolution" by "keeping in close touch with the masses and reality, by being modest and prudent, by sharing weal and woe with the masses, and by striving to overcome the bureaucratic style of work. They must correctly use criticism and self-criticism as a weapon to overcome erroneous ideas incompatible with the party's correct principles, to eliminate factionalism, to combat anarchism and extreme individualism, and to eliminate special privileges and other unhealthy practices." In addition to studying the "Resolution," leading cadres at all levels must play a leading role in rectifying the style of work of the party, strictly observe party discipline and the laws of the state, do everything in accordance with the "Guiding Principles," and earnestly devote themselves to serving the people. Particularly at a time when the broad masses of people throughout the province face temporary difficulties caused by flooding, leading cadres must redouble their efforts to set a good example for others to follow in the direction of rectifying the workstyle of the party. Only in this way can the party further strengthen its ties with the masses and raise its prestige among the people. Only thus can we mobilize our strength to overcome any difficulties we now face and make our cause develop more vigorously than ever.

ARTICLE RECALLS DEFEAT OF FOREIGN FORCE IN TAIPING REBELLION

Beijing RENMIN RIBAO in Chinese 18 Aug 81 p 5

[Article by Wan Zhuang [8001 8369]: "The Taiping Army's Devastating Defeat of Ward's Foreign Rifle Force"]

[Text] In the summer of 1860 the Taiping army smashed the large Jiangnan encampment of the imperial army and followed up their victory with an advance toward the east. In less than 50 days they captured a large number of important cities in southern Jiangsu Province, and the spearhead of the Taiping Revolution pointed directly at Shanghai.

The aggressor nations, the British, Americans, French and other foreigners, first declared that they would not interfere in the internal political affairs of China and repeatedly informed the Taiping regime that they would maintain neutrality. After the second Opium War, the foreign aggressors threw off the pretense of neutrality and staged an armed intervention against the Taiping regime. In May, when the Taiping vanguard threatened Shanghai, the British and French envoys screamed in unison that their countries would help the imperial troops "suppress and put down all illegal, rebellious movements and protect Shanghai." Instigated by the American consul in Shanghai, supported by England, France and other countries and working in collusion with the Shanghai bureaucracy, landlords and compradors, the American citizen Ward, in June, recruited foreigners living in China to form a "foreign rifle force," as a first step to suppress the Taiping regime.

The arrangement was that Ward would recruit the soldiers and train them for combat, and the imperial government would supply weapons and bear all military costs and would in addition pay substantial bonuses for the capture of each city. Ward then recruited 200 foreigners and several hundred Chinese. Ward himself held the position of commander of this force, having as his lieutenants two American military men named Burgevine and Forrester.

In July on completion of its organization, the foreign rifle force boarded ships for a night attack on the city of Songjiang. The Taiping army met them head-on and inflicted a severe defeat on them. Ward was sounded, his force was completely routed and in only a few minutes the whole battle was over. Ward retreated to Shanghai. There he put together a new force, outfitted them with new equipment and in the middle of July, with a supporting imperial army of 7,000 men, resumed his invasion, this time taking Songjiang by a surprise attack.

After the capture of Songjiang, during the first week of August Ward led his foreign rifle force, in coordination with an imperial army of over 10,000 men, in two attacks against Qingpu on the western outskirts of Shanghai. With one stroke the Taiping troops annihilated one-third of the foreign rifle force and killed or wounded a large number of the imperial soldiers. Ward was hit five times and fled in a panic back to Songjiang.

In August, 1861, Ward reorganized his foreign rifle force at Songjiang. The force was composed by Europeans and Americans as officers, and the Chinese were enticed to join up as common soldiers; the force was thus organized as a mixed brigade of foreigners and Chinese. The total number of officers and men was 700. By the middle of November this reactionary military force had grown to over 2,000 men and later gradually increased to over 5,000 men. The Qing government had no compunction in bestowing the name "Ever Victorious Army" on these constantly defeated troops and to commission Ward as "deputy general."

In February, 1862, exploiting their great victories in Zhejiang Province, the Taiping army advanced in five columns from Suzhou and Hangzhou for a second attack on Shanghai. As soon as the news was received that the Taiping army was advancing to attack Shanghai, the clique of reactionary Chinese and foreigners in great haste organized a "Sino-Foreign Common Defense Bureau." An aggressor force of over 1,500 Englishmen and Frenchmen was hastily linked up with a force of 7,000 men of Li Hongzhang's Huai army which had just arrived, to form a united Chinese-foreign army. This force, under the command of Admiral Hope of the British aggressor navy, staged a desperate counterattack against the Taiping army. The valiant officers and men of the Taiping army fought extremely well and almost captured Hope and Ward. In his report the British consul in Shanghai, Medhurst, said: "Luckily, there was available a small boat on which the two were able to escape. Otherwise they would certainly have been captured by the Taiping troops."

In May, of 1862, the Taiping army led by Li Xiucheng made a third attack on Shanghai. In the fighting at Taicang, the Taiping troops killed several hundred of the foreign aggressor troops, destroyed over 30 stockades of the imperial troops, annihilated over 5,000 of the enemy and captured a large quantity of foreign rifles and guns. During the battle they also captured Ward's lieutenant, Forrester. After a series of victories, Li Xiucheng said: "That time the foreign devils would not dare to fight me as they would have been immediately defeated." Even Zeng Guofan in his memorial to the emperor made a comparison in which he acknowledged: "The barbarians fear the long-haired ones just as we do. When they are commissioned to drive them away, the true state of things is revealed."

In September, 1862, Ward was finally killed by Taiping troops in a battle in eastern Zhejiang Province.

WORK OF DISCIPLINE INSPECTION COMMISSION REVIEWED

Beijing BANYUETAN [SEMI-MONTHLY TALKS] in Chinese No 12, 25 Jun 81 pp 12-24

[Article by reporters Min Fanlu [7036 0416 6424] and Qu Jianchong [2575 1696 1504]: "Working Hard Day and Night for the Sake of Party Workstyle--a Visit to the Discipline Inspection Commission of the CCP Central Committee"]

[Text] At the end of a speech given at the third conference of the CCP Central Committee's Commission for the Inspection of Discipline, the second secretary, Comrade Deng Yingchao [6772 4481 6389], quoted a poem written by Comrade Ye Jianying in the spring festival:

In the universe the old is superseded by the new,
The new generation prospers in the succeeding years.
The flow of the Changjiang may not be unbroken,
But the resources of the 900 million people of China are adequate.
If workstyle and institutions continue to improve,
Fine traditions will be properly passed on.
Unite all the people to build our country,
And hail the land to which spring returns.

This poem embodies the joy of the older generation of revolutionaries over the fact that our party's undertakings are just developing and have successors. It encourages the comrades of the whole party to succeed the older generation in their revolutionary spirit of building an enterprise through arduous effort, to carry forward the party's fine traditions, to overcome unhealthy tendencies, and to unite the people throughout the country to build a modern and strong socialist state. These are sincere words and earnest wishes.

Party workstyle, a major problem which concerns the life and death of the party in power, has the close attention of the broad masses of cadres and people inside and outside the party. It is the focus of the work of the Central Committee's Commission for the Inspection of Discipline to earnestly do a good job in party workstyle. Under the leadership of the Party Central Committee, and through the common efforts of the comrades of the whole party and the effective work of discipline inspection commissions at various levels of the party, people are happy to see that the "Guiding Principles" have initially demonstrated their power and that party workstyle is improving.

On the eve of the commemoration of the 60th anniversary of the birth of the party, we visited the CCP Central Committee's Commission for the Inspection of Discipline. This important department of the Party Central Committee concentrates a group of our party's older generation of proletarian revolutionaries who are tried and highly popular, and who shoulder the heavy responsibility of safeguarding party discipline and law. The average age of the standing committee members of the Central Committee's Commission for the Inspection of Discipline is 76. These old comrades, who are of venerable age and poor health take infinite pains and work hard day and night in order to keep our party's fervor of youth alive.

Long ago, when the Central Committee's Commission for the Inspection of Discipline was first established, the first secretary, Comrade Chen Yun [7115 0061], stressed that its work was to do a good job in party workstyle. Later he pointed out even more sharply, during the third nationwide forum on implementation of the "Guiding Principles," "The problem of the workstyle of the party in power concerns the life and death of the party." This clearly indicated the direction of the work of the Commission for the Inspection of Discipline and served as a warning to all party comrades.

Why does the problem of party workstyle concern the life and death of the party in power? Comrade Hu Yaobang said at the third forum on the implementation of "Guiding Principles" of the Central Committee's Commission for the Inspection of Discipline: Before our party came to power, circumstances forced it to have a good workstyle. In a war environment at that time, we would have been defeated and eliminated by the enemy if we had engaged in subjectivism, bureaucraticism, deviation from the masses, or special privileges. After the party came to power, some comrades whose revolutionary will was weak were easily victimized by the sweet life and were corrupted. They often mistook our party's leading position as a ruling position, and this generated a series of problems. That is why our comrades should never overlook the basic change in the party, from one of being oppressed, butchered, encircled, and suppresses to the position of the party in power. We may morally degenerate if we do not do well.

The comrades on the Commission for the Inspection of Discipline said now that the party has the correct line, principles, and policies, the problem is to have a good workstyle in order to guarantee their implementation. Certain unhealthy tendencies existing in the party have in fact destroyed the relationship between the party and the masses, tarnished the party's image, damaged the party's prestige, weakened the party's fighting strength, and fostered unhealthy tendencies in society. Therefore, implementation of the "Guiding Principles" and emphasis on party workstyle have become urgent tasks. The Commission's standing committee secretary, Comrade Huang Kecheng [7806 0344 6134], suffers from ill health, yet with single-hearted devotion he studies how to do a good job in party workstyle, and he personally takes up numerous major matters. He encourages everyone to struggle daringly against all unhealthy trends and evil practices for the party's undertakings; in addition to Chairman Mao's "five fear-nots" we must add two more fear-nots: fear not hurting someone's feelings, and fear not making secret charges. The deputy secretary in charge of the day-to-day affairs of the Commission, Comrade Wang Heshou [3769 7729 1108], has to deal with a lot of strenuous work every day. Although he is over 70 years old, he is energetic, personally takes care of every single thing, and is scrupulous about every detail. The Commission's deputy secretaries--

Comrades Wang Congwu [3769 1783 0710], Zhang Qilong [1728 0796 7893], Zhang Yun [4545 5686], Guo Shushen [6753 6615 3947], Ma Guorui [7456 0948 3843], and Zhang Ce [1728 4595] have all gove down to the grass-root units to understand the situation and to investigate, study, and deal with problems. Deputy Secretary Comrade Yuan Renyuan [5913 0117 6678] and many standing committee menbers persist in doing their work even while they are sick. Their spirit moves the people's hearts.

The in rectification of party workstyle, the Commission for the Inspection of Discipline adheres to a policy focusing on education and implements adherence to the four basic principles and safeguarding of the party line as the emphasis in discipline inspection work. Within 1 year and 3 months after the "Guiding Principles" were issued, the Commission had convened three nationwide forums and one plenary session to sum up and exchange the circumstances and experience of implementation, and to discuss opinions and the means to launch an in-depth implementation of the "Guiding Principles." To correct all unhealthy tendencies, the Commission issued 19 circulars and notices which explicity order all parts of the country to stop freely accepting and privately dispersing gifts in their activities with foreign nationals and organizations, to put an end to unhealthy tendencies in reception work, to strictly prevent cadres from eating and drinking extravagantly or entertaining guests and giving away presents, to stricly forbid the seizure of state goods under the pretext of "trial use," to resolutely put a halt to unhealthy tendencies in the realm of economics, to strengthen the struggle against bureaucraticism on the economic front, to strictly forbid malpractice in student enrollment work in schools of higher learning, to forbid interference in assigning college graduates for work, and to strictly forbid revelation of state secrets. As a result of each of these circulars and notices, serious violators of law and discipline are castigated, those who dare tostruggle against unhealthy tendencies are given recognition, comrades who act in violation of discipline come to understand their mistakes, and the broad masses of cadres and party members are educated. These circulars and notices have struck home at current corrupt practices like a long-sounding alarm bell.

For a while, people talked about quite a number of cases of cadres' children doing bad things. What was really happening? The Commission for the Inspection of Discipline decided to investigate and get a firm grasp of first-hand sources. The investigation concluded that the absolute majority of cadre children are good, and that fewer than 2 percent are bad. How should those who have really gone wrong be dealt with? The attitude of the leading comrades of the Commission is clear and definite. Regardless of who is involved, and regardless of whether he is the father of the heavenly king, that person must be dealt with strictly. Last year, in dealing with a major case concerning the sale of state-owned automobiles for profit which could not proceed because it involved the children of a leading cadre, the comrades of the Commission for the Inspection of Discipline cooperated with the department concerned, broke through the obstruction, and dealt with the case according to the law.

The Party Central Committee is strict and impartial aon party discipline and has a clear-cut stand, so the people trust and love the party even more. The Commission for the Inspection of Discipline firmly struggles against unhealthy tendencies, enforces the law without pandering is impartial and icorruptible, and inspires confidence among the people. Last year the Commission received 260,000 pieces of mail from the masses and had 30,000 visits from the people. Many important problems were discovered in the letters form the masses, such as the retaliation case of the Shanxi Ribao [News] Agency and the "eating guest meals" incident at Fengzeyuan Restaurant. The leading comrades of the Commission pay great attention to letters from and visits by the people and treat this as [showing the] trust and love of the party by the broad masses, and as help and supervision of our party by the people. They point out the need for strength and courage in encouraging the masses to expose unhealthy tendencies. Noxious influences can be reduced only if we have this strength and courage.

It is precisely because of the common effort by the whole party and the people throughout the country that party workstyle has made rather great progress. The comrades of the Commission for the Inspection of Discipline informed us of the four areas of manifestation of the improvement in party workstyle: Since the Party Central Committee revived the Marxist ideological and political line and organization line, there has been an increase in self-consciousness by the whole party in implementing the party line; life within the party had gradually taken the path of democratic centralism, with the result that democratic spirit grows and criticism and self-criticism develop from the top to all levels; the practice of seeking truth from facts has revived, a great number of unjust and misjudged cases are redressed, and unsubstantiated words and deeds continue to be exposed and criticized; and bureaucraticism and the unhealthy tendency whereby cadres' lives become privileged weaken and disappear.

The Party Central Committee has given sufficient certainty to the new outlook for the implementation of the "Guiding Principles." Comrade Deng Xiaoping is very concerned with the work of the Commission for the Inspection of Discipline and he often entrusts major problems and cases to it for handling. He emphasizes strict implementation of the "Guidelines" and unremitting correction of all unhealthy tendencies, and he particularly opposes the incorrect attitude of feigning compliance to the party's line, principles, and policies. Comrade Hu Yaobang encourages the comrades of the Commission to further do well in their work and to do a good job in party workstyle. He said: Comrades who perform discipline inspection work must have courage and resourcefulness, struggle against all unhealthy tendencies, give courage a leading role, and not be afraid of offending others. Our discipline inspection work can be accomplished and can do great things for the party, state and nation.

In the course of visiting the Commission for the Inspection of Discipline and talking to some old comrades, we found them full of confidence in the party and doing well in party workstyle. Naturally, "the future may be bright and clear, but we must not forget hidden complications." The Commission's deputy secretary, Comrade Zhao Yimin [6392 3015 2404], told us: "There are still many difficulties and obstacles to truly doing well in party workstyle. Unhealthy tendencies within the party have basically not yet been reversed, and there is much more arduous work to do. However, if just we just follow the instructions of the Party Central Committee and firmly continue with our work, in time the fine traditions and workstyle of our party will be carried forward."

Leaving Zhongnanhai and walking on the shaded Changan Street, we were still pondering: This older generation of Revolutionaries who had tempered themselves for decades care about the world, and looking at the future they know that they shoulder heavy responsibilities. Although their hair is grey, they are full of youthful vigor. They have a spirit of advancing despite difficulties and of indomitability; they have the vitality and do not give up until they reach their goal. The thought of this causes a surge of strength in one's heart. There are high hopes for our party!

DISCUSSION OF NATIONAL ECONOMIC DEVELOPMENT, SCIENTIFIC RESEARCH

Guan Weiyan

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 2, 1981 pp 1-2

[Article by Guan Weiyan [4619 1919 3508]: Institute of Physics, Academia Sinica: "Formulate Scientific Programs in Accordance With the Demands of the National Economy"]

[Text] The Central Work Conference has recently decided upon important policies to further implement economic readjustment and political stability. In carrying out these policies, science and technology must expand in step with the economy and society, and take the promotion of economic development as its main task.

The State Planning Commission should include a plan for science and technology as an integral part of the long-range plan for national economic development. Moreover, the plan for science and technology should be subordinate to the plan for national economic development. Namely, the plan for science and technology ought to be formulated according to the needs of national economic development, so that the two will be organically and closely bound together. Speaking of national economic development, relatively rapid progress can be made only if the newest technological achievements are utilized consciously. Speaking of scientific matters, they can prosper for an extended period of time only if they have society's needs as their driving force.

The key is, state planning organizations ought to see plans for science and technology as their own business, grasp them in their hands and utilize them for the benefit of national economic development. If the planning department were merely to appropriate a certain amount of funds for science and technology each year, neither assigning any task to the scientific research department nor investigating the effect of the investment, then the scientific research would lose contact with the needs of national economic development.

During the feudal period, production which was based on the manual labor of the farmers and the handicraftsmen did not allow extensive and conscious application of natural science to the production process. The farmers and the handicraftsmen *built their labor on their own skill, on learning gained only through their* experience, and on the foundation of the knowledge of natural science based on disjointed scientific theories.

However, when the society turned to a capitalist system, the situation of science also changed. In pursuit of profit, capitalists were already consciously utilizing natural science to the production processes. Capitalists made science serve themselves. They transformed the maids of theology into the slaves of capitalists, and used them as a tool to expand surplus value and to pursue surplus profit. In the early days of capitalist production, the bourgeoisie joined the rank of science in a revolution against the church. Influenced by the profit of production made by the bourgeoisie a new organization for the study of nature was born--Academy of Sciences. Some rules adopted by the Academy of Sciences pointed out clearly that its most important task was to promote the development of "mechanical skill" (e.g., technology). For example, the famous "financial superviser general" Colbert during the reign of Louis XIV of France, who is known for his policies protecting the development of capitalist large industry and trade, was at the same time the organizer of the French Academy of Sciences. This fact is not accidental at all. He was known to have demanded from the scientists those sciences which could promote the national industry directly.

With the development of capitalist production, the bourgeoisie sought more and more help from natural science. When it was necessary, they did not spare expense building laboratories and special institutes for physics and technological sciences. A number of large enterprises in the capitalist countries all have their own research and development departments of considerable scope. For example, the U.S. International Business Machines Corp and the Bell Telephone Company have their own very large-scale laboratories, and their research achievements are known all over the world. However, what is more important is the fact that the research plan of these laboratories are formulated directly according to the needs of their company's production development. They serve directly to increase the competitive edge of their own company. The results are outstanding when the needs of production are closely bound with the technological research. The production of capitalist society is disorganized and anarchistic, but within each enterprise, the organization is tight and the plan is precise. We, the socialist nations, may adopt only those effective things that exist inside an individual capitalists enterprise, and apply them to the entire society, in order to launch the plans for science and technology into orbit for the needs of national economic development. In fact, only the socialist system is capable of delivering science and technology from the bondage of capitalism, and transforming it from a tool for making profit to a means for raising the material welfare of the working people.

The plans for science and technology can be guaranteed to reflect the needs of national economic development only if the State Planning Commission takes up the charge to organize the troops and units.

Scientific research may be classified, according to the length of time required for its impact on production to be felt, into three categories: short range, medium range, and long range. From the viewpoint of long-range planning, medium-range (research projects) whose impact on production can be felt within 10-20 years ought to be emphasized.

Take energy resources, for example. Controlled thermonuclear fusion is truly the path through which mankind can hope fundamentally to solve the energy shortage problem. However, this belongs to a long-range project with an economic benefit that will not be felt for approximately 50 years. In view of China's national strength and its past technological resources, this project should not be emphasized at this time.

Nuclear fission power stations belongs in the medium-range projects. It has surpassed 10 percent of the total electric power generated in industrially developed nations. The worldwide specific weight of nuclear power generation capacity is expected to surpass 30 percent by the year 2,000. More than 20 nations worldwide have nuclear power stations today, while China has none. However, China has considerable technological reserves to be able to handle this type of medium-range project. We need only to organize carefully, and the economic effect can be reaped in 5-10 years. Therefore, this type of project ought to be emphasized.

Moreover, utilization of solar energy is nearing the practical applicable stage today. This type of project also belongs to the medium-range project which can yield early results with a relatively small investment.

In the 1950's when Soviet satellite technology led, the United States upon deep reflection discovered it was weak in materials science. Thereupon, they built a dozen or so materials science research centers. Thus overcoming its weakness, U.S. space technology quickly caught up and surpassed Soviet space technology. Materials science is related to various sections of the national economy. New materials are being invented endlessly one after another all over the world and are becoming the most important foundation for the new technology. We ought to select a number of medium-range projects, organize our forces, and break through with concentrated effort.

Now when the central government is formulating the important policies, the policy concerning the further readjustment of its organization must also be thoroughly carried out on the science and technology front. The present plans and projects for scientific research ought to be reexamined. First of all, a large number of projects involving small investment, short period and quick results ought to be grasped, funded according to their tasks and their activities effectively supervised in order to reap the results of the investment. We cannot afford the situations which have taken place in the past: "Money is thrown into the ocean and not a sound is heard." Next, from the viewpoint of long-range plans, we must selectively grasp a number of medium-range projects, organize forces, and break through with concentrated effort. I agree wholeheartedly with the present policy emphasizing discovery of latent potential, reform and renovation practiced by every enterprise. However, in order to be able to duplicate the miraculous "economic take-off" realized by some countries, we must more than ever emphasize utilization of the newest achievements of modern science and technology, and strive to catch up with the rest of the world starting out from a higher level.

In his analysis of the capitalist world in the imperialist period, Lenin pointed out the law of "late comers excelling over their predecessors." It was exactly this law which demanded the repartition of the colonies and led to wars between the imperialists. The reason why "late comers can excel over their predecessors" is because the late comers do not carry the burden of old technology and are free to adopt new technologies. In industrial construction, while we emphasize technological renovation of the existing enterprises, we must adopt as far as possible the newest achievements of modern science and technology. We must use the brand-new technologies, facilities, and processes in order fundamentally to change the backward appearance of China's industry and agriculture. We must turn our weakness, "weak foundation," into an advantage, "no burden."

Yang Jike

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese, No 2, 1981 pp 3-6

[Article by Yang Jike [2799 4764 3784], professor at China University of Science and Technology and deputy governor of Anhui Province Peoples Government: "Efficiency on Scientific Research Work Must Be Improved"]

[Text] During the period in which the national economy is being readjusted, scientific research work must also undergo corresponding readjustment. In view of the fact that national economic development has continuously to make demands on scientific research work, and the responsibilities of the scientific research workers are above all to satisfy the needs of national economic development, readjustment of scientific research work is, therefore, substantially one of the most important links in the readjustment of the national economy. Without this readjustment, the scientific research work cannot be bound to national economic development very well; it can become separated from the state of affairs and, worse, hinder the realization of the four modernizations.

Readjustment of scientific research work is extremely complicated. I would like to express my humble opinions here only on one of the problems--raising the efficiency of scientific research work. A comparison of the results achieved by the scientific research work carried out in China and the money spent on it over the years indicates that the efficiency is not very high; in fact, it is very low in some areas. If we in the scientific research field all work together with one heart and mind, and use every conceivable method in order to improve the work efficiency, one person accomplishing what it takes two to do now, accomplishing in 1 hour what takes 2 to do now, using only 1 square meter of area for what takes 2 to do now, and achieving a utilization rate of one instrument equivalent to what takes two today, then the scientific research work efficiency can be raised at least four fold without increasing investments on capital construction, instruments and equipment. This is absolutely not empty talk. The key lies in conscientious endeavor. The key to endeavor lies in discovering the latent potentials in man, time, space, and material and making full use of them.

To discover the latent potential in human talent ought to begin with discovery of the latent potential of the masses. Today distribution of talent among China's masses suffers from a serious disproportion. One of the reasons why the potential of many talents has not been manifested is the fact that the masses to which they belong are too crowded. On the other hand, the environment where these talents can thrive is sparsely populated.

Two examples may be used to explain the problem related to the disproportion of mass distribution. First: It became clear after the Second Society for Light Industry was recently established in Anhui Province that the number of workers with any specialized knowledge was only 0.31 percent of a total of 160,000 workers belonging to the jurisdiction of Anhui Second Light Industry; a pitifully small number. An inspection of a list of subjects of papers related to science and art reveals that although they have some economic value, they are so few in number. With such weak technological strength, how can we expect it to contribute significantly to the development of light industry? How can we truly place the light industry in the important position where it ought to be? On the other hand, the defense science research units are packed with talent, college graduates as thick as carp in the river. According to a report, the No 708 Office used to have a couple who held electrical engineering degrees. During the period of the cultural revolution, they were persecuted and sent to the countryside. While there, they helped the production team of the commune, purchased scrap materials from the factory and led a number of intellectual youths, in the manufacture of miniature electric devices and reaped an annual profit of 200,000 yuan. The production team of the commune took good care of the couple as if they were valuable treasures, raised their wages 140 yuan a month. After the disorder was quelled, the No 708 Office invited them back to work in the office, but the couple decided to remain in the countryside, unwilling to go back in spite of the fact that they were promised promotions and raises. If they were to go back to the office, they figured, they would remain as reserve staff or superfluous employees and, like the great majority of college graduates, they would never have the opportunity to fully develop their potentials. Is it permissible to suggest that a large number on the scientific and technical staffs belonging to various units under the Defense Science Commission be reassigned to civil industries such as light textile, electronics, electric machinery, mechanical, and chemical industries where their talents are urgently needed? The Defense Science Commission attaches importance to the systems science. If the problems related to the systematic and effective use of scientific and technological talents nationwide are studied using the method of systems science, I believe that my proposal will not meet any objection.

The other example: This year, Anhui Province requested a number of specialists from 15 fields of science to investigate the general utilization of natural resources in the Lianghui and western Anhui areas, including a general economic study requiring the use of systems science. We invited a mathematics instructor who was familiar with the work to participate in the project. When he was asked incidentally how many of the mathematics teachers are engaged in research which has practical applications to the national economy, he replied after a long pause that no one except himself has any interest in it; they all work in abstract mathematics. At the same time, a comrade who has just returned from an inspection tour in the United States told me that there were 25 professors in the mathematics department in one of the state universities he visited. Twenty of them taught applied mathematics and also did research. Five of them taught abstract mathematics, but they, too, did research on applied mathematics, because only by doing applied research were they able to earn extra income through contracts with outside enterprises. This point is worth taking into consideration, for comparison.

I believe, in order to be able to solve the disproportionate distribution of talents among various fields, the government must formulate truly effective guidelines and policies, so that these talents may be guided toward where they are needed by the national economy. In order to solve the disproportionate distribution of talents between abstract theory and practical application, the government must study the guidelines and policies which link the planned adjustment and the market adjustment of the talent problem. Otherwise, the phenomenon of disproportion between talents and masses will continue to develop and this is disadvantageous not only to the national economy but also to the four modernizations.

In discovering the potential of human talent, efforts should also be made to discover individual potential next. To do this, the most urgent matter is to implement thoroughly the 16-character guideline, "Management according to specialty, responsibility at every level, discussion among colleagues, and signing of contracts." Based on a report made by a comrade who spent 2 months at MIT recently, all professors of that school are engaged in some form of scientific research commissioned either by industrial enterprises, various social organizations, or the government. The majority adopts the contract responsibility system. The objective, the funds, and the schedule of a project are all laid out first, but the detail of how the time and funds are to be spent, including hiring workers, purchasing equipment and instruments, is up to the professor who is in charge of the project. This way, a great saving in expenses is achieved. Only the necessary instruments are purchased. And there is a lot of competition among the specialists, because everyone is afraid of losing the next contract. Workers cannot afford to be idle. This type of management method mot only joins scientific research with the actual needs of enterprises but also constitutes a great personal driving force, strengthening their sense of responsibility and fighting every minute and second in this endeavor, so that efficiency is very high. This way, human mobility and potential can be fully developed, and its rise or fall or transfer is all based on the standard of the results and is independent of seniority or rank. To say that one of them can stand up against two of us may be still an understatement.

We can also talk a lot about effective use of time. The unified planning method which was proposed and popularized by Prof Hua Luogene can save a lot of time if it is applied to scientific research. I have seen many chemical analysis offices in a number of research institutes in which one cannot find a large number of clean, ordinary glass equipment such as test tubes, beakers, pipettes, titration tubes, and fractionating columns. One can imagine that time must be utilized inefficiently in this type of analysis office. Experiments must be carried out like a surgeion operating on a patient. All instruments--knife, scissors, clamps, needles, saw, etc.--must be sterilized, clean and ready, and laid out orderly in a tray on the table by the side of the operating table, to be handed out by a nurse in charge. The doctor concentrates on the part of the body being operated on; he does not even turn his head when he asks for an instrument. Only in this way can the time required for the operation be made the shortest, efficiency the highest, and the safety of the patient guaranteed. The situations are similar when a chemical experiment is carried out. Imagine that a certain vessel is required during an experiment. Will not precious time be wasted if that vessel must first be found, then cleansed, and then rinsed with distilled water before it can be used? This is a most lamentable loss. This matter may appear insignificant, but it contains profound significance. Because, if those in every experimental process of science and technology are fussy about saving time, we will soon find out that twice the work is done in half the time. Therefore, I think every scientific research staff, especially the comrade who is leading a small research group, must learn a scientific method of conserving time and labor, such as the united planning method. We must research in earnest the problems concerning how to discover the latent time potential.

Management must reward the one who saves time and punish the one who wastes time. Various unreasonable political caps of the past such as "bourgeois specialist" road and unbreakable "iron rice bowl" have created a real effect of punishing those who worked hard and saved time and rewarding those who wasted time. Therefore, this was not a scientific management method; it was in the opposite direction from raising efficiency. If we wish rapid progress in scientific research work while holding such an attitude, then will it not be just as the saying goes "southern wagons will not fit into northern wagon tracks"? If the time required for various types of scientific research is determined quantitatively and totaled, and using a 95 percent reliability limit to predict the maximum time required by the similar type of research work, so that the time limit is fixed in the contract, then not only will there be a greater confidence in finishing the project on time or ahead of time, but also a significant rise in efficient use of time. In addition to this, if time saving is further encouraged by a reward method, then efficiency and benefit that can be achieved will more than double the success rate with only half the effort.

There is also a large potential that can be discovered in the land area used for the construction of scientific research institutes and offices in China. The effective area used for experiments by the various research units is usually smaller than that abroad. Those comrades who have taken a study tour abroad know well that the laboratories in foreign countries are usually very crowded. They don't build offices for technical personnel in the laboratory, and there are very few administrators, so that the office occupies only a small area. In order effectively to utilize the space, usually a number of research projects are carried out simultaneously in the same laboratory. Walls are full of chests for storage, fully utilizing the space. In contrast with this, some research units in China have more office space and some are even very spacious. Some laboratories have very poor space utilization. Quite a few experimental benches are idle and stacked with many unused instruments and equipment, just like an instrument display room. In China, very seldom can one find a number of research projects carried out simultaneously in a single laboratory. Few people have studied in earnest how every square meter of space may be most effectively utilized, but there are many who cry for more and larger buildings. If we investigate and study carefully, we often will discover that every laboratory or group has its own territory clearly staked out and nobody wants to overstep. Due to a desire to be big and complete, incorrect ideas such as "occupying" a branch of science prevail, and as a result, the office and group of research institutes grow bigger and bigger, and the ground larger and better. The natural consequence of this trend is a significant reduction in the effective utilization of the building area. One of the shortcomings resulting from purely administrative management can be seen here. Therefore, at this time when readjustment work is being undertaken and hundreds of enterprises are about to prosper, readjustment of the building area utilization effectiveness of every scientific research unit and the related management system is truly in order. Readjustment ought to be based on on-site inspection of the actual area utilization situation and using a method consisting of a combination between economic management and administrative management. For example, unused idle areas must be taxed according to the area. The standard of taxing must be increased according to the degree of shortage of the actually used area. This will force every laboratory or group to transform its office into laboratory or to start utilizing the idle area, or lend the space to people doing other important research projects. Using economic management methods such as this, it is quite possible to discover 30 percent of potential space nationwide without increasing investment on capital construction for scientific research work. As much as 50 percent of potential space can even be discovered in some areas.

As to instruments and equipment, the potential is even greater. The results of a nationwide investigation of large-scale electronic computers carried out this year sufficiently brings up this problem. Up to May 1979, 332 large-scale electronic computers were imported at an expense of $326 million, equivalent to 500 million yuan. However, the utilization rate is only a fraction of 20 hours of effective work per day which is the norm abroad. Less than 1/3 of these computers are used as many as 10 hours a day. There are 24 large-scale electronic computers in Anhui Province. Only three of these computers are used more than 8 hours a day. In spite of this, some units insist on importing more large-scale electronic computers. If investigation were carried out one step further to see what items were calculated on the machines which were reun 8 hours a day, one would often find that the proportion of important projects which are closely related to our national economy is very small.

If it is thus with the electronic computers, can other expensive imported instruments be any different? Foreign scientists who visited China often cast an envious eye on the advanced precision instruments on display at a number of research institutes (please note, utilization rate of these instruments is usually very low), because they can not affort them! When the director of a laser research institute belonging to the famous Max Planck Society of West Germany visited China to negotiate laser research cooperation, he said the instruments he found here were more advanced than those in his institute. It is unclear whether his words were a compliment or criticism!

The prevailing phenomenon characterized by the low utilization rate and low economic return of these instruments and equipment also runs counter to the needs of China's national economic development. I propose, in this year of readjustment, that a general investigation of all instruments and equipment valued at more than 10,000 yuan be carried out. Necessary policy changes including instrument import and management policy ought to be made based on the results of this general investigation. A set of economic measures ought to be implemented to strengthen control and management so that materials may be fully utilized. For example, an investment tax may be levied on idle instruments and equipment in order to force effective utilization of these instruments and also to join closely together the research projects which are essential to the industrial, agricultural, and national economic development. Those large-scale instruments which can be used jointly or centralized, such as electronic computers, must be effectively utilized collectively and should not be scattered and idle. Such bad habits as importing advanced instruments and equipment blindly and year-end buying sprees must be strictly forbidden. If necessary, a law ought to be written so that the wasteful party can be held legally responsible.

I do not know why, but it appears that everybody's eye is fixed on export trade and the foreign market, while at the same time, they waste hard-to-come-by foreign exchange on some unrealistic advanced instruments. They feel no pain spending several hundred million dollars, much less several hundred thousand dollars. I think it is time we transfer our sights from the hard to grasp and difficult to compete in foreign market to the vast domestic market. It is also time we transfer our precious foreign exchange from the impractical, expensive advanced instruments to the import goods which are essential to our national economic growth.

Biologists are all well aware that functional efficiency of human organs is extremely high. Brain, heart, liver, and stomach, each play their role with an extremely high efficiency. The human body survives and grows as a result of their coordinated function at high efficiency. Bionicists (cyberneticists) are all well aware that any social organization can function most efficiently and develop most extensively if it imitates a living body. Scientific research work cannot be an exception. High efficiency, joint utilization of man, time, land, and material is similar to the high efficiency coordination of various organs of the human body such as the brain, heart, liver, and stomach. Low efficiency utilization of talent is like retardation of the cerebrum; low efficiency utilization of time is like obstruction of the heart; low efficiency utilization of space is like hardening of the liver; and low efficiency utilization of material is like obesity. When all these conditions exist simulataneously in a human body, its days are numbered. Likewise, in a scientific research organization, it will be wasteful and with little actual achievement. Therefore, let us cry out loud: We must raise the efficiency of scientific research work! We must include raising the efficiency of scientific research work as part of the main content of readjustment of scientific research work. We must within 3-5 years, step by step raise the efficiency to such a level that it can be joined closely with the needs of national economic development. It must be raised to such a level that it matches the advanced step of the four modernizations. We must fight for the conditions of diligence and frugality, close and accurate calculation at all times, and discover and fully utilize the potentials in the limited manpower, material power, time, and space and thus shorten the gap between China's science and technology and the world's advanced standard as soon as possible.

Commentary on Articles

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese, No 2, 1981 p 6

[Text] Today China is moving one step further in the readjustment of its national economy. Development of scientific undertakings must be coordinated with the development of national economy. The two articles, Prof Guan Weiyan's "Formulate Scientific Program in Accordance With the Demand of National Economy" and Prof Yang Jike's "Efficiency on Scientific Research Work Must Be Improved," presented excellent opinions.

The article "Logic of Scientific Search" has concisely and systematically explained the scientific philosophy of Bupuer [phonetic]. The article "Problem of Methodology Concerning Discovery of DNA Double Helix Structure" discussed great scientific discovery in some detail from the angle of methodology.

Prof Yang Zhenning's "The Influence of Einstein on Theoretical Physics" presented concise discussions of symmetry and interaction, unification of physics, the relationship between physics and geometry, the impact of the simplicity and beauty of mathematics on theoretical physical research. The article also mentioned the work related to gage fields and fiber bundles which the author and Prof Chen Shengshen did together. The article "Development of Information Theory and Its Significance" explained the new trend in the study of information theory from simply a study of the quantity of information to a unified study of both quality and quantity of information, and also explored various aspects of information concepts.

Prof Shi Yafeng's "Is There Really a Glacier of the Quarternary Period at Lushan?" presented a different view from that of China's famous geologist Li Siguang concerning a theory related to the glacier of the Quarternary Period at Lushan. We wish that the concerned scholars would express their opinions and discuss the subject freely according to the policy of let a hundred schools contend and also based on the spirit of pursuit of truth. At the same time, the question of how to discriminate an old glacier must be studied using an approach mentioned above, e.g., discussing it from the angle of methodology. The author of the article "A Trial Discussion of the Characteristics of Metallurgy in Ancient China" has combined the literature research and the experimental verification method and obtained a historically unique understanding of the copper and iron smelting of ancient China, and thus set straight some misconceptions held by many foreign scholars about China's ancient smelting history. The article "A Brief History of Nuclear Power Stations" discussed the history and trend of the development of nuclear power stations. Included also were suggestions concerning how China's nuclear power stations may be developed and how to harmonize the relationship between military and civil applications. The article "It Is the Age of Communications and Control" described vividly the life and scientific spirit of Wierner, the founder of cybernetics.

In recent years, in order to cultivate a new type of scientists and engineers, many famous universities in the United States of America have established, one after another, teaching and scientific research projects related to "Science and Technology and Society." In the "Academic Movement" column of this issue, this type of teaching and research project established by MIT, Princeton University, and Stanford University were introduced for the reference of those who are interested in the Dialectics of Nature, History of Science, and Scienology.

GUANGDONG PARTY LEADERS ADDRESS OVERSEAS CHINESE AFFAIRS MEETING

Ren Zhongyi's Speech

Guangzhou NANFANG RIBAO in Chinese 2 Aug 81 pp 1, 3

[Article: "Guangdong Party Leaders Urge Party Organizations To Pay Special Attention to Overseas Chinese Affairs"]

[Text] Yesterday, Ren Zhongyi [0117 0112 1138], first secretary of the Guangdong Provincial Party Committee, delivered a speech to a joint session of the Guangdong Provincial Work Conference on Overseas Chinese Affairs and the Second Plenary Session of the Second Committee of the Guangdong Provincial Federation of Overseas Chinese Associations, emphasizing that since Guangdong is a principal native place of overseas Chinese, party organizations at all levels throughout the province must attach great importance to the role they have played in revolution and construction; they must also pay high attention to the work done by the office of Overseas Chinese Affairs and its implementation of the related policy; they must do a good job in this field in accordance with the guidelines of the kentral Committee instructions and further improve their performances in the service of the four modernizations.

These two meetings which opened in Guangzhou on 27 July are still in progress today. A total of more than 1,000 comrades attended yesterday's session. Among them were representatives attending the two meetings, and office cadres from Guangzhou Municipality and other parts of Guangdong Province. Comrade Ren Zhongyi followed Comrade Liu Tianfu [0491 3944 1133], secretary of the Guangdong Provincial Party Committee and governor of Guangdong, in addressing the joint session. [Comrade Liu Tianfu's speech will be reported lated on.] The joint session was presided over by Ye Xuanping [5509 6693 1627] vice governor of Guangdong.

Comrade Ren Zhengyi said: Why should we attach importance to the overseas Chinese role in revolution and construction? At issue is our understanding of their life. It seems clear that the great majority of them love their motherland. Their wholehearted love for their motherland and native place remains unchanged and firm regardless of its poverty, no matter how sorrowful is their memory of their past in their homeland, no matter how far they live from their homeland, and how many generations later. This seems to be an intrinsic characteristic unique to the Chinese people. Wherever they reside, they will never forget themselves at patriots always concerned with the ups and downs and destiny of their homeland.

Comrade Ren Zhongyi said: The overseas Chinese had played an exceptional role in the history of the Chinese revolution. The democratic revolutionary movement to overthrow the Manchu government under the leadership of Sun Yat-sen was first conceived and launched by overseas Chinese with the continuing financial aid from overseas Chinese throughout the world. Sun Yat-sen was an overseas Chinese himself. Throughout its revolutionary struggle, our party has never failed to expect and count on support and aid from patriotic overseas Chinese. This was true in wartime. This has also been true since the founding of new China. The overseas Chinese occupy a glorious place in the history of the Chinese revolution. They can be expected to play still a more positive role in the development of their motherland's four modernizations program in the days ahead. Among the numerous overseas Chinese are talented people. Comrade Liao Chengzhi estimated the number of the overseas Chinese, returned overseas Chinese and their dependents at nearly 100 million. This is indeed a great source of strength. Among them are experts in all fields of trade and professions including world-renowned scientists. Because they reside overseas, they usually enjoy access to new knowledge and new technology during their years. They are an important medium for economic and cultural exchanges between China and foreign countries. They are expected to bring their role into full play when we speed up the pace of four modernizations, especially in their native place such as Guangdong.

Comrade Ren Zhongyi said: Why should the overseas Chinese affairs command so much attention? The department in charge of the overseas Chinese affairs is an important aspect of our party's work. Its mission is to protect and encourage the patriotic and enthusiastic overseas Chinese to serve the four modernizations program and the great cause of the reunification of their motherland. This very important mission should be viewed as a common concern of all departments rather than just the Office of the Overseas Chinese Affairs. Party committees at all levels must attach great importance to and must be concerned with the work done in this field. They should strengthen their leadership over this work in order to guarantee its success. The Federation of the Overseas Chinese Associations has been named by the Central Committee as one of six important mass organizations. The five others are federations of trade unions, youth, women, writers, and scientists. Party committees at all levels must attach importance to the work done by the Federation of Overseas Chinese Associations and the Office of Overseas Chinese Affairs. As this work now commands nationwide attention, Guangdong should attach even greater importance to it.

Why should Guangdong be required by the Central Committee to enforce a special policy and carry out a flexible measure in this connection? Of course, there are many reasons for doing this. One of the most important reasons is that the overseas Chinese mostly come from Guangdong as their principal native place. This is viewed by the Central Committee as a vantage point from which Guangdong can proceed to develop its economy. If Guangdong wants to move a step ahead of other provinces in the development of four modernizations, it must do a good job in terms of overseas Chinese affairs, and must assume the full responsibility to protect and encourage patriotic and enthusiastic overseas Chinese to serve their motherland and native places.

Comrade Ren Zhongyi said: Why should the implementation of the overseas Chinese policy deserve our great attention? Because the job of protecting and encouraging the patriotic and enthusiastic overseas Chinese is an essential part of the policy.

There are two very important historical problems which remain: (1) the cases of those returned overseas Chinese and their dependents who have been falsely, unjustly and wrongly charged and sentenced still needs to be reviewed and corrected; (2) their economic problems, especially the problem of their homes still being occupied by others, need to be urgently solved. Party committees at all levels must adopt a very active and serious attitude in dealing with and solving such problems. Certainly, the implementation of the overseas Chinese policy covers not only the need to settle problems left from the past but also the requirements for solving some practical problems. In other words, we must make conscientious efforts to implement the policy of "giving equitable treatment to all overseas Chinese without any discrimination, and paying special and proper attention to their well-being." Particularly noteworthy is the political aspect of their life. Returned overseas Chinese and their dependents should be given equitable treatment without any discrimination. Those who qualify for party and CYL membership should be permitted and encouraged to join; those who qualify for promotion and higher important positions should not be suppressed. We should pay attention to their economic needs and should show regard for their living habits, and speedily process the shipment of supplies coming in from abroad at their expense. At the same time, we must convey the party's line, principles and policies to them and strengthen ideological and political work.

Comrade Ren Zhongyi emphasized: As soon as all returned overseas Chinese and their dependents are successfully settled, we can win greater support from overseas Chinese who remain overseas. We must also adopt a correct policy toward them and do a good job in this field. We welcome overseas Chinese and compatriots in Hong Kong and Macao to return to their homeland along with their offers of investment, cooperation or donations. But we should never extend our hands for their money and donations. Nor should we indicate any willingness to accept anything from them. This is our standing policy. Any acts contrary to this policy are a shame on our country and an embarrassment to the overseas Chinese involved. We also welcome overseas Chinese residents and overseas Chinese and compatriots in Hong Kong and Macao to return to their homeland where they can visit their relatives, sightsee, and embark on economic and cultural exchanges and cooperation. All localities should extend warm hospitality, and warm their hearts while in their motherland.

Comrade Ren Zhongyi concluded his speech by saying: The party Central Committee has paid great attention to the work done by the Office of Overseas Chinese Affairs. Hu Yaobang and other leading comrades on the Central Committee have issued instructions after attending a briefing on this work. Recently, Comrade Hu Yaobang personally circulated a letter reflecting problems resulting from the implementation of the policy toward the overseas Chinese. This letter written by Comrade Lin Qingyun [2651 7230 0061], a returned overseas Chinese and cadre, has been published by RENMIN RIBAO. Since the party Central Committee has shown such a deep interest in this work, it deserves even greater attention from party committees at all levels throughout Guangdong Province.

Comrades Ren Zhongyi's and Liu Tianfu's speeches were subjects of heated discussion by comrades who attended these two meetings yesterday afternoon.

Liu Tianfu's Speech

Guangzhou NANFANG RIBAO in Chinese 3 Aug 81 pp 1,3

[Article: "Two Conferences on Overseas Chinese Affairs Close in Guangzhou"]

[Text] The Guangdong Provincial Work Conference on Overseas Chinese Affairs and the Second Plenary Session of the Second Committee of the Guangdong Provincial Federation of Overseas Chinese Associations closed yesterday with a speech by Liu Tianfu, secretary of the Guangdong Provincial Party Committee and governor of Guangdong Province. In his speech, he emphasized: Party organizations at all levels throughout the province and government must work together to strengthen their leadership over the work dealing with the overseas Chinese affairs, make further efforts to eliminate the influence of the "leftist" ideology, concentrate on the implementation of the policy toward the overseas Chinese, and secure the services of overseas Chinese from Guangdong to our best advantage in our efforts to accelerate the pace of four modernizations.

These two meetings were held to convey the guidelines of the National Work Forum on Overseas Chinese Affairs, to review the work done by the Office of Overseas Chinese Affairs and the Federation of Overseas Chinese Associations during the past year, to endorse their achievements and to exchange their experiences. Also discussed and studied at the meetings were problems of how thoroughly to implement the basic overseas Chinese affairs policy proposed by the Central Committee for this new period, how to preserve and carry forward the tradition of cherishing their homeland inherited by the overseas Chinese, how to further implement the overseas Chinese affairs policy, how to help the Office of Overseas Chinese Affairs and the Federation of Overseas Chinese Associations do a good job in connection with our efforts to accelerate the development of four modernizations in Guangdong Province.

The meetings held that the thorough implementation of the basic overseas Chinese affairs policy calls for the continuous emancipation of the mind, and conscientious efforts to eliminate the influence of the "leftist" ideology and to overcome the erroneous "leftist" ideas and approaches in dealing with the overseas Chinese and returned overseas Chinese and their dependents. The meetings noted that the long existing deepening "leftist" influence on the overseas Chinese affairs front has resulted in a political discrimination against the returned overseas Chinese, economic infringements on their legitimate interests, and ignorance of their special character and needs for special care. The existence of this pernicious "leftist" influence is a great factor that has prevented our province from using the resources of overseas Chinese from Guangdong to the best advantage and has dampened their enthusiasm for loving their motherland and native place.

The meetings emphasized that various overseas Chinese affairs' policies must be firmly implemented in order to preserve and carry forward the tradition of cherishing the homeland inherited by the overseas Chinese and mobilize the returned overseas Chinese and their dependents to work harder than ever; at present, various localities must continue to concentrate on the implementation of the humanitarian policy in connection with the reinvestigation and correction of cases of those returned overseas Chinese and their dependents who have been falsely, unjustly and wrongly charged and sentenced, which must be completed as soon as possible, and score success in settling returned overseas Chinese and overseas Chinese in distress; secondly, they must concentrate on grasping well the implementation of the housing policy affecting the overseas Chinese.

In his speech, Comrade Liu Tianfu repeatedly emphasized the vital significance of the work done by the department in charge of overseas Chinese affairs to the proposals for realizing great unity among the patriotic overseas Chinese, for facilitating the return of Taiwan to the embrace of the motherland, and for accelerating the pace of the four modernizations in Guangdong. He pointed out that it is entirely wrong to argue that the work done by the Office of Overseas Chinese Affairs carries rightist overtones or has gone too far to the right side; rather than going too far to the right side, progress in this work has been retarded by the existence of the "leftist" ideology.

Comrade Liu Tianfu called on various localities and units to conduct a review of the achievements in the implementation of the overseas Chinese affairs policy, and take effective measures and make solid and conscientious efforts to solve the existing problems one after another. He said: all cases of returned overseas Chinese and their dependents who have been falsely, unjustly and wrongly charged and sentenced must be thoroughly settled without leaving anything undone. At present, the implementation of the overseas Chinese housing policy presents a big problem. Official units must take the lead in returning houses they have occupied to those overseas Chinese who own them. Various localities and units must strive to solve this problem within the next two years by setting aside a specific percentage of newly built housing units for use in the settlement of this issue through the implementation of the overseas Chinese housing policy. Judicial organs must step in to handle those occupants of such houses who have adamantly refused to vacate them, thus creating a very bad case in civil disputes. Only in this way can the legitimate interests of overseas Chinese be protected. We must extend good hospitality to the overseas Chinese residents, Chinese nationals and compatriots from Hong Kong, Macao and Taiwan who are coming to their homeland for sightseeing and reunion with their relatives. Customs authority, border checkpoints, railways, ships, airports, railway stations, harbour authority and other units must pay attention to improving their service attitude and service quality so as to leave a good impression on them.

Comrade Liu Tianfu said: This overseas Chinese affairs work must be strengthened in connection with the implementation of the guidelines of the work conference of Guangdong and Fujian Provinces and special economic zones recently called by the State Council. The Office of Overseas Chinese Affairs should do a good job of studying what it can and must do to stimulate fully the interests of overseas Chinese from Guangdong in developing their home province's industrial and agricultural production, in expanding its economic relations with foreign countries, and in local economic construction. It must also do everything possible to encourage overseas Chinese and organize their capital to develop Hainan.

In conclusion, Comrade Liu Tianfu pointed out: Aware that the Office of Overseas Chinese Affairs in our province faces a very difficult task, party organizations and local governments at all levels must effectively strengthen their leadership, and truly list the overseas Chinese affairs as an item on their agenda so that they can schedule regular meetings to discuss and study them. They must urge and help the Office of Overseas Chinese Affairs to do a good job of implementing the related policy, and attach importance to the positive role played by the Federation of Overseas Chinese Associations. The Federation of Overseas Chinese Associations is a mass organization and therefore should be treated in much the same way as the federations of trade unions, youth, women, scientists, and writers and artists are treated. All these mass organizations deserve the same assistance in solving their practical problems. The Office of Overseas Chinese Affairs must step up investigations and study so that it will be able to keep party committees and government informed of what is going on and give them recommendations and suggestions in connection with its business. Various departments and units must attach and support this work.

These meetings opened in Guangzhou on 27 July. Their joint opening session featured a speech by Vice Governor Ye Xuanping [5509 6693 1627] of Guangdong Province, and a report on overseas Chinese affairs by Xu Shengshou [1776 4939 0719], director of the Guangdong Provincial Office of Overseas Chinese Affairs.

The two meetings were attended by more than 300 representatives including responsible comrades from various prefectural executive offices, municipal and county governments, various overseas Chinese affairs departments, and various units directly under the provincial level authorities, and members of the Federation of Overseas Chinese Associations, as well as representatives of the various local overseas Chinese associations and of returned overseas Chinese.

LITERATURE AND ART URGED TO INFLUENCE LIFE

Shanghai WENHUI BAO in Chinese 10 Jul 81 p 3

[Article by He Yin [0149 7299]: "Literature and Art Should Not Only Recapture Life, But Also Influence It - An Exchange of Opinions with Comrades Sun Xun [1327 6676] and Wan Qinghua [5502 1987 5478]"]

[Text] Synopsis: The proposition that literature and art should not only recapture life but also explain life is, in terms of the function of literature and art, is not quite accurate. Because explaining life is by no means the entire function and ultimate function of literature and art. In order to illustrate how literature and art recapture life and in turn react on life, especially in the case of our work in revolutionary literature and art, we may entertain the proposition that literature and art should not only recapture life but also influence it.

WENHUIBAO published an article by Comrades Sun Xun and Wan Qinghua (the issue of 1 May 1981, p 3) entitled "Literature and Art Should Not Only Recapture Life But Also Explain it." The article stresses that, apart from "recapturing life," literature and art also play the role of "explaining life"; it also correctly points out that these roles of "recapturing life" and "explaining life" on the part of literature and art "do not become estranged or cut off from each other but permeate and blend with each other. In conjunction with the above viewpoint, expounded by certain creative thinkers in the circles of literature and art at present, the article exhibits a certain relevance and is also capable of producing some good effects. But it also has its shortcomings. Such shortcomings are mainly reflected in the following: First, even though the article speaks of how "recapturing life" and "explaining life" "penetrate and blend with each other," when it does concretely treat the two, it still ends up making them "become estranged or cut off from each other," as it stresses them as if they are two separate functions of literature and art. Meanwhile, it takes "recapturing life" and "explaining life" as the "total functions" of literature and art, and even asserts that only after "recapturing life" and "explaining life" can literature and art be "considered as having fulfilled their total duties and responsibilities," while it fails to mention that literature and art also play the major role of guiding life forward. Second, the article asserts it viewpoint mainly on the basis of a passage from Chernyshevsky, yet it fails to provide any concrete analysis of this passage. In response to the above shortcomings, this article expresses the following views for discussion.

Literary and Artistic Works Recapture Life and at the Same Time Explain Life Through the Authors' Understanding of Life

Literature and art recapture life, or literature and art are the recapture of life: this is a materialistic, and also a realistic, proposition; it is a fundamental law among all objective literary and artistic laws. As a social ideology, the recapture of life by literature and art is always achieved through the subjective mental activities of the literary and artistic authors. Comrade Mao Zedong said: "In their conceptual forms, literary and artistic works are all products of reflection of social life in man's mentality." All literary and artistic works recapturing life (so long as they are worthy of being regarded as such a recapture of life) include the respective understandings of the recaptured life on the part of the literary and artistic authors, and embody the various explanations of life based on the respective understandings of the authors: whether such explanations are superficial or profound, partial or comprehensive, twisted or accurate, artificial or substantive, they are all explanations. There is no such literary and artistic work which is "directly" reflected from life, i.e., a work recaptured in literature and art without going through a certain understanding of life by an author. Literary and artistic works recapture life through the authors' understanding of life and at the same time explain life; the more profoundly an author grasps the reality of life and the more thoroughly he understands the meaning of life, the deeper will be the degree to which his work recaptures life. Such depth of the recapture of life and the depth of the explanation of life are entirely consistent and not fundamentally two different things. The article by Comrades Sun and Wan acknowledges on the one hand that "the more authentically and profoundly a literary and artistic work recaptures the realistic life of a certain given era, the more it is of perceptual value, educational value, and esthetic value"; on the other hand it also says that it will not do by simply "recapturing life" this way, but there is still the need to "explain life." This kind of exposition is inaccurate and self-contradictory.

At its beginning, this article quotes the following passage from Chernyshevsky in his "The Esthetic Relationship Between Art and Reality"; "Recapturing life is the characteristic of the general nature of art, its essence. Artistic works often also have another function--explaining life: they often still have another function: passing judgment on the phenomena of life." The fact that the article takes "recapturing life" and "explaining life" as two functions originated from here. Below I would like to offer some analyses of this artistic viewpoint on the part of Chernyshevsky.

We all know that Chernyshevsky was a well-known materialistic thinker, a great revolutionary democratic fighter of 19th-century Russia. This materialistic view of art that recapturing life is the essence of art as put forward by him is connected together with his famous definition on beauty that "beauty is life." Originally, the view of looking at art as the recapture of reality had a long history; people gnerally think that it originated with Aristotle of ancient Greece. Chernyshevsky thought that the inventor of this view was Democritus, who was even earlier than Aristotle, and France's Laishin [phonetic] of the 18th Century was its greatest defender. By the 19th century, Hegel, following Kant, opposed this recapture view. The reigning idealist esthetics at the time took beauty as the sensual manifestation of absolute rationality; real beauty could not be found in reality, and art served to fill up this lack in reality; hence, artistic beauty was higher than realistic beauty. The view put forward by Chernyshevsky, that beauty is life and the essence of art constituted the materialist version of esthetics in terms of recapture of life, which represented a diametrical criticism of idealist esthetics and suggested outstanding ideological and artistic significance. But, just as Chernyshevsky himself said, his writing of the pamphlet "The Esthetic Relationship Between Art and Reality" "was an attempt to solve the basic questions of esthetics with Feuerbach's ideas"; therefore, he was subject to the influence of Feuerbach, and his materialist viewpoint was also tinged with an intuitive character. He emphasized that the beauty in reality "is thoroughly authentic," "is fully satisfactory." On the one hand, he correctly pointed out "in nature and life, there is nothing which exists only in abstract"; an artistic work "should reduce abstract things as much as possible, and do its best to concretely reflect everything in a lively scene and in individual forms." On the other hand, he also stressed that realistic beauty is higher than artistic beauty and did his best to depreciate artistic beauty, taking art as but a realistic and extremely uncouth "duplicate." Here we can see that, when Chernyshevsky criticized the partiality of idealism, because he did not master dialectical materialism, he also induced another partiality. In spite of the fact that he stressed recaptured reality to the height of considering it to be the essence of art, his interpretation of recaptured reality was somehow marked by an intuitive, mechanical-materialistic imprint.

Yet, Chernyshevsky was, after all, a great revolutionary democratic fighter. He understood and paid great attention to the role of literature and art in social life. If literature and art were merely a simple duplication of realistic life and far from being as authentic as reality, then what major social role could literature and art develop? Hence, Chernyshevsky made a timely amendment himself by putting forward their function of "explaining life." He put it this way: "The main function of art is to recapture life," but "explaining life, passing judgment on the phenomena of life, is also often raise to the status of first importance." I wonder if we may perceive such views of Chernyshevsky this way: attributing equally important meaning to "recapturing life" and "explaining life" is of course correct; but separating the two and make them two separate functions of art is in fact cutting them apart, which would be inadvisable. Therefore, it would be also inappropriate to postulate a theory of recapturing life and explaining life being the two functions of art on the basis of his above views. Affirming and exalting such views can easily lead to two problems: First, recapture of life itself includes explanation of life and passing judgment on life. If a literary and artistic work's recapture of life proves to be partial or even twisted, that means that the explanation of, and judgment on, life are also partial of twisted; this would have something to do with the author having come up with a partial or twisted understanding of life. The author would thus not be able to shirk his responsibility. If recapturing life and explaining life are viewed as two separate function of literature and art, then when the above situation is encountered, some authors would be liable to emphasize that this is a recapture of certain aspects of life and not paying attention to how life is recaptured or what realistic effects are actually brought about; nor would they try to find out the cause as to what kind of understanding and perception of life they have come up with in their own subjectivity. Second, explanation of life should be realized mainly through the symbolic recapture of life. If another function of explaining life is appended after recapturing life, that would likely lead to their expressing opinions about the images of life and characters of personalities in their works, attaching footnotes to them, and thereby bringing about conceptualized things. In the different opinion expressed by Plekhanov about Chernyshevsky's views was included precisely this point of concern. As for some people to take the passing of judgment on life as a third function in addition to the explanation of life, that would aggravate this problem even further. In the case of the above two problems, they have by no means failed to prop us in our realistic literary and artistic work; therefore we cannot but pay some attention in our theoretical explorations.

Literature and Art Must Not Only Recapture Life and Explain Life, More Importantly They Must Exert Influence on Life

Literature and art must not only recapture life but also explain life: this two-function theory is inaccurate, and defective, one aspect of the reason having already been stated above. On the other hand, it has not explained any practical problems in the treatment of the relationship between literature and art and life and as to what effects literature and art have on life and how to bring about such effects. Marx said, philosophy cannot just explain the world in different ways; the problem is to change the world. Literature and art should also be like this; they must not only recapture life and explain life; more importantly, they must exert influence on life, promote the development of life. Actually, if we but study a bit more seriously we would immediately discover that the explanation of life as broached by Chernyshevsky somewhat already more or less includes such an idea. Lunacharsky thought that Chernyshevsky "longed just as Marx said, not to explain the world, but to change the world"; this was of course an overestimation because Chernyshevsky was still unable to perceive and solve the relationship between explaining the world and changing the world from the height of philosophical world view of dialectical materialism. But he made his demands from the political and ideological viewpoint of revolutionary people's democracy in order to let art give scope to its role of awakening the people and exposing the tsarist autocracy; this point was very strong. For instance, when he explained passing judgment on the vicissitudes of life, he emphasized that an artist could not just recapture the aspects of life which pleased him but must recapture the things interesting to his contemporaries and thereby "put forward or solve problems arising in life for thoughtful people." When he specifically reviewed "Russian Literary Concepts in the Gogoli Period" of literary development, he clearly demanded "to understand literature as a powerful force exerting influence on the development of our social life" and "leaving a wholesome impact on the intellectual life in society."

In the history of literary development and realistic literary work, the question as to how to treat and handle the influence literature has on social life has, in contrast to the question that literature must at the same time explain life while it recaptures it, been explored far more often and also of far greater significance. The article by Comrades Sun and Wan takes Balzac's works as example in citing as the basis of his theory that literature has the two functions of recapturing life and explaining life, but Balzac's ideas of creation and the ideas reflected by his creative practice do not all happen to have to do with this, nor are they limited to this. Balzac declared that he wanted to be the French society's "secretary" and he wanted to write its "history of customs; did he mean in this connection the so-called "recaptured life" which included no explanation of life? Then, in saying that the history of customs he wanted to write would include the listing of good and bad behavior, the description of characters, the selection of principal events, and the molding of typical personalities, could these depart from understanding and perceiving social life or exclude explaining social life and passing judgment on it? The article says that only what Balzac said about how literature must not only describe the manifestations of life but also expound the reason why such manifestations come about and the significance behind personalities and events belongs to the "realm" of "explaining life"; then, for what is the revelation of such reason and such significance intended? Balzac wanted to let his history of customs become a force exerting influence upon society; this attempt was quite obvious. The explorations and discussions we are carrying on around certain questions of creation today indicate that some pertain to the question as to whether a recapture of life should include an explanation of life, but in reality the crucial point lies with how to understand and handle the exertion of influence on life by literature, especially the question of an exertion of good influence. Take, for example, what has been called the practice of displaying the dark side of life, the reason here is not that life is not explained (perhaps some comrades think life should be precisely explained that way), but that the question as to what influence should literature exert on life is not properly solved, that no attention is paid to correctly and dialectically explaining life and passing judgment on it, so that not very wholesome social effects have resulted.

ARTICLE HAILS SIGNIFICANCE OF POLISH PARTY CONGRESS

Beijing BANYUE TAN [SEMI-MONTHLY TALKS] in Chinese No 15, 10 Aug 81 pp 52-53

[Article by Chen Xi [2525 2569]: "Briefly on the Polish Party's Ninth Extraordinary Congress"]

[Text] The Ninth Extraordinary Congress of the Polish United Workers' Party, which convened on 14 July, concluded on 20 July, after 7 days of tense and heated work. The overall historical significance of this congress is of course a matter for the Polish people themselves to assess. It may seem too early for an assessment, but this does not lessen in the least the strong impression that this congress left behind.

Precisely as the "Appeal to the Polish People," passed at the end of the congress, expressed it: "The deep economic, social and political crisis that is now tormenting our country imperils the secure existence of our people and the future of our fatherland." The Ninth Extraordinary Congress of the Polish party "must extricate the country from its crisis and become the turning point in its struggle." Owing to the complex and delicate position that Poland finds itself in, owing to Poland's role in the overall East-West relationship where one light move may easily affect the entire situation, and owing to the nonstop political, military and economic pressure from the Soviet Union, the international community pays extraordinarily close attention to the Polish party's Ninth Extraordinary Congress. This is completely understandable.

The present congress summed up the events in Poland since the Eighth National Congress in February of last year. The congress debated most conscientiously the role and task of the Polish party in the present situation, selected in a uniquely new system a new central leadership structure, affirmed the line of having social reforms and political discussions solve conflicts, determined economic reforms, especially the strengthening of the policy of agricultural development, investigated the responsibility of former leadership personnel for the serious mistakes that have been committed and formulated new party statutes incorporating a new revolutionary spirit. One may take it that the special features of the present congress were promotion of democracy, determination to carry out reforms and a joint effort to avoid a national calamity. The overall atmosphere at the congress indicated that Poland is seeking a road of development that will conform with its national history and national peculiarities.

The courageous and successful experiment that the present congress carried out in democratizing innerparty political life left an extremely deep impression on everyone. It was most intensively reflected in the elections. All the elections, from Central Committee members to first secretaries, departed from the usual and traditional practice of the past, when candidates were nominated by the higher authorities and voted on by the lower levels. This time the candidates were nominated directly by the delegates and, after inquiries, voted upon by secret ballot and elected by majority vote. The result of the election was that 89 percent of the full and alternate members of the Politburo were eliminated and a large number of workers, peasants and rank and file cadres were elected into the highest leadership structure. Among the 200 members of the Central Committee, workers and peasants account for over 50 percent, and provincial party committee members and secretaries from factory and mine party committees account for less than 10 percent. Only four members of the former Politburo were reelected. This great "changing of the guard" undoubtedly expresses the determination of the delegates to "vote into the central leadership structure men who will resolutely carry out and support socialist innovations." However, since most of the new men lack experience in leadership work, this might entail a number of new problems.

The spirit of political reform of the present congress is full expressed in the new party statutes passed by the congress. The new statutes stipulate: First secretaries in the central party organizations and party organizations of all levels may not hold office in excess of two terms (10 years). The separation of party and government, and the principle of no one holding concurrent offices in both is strictly emphasized. The statutes determine the supervisory role of the party's electoral organization over the executive organization and strengthen the functions of the grassroots party organizations. The party statutes also clearly stipulate the responsibilities and limits of powers of the cadres at different levels. These reform measures are undoubtedly very positive.

The renewed confirmation of First Secretary Kania's leadership position and the elimination of the "extremists" in the leadership by the present congress is of great significance for the maintenance of party unity and prevention of its splitting apart. This also created the necessary conditions for the realization of reforms and for the process of democratization. However, the present congress has obviously not yet set forth a "well-considered program of action" to overcome the present crisis and concrete plans to carry out such a program effectively. The new leadership will have many things to attend to.

Essentially, the key problem which the party's Ninth Extraordinary Congress solved was the problem of the leadership team, that is, the problem of personnel. This was precisely the crucial point in Moscow's concerns all along. Ever since Kania and Premier Jaruzelski took charge of the party and the government, Moscow has incessantly attacked the Polish party as "revisionist" and "opportunist" and in letters, naming names, expressed its dissatisfaction, stirring up quite some action in the internal division of the party. Up to the present congress, there has been not the slightest letup in the Soviet military, economic and political pressure. The low-key reaction, limited quantity and dark-tinged criticism of the Soviet propaganda machine toward the Polish party's Ninth Congress has been noteworthy. International observers even noticed the subtle difference in Brezhnev's congratulatory telegram to Kania, calling him "Respected Comrade" and not "Dear Comrade." Even though Kania has repeatedly reaffirmed his loyalty to the Polish-Soviet alliance and the "one big family," Moscow has not changed its attitude of distrust of him and reservations toward him. This means that the dark cloud of Soviet intervention will continue to hang over Poland and that Poland's road out of its crisis and toward reforms is still beset with many difficulties.

However, the significance of the Ninth Extraordinary Congress of the Polish party is perhaps just that it wants to be, on the one hand, "the loyal ally," "one of the big family," and "a firm link in the chain," but on the other hand courageously break out from the "Soviet-style" cage and seek its own road.

PARTY AND STATE

HISTORICAL STUDY, CORRECT CONCEPT OF PARTY URGED

Beijing XIN SHIQI [NEW ERA] in Chinese No 5, May 81 pp 2-4

[Article by Wang Furu [3769 4395 1172]: "To Know the Party as It Is"]

[Text] Lately, some people, especially young people, have formed some questionable concepts about our party. Some way that our party is a party of small producers. Others say that our party has never been a party of the proletariat, but rather "a paradise for a few career revolutionists," or words to that effect. Are they correct or not? They are of course wrong.

Our party has grown up in rural environments. Many of our party members have a peasant background. Thus the mentality of small producers has held considerable sway within our party. But can we then conclude that our party is a party of small agricultural producers?

We must realize that the social background of our party members does not make our party what it is. The determining factors are its guiding ideology, its political platform, its political line, and the principles of its organization. For example, the Labor Party in England is made up mostly of workers as far as its membership goes, but it has long been a capitalist political party. While our party has a predominantly peasant membership, it is just the same a proletarian party. It is because our party is armed with Marxist scientific theory and is a product of the marriage between Marxism and the Chinese worker movement. Our party built its foundation on the working class, not the small agricultural producers. Peasants and people of other social classes and all social strata may join our party, but they must accept the proletarian world outlook, embrace our party platform, and prove themselves in the course of real-life struggles as the cream of the proletariat before they are admitted into the party as members. This is not a new issue. Comrade Liu Shaoqi touched on this point when he was addressing the Seventh Party Congress on revisions to the party charter. He said: "The social background of our party members in itself is not a determining factor. The determining factors are our party's political struggles and political conduct, its ideological education programs, and the ideological and political leadership it provides. Our party's general and organizational principles put the proletarian thought and line in an authoritative position in our party's conduct."

It is undeniable that the old China was a nation made up mostly of small agricultural producers. The petite bourgeoisie was a formidable national force. Therefore, the party leadership could not help being affected by the mentality of small producers.

During the period of democratic revolution, our party swerved several times to the far "left" and to the far right because of the influence of such a mentality. Even during the period of socialism beginning in the late 1950's, we still did not shake off this mentality entirely as we led our socialist construction. We suffered, to varying degrees, from left leaning utopianism. This notwithstanding, we need to point out without reservation, that in general and fundamental terms it was the proletarian scientific theory of Marx and Lenin, not the mentality of the small producers, that has guided our party all along. Some people are suggesting these days that it was a brand of rural socialism, not scientific socialism, that guided our party's conduct, during the period of socialism. They say that such rural socialism was "coated with Marxism, steeped in agrarian socialism, and rooted in feudal socialism." They are entirely off the mark. They are talking nonsense. It is true that our party did come under the influence of the mentality of the small producers when we worked on the problem of how to build socialism. It does not mean that such a mentality guided us through the period of socialism. No matter what guise it assumed and what influence it exerted on our party during both the period of democratic revolution and the period of socialism, the mentality of the small producers was illegal and it ran counter to the guiding ideology of our party. The very fact that our party is always guided by the scientific theory of Marxism-Leninism-Mao Zedong Thought is our guarantee that we shall triumph over the mentality of the small producers and all other social classes, that we shall elevate our theory, our basic concepts, our political line and our policies to a level in keeping with the scientific theory of the proletariat, and that we shall lead our revolution onto the path of one victory after another. Let us go back to the concepts and policies which our party pursued for the period of the new democratic revolution. We insisted at the time that such a revolution should be accomplished in two stages, that the proletariat should be the leading class, and that the democratic revolution was to pave the way for the socialist revolution. Small producers could not have envisioned that. By the same token, the concept and strategy that our party devised for our revolutionary war, including our extremely sophisticated military dialectics, could not have been devised by small producers. Similarly, the lofty program designed by our party to realize socialist modernization and the political and economic reforms planned by our party would again be beyond the intellectual reach of the small producers. The fact that we could build such a great party as ours, win such a remarkable victory for our revolution, and move on to the socialist path was a testimonial to the triumph of Marxism-Leninism-Mao Zedong Thought and the triumph of scientific socialism. This achievement can never be justified on the strength of the mentality of small producers by itself.

It is clear then that to negate our party's leading ideology and to doubt the proletarian character of the party just because our party once came under the influence, even strong influence, of the mentality of small producers is an unscientific attitude. Anyone who holds such an attitude sees only what is on the surface, not what is on the inside. He will never correctly understand the true nature of our party.

Anyone who contends that our party is "a paradise for a few career revolutionists" is again making an error of judgement in failing to see what is truly at issue.

It is true that a number of career revolutionists filled our party ranks at its very inception. As our revolution developed apace, their ranks grew in number.

Even for a proletarian party like ours, these career revolutionists played a very important role. In his book "What Is To Be Done," Lenin also dwelt upon this important issue. He argued that scientific communism did not rise out of the workers movement. It was "injected" into it. The career revolutionists acted as the inspirers and organizers of the proletarian struggle and their role was indispensable. Lenin said: "Without the strong and organized leadership provided by career revolutionists, the spontaneous proletarian struggle could not have grown into a class struggle in its true sense." ["Complete Collection of Lenin's Works" Vol 5, p 445] Since its founding, our party has led a protracted and arduous armed struggle and underground struggle. The career revolutionists in our ranks have grown in number and have played more and more important roles. Li Daozhao, Mao Zedong, Zhou Enlai, Liu Shaoqi, Zhu De and Dong Biwu were the most outstanding of them. This is not to say that our party is nothing more than a tight group of career revolutionists. The fact remains that our party is a proletarian party composed of the broadest possible cross section of the people. It is because our party is not working in the interest of the proletariat and the working people as a whole. Our party is not a paradise for career ervolutionists. It is a melting pot of all revolutionary people. Everyone who joins our party must be prepared to accept all sorts of challenges. Our party once worked under extremely vicious white terror. The great majority of the career revolutionists joined our party ranks not to work for their own personal gains but to work for class and national liberation. Many of them gave their precious lives for this cause. "They were concerned about what was good for the world, not what was good for themselves or their families." Anyone who knows a little bit about the Chinese revolution will accept this fact.

Perhaps some of the people who will not accept this fact are not thinking about the past, but the present. Perhaps what they mean is that all the career revolutionists are enjoying special privileges now, so that our party is no longer what it was and has turned into a "paradise" for the career revolutionists. Such a conclusion has no basis in fact and is dangerous.

We have to admit that with the victory in our revolution, our party has assumed a different status and a large number of career revolutionists have moved into leadership positions at all levels of the government and are holding considerable power. As a result, their relationship with the people may be changing. In the past, they shared weal and woe with the people and maintained close ties with them. They led the people in their struggle against the reactionary rulers. Now they are leaders of the people's government. While they still share the basic common interests with the people, they may, if they do not do their jobs properly or conduct themselves properly, come into conflict with the people, or they may even place themselves in a position opposite the people. Comrade Chen Yun once pointed out: "How a ruling party conducts itself is a matter of life or death for that party." It is wrong to ignore this serious problem or fail to recognize the danger in the degeneration of a ruling party.

We must also admit that some leading cadres have committed improprieties. The decade of chaos fueled the fire of bureaucratism and the pursuit of privileges. Some party leaders were affected by Lin Biao's philosophy that "when you have power, you have everything." They took to heart life's philosophy summarized in this maxim: "Power and money, power and money, power generates money." They put their personal gains above everything else. They do not care what is good for our party or what is good for our people. Perhaps they cared before, but not any more. This situation calls for a careful analysis as follows:

1. We must make a quantitative analysis. Within our party, those who have flagrantly disobeyed the law and the party's code of conduct, who have embezzled the fruits of labor of the people, and who have squandered and wasted public money form an extreme minority. What they did or are doing does not meet our party's code of conduct and tarnishes the good reputation of all other party members. Nevertheless, we cannot generalize or blame the misconduct of a few on the entire party. If we draw the conclusion that the majority of our party leaders are already corrupted, we are not stating the true facts.

2. The problem of our party leadership is basically a problem of misdirection. The desire to achieve quick results, the failure to strike a proper balance between reserves and spending, poor planning and mismanagement have resulted in tremendous waste. This has created obstacles for the development of production and the improvement of the living standard of the people. However, this is not the same as pocketing the entire proceeds from the surplus production of the working people, like the capitalists used to do. We must separate honest mistakes of individuals from the normal conduct of our party. We must also separate the mistakes of our party from the attempt at sabotage by Lin Biao and the "gang of four." We cannot blame all the social consequences of the decade of chaos and all the hardship we have suffered because of it on our party. If we do, we will not form the right opinion about our party, we will not see it for what it truly is.

3. More importantly, we must ask ourselves this question: Are the policies of our party designed to serve the interest of the people and to benefit the people? Or are they designed to protect and perpetuate the privileges of a few? This is a basic criterion by which to judge our party. We must admit that except the time when Lin Biao and the "gang of four" were pursuing their perversive policies, our party has spent most of its time trying to curb and criticize special privileges. Special privileges have always been illegal within our party.

Since the 3d Plenary Session of the 11th Party Central Committee, our party has passed a number of bills regulating the political conduct of our party. It has set a code of ethics for high-ranking cadres. It has made an exhaustive effort to criticize and stamp our misconduct. It is also determined to carry its corrective effort a step further if necessary. This is a direct refutation of the thoughtless claim that all leading cadres of our party are privileged people and that our party has turned into a party of the privileged class.

It is not surprising that some people, especially some young people, should raise questions about what our party is. All our young people under age 30 stepped out into the world at a time when the "Great Proletarian Cultural Revolution" had just gotten underway. They faced a confusing situation when everyone was demanding: "Let's kick the party committees out of the way and get down to making revolution!"

What they heard and saw was the distorted and disfigured image of our party and our veteran cadres, an image created by Lin Biao and the "gang of four." Many of them have only a fragmentary knowledge of what our party stands for and what our party has gone through. They are too young to have taken part in the revolutionary war led by our party. They are too young to have experienced the correct leadership provided by our party during the first 17 years of China's liberation. There is no wonder that they are likely to form some objective, one-sided, and superficial opinions about our party. They have no appreciation for the fact that a large party like ours which has to lead a nation of 1 billion people and which has to take on an innovative and arduous task in a situation full of complex contradictions and conflicts is likely to make its share of mistakes. Once they realize that our party has made some mistakes, they refuse to examine those mistakes from a dialectical and historical perspective. They simply say that nothing is right. They refuse to accept the party for what it is. They close their eyes to the fact that our party is a superior party, that it has a glorious, revolutionary tradition, and that it has a vibrant vitality. It is capable of overcoming its own mistakes on its own strength and in the process grows stronger and better able to lead the nation toward the socialist goal. If we do not understand this issue properly, we are likely to give in to complaints and accusations, to develop skepticism and pessimism, and to lose faith in our party and in its ability to carry out the four modernizations. If we are to understand correctly the true nature of our party, we must review the history of our party's struggles in the past 60 years in the right perspective and conscientiously study the works of Marx, Lenin and Comrade Mao Zedong. We must realize that by adopting dialectical materialism and historical materialism to suit the conditions of China's revolutionary struggle, Comrade Mao Zedong came up with many creative ideas that filled the pages of all his brilliant works. If we study the history of our party and the philosophical treatises by Comrade Mao Zedong side by side, we will develop the correct approach, perspective and method to reach the right conclusion about what our party has gone through and about what our party really is. We will also develop a stronger faith in our party's leadership style and its ability to carry out the four modernizations.

PARTY AND STATE

NEED FOR CRITICISM, SELF-CRITICISM STRESSED

Chengdu SICHUAN RIBAO in Chinese 6 Aug 81 p 3

[Article by Hong Yunshan [3163 7301 3790]: "Daring To Make Self-criticism Is an Important Profile of Our Party"]

[Text The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC," adopted by the Sixth Plenary Session of the 11th Party Central Committee, is a realistic endorsement of the historical role of Comrade Mao Zedong and Mao Zedong Thought as a guide, and is a reaffirmation of our party's tremendous achievements in leading the people throughout the country to embark on socialist revolution and construction. At the same time, this document contains open confessions of mistakes committed by our party's leadership since the founding of the PRC and mistakes committed by Comrade Mao Zedong in his later years, as well as serious, conscientious, and nonperfunctory self-criticisms and a review of experiences and lessions it has drawn during the past 32 years. This reflects the quality of a proletarian political party characterized by honesty, openmindedness, selfless devotion and courage, as well as a high sense of its responsibility to the party and the people, or what Lenin called "the hallmark of a serious-minded party." ("Selected Works of Lenin," Vol 4, p 213)

In 1891, when Engels decided to publish "Criticism of the Gotha Program," a document written by Marx 15 years earlier to seriously criticize the party's erroneous tendencies, he wrote a letter to Kautskiy saying: "The worry that this letter (reference to 'Criticism of the Gotha Program'--editor) will provide the enemy with a weapon will prove unfounded. Of course, anyone can spread malicious slander for any reason. Generally speaking, however, this form of dispassionate self-criticism may catch the enemy by surprise and may give him this feeling: What gives this party such enormous potential strength to offer itself such things!" ("Selected Works of Marx and Engels," Vol 4, p 487) This resolution that has been adopted by our party was published some 32 years after it came to power, and it is expected to carry greater weight and influence than the principled criticism of that Gotha program exercised by a party not yet in power. The fact that we dare openly to examine and criticize ourselves also proves that the "potential strength of our party is very great!"

Whether a political party can lead a revolution is a point that has nothing to do with whether it will make mistakes or not. The most important point is that we must watch whether it can represent the progressive social tendencies and the interests of the overwhelming majority of the people, and whether it can push the wheel of society forward. In our era, only socialism can save China, and only the Communist Party can assume the difficult historical role of leading the cause of socialist revolution and socialist construction. No political party or individual can avoid making mistakes. A case in point is that correcting mistakes calls for a correct attitude and strength. Our party has taken a serious and conscientious attitude toward its mistakes and has relied on its own strength to consciously correct them. In the process, it has also summed up experiences and lessons so that it can push the revolutionary cause forward and grow more mature than ever.

During the new democratic revolution, our party committed two serious mistakes--one in 1927 and the other in 1934--as a result of the implementation of an erroneous guiding ideology. Because our party took a serious and conscientious attitude toward these mistakes and could rely on its own strength to correct them, it eventually succeeded in overcoming difficulties, triumphed over the enemy, and captured the nation's political power. After the founding of the PRC, our party led the people throughout the country to take swift action to revive the seriously damaged national economy through the proclamation of a general line for the transition period, the formulation and successful implementation of the First Five-Year Plan, and the socialist transformation of the means of production of private ownership. When the socialist transformation was basically completed in 1956, our country began to shift the emphasis of its work to large-scale socialist construction. Socialism is a brand new undertaking--especially new to a poor and backward big nation like ours. Under such circumstances, we cannot consult the books by our revolutionary teachers on ways to practice socialism, its special characteristics, and the laws governing its development. We have had no alternative but to find answers to these matters of interest through exploration. For example, the tempo and scale of development that would suit our nation, the specific forms of public ownership that should be adopted in order to meet the level of the productive forces in our country, and how to establish an economic management system and certain leadership systems for our party and state--all these needed to be explored through practice. Only thus could we obtain correct knowledge and acquire successful experiences. Because any correct knowledge can be obtained only through the repeated process of practice, knowledge, and again practice, and because almost all successful experiences can be made available only through the process of summing up lessons in success and failure, it seemed unavoidable that we would make mistakes of one kind or another in our work. A review of our historical experiences since the founding of the PRC shows that some mistakes could not be avoided, while some could have been avoided. Since these mistakes have been made, we must try our best to draw useful lessons and experiences from them and convert them into the invaluable assets of the party and the people throughout the country. Since the smashing of the "gang of four", and especially since the Third Plenary Session of the 11th Party Central Committee, our party has taken careful measures to lead the comrades of the entire party to conscientiously sum up its experiences since the founding of the PRC, and especially the experiences and lessons drawn from the "Great Cultural Revolution"; to resolutely rectify mistakes and wholly revive and reaffirm the correct Marxist line on the political, ideological, and organitional fronts; and to effect a great transition of far-reaching significance in the history of our party since the founding of the PRC. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC" is a document aimed at summing up all such experiences. It reflects not only the fact that our party is a serious-minded organization capable of relying on its own strength to correct its mistakes, but also the fact that it has become more politically mature than at any time since the founding of the PRC. It convinces us that the great objective of our socialist modernization program can be victoriously realized. In the face of mistakes and frustrations, no one should lose confidence, nor should anyone become pessimistic, disappointed, or demoralized. It is entirely wrong to adopt such attitudes.

In the 60 years of its struggle, our party has committed many mistakes. No matter how many mistakes it has committed and how serious their nature and consequences, it has counted on nothing but its own strength to correct them. In the course of correcting its mistakes, it has summed up its experiences so that it can continue its march forward again. This fact proves that our party is a proletarian vanguard armed with Marxism-Leninism and Lao Zedong Thought, that it is dedicated to serving the people wholeheartedly, and that it willing to do everything for the masses or in their interests. This is why we are not afraid to tell the people and the whole world openly of its shortcomings. The demonstration of this daring spirit to make criticism and self-criticism is proof that our party is always serious-minded and is very powerful, and a hallmark that distinguishes our party from any other political party. It tells us that our party can overcome any difficulties in leading the Chinese people on the march from one victory to another. Through the study of the "Resolution," we must exhibit greater confidence in this point, rally more closely around the Party Central Committee, work with one mind and one heart, display an indomitable spirit, and make vigorous efforts to develop the socialist modernization program.

PARTY AND STATE

THIRD PLENUM DEFENDED AS GREAT TURNING POINT

Guangzhou NANFAN RIBAO in Chinese 17 Aug 81 p 4

[Article by Li Changtai [2621 7022 1132]: "Why the Third Plenum Was the Great Turning Point in Our Party's History Since the Founding of the People's Republic of China"]

[Text] Comrade Ho Yao Xin:

You wrote and asked why the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" evaluated the 3D Plenum of the 11th Party Central Committee by saying the "the 3D Plenum of the 11th Party Central Committee was the great turning point with far-reaching significance in the history of our party since the founding of the nation"? Why doesn't the smashing of the Jiang Qing counterrevolutionary clique qualify as the great turning point? I feel that what was written in the "Resolution" was reasonable and correct.

Generally speaking, in order to be called a great turning point, something must have created an entirely new situation for the revolution and construction. We call the Cunyi Conference the first great turning point in our party's history because it opened a new page in our country's new democratic revolution and laid the foundation for its victory. Similarly, we call the Third Plenum another great turning point because it created a new situation for our nation's socialist revolution and construction and is leading us to a great new victory in socialist modernization construction.

The victory achieved in smashing the Jiang Qing counterrevolutionary clique had tremendous significance in our party's history. It saved the party and the revolution from great peril and led our country into a new period of historical development. In the 2 years from that time until the eve of the Third Plenum the party and the people did a vast amount of work, such as unmasking and denouncing the crimes of the Jiang Qing counterrevolutionary clique, beginning in part to redress the injustices done, bringing about a fairly quick restoration of production, etc. In short, during these 2 years the work of the party proceeded. But the progress achieved met with severe obstruction. Suddenly there appeared mistaken theories, policies and slogans of the "Great Cultural Revolution," including the theory of "Continuing revolution under the dictatorship of the proletariat," the slogan "Take class struggle as the key," etc. And these not only went uncorrected, but to varying degrees were confirmed as correct. There are reasons for the appearance of these improper phenomena. One is that the political and ideological confusion created by the 10 years of the "Great Cultural Revolution" cannot be easily cleared up in a short period. A second is that Comrade Hua Guofeng who was party chairman during that time continued to make leftist errors in guiding ideology. The Party Central Committee convened the 3D Plenum of the 11th Party Central Committee in order to change the situation of party work proceeding in an atmosphere of indecision.

The great significance of the 3D Plenum lies in its full scale, resolute restoration of order which relied on the masses and was well thought out. The 3D Plenum ended the situation of party work proceeding in an atmosphere of indecision, and began the complete and serious correction of the leftist mistakes committed during the "Great Cultural Revolution: and before. The 3D Plenum established the correct ideological, political and organizational lines. The guiding ideology of the party returned to the correct path of Mao Zedong Thought. The 3D Plenum began the search for a path to Chinese style modernization. After the 3D Plenum, we began the step by step establishment of a correct path to socialist modernization construction which suits China's situation.

The 3D Plenum firmly criticized the mistaken principle of the "two whatevers," fully confirmed the need to grasp completely and accurately the scientific system of Mao Zedong Thought, evaluated in depth the discussion of the question of standards of truth, and established the leading principles of emancipation of our minds, using our heads, seeking the truth from facts, and looking forward in unity. This demonstration that our party has already established the correct ideological line of "seek the truth from facts, everything proceeds from reality, and theory and practice unite." The 3D Plenum decisively put a stop to the use of the slogan "Take class struggle as the key" which is ill-suited to a socialist society and formulated the strategy which made socialist modernization construction the focal point of our work. It also demanded that we make an effort to solve the serious imbalances in our national economy and it made the decision to speed up agricultural development. This makes it clear that our party has already established the correct political line of "Carry out the four modernizations in a Chinese way." The 3D Plenum emphasized the tasks of perfecting socialist democracy and strengthening the socialist legal system, and of investigating and solving the large number of grievous mistakes made in the history of the party and the question of the merits and demerits of certain important leaders. The entire plenum also selected the members of the organ of central leadership. This makes it clear that our party has already established the correct organizational line which, along with the ideological and political lines, appropriately upholds democratic centralism. All of this demonstrates that in guiding ideology our party has already departed from the leftist mistakes of so many past years and has returned to the correct path of Marxism-Leninism-Mao Zedong Thought. After this the party grasped the initiative in restoring order. It proceeded step by step to solve the numerous historical problems passed on since the founding of the nation and new problems which have appeared in actual life, and has done tireless work in construction and revolution, creating for our nation an excellent situation. Under the leadership of the 3D Plenum thinking inside and outside of the party has been vigorous and a lively situation of working hard at researching new conditions and solving new problems has developed. Economic construction has begun to free itself from the long period of leftist guiding ideology and has been set upon a path of measured advancement and stable development which is suited to our national situation and which is concerned with effectiveness. In the area of relations between society and government we have made progress in resolutely solving a large number of grave problems which were mishandled for a long period and we have promoted both stability and unity and the consolidation and development of a lively political situation. There have been great accomplishments in other areas as well. It is just as the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" indicated: "In short, since the 3D Plenum the scientific principles of Mao Zedong Thought and the correct policies of the party have been restored and developed under new conditions. Every item of the party and nation's work has daily improved. There are still errors and shortcomings in our work. There are still numerous difficulties before us. But, the road to victory and progress has already been cleared." Practice has proven that the 3D Plenum of the 11th Party Central Committee was another great turning point. It will inevitably lead us to a great victory in socialist modernization construction.

MODERN CHINESE INTELLECTUAL HISTORY REVIEWED

Shanghai WEN HUI BAO in Chinese 17 Aug 81 p 3

[Article by Li Huaxing [2621 5478 5281]: "A Historical Choice: Marxism--A Review of Modern Chinese Intellectual History"]

[Text] Note on the topic of this article: In the 80 years since the Opium War and prior to the establishment of the Chinese Communist Party the people wished to avert disaster and preserve the nation and so they investigated and followed a number of doctrines and methods, but were doomed to repeated failure. It was only after they found Marxism that the real way to save China became clear.

1

A historical choice is one that the people make under the restrictions of social limitations. "The degree to which a theory is realized in a nation is determined by the degree to which this theory satisfies national needs." (MAKESI-ENGESI XUANJI--THE COMPLETE WORKS OF MARX AND ENGELS, Vol. 1, p 462) Each and every theory, no matter what sort of theory, must stand before the criterion of national needs and either defend or relinquish its right to exist; each and every intellectual, no matter of what school, must stand before the fixed social conditions and either accept or reject the historical choice, and moreover must use these conditions to determine his right and wrong deeds.

Beginning with the Opium War in 1840 the ancient Chinese nation was subjected to imperialistic barbaric invasions. From this time on, averting disaster and saving the nation became the most urgent and sacred problem facing all the people. In attempting to answer the questions of how to analyze national conditions, how to save the nation, save the people and how to plan for the future, superior men in all social classes, levels, factions and groups engaged all their mental and emotional abilities to apply their understanding and experience to produce solution upon solution. All the methods they suggested and all the avenues they chose without exception were subjected to severe social observation on the central point of saving the nation.

2

A series of events including the cannon shots of the Opium War, the loss of authority in the Treaty of Nanjing and the collapse of the imperial court awoke some members of the feudal gentry out of their apathetic slumbers, reality revealed the lies and forced those members of the landlord reform faction who were concerned about the fate of the nation and the "plight of the people" to open their eyes in order to see the world, see reality, discuss national affairs and ridicule the current government.

Gong Zizhen smashed the mute, unresponsive attitude, revealed the corrupt feudal "world-sorrow," loudly demanded reform and attacked the imperial system asking "why is it unthinkable to change the system of government?" When Lin Zexu was resisting the British naval invasion he suggested the correct policy of "learning the enemy's strong points in order to defeat them and concentrating the people's financial resources to open mines and factories." He bitterly attacked the nobility as "benighted and ignorant." The person who developed this correct view of Lin Zexu and systematically learned great lessons from western nations was Wei Yuan, the author of HAIGUO TUZHI--A RECORD OF MARITIME NATIONS. "In order to control the barbarians we must systematically understand them," and only by understanding the enemy will we overcome them. Wei Yuan advocated learning the enemy's superior military technology and make up national shortcomings to use the technique of learning from the barbarians with the""goal of controlling the barbarians." The ideology of "learning from barbarian strengths in order to overcome the barbarians" both prompted the study of western firepower and lit the fires of patriotism.

Nonetheless, it was impossible to avoid the limitations of the times and of class so that they were unable to escape the confines of the feudal, ancestral halls and could not escape the trap of "loyalty to one's sovereign." Gong Zizhen, Lin Zexu and Wei Yuan revealed social corruption but also protected the feudal system, called for progressive reforms but were afraid of basic reforms, and called for a "great storm" but looked with emnity on peasant uprisings. These attitutes kept them in the first stage of modern history and placed them in a secondary role.

3

During the 1850s, peasant reveloution ideology as represented by Hong Xiuquan, appeared on the political stage and was subjected to the test of history.

In the struggle against feudal oppression and feudal exploitation the demand for an ideology of equality and egalitarianism was the simple expression of the revolutionary instincts and livelihood aspirations of the broad peasants. In the increasingly fierce practice of this struggle Hong Xiuquan focused the peasant demands for equality and used some features of western Christian doctrine and Confucian ideology to provide the peasant revolution with anideological weapon to oppose feudal oppression.

The Taiping peasant uprising wore an outer robe of religious mysticism, they worshipped an all-powerful "heavenly emperor," and sought the wisdom and protection of the gods in creating an earthly paradise and in fighting to the death against "satan" and his minions. In the TIANCHAO TIANMU ZHIDU--THE HEAVENLY SYSTEM OF LAND DISTRIBUTION, Hong Xiuquan brought about the peasants' lifelong dream of a future society with "land for all to till, food for all to eat, clothes for all to wear, money for all to use, equality in all matters and satisfaction for all people." However, this ideal castle was built on the sandy foundation of small-scale peasant production and absolute egalitarianism. Hong Xiuquan strongly advocated that all nations of the world ought to "concern themselves with their own production efforts and avoid interfering with other people's property rights." Consequently, the naive peasants were unable to discern the character of the aggressors who were wolves in sheeps clothing and who were mistaken as foreign brothers who believed in the same gods.

The combination of an insubstantial structure and Chinese and foreign reactionary forces brought about the defeat of the Taiping peasant revolution. The tragic lesson of history is that a small peasant economy cannot oppose a feudal economy and to base absolute egalitarianism on small-scale production can only restore the path of feudal production methods. A peasant government cannot oppose a feudal government, it will either be repressed by the feudal court or become transformed into a new feudal court. The end result will be the same. A peasant ideology cannot defeat the system of feudal ideology--after the victory of the revolution the ideology of equality will be denied by social practice and by the peasants themselves. Autocracy and class views will come to replace it. Religion is only mysticism and idealism deifies the individual. The deification of the individual will then bring about the demise of the revolution.

The greatest revolutionary democratic faction is the hundreds of millions of peasants. Nonetheless, the old style peasant revolution cannot overthrow feudal nations, it cannot fulfill its anti-imperialist duties and a spontaneous peasant ideology cannot revitalize China.

4

During the bloody repression of the peasant revolution there appeared in history the fantasy of the "Tongzhi Restoration." Prior to the Sino-Japanese War, this westernization ideology under the banner of "new government" seemed to some people to be an excellent method for "seeking power and wealth."

The starting point and resting point of the westernization faction was loyalty to the feudal system. The Manchu and landlord class became involved in a contradictory struggle over the allocation of authority so that even Li Hongzhang lamented that "In the capital everyone is unable to make longrange plans. They worry at the internal weakness and foreign strength and the timorousness at accepting military commands or border area governships." (YU GUO SONGTAO SHU--A LETTER TO GUO SONGTAO) Nonetheless, he was willing to "bear insults and carry heavy burdens" in exercising his loyalty to the court.

With regard to the Taiping peasant revolution westernization was a step backward, but with regard to the reactionary faction westernization was a step forward. Although the westernization faction and the reactionary faction agreed on the preservation of the feudal system, they nonetheless differed on the methods and technique of achieving this reactionary goal. The westernization faction advocated learning "barbarian knowledge to build cannon and ships and then using these foreign ships and cannon to protect the feudal structures." The reactionary faction advocated a return to the period of exclusion, "with loyalty as armor and ritual as shields" and applying the ways of the sages to preserve the Qing court.

The keystone of the westernization faction ideology was to "use Chinese learning as the spirit and western learning as technique." However, the entire history of the westernization movement clearly shows that the structure of the feudal system could not withstand the results of the production technology of capitalism. It was like fitting a horse's legs on a cow's body, by no means a valiant steed. All plans to import the materials and techniques of modernized western production and force these into the unyielding mold of the feudal ownership system were but a fleeting dream.

5

The process of the downfall of the westernization movement corresponds with the progress of the development of the bourgeoisie reform movement. How was western knowledge acquired? According to the understanding of modern Chinese scholars, but underwent a progression from appearances to essentials, from form to content, gradually progressing from a shallow to a more profound understanding, making progress in very small increments. Prior to the Sino-Japanese War, the vision of the early bourgeois reform faction had already progressed beyond the simple model of western "boats and cannon" and production technology and had advanced to a demand for the development of capitalistic industry and commerce. The feudal shackels of "inspection at every port and taxation at every level" could not but make them issue a call for the establishment of capitalist production relationships. Taking things a step further, they were even more aware that if they did not transform the feudal political system they could not enter the path of developing capitalism. The suggestion of "joint rule by the nobility and the people," that is to say the change to a bougreois constitutional monarchy, came about in just this fashion. The reform movement ideology as represented by Kang Youwei was a direct reflection of the desire to avert disaster and preserve the nation. The sad part is that the reformers wished to resist the external enemy and had an unrealistic view of imperialism, even to the point of thinking that England, Japan and the United States would assist China in its reform into a "friendly nation." The reformers wished to transform current conditions but also held on to the two major symbols of feudal authority (the political authority of the emperor Guangxu and the theoretical authority of Confucian and Daoist thought). The reformers wished to save the nation and save the people but they also were afraid of awareness among the people and were more afraid of mass movements than of reactionary forces.

The conclusion was of course tragic and the Hundred Day Reform vanished like a puff of smoke. "I lay my sword aside and laugh at the skies," Tan Sitong welcomed his death and won a place in the annals of history! Before taking action he lamented that he "had the desire to kill the bandits but lacked the strength to ascend to heaven." "Desire" in the end is but "strength" and the phrase "those with the strongest mind can accomplish anything" (Tan Sitong in RENXUE--ON LEARNING) was but an empty boast. "True strength" belongs to the people and without the people the Reform Movement of 1898 was without any strength.

6

After entering the 20th century the most obvious point in the historical development was the spread of the bourgeois democratic revolution throughout the whole nation.

The bourgeois revolutionary faction led by Sun Zhongsan praised revolution as the "universally acknowledged truth" of being "obedient to heaven and pleasing to men" and also praised it as a "heavenly principle" of "eliminating barbarism and advancing civilization." They saw Rousseaus's theory of innate rights of man,Montesquieu's theory of the tri-part separation of powers as ideological weapons and firmly believed that they were "precious formulas for restoring life and revitalizing the soul." They called upon the people to "rush into a hail of bullets" to overthrow the barbarian Manchu government and sweep out all foreign devils" in order to take the United States as a model in establishing a free, independent, democratic and constitutional "Republic of China" (Zou Rong in GEMING JUN--THE REVOLUTIONARY ARMY).

"In 1911 the great revolutionary martyr Sun Zhongshan led the revolution in overthrowing the Qing dynasty and thus brought an end to over 2,000 years of feudal imperialistic rule. Nonetheless, there were no changes in the semi-colonial, semi-feudal nature of Chinese society." (Resolution Concerning Certain Historical Questions in the Party Since the Founding of the Nation) With the establishment of the Chinese Rebublic the people first thought that this would bring them freedom, equality, and compassion and reward them with milk and honey. After a time there was a republic in name only and the people still suffered under the two great mountains of oppression of feudalism and imperialism.

What was the way out? More than 70 years had gone by and the idelogical weapons and political techniques of evolution, the innate rights of man and the bourgeois republic had all been brought in and tested, but all failed and were unable to carry out their ideals. The history of the search for truth in previous western democratic revolutions was not one of success but rather one of failure. Yet, this failure bred success and doubt became the starting point of a new search. The process of the downfall of western bourgeois civilization in China was also the process whereby China discovered Marxism, chose Marxism and successfully applied it.

7

At the end of the 19th century and the beginning of the 20th century only a very small number of Chinese people had any knowledge of the name Marx or knew anything of his writings or the theory of socialism. Nonetheless, Marxism was accepted by progressive Chinese intellectuals. After the Russian October Revolution it pointed out the true path of the Chinese revolution. In May of 1919 Li Dazhao published his very important work WODE MAKESIZHUYIGUAN--MY VIEW OF MARXISM.

In February of 1899, the Shanghai Christian missionary newspaper WANGUO GONGBAO, issue #121, published an article by Timothy Li which said: " The leader of the the workers is an Englishman (actually German) named Marx." In April of the same year, issue #123 published an article titled "Datongxue" which said, "The German Marx is the author of 'On Capitalism'." As far as we now know, this is the first mention in any Chinese language publication of any reference to Marx or his famous work "On Capitalism."

Neither history nor mankind will ever forget the contribution of that great Chinese Communist pioneer Li Dazhao. It was Li Dazhao who first told the Chinese people of the great victory of the October socialist revolution and who said, "The world of the future will follow the red banner." It was Li Dazhao who first systematically introduced Marxism to the Chinese people, who pointed out that Marx's theory of socialism was a "scientific theory and system." He also said that Marx's historical materialism, economic theories and socialism were "three theories which are undivisible and which are joined together by the golden thread of the theory of class struggle." (LI DAZHAO XUANJI--SELECTED WORKS OF LI DAZHAO, pp 176-177)

"Sublime words brilliantly transmit the truth." As representatives of Chinese Communist intellectuals, Li Dazhao and Mao Zedong possessed the wisdom to select the scientific theory of socialism found in Marxism from the great variety of socialist theories. After gaining possession of Marxism the spirit of the Chinese people was no longer passive and took the initiative. In May of 1921 the great Chinese Communist Party was born and the face of the Chinese revolution took on a new appearance!

Practice is the only standard for judging truth. Comparison is the major technique for understanding things.

"Prior to the birth of the Chinese Communist Party, during the 80 years after the Opium War the people engaged in heroic struggles without cessation but suffered defeat after defeat, and many dedicated people bore an undying hatred because of this." (Hu Yaobang, "At the Meeting in Celebration of the 60th Anniversary of the Chinese Communist Party") During the protracted struggle to preserve the nation and during the revolutionary experiences in opposing imperialism and opposing feudalism the people underwent practice, understanding, more practice and more understanding, then engaged in struggle and suffered defeat, struggled more and suffered further defeat and took up the struggle anew until the goal of victory was attained. They paid a great price and undertook all sorts of comparisons before discovering Marxism and placed their faith in it. Marxism is the remaining essence of the historical process and is a social selection not influenced by individual will.

The ideology of the landlord revolutionary faction, the egalitarianism and religion of the peasant revolutionary faction, the "Chinese learning for spirit and western learning for function" of the westernization faction, the reformist ideology and constitutional monarchy of the bourgeois reformist faction, the Three People's Principles and democratic republic of the bourgeois revolutionary faction, the various forms of non-scientific socialism and bourgeois socialism were all unable to save China. The facts irrefutably point out that only Marxism was able to save China. This was the best possible choice during the past hundred-some years in China.

Lenin correctly said, "The reason why the revolutionary proletarian ideological system of Marxism was able to win worldwide historical significance was because it did not discard the most valuable accomplishments of the bourgeois period, but on the contrary absorbed and transformed a number of valuable accomplishments from 2,000 years of mankind's ideological and cultural development." (LIENING XUANJI--SELECTED WORKS OF LENIN, vol 4, p 362) Because of this, those truly democratic people in modern Chinese history finally had to follow Marxism or at the very least become friends of Marxism. And because of this, promising young people who wished to awaken China and pursue the road of intellectual truth made observations, comparisons, syntheses and analyses to measure success and failure, advantages and disadvantages and finally chose Marxism.

PARTY AND STATE

CRITICISM CAMPAIGN MOUNTED IN YONGKANG TO RECTIFY WORK STYLE

Hangzhou ZHEJIANG RIBAO in Chinese 27 Aug 81 p 3

[Article: "Pick Up the Weapon of Criticism To Rectify the Style of the Work of the Party"]

[Text] In the course of conscientiously studying the "Resolution" adopted by the Sixth Plenum and Comrade Hu Yaobang's 1 July speech, the leading members on the party committee of Longshan District of Yongkang County have summed up experiences and lessons, and applied the weapon of criticism and self-criticism to do away with the dirty political practices and effectively to rectify the style and the work of the party.

The careful study of the "Resolution" and "speech" has led the party committee of Longshan District to believe deeply that it is important to be critical and self-critical within the ranks of the party. In this connection, Zhang Ruizhi [4545 3842 5347], secretary of the party committee of Longshan District, said: Early this year, in response to the urgent demands from the masses, Tangqi Commune located in a mountainous area proposed to put into effect the system of production responsibility for the fixing of dry field crop output quotas based on the individual households. When the commune party committee reported this to the district party committee, Zhang could not make any decision in a matter of minutes, this forced a "noncommittal" and evasive attitude on the matter and a "showdown" with the cadres an and the masses.

Later, he personally visited this commune for an investigation. While there, he listened to opinions from the grassroots cadres and the masses, rectified his earlier understanding and voluntarily criticized himself in the presence of the cadres and in addition he helped them eliminate a variety of ideological obstacles and wholeheartedly assisted the masses in improving and perfecting the system of production responsibility. In coordination with the secretary of the commune party committee, he studied some new problems resulting from the enforcement of the system of production responsibility so that he could seek solutions for these problems. Thanks to the overall guidance provided by him, the commune has scored great success in production. In this connection, Zhang Ruizhi said emotionally: "We communists are committed to serve the people. We must dare to uphold the truth, and correct our mistakes. Only in this way can we win the trust of the people and remain invincible."

In the course of developing cricitism and self-criticism, the party committee of Longshan District has urged the people to take an active part in the ideological struggle and to neither cover up contradictions nor distort facts. One day, a party member-cadre in this district leaked to the public the information on the reshuffle of the district party committee personnel under discussion, thus creating an adverse impact on society. After becoming aware of this problem, the leadership of the district party committee contacted this cadre several times, pointing out his mistakes. The party branch of the district government then called a meeting to criticize this comrade in a stern manner and in accordance with the principle of seeking truth from facts until he acknowledged his mistakes and criticized himself. To prevent a repeat of similar cases in the future, the district party committee has adopted a five-point conference room discipline designed to safeguard the secrets of the party. There are some individual party members and cadres who have been found guilty of failing to abide by principle when assigned to distribute material supplies and of disobeying orders for transfer from their party organizations, which have then held meetings to help these comrades correct their mistakes and rectify the style of the work of the party. The district party committee is composed of 10 members. Except for one who is now on sick leave, the rest of them have demonstrated the courage to bear the brunt of its workload thus introducing a new spirit into work. The district party committee has made further efforts to study and improve the system of developing criticism and self-criticism in a determined effort to do away with dirty political practices and to revitablize the organization of the party through the process of frequently and systematically developing criticism and self-criticism.

STRICT DISCIPLINE, LEFTIST IDEOLOGY DIFFERENCES DEFINED

Fuzhou FUJIAN RIBAO in Chinese 31 Aug 81 p 3

[Excerpts of article from 21 August ANHUI RIBAO: "'Strictness' and 'Left' Are Not the Same"]

[Text] In routine work and daily life, some comrades often make the term "strictness" sound indistinguishable from the term "left." For fear of being accused of being "leftists," some leading comrades have hesitated to place strict demands on their subordinates and cadres. Nor have they dared to take stern measures against the unhealthy practices or criticize those who should have been criticized. What does the "left" imply? The term "left" refers to the guiding ideology of a political party or a leading cadre which has no regard for the objective laws governing the development of things, which transcends the objective reality and the political consciousness of the masses, and which calls for subjective efforts to fulfill missions today that can never be fulfilled or can only be fulfilled step by step in the future. What does the term "strictness" imply? It refers to the serious attitude taken by the people and rigid requirements set by them for work, study and styles of work. For example, well-defined discipline, close-knit organization, solemn styles of work and rigid requirements are essential in this connection. Requirements must be set for any undertaking, work and study programs. To guarantee that these requirements can be met, we must formulate and adopt a variety of regulations for strict implementation. Otherwise, stability cannot be achieved, civilization cannot be built, and progress cannot be made by society and mankind. Can we mix this up with the "left"? Today as the Party Central Committee leads us to negotiate the Eighteen Bends and to scale the Peak of the Jade Emperor in the Mount Taishan, can we fulfill such missions without a close-knit organization, well-defined form of discipline, solemn styles of work, and rigid requirements?

The opponents of "strictness" have denounced it as something from the "left." In their minds, there often exist to a certain extent individualism, liberalism or anarchism. If we countenance, accomodate and acquiesce in the face of such elements and phenomena, we would do harm to our revolutionary cause and would be accused of showing no sense of responsibility to the people. If a leader adopts this approach, he would be guilty of a dereliction of duty. Of course, we will not allow anyone to promote the "leftist" trash under the pretext of being "strict."

ARTICLE REVIEWS TAIPING LAND SYSTEM

Beijing RENMIN RIBAO in Chinese 31 Aug 81 p 5

[Article by Cui Zhiqing [1508 0037 3237]: "'The Celestial Dynasty's Land System': A Brief Introduction"]

[Text] In 1853, the Taiping Heavenly Kingdom established its Celestial Capital and soon thereafter promulgated "The Celestial Dynasty's Land System" (hereafter cited as "the System").

The basic spirit of "the System" was to destroy the feudal landlord's land ownership and redistribute the country's land on an equitable basis. "All land in the country must be cultivated in common by all people in the country." Land was classified into nine grades according to degrees of productivity and divided equally according to the population of farming households; "irrespective of difference in sex...each person is given half of a good grade and half of a lesser grade of land." On this basis, sthe System" also prescribed the policy of equitable distribution and lifestyle of "a universal mode throughout the country." Apart from raising grains, each farming household must also plant mulberry trees and hemp and raise five chickens and two sows. In those days, at harvest time each year, 2 military officers would supervise the head of every 5 (multiples)-household unit to see that, except for retaining a sufficient amount of the harvested grains so that every person in the 25 constituent households would have enough food until the next harvest, all the rest was handed over to the state treasury. When a household was scheduled to have happy events like a wedding, the state treasury would dispense money and provisions according to established rules. The ultimate goal of "the System" was to establish an ideal state for the peasants in which "people cultivate their land together, share their good together, share their clothing together, use their money together, so that equality prevails everywhere and no one is deprived of his daily necessities."

Following the organic structure of the Taiping Army, "the System" also installed a rural officers system in which military undertakings and agriculture were combined. Such rural officers below the county level were divided into those of five (multiples)-household, two (military officers), company, regiment, division, and army units. One "army" unit had jurisdiction over 13,156 households; the lowest basic unit of production and distribution was a "two (military officers)," which had jurisdiction over 25 households, a state treasury, and a church. Each farming household was to designate an able-bodied male to serve as a soldier; he would in ordinary times engage himself in farming but in wartime he would join an expedition. In ordinary times, these rural officers handled production, distribution, livelihood arrangements, litigations, and administrative affairs; in wartime, they became military officers to command the militia under their jurisdiction in combat.

The rural officers, according to regulations, were elected publicly by their local communities and then recommended by the next higher level officers and thus investigated and recommended from above, level after level, until they were all approved by the Celestial Emperor himself. When administrative officials at various levels were to be promoted or demoted, their situations were also examined level after level, and finally decided by the Celestial Emperor.

"The System" also had certain provisions in policies on women. Economically, land and a means of livelihood were distributed to men and women alike; politically, women officials were also appointed; religiously, they participated in activities of worship; and "no property is to be made a condition of marriage throughout the country."

Culture and education were combined with religion and propaganda; all subjects of the country were required to honor the God-worshiping sect, to gather in weekly worship service, to listen to sermons, to follow Taiping regulations, and to exert themselves in agricultural undertakings.

"The System" had some special provisions in respect to those who earned military merits and were given official ranks; "meritorious subjects are given Celestial provisions generation after generation," so that generation after generation they would enjoy privileges and abundant remunerations, whereas the vast ranks of the peasants would be saddled with the duties of "cultivating the land and providing for those above."

"The System," for the first time, used the strong desire of the peasants to deprive the landlords of their land and redistribute it into a concrete policy decision; this was the essence of "the System."

"The System" attempted to eliminate all private properties and thoroughly redistribute all wealth. "The System" thus proclaimed the public ownership of "ascribing everything to the Lord above," abolished commerce and independently managed handicrafts, organized all the country's population and kept them engaged in a single agricultural production with farming combined with weaving; this, in essence, was a type of retrogression. And it was not by the development of productive forces but by an economic policy of equal distribution of means of livelihood that it sought to assure the people's elementary well-being; this, too, was impractical and harmful. The requirement that all surplus products must be handed over by the peasants to the state treasury was good of course, for depriving the landlords and rich peasants of their feudal wealth but it affected the peasants' enthusiasm in production. This policy was carried out in the cities, but it was eventually discarded because it led to dissatisfaction on the part of the people.

"The System" was never carried out to the letter; the most important intent, that of expropriating the landlords" land and equally distributing it to the peasants, in particular, eventually became a mere provision on paper. In reality, what was practiced was letting the people "hand over grains and pay levies as usual," which acknowledged the landlords' land ownership in the end. The fundamental reason why it could not be carried out was that, without thoroughly destroying the feudal system, it was impossible to solve the land problem which the peasants were so anxious to solve.

MISINTERPRETATION OF LITERARY WORKS BY CRITICS DENOUNCED

Shanghai SHEHUE KEXUE [JOURNAL OF SOCIAL SCIENCES] in Chinese No 3, 81 p 112

[Article by Lin Fan [2651 1581]: "Imagination, Criticism and Social Effect"]

[Text] One day when I was pondering some problems, I suddenly recalled an interesting passage in an essay entitled "A Mixed Feeling" written by Lu Xun over 40 years ago which read: Upon seeing short sleeves, some people will immediately stretch their imagination from the white-skinned arms to a nude figure and then a bastard. This step-by-step leap in imagaination from short sleeves to a bastard reflects a degree of sensitivity that will surprise everyone. Actually, this strange feeling is not strange at all. The reason is that with the power of imagination, we human begins are often emotionally excited and can easily trigger a train of thoughts. This stretch of imagination falls under the category of mental activities! Everything has its own specification in connection with the objective realities. In the traditional Chinese concept, there is something called relationship between an object and its appearance. This summarization is concise and good because it reflects an indivisible relationship between an object and its appearance and a natural link between these two matters. For example, the "snow" will remind us of its "white" appearance and "cold" weather; "blood" will remind us of "red" and "pain." Likewise, fallen leaves will remind us of the arrival of autumn and the appearance of swallows will remind us of the advent of the spring season. These phenomena which are often associated with the objective reality will take shape as a result of the observation of nature by people or a stretch of their imagination. This is why we often use "the term 'running deep' to describe the waters and passages in a hall, and the term 'width and breadth' to depict the size of cloth and land."

It appears that imagination is indispensable to every writer. The reason is that without imagination, life will become tasteless, and will go on without prose and poetry. But from the critics' point of view, those who love a stretch of imagination cannot enjoy popularity everywhere. A careless stretch of imagination may produce results contrary to what one wishes, and may turn out to be an arbitrary contention which can convince no one.

A literary work of lasting value can withstand the test of the most astute book reviewers. Why? It is probably due to the "flawless expressions of emotion from the bottom of hearts that appeal to reason." A literary work is usually designed to depict emotion or reason or both. This is why a writer must pay attention to the expressions of reasoning and emotion in his works. However, critical remarks have little in common with such literary style because criticism must be dispassionate.

Instead of using imagination and speculation, a critic must seek truth from facts and reason things out. Otherwise, he is apt to turn his argument into a far-fetched interpretation and to impose his own views on others. The ancients said: There will never be any explanatory notes in poems. This is true. A poet is gifted to express emotion that lies deep in his heart, is full of imagination, and capable of thinking of centuries-old events and observing the world with clairvoyant eyes. The more he thinks, the fuller his poetic expressions. A poet can produce a work as a result of a stretch of imagination, a work which can be deciphered only by the same stretch of imagination. This is why interpretations of poem vary from person to person. If this method is applied in literary reviews, contradictions certainly cannot be avoided. I can certainly bury my views in my heart, if those negative far-fetched interpretations are not associated with politics. But the problem is that some "interpreters" have made deliberate efforts to hook certain fellows to specific lines or programs in an attempt to create a situation in which they can wield the stick.

A short poem entitled "Self-Expression of Winter Wheat" came to my attention recently; it read: "The wild flowers of the chrysanthemum wilted, we are growing in strength; the earth is covered by snow, we are expecting a bumper crop." Now let us take a look at how our "critics" have deciphered this poem: They have viewed the wilted "wild flowers" as a smearing of the Communist Party and a call for its downfall; they have interpreted the phrase "we are growing in strength" as an indication that the diehard bourgeois elements are about to rise to power; they have regarded the phrase "the earth is covered by snow" as a reflection of popular discontent with the socialist system and vocal opposition to it. In their view, the last sentence is most vicious of all, which is tantamount to an open call for staging counterrevolutionary uprisings. This judgment resulted from imagination and speculation. This being the case, all poets will find no place to bury themselves! We must remember this lesson that as a result of the 10 years of turmoil, our literary and artistic garden of a hundred flowers has been ruined. I feel that literary and artistic critics must act as a medical doctor who has the responsibility to control disease and save the lives of patients. I can't believe that a doctor would use his imagination to diagnose his patients and would stretch his imagination so far as to link an acute diarrhea to gastric ulcer or cancer and finally, the need to fill out a death certificate for his patient. If this is not the case, why do some of our critics prefer the imaginative method to "admonish" and criticize literary and artistic works in an attempt to sentence some of their authors to death?

I entirely agree that writers and artists must take into account the effect their works may have on society. However, can all literary and artistic critics disregard the effect their criticism may have on society as well as their obligations to improve the level of literature? When a patient hates to take medicine, why can't we give him some sugar-coated pills to swallow; when a patient is afraid of surgery, why can't we give him an anesthetic to the satisfaction of both the patient and doctor? This simple treatment would not have been suggested here if I had not heard some comrades complain about criticism directed at them, a criticism which again leaves them with a lingering scary feeling. Perplexed by this situation, I have no alternative but to speak out briefly on this matter.

In conclusion, I fervently hope that critics will also find it necessary to emphasize the effect their criticism may have on society. I also sincerely hope that some comrades will no longer go about the task of criticism by using imagination and speculation.

INTERVIEW ON QUESTIONS IN AWARDING ACADEMIC DEGREES

Beijing GUANGMING RIBAO in Chinese 3 Aug 81 p 2

[Interview with a responsible comrade from the Office of Academic Degree Committee of the State Council by staff reporter; date and place not specified]

[Text] Recently we have received many letters from our readers, asking questions about the awarding of academic degrees. For this, our staff reporter paid a visit to a responsible comrade at the Office of Academic Degree Committee of the State Council and asked him to answer the following questions:

[Question] Why should all units in order to award academic degrees be scrutinized before approval?

[Answer] The reason that these units must be scrutinized for approval is to guarantee the quality of academic degrees awarded by them. According to the "Regulations for Academic Degrees of the People's Republic of China," the awarding units are responsible for the specific work of awarding academic degrees without further approval of departments at higher levels. For the supervision on the quality of academic degrees of all grades, the state relies mainly upon a strict scrutiny by the awarding units to give them the authority. At present, our country has more than 500 institutes of higher education for college undergraduates, of which more than 300 institutes have enrolled postgraduates for training. More than 300 scientific research organs have also taken in postgraduate students. The conditions of these institutes of higher learning and scientific research organs are not uniform, and also the quality of their work is very different. For this reason, it is necessary first to accomplish the work of scrutinizing the awarding units.

To accomplish this work, we must act according to the "Regulations for Academic Degrees of the People's Republic of China," the "Provisional Measures for the Implementation of the Regulations for Academic Degrees of the People's Republic of China" and the "Principles and Measures of the Academic Degree Committee of the State Council on the Examination and Approval of Academic Degree Awarding Units." In this work of scrutiny, we must act strictly and think of giving primary importance to quality. We must "uphold the standards, make strict demands, safeguard quality and be fair and reasonable." We must adhere to the principle "from the start rather to be on the strict side and place a little more stress on quality than on quantity" and "to set more stringent [rules] for a doctor's degree than for a master's degree." It is also necessary to take into account what is advantageous for the development of higher education, especially the steady and proportionate development of the work concerning postgraduates. We must earnestly refrain from prematurely concentrating the force of professors and associate professors on the training of postgraduates to weaken the education of undergraduates and lower the standard. The scientific research institutes should also carefully refrain from the implementation of such conditions as giving courses prematurely to enroll too many postgraduates. It will be difficult for these institutes to guarantee the quality of their postgraduates, and it will even interfere with the fulfillment of their own tasks of scientific research. Therefore, in this very important link we should also proceed from reality, strictly scrutinize and approve all units to award academic degrees, and make the authorized area fairly limited, not too broad.

[Question] What units can apply for the authority of awarding the first batch of doctor's and master's degrees?

[Answer] The Academic Degree Committee of the State Council decided at its first meeting to adopt a policy of carrying out gradually the "Regulations for Academic Degrees." Those units which have applied for the authority of awarding academic degrees will be examined and approved by groups. Therefore, the first batch of units to award doctor's and master's degrees will be mainly limited to those branches of learning and specialities which have trained postgraduates before or after the "Great Cultural Revolution" and are now applying for the authority to award doctor's or master's degrees. For the time being, applications from those branches of learning and specialities which just began to enroll postgraduate students in 1981 will not be taken into consideration.

[Question] What are the qualifications of units to award doctor's degree?

[Answer] The units, branches of learning and specialities to award the doctor's degree will be mainly the key branches of learning in China's key institutes of higher learning and scientific research organs attached to concerned departments of the State Council, which have the following qualifications and truly can train postgraduates studying for the Doctor's degree. One or two key branches of learning of a few other units, which have the following qualifications, may also be included in the list.

(1) A qualified unit must have professors (researchers or personnel with like titles) working as guiding teachers, who have fairly high academic attainments, have achieved outstanding successes in education or research work, are at present engaged in scientific research work of fairly high standards and have gained certain results.

(2) A qualified unit must be able to provide the postgraduates studying for the doctor's degree with full facilities for study, and should guarantee them the completion of their study of the courses.

(3) With respect to concerned courses for the training of postgraduates, a qualified unit have a fairly high academic standard among similar courses in China, must have a fairly good foundation of scientific research, have undertaken key national projects of scientific research, key research projects of the ministries and commissions of the State Council and in various provinces, municipalities and autonomous regions, and other projects of great value and fairly high academic

standards, and must be able to provide the postgraduates with laboratory equipment and related books and material which they need for writing their doctorate papers.

[Question] What are the qualifications of units to award a master's degree?

[Answer] Any institute of higher education which enrolls postgraduates with the approval of the Ministry of Education, and any scientific research organ which enrolls postgraduates with the approval of concerned departments of the State Council, having courses and specialities of the following qualifications and being able to train postgraduates on a regular basis for the study of a master's degree, may be listed as units to award the master's degree.

(1) A qualified unit must have professors and associate professors (researchers and assistant researchers or personnel with like titles) working as guiding teachers, who have a fairly high academic standard, have achieved successes in education or research work, and are at present engaged in scientific research.

(2) The institutes of higher education should be able to provide postgraduates studying for the master's degree with required and elective courses of basic theories, speciality theories and experimental technology of fairly high standards. The scientific research organs should have graduate schools, or work in cooperation with the institutes of higher education, to give the foregoing courses to postgraduates studying for the master's degree, or should provide sufficient teaching personnel to give guidance to postgraduates studying for the master's degree in the foregoing courses.

(3) With respect to concerned courses for the training of postgraduates, a qualified unit must have determined its direction and projects of scientific research, and be able to provide the postgraduates with laboratory equipment and related books and material which they need for writing their research papers.

All units to award doctor's and master's degrees must have a sound system for supervising and administrating the research students.

[Question] Can the institutes of higher education and research organizations train research students jointly?

[Answer] We should advocate that the institutes of higher education and the research organs may cooperate and train postgraduates jointly. It is a good way for them to cultivate qualified personnel by giving play to their own respective superiority and making up each other's deficiencies. The two parties of this joing undertaking in training postgraduates working for the doctor's or master's degree must maintain a fairly stable relationship of cooperation. When they apply for the authority to award doctor's and master's degrees, one of the two parties should be taken as the principal unit. At the same time, all professors, researchers, associate professors, assistant researchers and personnel with like titles can work at only one unit (either an institute of higher education or a research organization) as guiding teachers of the units which apply for the authority to award doctor's and master's degrees. However, if the joint training of two units shows no practical results, or if one of the two units which apply for the authority to award degrees simply uses the names of the other unit's specialists as a means of applying for the authority, then the approval of these applications should be deferred.

[Question] What is the procedure for the in-service personnel and those of the same educational level to apply for the doctor's or master's degree?

[Answer] According to the academic degree system of our country, a postgraduate may apply for master's degree at the first stage of his graduation, and he may apply for doctor's degree at the second stage of his graduation. At present, only a limited number of postgraduates have been enrolled in our country. To encourage self-study for advancement in learning, our "Regulations for Academic Degrees" stipulates that all in-service personnel and persons of the same educational level, who have attained from self-study the academic level of postgraduates on graduation, are permitted to apply for a doctor's or master's degree.

Our "Provisional Measures for the Implementation of the Regulations for Academic Degrees" stipulates that when personnel of the same educational level apply for a doctor's degree, they should submit a letter of recommendation signed by two professors or specialists of like titles. If an applicant has not obtained his master's degree, the unit to award the academic degree may take proper measures before accepting his application to check his qualification for certain subjects of the master's degree in basic theories and in his speciality. When the unit agrees to accept his application, it should also hold an examination of the courses for the doctor's degree. After the applicant has passed the examination, then he will be permitted to take the oral test for the doctor's degree.

When personnel of equal educational level apply for a master's degree, they should submit a letter of recommendation signed by two associate professors, professors or specialists with like titles. If the applicant has no educational record as a college graduate, the unit to award the academic degree may take proper measures before accepting his application to check his qualifications for certain college courses. When the unit agrees to accept his application, it should further hold an examination of the courses for the master's degree. After the applicant has passed the examination, then he will be permitted to take the oral test.

We have just begun to implement the "Regulations for Academic Degrees" and still have no experience. Therefore, it was decided at the first (enlarged) meeting of the Academic Degree Committee of the State Council to postpone the application of the in-service personnel and those of the same educational level for doctor's and master's degrees till 1982 when the work of awarding academic degrees will be carried out gradually.

TAIWAN WRITER DISCUSSES ISSUE OF REUNIFICATION

Hong Kong ZHENG MING [CONTENDING] in Chinese No 47, 1 Sep 81 pp 69-70

[Article: "Exploration of the Reunification Issue in a Taiwan Publication"]

[Text] Editor: The text reprinted below consists of two sections of the article entitled "the Road of Modernization of the Two Coasts of the Taiwan Strait." Appearing in the inaugural issue of LIANHE YUEKAN, a Taiwan publication, in July, it was written by Gao Yingmao [7559 5391 5399].

In the sections under the subtitles "Exploration of the Reunification Issue" and "Conclusion," the author made a brief and concise analysis of the reunification issue of the two coasts of the strait and suggested limited contact, "indirect trade," "peaceful competition," and mutually "learning each other's good points and reform the defects" under the principle of giving consideration to humanitarianism, mutual benefit and security. We feel that such analysis and suggestions in Taiwan's media are relatively sober and rational. Today, concerned over the issue of reunification, Chinese at home and abroad have made many different suggestions. The article reprinted here will serve as a reference. It is slightly abridged.

Exploration of the Reunification Issue

To put it succinctly, there are only two basic means to reunify the two coasts of Taiwan Strait: (1) Reunification by force: Send troops across the strait and, by the law of the jungle, reunify by defeating the other side. (2) Peaceful reunification: Under the principle of voluntary participation and mutual benefit, complete the reunification by peaceful means by both sides.

At present, Communist China possesses an army of over 4 million, large numbers of fighter planes and naval vessels, and strategic atomic weapons. On the surface, it should be easy for it to attack Taiwan by force, but actually, it must give careful consideration to several major problems which are difficult to surmount: (1) Though the number of the "Liberation Army" is several times greater than Taiwan's 500,000 troops, but in quality, Taiwan's airforce and navy are better equipped and better trained. According to the estimates of military experts in general, if Communist China stubbornly wants to cross the strait and attack Taiwan, it must be prepared to sacrifice one-third or more of its air and naval strengths. Under the grave threat of Soviet forces, whether it can pay such a high price for Taiwan is naturally a difficult strategic dilemma. (2) Whether Communist China will resort to atomic weapons to give Taiwan a blood bath in order to compensate for its military deficiencies in other aspects is also a dilemma. How will it justify itself in morality and justice if it slaughters tens of millions of its compatriots? After occupying Taiwan, what will be the benefit if the economy and industry of the island are completely destroyed? (3) If Communist China attacks Taiwan by force, the economy of the mainland will inevitably suffer severe destructions. Meanwhile, the scientific, technological and economic relations built by Communist China with the West in recent years will also run into serious difficulties. Finally, does Communist China have the capacity to fight simultaneously in the north and the south, facing the Soviet Union in the north and Taiwan and Vietnam in the south? All these are dilemmas which Communist China is unable to give a definite answer.

If the potential of reunification by force is not great, what is the potential of "peaceful reunification?" In recent years, Beijing has been reinforcing its "peace offensive" toward Taiwan, and the slogan "liberate Taiwan" has changed to "return to the motherland." Besides appealing to Taiwan to launch the "three-open" (opening trade, postal communication, and visiting), last year it proposed the "five-guarantee." Beijing guarantees that (1) Taiwan may keep its social system; (2) its living standard will not be lowered; (3) it may maintain its people-to-people relations with foreign countries; (4) it may enjoy self-governing rights; (5) it may even keep its troops.

These proposals do not have a strong appeal to Taiwan. There are the following reasons worthy of attention: (1) In the past 60 plus years, Guomindang and the Chinese Communist Party held peace negotiations and cooperations three times, and every time the Guomindang got the worst of it, ending in defeat and withdrawal from the mainland the last time. The Guomindang will not forget such historical experiences. (2) The "peaceful liberation" of Xizang also taught the Taiwan people a frightening lesson. The Xizang authorities signed the "Agreement of Peaceful Liberation" of 17 articles with Beijing on 23 May 1951, but in the spring of 1959, Beijing sent troops to occupy Xizang and suppress the "rebellion." In fact, the "lenient" conditions proposed by Beijing to Taiwan at present are almost identical to those proposed to Xizang in 1951. The Taiwan people seem to be highly aware of the possibility of a repetition of history. (3) As analyzed above, great gaps and discrepancies have occurred in the living standards and living patterns of Taiwan and the mainland in the past 30 years. To protect its prosperous living conditions and free living pattern, Taiwan most likely will reinforce its resistance of the mainland's appeal for a united front, rather than voluntarily supporting it. Concrete economic interests will strengthen the anti-communist ideology of the Taiwan people. Possibly deeply aware of this problem, Deng Xiaoping, in his speech on New Year's Day of 1980, stated emphatically that the peaceful reunification of Taiwan awaits the improvement of mainland China's political and economic systems until they excel those of Taiwan. However, he hoped that, by the year 2000, the average per capita income on the mainland will reach $1,000, but what requires attention is that the average income per capita in Taiwan, by that time, will exceed $7,000. The most important key to the reunification of the two coasts of the Taiwan Strait actually may not be the difference in the living standards, but the difference in the basic systems and living patterns.

Conclusion

In view of the foregoing analysis, we may conclude that, in the near future, the reunification of the two coasts of Taiwan Strait will absolutely not be a simple issue. Today, while it is impossible for either side to use the means of force to attain reunification, nor is it possible to attain the goal by means of peace. Under this stalemate of "neither war nor peace," peaceful competition under the status quo becomes the most feasible and also the most constructive direction of development. For the survival of their own systems and for increasing the appeal to the people of the other side, the regimes on both coasts must produce the best patterns and systems for the welfare of the Chinese people. Meanwhile, peaceful competition will create a strong mutually stimulating effect, learning the good points of the other side and reforming one's own defects.

Today, the "three-open" proposed by Communist China is rather premature. Obviously, the time is not ripe, and there is no trust and confidence between the two sides. Such peace offensive has become a tool of threat and inducement for the united front. However, under the principle of giving consideration to humanitarianism, mutual benefit and security, limited contact and "indirect trade," getting along peacefully, seem to be worthy of a try; it will contribute considerably to the peace and prosperity of both coasts. In terms of the effort for modernization, many obvious experiences and patterns fully proved to be effective and successful in Taiwan should serve as valuable references to the mainland in its economic development. Taiwan's large scientific and technical manpower should be of considerable help to the modernization of the mainland. This is not only a feasible, but also correct, path for mainland China to follow. The Chinese people on both sides of Taiwan Strait and the millions of overseas Chinese will approve and support it. Under the major premise of seeking happiness for all the Chinese people, this is the most important task at the present time. As for the issue of final reunification, it is best to ask history for help for its gradual solution.

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

EGYPTIAN FOREIGN MINISTER ON PALESTINE AUTONOMY

OW220826 Beijing XINHUA in English 0704 GMT 22 Sep 81

[Text] Cairo, 21 Sep (XINHUA)--Egyptian Minister of State for Foreign Affairs Butrus Ghali said tonight that Egypt's objective in the Palestinian autonomy negotiations, to be resumed here on Wednesday, was to push forward the peace process in the West Bank of the Jordan River and the Gaza Strip.

At a news conference here, the minister expressed the hope that an agreement would be reached to create a climate of confidence in the West Bank and Gaza that would encourage the Palestinians to participate, directly or indirectly, in a future stage of the negotiations.

Ghali affirmed that the United States would remain the full partner in the upcoming stage. He stressed that the U.S. is an essential factor for the negotiations, and no results could be reached in the negotiations without that factor and no results could be reached without a full agreement of the three parties.

On the Arab countries' attitude towards the autonomy talks, Ghali said their difference with Egypt pertained to techniques and measures and not the objective. The objective was the same, namely the Palestinians' right to regain the West Bank and Gaza, he said.

Concerning Egypt's stance on the AWACS planes issue, Ghali said that Egypt welcomed and supported the sale agreement between the U.S. and Saudi Arabia, as the planes would consolidate Saudi Arabia's capabilities to defend its sovereignty and political security.

FRG LEADER OPENS CONFERENCE ON DEVELOPING NATIONS

OW231612 Beijing XINHUA in English 1510 GMT 23 Sep 81

[Text] Bonn, 22 Sep (XINHUA)--Four West German foundations held a conference here today to discuss their work in developing countries. The four foundations are: Konrad-Adenauer-Stiftung, Friedrich-Ebert-Stiftung, Friedrich-Naumann-Stiftung and Hanns-Seidel-Stiftung.

Attending the conference were 500 West German delegates. Also attending were 50 politicians from 33 countries.

Opening the conference, West German President Karl Carstens pointed out that developing countries should plan their development more independently in the future. In addition, he said, it is important for developing countries to increase grain production on their own. Carstens explained that it is a worthy goal for each developing country to endeavour not to import grain if favorable conditions exist.

Former West German President Walter Scheel, after summing up the foundations' efforts in developing countries since 1961, pointed out that the principal aim of the foundations is to contribute to North-South dialogue. The ultimate aim of development is the strengthening of independence and self-determination.

Eduardo Frei Montalva, former president of Chile and the member of the North-South Commission, advocated that cooperation in the developing problem should be carried out both economically and socially. He said it would be a "big mistake" for Third World countries and industrialized countries if the West reduced its aid to developing countries.

Some statesmen in the Third World countries urged that more considerations should be given to their social and cultural conditions to help improve their conditions of trade.

NEW UK PARTY ALLIANCE SUPPORTS NATO, EEC

OW191606 Beijing XINHUA in English 1514 GMT 19 Sep 81

[Text] Llandudno, Wales, 19 Sep (XINHUA)--The British Liberal Party formerly decided to forge an electoral alliance with the newly-established Social Democratic Party (SDP) to fight the next general election due in 1984 at its 5-day 1981 annual assembly which ended today in the seaside town of Llandudno, north Wales.

After a heated and long debate on Wednesday, the assembly voted overwhelmingly in favour of the alliance.

The Liberal Party, with 11 members in the House of Commons, has been out of office since World War I. The SDP, which has now 16 members of Parliament, was founded last March by four former cabinet ministers of the Labour Party. In recent local elections, the Liberal Party and SDP polled well by working as an alliance.

In a traditional winding-up speech to the assembly yesterday, David Steel, leader of the Liberal Party reinterated the party'c commitment to the European Economic Community (EEC) and the North Atlantic Treaty Organisation (NATO). "Our commitment to collective Western security in the defence of freedom must be maintained. The threat to Poland should remind us of the need for eternal vigilance," he stressed.

Speaking of a resolution passed at the assembly on Thursday, which opposes the siting of cruise missiles in Britain and calls for a European nuclear-free zone, Steel said: "If the Soviet Union can be persuaded to withdraw her SS20's, cruise missiles will not be required in Europe."

Some 1,600 delegates, representing about 160,000 members of the party throughout the country, attended this year's annual conference.

WRITER ADDRESSES PARIS PEN CONGRESS

OW221710 Beijing XINHUA in English 1636 GMT 22 Sep 81

[Text] Paris, 21 Sep (XINHUA)--International PEN Center Chairman Per Wastberg (Sweden) inaugurated the 45th international congress of the PEN in Lyon today by saying that international PEN stands for peace in a world today where peace is threatened. "War can only be prevented by all of us," he declared. "Writers, having no power have moral authority. Our responsibility is to ourselves and to the future."

The congress, under the theme "literature: hope for a crisis-ridden world," was attended by more than 300 writers from 59 PEN centers throughout the world.

In his speech, Chinese writer Ba Jin said that Chinese writers crossed one half of the world for friendship and cooperation in literature creation. It is natural, he said, that writers from different areas of the world have differences. But writers should have the common ground of defending peace and opposing aggression to enable people of various countries to live in tranquility and to enable the literature works of each nation to develop freely on a healthy road. By so doing, writers would make contributions to the progress and prosperity of world literature, he stated.

Ba Jin is the head of the delegation of the China PEN Center. The delegation, together with representatives of Shanghai and Guangzhou Chinese PEN Centers, were participating in the PEN congress for the first time.

Lyon Mayor Francisque Collomb and French PEN President Rene Tavernier also addressed the congress.

SALVADORAN FRONTS SAY 'PEOPLE'S WAR' ONLY CHOICE

OW201612 Beijing XINHUA in English 1543 GMT 20 Sep 81

[Text] Beijing, 20 Sep (XINHUA)--Salvadoran delegates to the 68th conference of the Inter-Parliamentary Union now being held in Havana have said that people's war is the only choice left for the Salvadoran people, according to EFE reports.

A five-member Salvadoran delegation to the conference includes representatives from two opposition parties in that country: the Democratic Revolutionary Front and the Farabundo Marti National Liberation Front.

Juan Jose Martel, member of the delegation, said although it is possible to resolve the conflict in the country through peaceful means, "general elections are not a solution to the problem. We don't oppose general elections as one of the forms of expressing the people's will, but (we think) it can be realized only when there are necessary conditions, both objective and subjective."

Hugo Navarrete, another delegation member, said, "How can general elections be held in a country where curfew is imposed, martial law enforced, torture permitted and the freedom of expression deprived?"

Mario Aguinada, commander of the Farabundo Marti National Liberation Front, said that the current Salvadoran Government "is only supported by the United States, but we, as the representative of the people's interests, have the right to use whatever means of struggle considered as necessary by the Salvadoran people to materialize their liberation."

Ruben Zamora from the Democratic Revolutionary Front, another member of the Salvadoran delegation, told the EFE News Agency in Quito yesterday that guerrillas will never lay down their arms to have dialogue with the Salvadoran Government. He held that the present state of war existing between the government and opposition parties is not an obstacle to a political solution. The Democratic Revolutionary Front believes, he said, that once international mediators acceptable to both sides are found, such items as cease-fire and elections can be placed on the agenda of their negotiations.

VENEZUELAN PRESIDENT ADDRESSES UN GENERAL ASSEMBLY

OW220328 Beijing XINHUA in English 0239 GMT 22 Sep 81

[Text] United Nations, 21 Sep (XINHUA)—Luis Herrera Campins, constitutional president of Venezuela, today condemned foreign interventions in the affairs of the Third World countries and urged an end to the old international economic order. Speaking at the general debate of the UN General Assembly beginning today, Luis Campins noted that the organization's responses to aggression are "barely formal resolutions devoid of concrete substance, or simply may not even reach the level of operative recognition of the organization."

He condemned the "policy of force," saying that "on behalf of that policy of force, interventions occur with the intention of imposing or maintaining given political regimes leaning towards one ideology or another, or intervention is threatened, to intimidate with the force of weapons."

Reviewing the situation in various parts of the world, Campins pointed out, "In Africa, racism and intervention of diverse poles of power fuel the flames of violence." "The Middle East continues to be an explosive region" and "in Asia, foreign occupation threatens the peace, sovereignty and independence of the region's countries." Referring to the situation in Poland, he added, "The shadow of powerful maneuvers hang like a threat over that often-invaded country, whose people remain intact as such, in spite of successive dismemberments."

"In the face of colonialism," Campins stressed, this organization "should be particularly energetic not only in the face of classic colonialism, but regarding the new and subtle types of pressure of one state over another, new forms of disguised colonialism."

Dwelling on the world economic problems, Campins observed, "The gap between the more developed and the poorer countries has widened." "It cannot be assumed that the dispossessed will long accept with resignation their gradual and irreversible impoverishment," he asserted.

POLISH PRIME MINISTER ADDRESSES ASSEMBLY

OW250945 Beijing XINHUA in English 0718 GMT 25 Sep 81

[Text] Warsaw, 24 Sep (XINHUA)--The Polish National Assembly (SEJM) opened its session here this morning to discuss draft laws governing workers' self-management and the state-run enterprises. The session began by hearing a report from Prime Minister Wojciech Jaruzelski on the home situation.

Jaruzelski declared emphatically in his report that "the future of the (Polish) nation and people depends on the clarification of the question," namely, does the Solidarity Union intend to observe and honor its commitments in the agreements concluded last August and September and in its own constitution? "To what extent will (Solidarity) stop and renounce in practice its attempt to seize power?"

The prime minister appealed to the public to support the government "measures to deal with all sorts of sabotage in a severe manner." He told the National Assembly, "I have entrusted the matter to the minister of the interior whose actions will have the necessary and appropriate support of the troops assigned (for the purpose) and military means."

He solicited the assembly's understanding of what the government had to do to end the anarchy and unrestrained activities against the state and the Soviet Union and to stop making a mockery of the law and traditional values.

The country's economic crisis continued to worsen, he said. Industrial output value in the first 8 months of this year was down by 13 percent as compared with the same period last year, state purchase of slaughtered cattle by more than 20 percent and that of milk 12 percent.

He went on to say that the government had taken emergency actions to prevent a further decline in industrial production and to alleviate the crisis and its consequences.

Stanislaw Kania, first secretary of the Central Committee of the United Workers' Party, was present at the session.

PAP ON POLISH DOMESTIC SITUATION, MINISTERS TALKS

OW200638 Beijing XINHUA Domestic Service in Chinese 1536 GMT 18 Sep 81

[Text] Warsaw, 18 Sep (XINHUA)--According to a PAP report, the Polish Council of Ministers held meetings on 14 and 17 September to discuss the complicated domestic situation in Poland today.

According to the report, the Council of Ministers felt that under the influence of the first stage meeting of the National Congress of the Solidarity trade union and the resolution adopted by the meeting, the situation in Poland has been seriously aggravated. The resolution adopted by the meeting in fact implies the refusal of constructive proposals for cooperation and implies incitement of confrontation which breeds dangerous consequences. The report says: The government concurs with the appraisal of the current situation made in the statement of the PZPR Central Committee Politburo and declares that as a last resort it will not rule out the adoption of any means suited to the state's emergency laws.

The Council of Ministers held that the Solidarity trade union's central leading organ and a number of its local branches are engaged in a struggle to seize power in Poland, fail to abide by the Solidarity trade union's constitution and are engaged in political activities against socialism. The first stage meeting of the National Congress of the Solidarity trade union was controlled by a very large number of people with extremely wild political ambitions whose main intention is to seize power. The Council of Ministers called on the ordinary members of the Solidarity union to break relations with this line."

The report says: The Council of Ministers held that "it is the responsibility of the government and the organs of the people's political power at all levels to resolutely defend the socialist state and the fundamental interests of the state and the people, guarding them against the threat of the counterrevolutionary forces."

The Council of Ministers indicated that it is imperative to rule out any possibility of consultations with the forces inciting confrontation and undermining the system and principles, and that these forces must face the resolute counterattack by the authorities and society. The Council of Ministers gave instructions to organizations under its jurisdiction on the appropriate tasks they must carry out when required by the national situation and studied concrete measures which must be adopted to safeguard socialism and defend the interests of the Polish state and people.

According to another PAP report, the PZPR [Polish United Workers' Party] Central Committee held a meeting of secretaries of the Central Committee, first secretaries of the provincial committees and directors of the various departments of the Central Committee on 16 and 17 September. The meeting discussed the current internal social and political situation and put forward proposals to party organizations at all levels.

CSO: 4005/1

OLSZOWSKI MAKES TV SPEECH ON POLISH SITUATION

OW241055 Beijing XINHUA Domestic Service in Chinese 1442 GMT 23 Sep 81

[Text] Warsaw, 22 Sep (XINHUA)--Stefan Olszowski, Politburo member and secretary of the Polish United Workers' Party [PZPR] Central Committee, delivered a televised speech tonight on the current domestic situation in Poland.

Olszowski said: Recently the tense situation in society, like an avalanche, is becoming increasingly serious with each passing week, sometimes with each passing day. Within the country there have been over 1,000 meetings and interviews and everyday the central authorities have received hundreds of resolutions and letters reflecting panic about the situation. They have one characteristic in common, that is, uneasiness about the current domestic situation. He added: Today, in the face of economic and social threats and the threats created by the political activities trying to draw our cause into the Western orbit, it should be the time to put an end to the cold war aimed at opposing and seizing political power.

Olszowski said: The line formulated by certain leaders of the Solidarity trade union is not aimed at improving the socialist system. They intend to change the system completely and to link Poland with the West. For this reason, it is a counterrevolutionary line which opposes the fruitful results the Polish working people obtained during the years of the people's political power.

Olszowski said: "We do not believe that all leaders of the regional branches of the Solidarity trade union have dishonest and dangerous ambitions. On the contrary, we believe that in the struggle to extricate Poland from the disastrous crisis and anarchism most people, even though they still distrust the authorities and the party organizations, will become genuine allies and will play a due role in promoting the work of overcoming the destructive process. The Politburo still affirms that it needs and is prepared to form an alliance with everyone, with everyone who is not opposed to socialism, and to reach an understanding with those who attach importance to the cause of our motherland and to the work of national salvation."

Olszowski said: "It should be explicitly stated that we need mutual understanding now more than ever before."

Speaking on the "anti-Soviet actions" in Poland, Olszowski said: These actions may cause our closest friend, a big socialist power, to contemplate whether it should continue to help us or maintain economic relations with us on the condition that both sides keep the balance. We are confronted with such a staggering deficit in our trade balance that if we write off the unfavorable balance next year, then Poland's imports from the Soviet Union would be reduced from 4.4 billion roubles to 2.7 billion. That is to say, we could only expect a 50 percent purchase of raw materials at the most, and oil imports would fall sharply; they would be even less than those of other raw materials.

He said: Today, the Polish shipbuilding industry has developed on the basis of steady orders received from the Soviet Union. The Soviet Union can exist without the supply of Polish goods but Poland cannot exist without supplies from the Soviet Union.

In conclusion, Olszowski said: Despite the difference in opinion, it is imperative to reestablish a basis for consultations among Polish people in order to unite all political forces to save the motherland. No matter how different their viewpoints and their moral and ideological motives, genuine consultations may create new prospects for development in our domestic affairs, prospects which will determine the future and development of our country.

According to another report, following the statement on the domestic situation issued by the PZPR Politburo, the National Coordinating Committee of the Solidarity trade union held a press conference on 21 September in (?Rzeszow). At the press conference, Celinski, secretary of the Presidium of the committee, said: The Solidarity trade union is ready to hold negotiations with the government at any time on any question. Regrettably, the government does not want to hold such negotiations at this time and the extensive "anti-Solidarity" propaganda is proof of this. He emphatically pointed out that the Solidarity trade union does not have the slightest intention of creating confrontation and that presently its attention is focused on matters concerning economic reform and autonomy. He further stressed that conciliation between the government and the Solidarity trade union is a requisite for the stable life in the country.

A PAP report says that the Presidium of the National Coordinating Committee of the Polish Solidarity trade union held a meeting on 22 September in Gdansk and adopted a document of the Union on the autonomy of staffs and workers.

DENG XIAOPING CRITICIZED FOR SENKAKUS POLICY

OW191135 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 17 Sep 81

[Text] Our foreign policy of personally decided by the supreme authority just as our domestic policy is. This has led to serious mistakes and caused a huge loss to our national interest.

As everybody knows, the statement issued not long ago by the Information Department of our Ministry of Foreign Affairs pointed out that, ignoring the position of our country, Japan conducted a survey of fishery resources on China's Diaoyutai Islands [Senkakus] and their surrounding waters. Our country lodged a protest with Japan over this illegal action. However, Japan's reply to our fair and just protest was extremely fallacious. It alleged that Diaoyudao Island has always belonged to the Japanese empire and the surrounding waters are Japanese territorial waters. At the same time, Japan also defended itself by referring to the Diaoyudao agreement reached by Vice Chairman Deng and the Japanese Government.

About this historical fact; we have to point out: Paying a visit to Japan in 1978, Comrade Deng Xiaoping did his utmost to carry out his policy of friendship and alliance with Japan and virtually made no mention of Japan's armed occupation of China's Diaoyudao Island. He even ignored other leading comrades' objections, obstinately pursued his own course and told the Japanese that the Diaoyudao problem should be left for the coming next generation to solve. This meant that Comrade Deng Xiaoping decided, without authorization, to let Japan indefinitely have Diaoyudao Island and the surrounding waters. Obviously, this arbitrary action was a very serious mistake that gravely damaged our national interest. We ask: Should we go so far as to cede the territory of the Chinese nation simply for the sake of friendship and cooperation with Japan?

Everybody should recall that our government solemnly pointed out: In order to forcibly occupy China's Diaoyudao and other islands, Japanese reactionaries resorted to all sorts of despicable tricks in order to create a fait accompli. However, all the tricks played by Japanese reactionaries will be in vain. No matter how they use lame arguments and resort to fraud, they will not turn Chinese territory into Japanese territory.

Yet, what we now witness is that Japanese reactionaries are relying on the so-called agreement between Vice Chairman Deng and the Japanese Government to legalize their action of occupying our Diaoyudao and turn Chinese territory into Japanese territory.

We might as well review this: Some years ago, the Kuomintang ruling clique on Taiwan vainly attempted to cede Diaoyudao Island to Japan. At that time, our government solemnly and justly announced: The political mummies on Taiwan are shamelessly selling out China's territory and resources. The Chinese people will never forgive those political mummies for their crime of treason.

What a just, indignant and forceful statement that was. That statement is still significant. The great revolutionary people of our country will never forgive that treasonous action.

We also see that even though the supreme authority makes no mention of the Diaoyudao Island issue as he has promised Japan, the statement issued by the Information Department of our Ministry of Foreign Affairs has resurfaced this problem. We know that some central leaders, ignoring the supreme authority's stand, have more than once pronounced, and will continue to pronounce, that Diaoyudao Island is the sacred, inalienable territory of China. We Chinese people will never honor any supreme authority's arbitrary decision and will never tolerate Japan's occupation of our sacred territory. infringement on our sovereignty and insult to the Chinese people's dignity.

FURTHER ON USSR LU XUN ANNIVERSARY SOIREE

OW190102 Beijing XINHUA Domestic Service in Chinese 1428 GMT 18 Sep 81

[Text] Moscow, 18 Sep (XINHUA)--The Union of Societies for Friendship and Cultural Relations With Foreign Countries, the Soviet-Chinese Friendship Society and the USSR Union of Writers jointly sponsored a soiree in Moscow on the evening of 17 September to mark the centenary of the birth of Lu Xun.

(Bernov), vice chairman of the Union of Societies for Friendship and Cultural Relations With Foreign Countries, delivered the opening speech.

The noted Sinologist N.T. Fedorenko, who is secretary of the Writers' Union and vice chairman of the Central Council of the Soviet-Chinese Friendship Society, made a report on Lu Xun's life and creative work. He aid that Lu Xun was a great writer and thinker and founder of the modern realistic literature of China. Fedorenko said: "By the clear-cut language of an artist and political writer, Lu Xun penetratingly exposed the reactionary nature of imperialism, mocked at the bias of feudalism and expressed his deep hatred for those Chinese and foreigners that enslaved the Chinese people." He said that the massive publication of Lu Xun's works in the Soviet Union since 1929 has proved that the Soviet people like Lu Xun and his works.

After the report, a cultural performance was staged by Soviet artists.

Responsible persons of concerned Soviet social organizations and many Sinologists were present at the soiree. Chinese Ambassador to the Soviet Union Yang Shouzheng and other diplomats of the Chinese Embassy also attended the soiree on invitation.

On 14 September, an academic report meeting on Lu Xun and his creative work was jointly held by the Oriental Studies Institute, the Far East Institute and the World Literature Institute of the Soviet Academy of Sciences, Moscow University's Institute of Asian and African Countries and the Soviet-Chinese Friendship Society.

Beginning on 21 September, the Moscow Foreign Literature Library will hold an exhibition on the life and works of Lu Xun.

ITALIAN SOCIALIST PARTY LEADER ON FOREIGN POLICY

OW271718 Beijing XINHUA in English 1631 GMT 27 Sep 81

[Text] Rome, 27 Sep (XINHUA)--Italian Socialist Party General Secretary Bettino Craxi said Saturday in Bologna that "we have strived and will strive for peace," however, peace should be set up on a basis of security and a balance of power.

Speaking at a mass rally, Craxi said negotiations for arms control and disarmament "should have a scope as broad as possible" and that Europe's position should be to participate and share responsibility with the United States. Craxi said talks should begin quickly to achieve results before 1983. He said that only with a balance of power can peace be maintained, but the Soviet Union has a superiority in Europe.

"We hope that our country will close its ranks on such important problems as peace and national defense," he said. "Any split on this issue of common and fundamental interests will be the most serious hindrance, rather than a help, to the nation and democracy."

On the 10-point basic propositions of the Socialist Party on international issues, he stressed the necessity of unity among NATO member countries, Europe's need to play a bigger role in the world in coordination with the United States and the need for more dialogue between Eastern and Western Europe.

Craxi also demanded Soviet troop withdrawal from Afghanistan, calling for a solution in Afghanistan that would guarantee stability in that area.

On the Middle East issue, he appealed for negotiations which would include the Palestine Liberation Organization.

On the Poland issue, he warned, "The continued Soviet threat to interfere in the internal affairs of Poland will only incite unpopularity in that country and bring about an ever more difficult and dangerous situation."

"Poland is not a remote province of the Soviet Union," he said.

JAPAN'S EXPORTS SHOW SIGNS OF DECLINE

OW190807 Beijing XINHUA in English 0751 GMT 19 Sep 81

[Text] Tokyo, 19 Sep (XINHUA)--Japan's export which used to help propel the country's economic recovery is now stagnant and even on the point of declining.

Car export, one of Japan's top foreign currency earners, has reduced as a result of restrictions demanded by the United States and Western Europe. A Finance Ministry release on 14 September showed that Japan's car export went down to 430,000 units in August, 12.3 percent less than the same month last year. This was the first two-digit slump in 2 years and 5 months.

Despite an upward turn since the beginning of this year, steel export is expected to drop to 7.10 million tons in the fourth quarter of this year. It was 7.46 million tons in the second quarter and about 7.60 million tons in the third quarter, NIHON KEIZAI SHIMBUN reported today.

Machine tool export which has risen remarkably in recent years, is also declining. Exports went down for 2 consecutive months of June and July as compared with the corresponding months last year. The yearly total will be far less than last year's figure.

The export of video recorders has gone up briskly each year since 1977. However, the Ministry of International Trade and Industry has decided to curb recorder export next year to avoid frictions with the U.S. and the EEC countries as in the car war.

Both Japan's public and private research institutes are not optimistic about the prospects of the country's export business this year.

THAI RADIO PRAISES KAMPUCHEAN ALLIANCE

OW221528 Beijing XINHUA in English 1512 GMT 22 Sep 81

[Text] Bangkok, 22 Sep (XINHUA)--The tripartite ad hoc committee meetings held in Thailand are aimed at establishing a coalition government that will genuinely represent the Kampuchean people now under Vietnamese occupation, Voice of Free Asia radio commentary said today.

The radio, which is under guidance of the Thai Foreign Ministry, said that Thailand's efforts in this connection are endorsed by two-thirds of the UN membership. "Thailand and other ASEAN countries have demonstrated their full support for such a constructive move which would pave the way for a comprehensive political settlement of the Kampuchean problem." The meetings, it added, are significant steps forward, contributing to a durable settlement of the Kampuchean question along the lines of the UN resolutions and declration adopted by a majority of UN members.

The commentary said: "Should the Kampuchean nationalists merge into a coalition government, this government will clearly be broadly representative of the Kampuchean people. This is something which the Vietnamese-installed clique in Phnom Penh can never claim to be, so long as it owes its existence to its foreign masters and their 200,000 armed troops.

"Its existence, furthermore, is a transgression against the fundamental principles of the UN Charter, and therefore, cannot be acceptable to the overwhelming majority of the world community which abide by these UN principles," the commentary declared.

Refuting the Phnom Penh regime's slander on Thailand, the commentary said: "It is ironic that the puppet of a foreign country should have the audacity to vilify Thailand's peaceful and constructive efforts to assist the Kampuchean nationalists to restore peace and independence to their country."

SFRY, KUWAIT COMMUNIQUE STRESSES NONALIGNMENT

OW201324 Beijing XINHUA in English 1212 GMT 20 Sep 81

[Text] Belgrade, 19 Sep (XINHUA)--The preservation of security and peace in the Gulf region rests upon the countries of that region alone, says the joint communique of Yugoslavia and Kuwait issued at the end of the official visit to Yugoslavia by the amir of Kuwait today.

Amir of Juwait Sheykh Jabir al-Ahmad al-Sabah ended his 4-day visit to the country, during which he had talks with President of the Yugoslav Federal Presidency Sergej Kraigher on bilateral relations and the international situation.

The communique says that the two sides reiterate the conviction that the Gulf most remain outside all forms of bloc competitions.

The communique expresses the two countries' deep concern over the deterioration of international relations caused by big power rivalry and the policy of spheres of interest. It says that the two sides emphasize the great responsibility of the nonaligned policy and movement in settling key international issues. They point to the importance and the need of solidarity and cooperation among the nonaligned countries and of the peaceful settlement of disputes among them on the basis of the principles of nonalignment.

The two countries express serious concern at the deterioration of the Middle East situation because of Israel's aggressive and expansionist policy and reiterate that a just and lasting solution in the region cannot be reached without the realization of the national, legitimate rights of the Palestinian people. They also condemn Israel's constant aggressive policy against Lebanon.

The communique says that the two sides express serious concern over the continuation of the armed conflict between Iraq and Iran and the crises in Southwest and Southeast Asia. They support a peaceful solution of the Afghan and Kampuchean problems on the basis of withdrawal of foreign troops from these countries and an end to outside interference in their internal affairs.

The two parties also point out that the uninterrupted big-power military buildup in the Indian Ocean threatens peace and security in the world. The two countries press for global negotiations as a first step towards establishing a new international economic order, the communique says. It notes that Yugoslav-Kuwaiti relations are developing successfully and expresses readiness for further efforts to promote overall relations.

THAI FOREIGN MINISTER ON KAMPUCHEAN RESISTANCE

OW220916 Beijing XINHUA in English 0746 GMT 22 Sep 81

[Text] Bangkok, 22 Sep (XINHUA)--Thai Foreign Minister Sitthi Sawetsila yesterday predicted the possibility for the three Kampuchean resistance forces to reach a common stand on many problems after several rounds of talks between their representatives, according to Thai press reports here today. He was talking to Thai reporters before leaving for New York to attend the UN General Assembly.

"If the Khmer Rouge, the KPNLF (The Khmer People's National Liberation Front) and the Sihanoukists can get together to form a coalition government, it would be to the benefit of them all and to that of their country and people," the foreign minister said. With the three groups united, Vietnam cannot maintain its claim that there is no resistance movement against its occupation of Kampuchea, he added.

Meanwhile, Gen Saiyud Kerdphol, chief of staff of the Royal Thai Armed Forces, told the NATION REVIEW that the formation of a resistance coalition government in Kampuchea will convince the other side to seek a political solution. ASEAN's diplomatic move on the Kampuchean issue has won very satisfactory support from countries around the world, he said.

Asked about Soviet assistance to Vietnam and the Heng Samrin regime, Gen Saiyud said, "estimates by some sources say that Soviet aid to Vietnam is about $3 million a day. But one must not forget that the Soviet Union also faces problems in many other parts of the world."

Answering a question on the use of toxins by Vietnamese troops in Kampuchea, the senior military officer said that Thailand has passed on all evidence it had gathered to friendly countries. "Our soldiers near the Thai-Kampuchean border are on alert and they have been trained to cope with toxins," he added.

FURTHER COMMENTS ON PZPR STATEMENT ON DOMESTIC SITUATION

OW181417 Beijing XINHUA Domestic Service in Chinese 1255 GMT 17 Sep 81

[Text] Warsaw, 16 Sep (XINHUA)--The PZPR Central Committee Politburo issued a statement on the evening of 16 September accusing the first stage meeting of the first National Congress of the Solidarity trade union of unilaterally breaking the "agreements signed in Gdansk, Szczecin and Jastrzebie," and "clearly adopting the line of seizing power and changing the sociopolitical system of Poland."

The statement stresses: "The domestic political situation is developing in a dangerous direction," "the state will take the measures called for by the situation" and "defend socialism, as it will defend Poland's independence."

The statement says: The current congress has "elevated the adventurist tendency and phenomena in the Solidarity union to the status of an official program of the entire organization." This program "implies the trend toward confrontations, which could cause bloodshed."

The statement says: This is not a program to unite the workers in the Solidarity union. It in fact serves the interests, schemes and aims of the adventurist, counterrevolutionary groups, such as the "Workers Defense Committee" and the "Confederation of Independent Poland."

The statement criticizes the congress's "message to the working people of East European countries" as "an insensate provocation against Poland's allies."

The statement says: The congress has also adopted an "outrageous resolution" against the Polish SEJM and taken a "negative attitude toward all efforts" of the Polish Government. This attitude "threatens the implementation of the program drawn up by the government to stabilize Poland's socioeconomic situation."

The statement calls on all PZPR members, members of the various parties and trade unions, religious organizations and the entire society to proceed from the interests of the Polish people and the country and "explicitly oppose political adventures and attempts to incite struggles for power and destroy the socialist motherland."

The statement stresses: "Despite the tense situation the PZPR Politburo still affirms its readiness and the need to forge an alliance with all and understanding with everyone who is not against socialism and who treasures the motherland's cause and comes to its rescue."

On 14 September the United Action Committee of the central committees of the PZPR, the United Peasant Party and the Democratic Party held a meeting in Warsaw to discuss the current domestic sociopolitical situation in Poland.

On 15 and 16 September the Presidium of the Polish Democratic Party Central Committee and the Presidium of the Polish Socialist Youth Union Central Council issued statements expressing uneasiness over the serious situation now emerging in Poland, "with a struggle for power actually in progress" and "with socialism being undermined," and stressing that it is imperative to protect the activities of legitimate state organs and strive to stabilize the country's political and economic situation.

The Polish Catholic Episcopate also held a plenary meeting on 14 and 15 September. The meeting stressed that in the current situation it is necessary to avoid confrontations that may bring great dangers and to "find a new way to bring all to sit down at the conference table."

BRIEFS

'RENMIN RIBAO' EDITOR LEAVES--Beijing, 16 Sep (XINHUA)--Three Chinese journalists including Wang Ruoshui, deputy editor-in-chief of the PEOPLE'S DAILY, left here by air today for Italy and Spain to attend festivities organized by the organs of the Italian and Spanish Communist Parties. [Text] [OW162122 Beijing XINHUA in English 1516 GMT 16 Sep 81]

COORDINATION OF EUROPE'S FOREIGN POLICY--Bonn, 18 Sep (XINHUA)--The West German Government reiterated today that the European Community (EEC) should remain intact and be strengthened as a balancer in world politics. Government spokesman Kurt Becker told newsmen after a cabinet meeting that the cabinet unanimously held that only a powerful EEC could act as a U.S. partner in their relations with the Third World and in the East-West relations. Therefore, it is very important for the EEC member states to coordinate their foreign and security policies. Becker said that the cabinet authorized Foreign Minister Hans-Dietrich Genscher to negotiate with other EEC countries on a political policy statement on the formation of a European union as an effort to promote political cooperation among the West European countries. In mid-August, Genscher suggested that political cooperation in Western Europe should take the "form of a treaty." Bonn now also attaches great importance to its bilateral relations with other EEC countries, Becker said, adding that it regards these relations as an important factor in European cooperation. [Text] [OW191618 Beijing XINHUA in English 1537 GMT 19 Sep 81]

ITALY REAFFIRMS SUPPORT FOR ANGOLA--Rome, 18 Sep (XINHUA)--Italian Foreign Minister Emilio Colombo today reaffirmed Italy's full support for Angola and denounced South Africa's military aggression against Angola. Talking with visiting Angolan Foreign Minister Pavlo Texeira Jorge, Colombo said that Italy hoped to see a peaceful solution of the Namibian question through negotiations and that the whole area should be free from tension and conflicts and rid of foreign forces. Pavlo Jorge described South Africa's violent action as in defiance of the rudimentary code of action, and denounced the United State's passive attitude at the UN Security Council as aimed at undermining stability in Angola. The two ministers shared the views that the Namibian question must be solved peacefully on the basis of Security Council Resolution 435. Pavlo Jorge also met today with Egyptian Minister of State for Foreign Affairs Butrus Ghali who was also on a tour here. Butrus has ordered the Egyptian ambassador to the UN to contact Pavlo Jorge who is on his way to the UN so as to act in accord with Angola diplomatically. [Text] [OW190730 Beijing XINHUA in English 0704 GMT 19 Sep 81]

S. AFRICAN AGGRESSION CONDEMNED--Beijing, 18 Sep (XINHUA)--The 50-nation UN African group strongly condemns South Africa's "criminal aggression" against Angola, according to a report from New York. A statement to this effect was issued by the group after a meeting of African diplomats at the United Nations last night. The statement says that during the aggression, 150 South African planes and more than 6,000 infantry "brought death to more than 1,400 innocent civilians and massive material damage" to the southern region of Angola. It adds, "This renewed aggression comes as a result of the support being given by the Reagan administration to the racist and terrorist minority regime of South Africa, thereby encouraging it to be more daring in the perpetuation of its heinous acts of aggression against Angola." The statement appeals to the international community, "particularly to those countries which have the necessary means to bring pressure" on South Africa, to help Angola by taking urgent measures to halt the aggression and illegal occupation. [Text] [OW181254 Beijing XINHUA in English 1225 GMT 18 Sep 81]

YUGOSLAVIA, U.S. REAFFIRM TIES--Belgrade, 13 Sep (XINHUA)--Yugoslavia and the United States reaffirmed today that the principles for independence, sovereignty, equality and non-interference in each other's internal affairs, that had been established between the two countries and tested by time, would remain the basis for permanent cooperation between them. This was stated in a news bulletin here this morning on U.S. Secretary of State Alexander Haig's 2-day visit to Yugoslavia. Haig made it clear that the U.S. would respect Yugoslavia's independent, non-aligned status and policy in world affairs. The two sides said that they would promote their ties of equality in various domains. On international developments, the two sides explained their respective views and exchanged ideas on the forthcoming North-South dialogue to be held in Cancun. They maintained that peace, security and development require all countries to contribute greater efforts so as to peacefully settle the current disputes and problems in the world. Haig left here for Bonn this morning. [Text] [OW131536 Beijing XINHUA in English 1519 GMT 13 Sep 81]

DPRK PAPER ADVOCATES REUNIFICATION CONFERENCE--Pyongyang, 22 Sep (XINHUA)--The holding of a conference for the promotion of national reunification, a new proposal of the North, is the most realistic means for unifying Korea, the Korean newspaper NODONG SINMUN reported today. Reaffirming that the North cannot hold dialogue with Chon Tu-hwan clique, the article points out: "The conference for the promotion of national reunification would be a theater of a nation-wide dialogue for tiding over the difficulties lying in the way of reunification and accelerating the cause of the reunification. Its door is open to all parties, groupings and personages of all circles desirous of the reunification, but only the Chon Tu-hwan group is not qualified to attend it. "If such splittists [would] be allowed to participate in the dialogue for reunification, the venue of dialogue will become a club dragging on time arguing pro and con over the reunfiication question, not a site of consultation for a practical solution of the reunification question," it declares. [Text] [OW221720 Beijing XINHUA in English 1644 GMT 22 Sep 81]

INDIAN NUCLEAR TEST PLANS--New Delhi, 20 Sep (XINHUA)--India will continue to carry out nuclear tests if necessary but will not manufacture the atomic bomb, said Indian Prime Minister Indira Gandhi in an interview with a correspondent of the magazine AGE of Australia, according to a press report here today. India exploded a nuclear device in the Rejasthan Desert at Pokharan in 1974. Gandhi stressed that India has developed nuclear energy for agricultural and industrial purposes. She said India might have a peaceful explosion as it had before "if we think it is in the interests of our science or development." It was not necessarily connected with what Pakistan was doing, she said. Gandhi regarded India's transition from peaceful to military use of nuclear power depends on "what the real danger is" to India's national security interests. How long it will take from peaceful to military uses of nuclear power is a question for scientists to answer because things are getting more and more sophisticated all the time, she said. [Text] [OW200938 Beijing XINHUA in English 0804 GMT 20 Sep 81]

PAKISTAN OFFICIAL REAFFIRMS DRA STAND--Islamabad, 19 Sep (XINHUA)--The Pakistani Foreign Minister Agha Shahi expressed surprise and disappointment that Mrs Indira Gandhi, prime minister of India, should have chosen to question Pakistan's bona fides for the settlement of the Afghan problem, according [to] an official handout here today. The foreign minister was commenting on the Indian prime minister's recent interview with LE FIGARO in which she alleged that Pakistan was not interested in the solution of the Afghan problem but was exploiting it for its own purpose. He said that Pakistan was committed to a peaceful political settlement of the Afghan problem which would ensure the withdrawal of foreign forces from that country, safeguard Afghanistan's independence and non-aligned status, permit its people to decide their own future free of foreign intervention or interference, and enable the Afghan refugees to return to their homes in safety and honour. This has been Pakistan's principled stand from the beginning and has been endorsed by an overwhelming majority of the international community in the UN General Assembly. India had sided with a small minority, but Pakistan had not questioned India's motives for doing so. It was not appropriate for India to attribute false motives to Pakistan. He said that he was looking forward to the discussions at the UN with the secretary general acting as a channel for negotiations, and hoped progress could be made towards a political settlement based on principles. [Text] [OW200118 Beijing XINHUA in English 0102 GMT 20 Sep 81]

PAKISTAN PRESIDENT URGES USSR WITHDRAWAL--Islamabad, 21 Sep (XINHUA)--Pakistan President Xiaulhaq said today that Pakistan would not accept anything less than the withdrawal of Soviet troops, restoration of Islamic and non-aligned character of Afghanistan and the return of over 2.4 million Afghan refugees to their homes in an honourable way. Addressing councillors, noted personages and the general public in Kharan, 250 miles away from Quetta, the president said that the Afghan people should be allowed to have a government of their own choice without any foreign intervention. He said that the Pakistan Government had informed the world opinion through international forums as to what was going on across its western borders where a superpower was trying to change the character of an Islamic country. The president said that today it was Afghanistan and tomorrow Pakistan might be the next target. He said that it was the moral duty of the people and government of Pakistan to protest against foreign aggression against a Muslim neighbouring country. He stated that the people of Pakistan were fully prepared to defend their freedom. [Text] [OW211928 Beijing XINHUA in English 1912 GMT 21 Sep 81]

SOLIDARITY CITED ON SELF-MANAGEMENT--The Presidium of the Polish Soldarity Trade Union's National Consultative Committee met in Gdansk in September. One document on the Solidarity Union's stand on the question of workers self-management was adopted at the meeting. Managers of state enterprises should be appointed or dismissed by the workers' councils of the enterprises or by the higher administrative organs, the document says. After consulting with the trade union, the Council of Ministers will draw up the namelist of key enterprises whose managers should be appointed or removed by the higher administrative organs. Managers of public utility enterprises, however, should be appointed or removed by the higher administrative organs. [Text] [OW271146 Beijing Domestic Service in Mandarin 1000 GMT 24 Sep 81]

JILIN DELEGATION BACK FROM DPRK--The Jilin Provincial CCP Committee delegation headed by Zhang Gensheng, secretary of the Provincial CCP Committee, having completed its visit to Yanggang Province and Pyongyang, the DPRK, at the invitation of the Yanggang Provincial KWP Committee, returned to Changchun 18 September. Li Diping, secretary of the Provincial CCP Committee, and Deputy Governor Wang Guangchao greeted the delegation at the railway station. During its stay in Yanggang Province, the delegation met and was feted by Yin Su-man, responsible secretary of the Yanggang Provincial KWP Committee. Kim Yong-nam, Political Bureau member and secretary of the KWP Central Committee, received and feted the delegation when it visited Pyongyang. WANG RUOWANG'S VIEWS ON LITERATURE CRITICIZED

Changsha SHIDAI DE BAOGAO [CONTEMPORARY REPORT] in Chinese No 1, 15 Mar 81 pp 169-172

[Article by Liu Zhihong [0491 1807 3163], Department of Chinese, Zhongnan Minority College: "Upon Reading Wang Ruowang's [3769 5387 2598] 'Jottings'--Thoughts on 'Do Not Bluff and Bluster' in 'Jottings' Column, WENYI BAO"]

[Text] Editor: We welcome Comrade Wang Ruowang's "Do Not Bluff and Bluster" and all other comments on the comment of "Files" in our inaugural issue, and we look for more arguments. The "Ideological Comments" column of the editorial department of this publication strictly upholds the four basic principles, firmly follows the double hundred policy and strives to truly attain "a hundred schools of thought contending," permitting both criticisms and countercriticisms. Our goal is to join the comrades on the new long march of the "four modernizations" and search for the truth, clarify the right and wrong, fight shoulder to shoulder with them and advance together.

This writer had the good fortune to read Comrade Wang Ruowang's "Do Not Bluff and Bluster" in the "Jottings" column of WENYI BAO, No 11, 1980. The article is a comment on the views on the film "in the Files of Society" (hereinafter referred to as "Files") written by a commentator in No 1 of CONTEMPORARY REPORT. Among the stern denouncements of the commentator's article, Comrade Wang Ruowang's article can be considered "unique." Reading it deep in the night, I cannot but wish to express some thoughts which may be unfashionable.

Originally, it is not a bad thing for there to be criticisms and countercriticisms of a published literary or artistic work (such as the film "Files"). Naturally, in regard to the countercriticisms of any literary criticism, one may comment on the method and the style as well as the viewpoint and standpoint. However, if the method and style of the writer of a countercriticism are incorrect, such as "Do Not Bluff and Bluster" now under discussion, how should it be handled? It is easily done. We have to reason it out once more.

There must be a mystery for the one comment and the dialogue of the two young readers in CONTEMPORARY REPORT to cause such repercussions throughout the north and the south (the lively countercriticisms now underway). This writer feels that CONTEMPORARY REPORT should uphold what it feels to be correct and publish its arguments. If there are indeed mistakes or improprieties, there is no harm in rectifying them and accepting the correct criticisms.

This writer also read "What Are the Issues Brought Up by 'in the Files of Society?," the article by the commentator in No 1, CONTEMPORARY REPORT, and my impressions were quite different from those of Comrade Wang Ruowang. Comrade Wang Ruowang found that there were two serious "charges" or "characteristics" against the commentator's article: "Concentrating on citing Marxist-Leninist words to intimidate country bumpkins;" "empty bluff and bluster." I felt completely the opposite. Sharp and pungent and lively, the CONTEMPORARY REPORT article expressed a clear-cut stand. It was regrettable that Comrade Wang Ruowang attached two big labels of inferiority to it, because he was wrong. But this is only a small matter, and what deserves our attention is that he had always prided himself for opposing attaching wrong labels on others, yet he himself indiscriminately attached labels. One wonders just what he was up to.

In his article, Comrade Wang Ruowang wrote plainly: "'To be affected and pretentious' mentioned by Chairman Mao means to sever from the reality of China and cite Marxist-Leninist words to intimidate country bumpkins. The commentator's article on the film 'Files' in No 1, CONTEMPORARY REPORT, produced such a feeling in me."

Indeed, the "brain" is an organ belonging to the person himself, and no one can stop our Comrade Wang Ruowang from his "feeling," i.e., "conclusion," "after reading" the article in question that 'it concentrated on citing Marxist-Leninist words to intimidate country bumpkins." However, where did this"feeling" or "conclusion" come from? We had hoped that he would present the objective "facts" or "theoretical basis" which produced his "feeling," but regrettably he was unable to do so. Instead, he rendered a "judgment" from his "feeling" (whether illusory or concocted is unknown) without any factual basis: "As his (CONTEMPORARY REPORT commentator) argument was too farfetched and strained, and untenable, he had to seek help from the words of Marx, Engels, Lenin, Stalin and Mao." This judgment from his "feeling" may possibly create a misconception in the readers who have not read the CONTEMPORARY REPORT article: It may seem that the CONTEMPORARY REPORT commentator, having no convincing grounds for his article, "extensively cited the words of Marx, Engels, Lenin, Stalin and Mao" throughout the article. However, those who have read the article, if they are fair, cannot but point out to Comrade Wang Ruowang: Your charges are merely startling lies.

Here, I wish to bring up two issues: First, how could Comrade Wang Ruowang tell that the CONTEMPORARY REPORT article "concentrated on citing Marxist-Leninist words to intimidate country bumpkins?" I think that no reader without prejudice or malice can agree with him. Facts speak louder than words. Among the /8,000 plus words/ in the /7 parts/ of the article, the commentator only discussed what Wang Ruowang referred to as "a famous remark earnestly cited by a sensitive young reader and commentator" in /Part 6/ (under the theme "Doubts of the Socialist System"). This famous remark was from Engels' letter to

(Mina Kautsky) in 1885. However, as the young reader was not complete and accurate in his citation, the commentator supplemented it with the original text from Volume 36 of "Complete Works of Marx and Engels," thereby presenting his own proof. We want to ask: "How is this "/concentrating on citing/ Marxist-Leninist words to intimidate country bumpkins?" Is Comrade Wang Ruowang's "feeling" actually normal or abnormal? Let us borrow his self-satisfied words: "Anyone having a little knowledge of logical reason, a little knowledge of literature, can point out the arbitrariness and malignance of the above....!" Furthermore, can this be considered a sort of true "manifestation of internal emptiness?" Actually, who is "bluffing and blustering?"--Truly there is the elegant "bearing" of telling lies and practicing deception in the open; truly it is taking the tens of thousands of readers as illiterates and ignorant "country bumpkins!"

Second, was it true that the CONTEMPORARY REPORT commentator's argument was "too farfetched and strained, and untenable" and that he had "to seek help from the words of Marx, Engels, Lenin, Stalin and Mao?" As discussed above, the CONTEMPORARY REPORT article contained only one citation from Engels, and no words of Marx, Lenin, Stalin or Mao were found in it. Then, a literary comment of 8,000 plus words which contained reasons and bases and which probed conscientiously, by merely completing a revolutionary teacher's statement which was closely linked with the commentator's viewpoint and affirmed by tens of thousands of readers and extremely familiar to literary commentators, was deliberately distorted as "concentrating on citing Marxism-Leninism," thereby regarded as heresy. One may ask just whose "law" was Comrade Wang Ruowang actually following?

Furthermore, another basis of the so-called "bluff and bluster" of the CONTEMPORARY REPORT article denounced by Comrade Wang Ruowang was that, upon careful counting, he found that the terms "some people said" and "no wonder some people said" appeared "a total of six times." According to him, "it became a kind of 'bluff and bluster,' as if many people echoed the views of this commentator." (Attention: What is quoted here is Comrade Wang Ruowang's brilliant original text!) Unfortunately, the argument "cited" by Wang Ruowang here was not only unfavorable to the argument advanced by him, but also demonstrated that what he advanced was a ridiculous accusation. According to my view, first, the facts were otherwise; next, most likely the CONTEMPORARY REPORT commentator was not interested in Wang Rruowang's so-called "bluff and bluster."--I believe that this has been proved by the facts--and will be further proved in the future.

If you do not believe me, let us look at the facts. The fact was that the CONTEMPORARY REPORT article was not exclusively the "echoes" of the commentator's viewpoint. The article, for instance, pointed out: "/Some people/ defended the work by saying that the author was not affirming Wang Hainan, but merely described in a tender tone that he had nowhere to turn." "/Some people/, with an understanding spirit, said that 'Files' and 'Flying to the Heavens' contained flaws to a certain extent, but the issue of resisting special privileges brought up by them deserves serious attention." "/Some people/ felt that the author wrote with pain, anger and reflection," etc. One may ask the person who criticized the commentator for "bluff and bluster" whether all these "/some people/" did not also "form a kind of 'bluff and bluster,' as if many opposed the views of this commentator." Reading an article with one eye open and one eye closed, the writer of "Jottings" for WENYI BAO seemed a little too casual! We rather admire the style of the CONTEMPORARY REPORT commentator. He had the courage to present "/some people's/" viewpoints which were sharply opposed to his as well as those which were identical with or close to his own, and to express his own viewpoints. Isn't it a most fair and correct attitude of discussion? How could it be called "an intimidating attitude" of "bluff and bluster?"--When I come to this point, a thought comes to my mind: The sudden emergence of Wang Ruowang's "Jottings" without any factual basis alerts us to watch out for and combat the high-handed arrogance reflected by it! Such high-handedness disregarding facts and reason is an extremely harmful pollution of the fresh air of literature and detrimental to the party's literary enterprise.

In addition, to "prove" the crime of "bluff and bluster" committed by CONTEMPORARY REPORT, Comrade Wang Ruowang carefully "selected" and quoted "five sentences in the first part" (actually it was one sentence) of the commentator's article, in order to elaborate on his "Jottings." The sentence in question is: "Just when some comrades in literature sincerely proposed that literature is not a tool of the class struggle, 'in the Files of Society' (film script) and 'Flying to the Heavens' emerged successively--such works are like uninvited teachers, volunteering to participate in the 'discussion on the relationship between literature and politics!'"

Light and smooth, witty and descriptive, and avoiding platitude, the sentence, which opened the article, was well-written and afforded much food for thought. Nevertheless, for reasons unknown, Comrade Wang Ruowang was extremely annoyed by "the above-mentioned five sentences," and found that CONTEMPORARY REPORT, by these words, "triumphantly declared: Literature is inevitably a tool of the class struggle; literature must serve politics!" He rendered his judgment: "Anyone having a little knowledge of logical reasoning, a little knowledge of literature, can point out the arbitrariness and malignance of the above five sentences!" Wrong! Comrade Wang Ruowang, the words on "arbitrariness and malignance" in your "Jottings" precisely proved your extraordinary "arbitrariness and malignance!" Is it conceivable that, by citing "Files" and "Flying to the Heavens" as illustrations, the commentator triumphantly declared that "literature is inevitably a tool of the class struggle; literature must serve politics?" Wrong. Are the "illustrations" limited to "Files"and "Flying to the Heavens" which the commentator had come across? Does it mean that there should be an endless list of books as "illustrations?" Rudimentarily speaking, it was excellent that CONTEMPORARY REPORT cited several new typical "illustrations" showing that "literature cannot be separated from politics." Furthermore, precisely as stated by Comrade Wang Ruowang, "the spokesman of a publication may frankly express different viewpoints." Then, isn't it strange that the CONTEMPORARY REPORT commentator alone is not permitted to "frankly express different viewpoints?" And the moment he did so, it became "arbitrariness and malignance." Just whose "law" was Wang Ruowang upholding and just what was the reason?

Was Comrade Wang Ruowang's impressive "Jottings" a "lecture" and a "lesson" to one commentator? No. He was "lecturing" "/a group of people/, a contingent:" "This commentator... actually represents /a group of people./ Indifferent to the deterioration of China's Great Wall, these comrades, the moment they hear that there is something wrong with a certain work, they flock to it like ducks to join the nitpickers and condemn the field of literature as utterly hopeless." Just because the CONTEMPORARY REPORT commentator frankly expressed a somewhat different view on "Files," he was accused by Comrade Wang Ruowang, by "logical reasoning," for representing "/a group of people,/ a contingent," actually "waging a class struggle" ferociously. Wasn't this intolerable "arbitrariness and malignance?"--Was this the warm breeze of the springtime of literature, or a small gust of ill wind?

Such "jottings" can be put aside! We advice Comrade Wang Ruowang to study, at his leisure and convenience, his own "jottings" to determine whether, besides the impressive "bluff and bluster," it has any truth in it!

The truculent literary "jottings" represented by Comrade Wang Ruowang have indeed made clear the nature of the debate launched by them. At the same time, they have also unequivocally explained the kind of method and pattern of "courage and skill in contending." Here I wish to send word to the writer of "Do Not Bluff and Bluster:" We will carefully study and discuss your comment and, besides answering your arguments, we will carefully determine just who is "bluffing and blustering," and not just "bluffing and blustering" either!"

YUNNAN DELEGATION IN NEI MONGGOL--The Mongolian delegation from Tonghai County, Yunnan Province, held a farewell forum on 17 September to express its thanks to the Regional CCP Committee and government for their warm welcome. Ting Mao, second secretary of the Regional CCP Committee and Kui Bi, chairman of the Regional CPPCC Committee, attended the forum. Ting Mao addressed the forum. He expressed hope that the Mongolian people living in border areas will strengthen unity between nationalities and make new contributions to safeguarding and building the frontier. [SK210442 Hohhot Nei Monggol Regional Service in Mandarin 1100 GMT 18 Sep 81]

NEI MONGGOL BANNER CELEBRATION--Wang Duo, permanent secretary of the Nei Monggol Autonomous Regional CCP Committee, led a regional party and government delegation to (Alihe) today to participate in the celebrations for the 30th founding anniversary of Oroqen autonomous banner, which falls on 1 October. Deputy leaders of the delegation are Chen Bingyu, vice chairman of the regional government, and (Zhao Yuping), deputy director of the United Front Work Department of the Regional CCP Committee and vice chairman of the Regional Nationality Affairs Committee. Members were Wang Haishan, vice chairman of the Regional CPPCC Committee; (Man-du-hu), deputy secretary general of the Regional People's Congress Standing Committee; (Men De), deputy director of the general office of the regional government; (Jin Jiudou), deputy director of the Regional Public Health Office; and (Bao-yin-da-lai), deputy director of the Regional Culture Bureau. Bu He, secretary of the Hohhot Municipal CCP Committee and municipal deputy mayor, also joined the delegation. A literary and art troupe and a medical subordinate to the delegation will give performances and provide medical services at communes of the banner after the celebration activities. DENG CRITICIZED FOR PLA CADRES PURGE

OW201138 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 19 Sep 81

[Text] Serious problems exist in training the army air defense units, air force units and other units with airlift capabilities and in furnishing these units with military equipment. Inevitable and serious consequences will follow if no effective measures are taken to solve such problems within a short period and if Comrade Deng Xiaoping continues to show prejudice against the broad masses of air force and naval cadres because of the Lin Biao incident.

Recently Huang Zhicheng, an examining officer of the KMT Air Force, crossed over with a fighter and landed at a certain airport on the Fujian front of his own will. This event had shocked many comrades particularly the leading comrades of the air defense units, the air force units under the Fuzhou Military Command, the general staff headquarters and the Military Commission. They openly expressed doubts about the existing military line, and held that it is necessary to make self-criticism on the erroneous policies pursued by the air force, the navy, the Nanjing Military Command and the Guangzhou Military Command in the past few years.

It should be realized that Huang Zhicheng's landing at the Fujian airport of his own will is not a simple incident. According to Huang Zhicheng, he entered China's territorial airspace twice before he finally landed. However, he did not see any plane trying to intercept him. In fact, our radar stations did not discover him in time. Even if his plane had been discovered, there was no way that this kind of aircraft could have been intercepted. However, the F-5F fighter with which Huang Zhicheng crossed over was not the most advanced aircraft. The FX fighters which the United States is going to sell to Taiwan, the F-16 fighters in Japan and South Korea as well as the Mig-25 fighters in Vietnam are better and more powerful than the F-5F fighters. From this, we are able to judge our air defense capabilities.

However, what we fail to understand is that in less than 3 months after the closing of the Sixth Plenary Session of the CCP Central Committee, some person in the Military Commission has already defied the resolution adopted at the plenary session about seeking truth from facts, saying: The equipment and the training of the PLA air force units and the air defense units are not so good, because during the chaotic decade, we had concentrated our main efforts on the development of political movements. We had also put forward many unrealistic slogans on building and training the naval and air force units and taken a roundabout course.

Needless to say, these remarks will never be able to solve the real problems in the PLA units. We would like to raise one question: Following the overthrow of the gang of four, Comrade Deng Xiaoping had actually taken charge of the work in the Military Commission for so many years. Shouldn't he be held responsible for anything at all? It is known to all that after rigging up the Lin Biao incident, the gang of four had ruthlessly persecuted the principal leading cadres of our armed forces, especially those in the navy and air force. Instead of redressing this most serious unjust case in the history of our armed forces, Comrade Deng Xiaoping made use of this historical issue to purge army cadres three times, subjecting our air force and naval cadres, the Nanjing PLA units, the Guangzhou PLA units and the Fuzhou PLA units to the most barbarous persecution. Even now, all such cadres are unable to completely recover from their shocking experience. Therefore, in order to formulate a correct and feasible principle in army building, it is necessary to conscientiously make self-criticisms of our past erroneous principles and line and sum up our experience in the past.

BRIEFS

SHANDONG ANTI-AIRCRAFT PRACTICE--The Shandong Provincial Military District recently organized the Shengli oilfield, Zibo Municipality, the (Julu) Petrochemical Company and a militia anti-aircraft regiment in Weifang Municipality to conduct an anti-aircraft firing practice with live ammunition at the shooting range of an anti-aircraft regiment under the Jinan PLA units. Zhao Feng, commander of the provincial military district, participated in the practice to give instructions. With the cooperation of naval air units, they conducted four firing practices in 2 weeks with flying colors. [SK220504 Jinan Shandong Provincial Service in Mandarin 2300 GMT 19 Sep 81]

WUHAN PLA CADRES--Wuhan, 22 Sep (XINHUA)--The Wuhan PLA units are paying attention to selecting and training middle-age and young cadres. In 1981 more than 220 middle-aged and young cadres have been promoted to principal leading positions at corps, division and regimental levels. Prior to promotion most of them were given an opportunity to pursue 1-year advanced training programs at military schools. [OW231453 Beijing XINHUA Domestic Service in Chinese 0715 GMT 22 Sep 81]

YUNNAN COMFORT GROUP--Led by Meng Qi, group leader and vice governor, the Yunnan Provincial Comfort Group arrived in (Luojiaping) in Malipo County on 21 August to comfort the commanders and fighters of a certain border defense PLA unit. The commander of the Fifth Company of the PLA unit introduced the situation of their struggle against the enemies to the comrades of the group. On behalf of the masses of all nationalities throughout the province, Meng Qi thanked the border defense PLA commanders and fighters for defending the motherland. The group comprised (Zhu Youling), advisor of the Yunnan Military District; (Gu Quanming), deputy secretary general of the Provincial People's Congress Standing Committee; and (Deng Xiaofeng), vice chairman of the Provincial Federation of Trade Unions. NEW RULES ON PLANNED PARENTHOOD TAKE EFFECT IN SHANGHAI

Shanghai JIEFANG RIBAO in Chinese 10 Aug 81 p 3

[Article: "Shanghai Municipality Enforces Certain Rules for Planned Parenthood"]

[Text] To keep the population increase in line with the development of the national economy, to accelerate our socialist modernization, and to raise the material and cultural living standard of our people, the following rules are stipulated especially for the actual conditions of Shanghai and on the basis of the "Constitution of the People's Republic of China" Article 53 that "The state advocates and pursues planned parenthood" and the "Marriage Law of the People's Republic of China" Article 5 that "Late marriage and parenthood should be encouraged" and Article 12 that "Both the husband and the wife have the duty to practice planned parenthood."

Article 1: The basic requirement of planned parenthood is: late marriage, late parenthood, fewer and better children, and only one child per couple. Ideological education should be the principal means, to be assisted with necessary economic and administrative measures.

Article 2: Ages for first marriage: In urban areas, men above 27 and women above 25; in suburban counties (including rural towns), men above 25 and women above 23, an additional week of leave for the wedding.

Article 3: For urban women over 25 and suburban county women over 23 when they give birth to a first child (including the first birth by remarried couples without children), an additional maternity leave of 15 days, wages to be paid and workpoints recorded as usual.

Article 4: A couple to have only one child, and to pledge not to have another. Before a child reaches 16, its parents may apply jointly for an "only child certificate" with the approval of the prefecture and county office of planned parenthood. The holder of this certificate is entitled to the following benefits:

1. The only child will receive a monthly allowance of 5 yuan until age 16. This sum is to be paid in equal shares by the two units of its father and mother.

2. The only child has the priority to be taken care of by a nursery or a kindergarten, generally to be paid by the unit of the mother, and will receive free education from elementary school until graduation from senior middle school.

3. When a couple holding an "only child certificate" retires from old age, as workers they will receive an additional pension at 5 percent of their original wages, but the total amount of the pension should not exceed their wages; as rural commune members who have lost their working ability on account of old age, they will receive monthly a certain sum of living allowance in addition to the welfare benefits which they are entitled to at their units.

4. In case a worker has real difficulty in coming back to work after her maternity leave, after she has obtained an "only child certificate," she may apply for and receive, with the approval of the higher-level department, a tentative prolonged leave of absence which, together with her official maternity leave, should not exceed the maximum of 1 year, within which period she will receive 80 percent of her usual wage.

For workers and temporary workers, the above expenses should be paid from the welfare funds of the units concerned; for rural commune members, the above expenses should be paid from the public welfare funds of the units concerned, the production brigade or commune should subsidize units of real difficulty, and the local treasury should subsidize the production brigade or the commune that also have real difficulty. When both the husband and his wife are urban residents waiting for employment, the above expenses should be paid from funds for planned parenthood. Expenses of free education for an only child should be treated as an expenditure of the local treasury's education fund in Shanghai.

Article 5: When a couple holding an "only child certificate" gives birth to a second child, they should surrender the "only child certificate," forfeit all privileges under the certificate, and pay back all material benefits received previously by deducting a part of their wages.

Article 6: When either the husband or his wife receives the operation for sterilization after the couple has given birth to the first child, they will receive an allowance of 30 yuan for nourishment, the payment is made in the same way as Article 4.

Article 7: When a married couple takes a leave of absence to undergo a sterilization operation and spends time for recuperation at the hospital, they will be treated as on public vacation, wages will be paid as usual, workpoints will be recorded as usual, and the assessment of their bonus will not be affected.

Article 8: When a married couple has no child for life, or when they have not given birth to another child after the death of their only child and have not adopted any child, on retirement either the husband or his wife may submit an application which will be examined and approved by his or her organization so that a worker can receive an additional pension at 10 percent of his or her original wage, which together with the original pension should not exceed the amount of his or her wage. In case of married rural commune members having no child for life, when they have lost their ability to work on account of old age, they will be paid a certain monthly allowance for living in addition to the welfare benefits which they are entitled to according to the regulations of their units.

Article 9: When an urban family with an only child, which has obtained an "only child certificate," asks for housing facility, the family will receive the same treatment as a family with two children.

Article 10: When rural villages regulate private plots and arrange foundation land for building houses, a family with an only child will be treated as a family with two children. After the enforcement of this rule, overproductive families with many children will not receive additional private plots and land for housing.

When rural commune and brigade enterprises recruit workers, under equal conditions the priority of employment should be given to families with an only child.

Article 11: The birth of a second child should be placed under strict control. Under one of the following circumstances, and with the approval of the prefecture and county office of planned parenthood, it may be arranged in a planned way to give birth to a second child:

1. The first child has a nonhereditary deformity, and cannot grow up to be a normal able-bodied worker.

2. The family of a remarried couple (including one of remarriage and the other of first marriage) has originally only one child.

3. A couple was found to be sterile by the prefecture and county hospital, and the wife becomes pregnant after they have adopted a child with the approval of concerned departments.

Under the first and second circumstances, the birth of the second child should take place generally over 4 years after the birth of the first child.

Article 12: When a second child is born not under the program of planned parenthood, the mother should pay her own hospital expenses and all medical expenses during her maternity leave, and cannot enjoy the benefits of usual wages and workpoints during her maternity leave. For a child born in excess of planned parenthood, the parents must pay the nursery fees and medical expenses (cooperative medical care) before the child gets a job. In rural communes and production brigades which have no such welfare benefits, a deduction at 10 percent of the total income of the parents should be made in 3 consecutive years.

Article 13: When a couple gives birth to a third or more extra child, they pay their own hospital expenses and medical expenses during the maternity leave, and cannot enjoy the benefits of usual wages and workpoints during the mother's maternity leave. They must pay their extra child's nursery fees and medical expenses (cooperative medical care) before the child gets a job. From the month of the extra child's birth to the time when the child reaches 16, both parents should pay an "extra child fee" at 10 percent of their respective income from wages or labor workpoints. If the parents are workers, their units should collect this fee each month for use as the units' welfare fund. If the parents are rural commune members, their units collect this fee from the year-end distribution for use as public welfare fund.

Article 14: If a woman becomes pregnant and gives birth to a child without the registration of her marriage, she pays all her medical expenses and cannot enjoy the benefits of usual wages and workpoints during her maternity leave.

Article 15: All units and individuals (scientific research personnel, medical personnel, full-time personnel, and activists at the grass-roots) with marked achievements in the work of planned parenthood should be commended and given awards. Medical personnel who have performed over 1,000 sterilization operations in succession without mishaps should be given a money award, to be paid from funds for planned parenthood.

Article 16: When all departments concerned stipulate their rules and regulations, they should facilitate the work of planned parenthood, and given benefits to families with an only child.

Article 17: Those who have committed actions of undermining planned parenthood should be criticized and educated or be punished according to administrative discipline. In abominable cases which have caused serious consequences, the offenders should be called upon to take the responsibility according to the law.

Article 18: The Shanghai Municipality's leading group for planned parenthood office will stipulate detailed regulations for the implementation of the above rules.

Article 19: The above rules become effective from the date of announcement. From the date of the announcement of the above rules, the former "Certain Rules on the Enforcement of Planned Parenthood" of the Shanghai Municipal Revolutionary Committee will be ineffective.

Article 20: When the above rules are in conflict with the rules notified by the state concerning planned parenthood, the rules of the state will be taken as the standard.

GUANGDONG PROVINCIAL GOVERNMENT RESHUFFLES PERSONNEL

Guangzhou NANFANG RIBAO in Chinese 22 Jul 81 p 1

[Article: "The State Council Approves the Appointment of 43 Working Personnel of the Guangdong Provincial People's Government"]

[Text] According to the provisions of the "Law of the Organization of Local People's Congresses of All Levels and Local People's Governments of All Levels," the State Council has recently approved the appointment of 43 working personnel of the Guangdong Provincial People's Government, which was passed by the Standing Committee of the Guangdong Provincial People's Congress. The list of names is as follows:

Wu Nansheng [0702 0589 3932] as chairman of the Provincial Special Economic Area Administrative Commission

Yang Zhen [2799 7201] as chairman of the Provincial Planning Commission

Wang Huan [3769 3562] as chairman of the Provincial Economic Commission

Zeng Dingshi [2582 1353 4258] as chairman (concurrent) of the Provincial Committee of Economic Work with Foreign Countries

Ye Xuanping [5509 6693 1627] as chairman (concurrent) of the Provincial Science and Technology Commission

Chen Yuangao [7115 6678 7559] as chairman of the Provincial Committee of Physical Culture and Sports

Huang Kang [7806 1660] as chairman of the Provincial Committee of Nationalities Affairs

Hu Guangen [5170 1684 1869] as chief of the Finance and Trade Office of the Provincial People's Government

Li Chao [2621 6389] as chief of the Culture and Education Office of the Provincial People's Government

Wei Ji [7614 7535] as chief of the Provincial Office of National Defense Industry

Li Mouxuan [2621 5399 5503] as director of the Provincial Department of Civil Affairs

Wang Ning [3769 1380] as director (concurrent) of the Provincial Department of Public Security

Ma Fang [7456 5364] as director of the Provincial Department of Justice

Lu Yisan [7773 4135 0005] as director of the Provincial Department of Commerce

Gu Jie [7357 2638] as director of the Provincial Grain Department

Sun Yi [1327 3015] as director of the Provincial Department of Machine Building

Cao Jie [2580 2638] as director of the Provincial Department of Metallurgical Industry

Qin Defu [4440 1795 1133] as director of the Provincial Department of Coal Industry

He Shiyong [0149 0013 1661] as director of the Provincial Department of Petrochemical Industry

Wang Yaning [3769 0068 1380] as director of the Provincial First Department of Light Industry

Li Mu [2621 3668] as director of the Provincial Department of Communications

Qu Diankui [2575 3013 7608] as director of the Provincial Department of Agriculture

Yang Zijiang [2799 1311 3068] as director of the Provincial Department of Education

Zhang Qin [1728 0530] as director of the Provincial Department of Public Health

Li Cheng [2621 6134] as director of the Provincial Bureau of Goods and Materials

Wu Zhengzhi [2976 2973 0037] as director of the Provincial Seismological Bureau

Lin Chuan [2651 1557] as director of the Provincial Bureau of Higher Education

Huang Wenyu [7806 2429 0205] as director of the Provincial Administrative Bureau of Publications

Liao Wei [1675 0251] as the director of the Provincial Bureau of Urban Construction

Wang Biting [3769 1732 1656] as director of the Provincial Administrative Bureau of People's Communes' Enterprises

Liu Tieping [0491 6993 1627] as director of the Provincial Meteorological Bureau

Zhou Kai [0719 0418] as director of the Provincial Bureau of Building Materials Industry

Luo Ting [5012 2185] as director of the Provincial Bureau of Surveying and Cartography

Jin Yang [6855 7122] as director of the Provincial Bureau of Environmental Protection

Tian Yumin [3944 5148 3046] as director of the Provincial Administrative Bureau of Medicine

Feng Xueyan [7458 1331 1750] as director of the Provincial Bureau of Foreign Trade

Liu Yin [0491 0936] as director of the Provincial Bureau of Building Construction

Guo Ling [6753 0407] as director of the Provincial Statistical Bureau

Cheng Li [4453 6849] (female) as director of the Provincial Labor Bureau

Ye Wobo [5509 5257 3134] as director of the Provincial Bureau of Electronic Industry

Xie Yongkuan [6200 3057 1401] as director of the Provincial Department of Aquatic Products

Hou Cailing [0186 6846 5376] as director of the Provincial Department of Agricultural Machinery

Wei Linji [7614 7792 1015] as director of the Provincial Department of Water Conservancy and Electric Power

SHANDONG PROVINCE MAKES PREPARATION FOR CENSUS WORK

Jinan DAZHONG RIBAO in Chinese 13 Jul 81 p 1

[Article: "To Strengthen Leadership and Make Good Preparation for the Census"]

[Text] Recently an on-the-spot meeting for the provincial third census was held in Jining City.

At the meeting, the members of the provincial census leading group, the leaders of census leading groups of various prefectures, cities and counties, and the responsible comrades of public security, statistics and concerned departments earnestly studied the documents of the Party Central Committee and the State Council concerning the census, heard reports from the experimental points in Jining City and Jining County, made an on-the-spot inspection of the census registration work in Jining City, and discussed the views on making arrangements for the census work in our province.

The meeting drew up plans for the preparation of the census work in the whole province. All counties and cities are required to set up experimental points in the first quarter of next year, to prepare necessary goods and material in May and June and carry out activities of propaganda, and to start the work of the census on 1 July according to the standard time for the census as specified for the entire country.

The meeting held that we can do a good job of census-taking by accomplishing the following work: (1) Setting up a strong commanding organ with a working group. Census leading groups of various levels should be organized by responsible comrades of concerned departments, with leading comrades of party committees and governments as group leaders and deputy leaders. Under the unified planning of the census leading groups of various levels, all concerned departments of public security, civil administration, grain, labor and birth control must take an active part, work in close coordination, and make a concerted effort. (2) We must earnestly do well the work of checking up and consolidating the registration of households and population to lay a good foundation for the census. All prefectures, cities and counties must do well the work of setting up experimental census points level by level, organize and train working personnel, gain some experience, and create favorable conditions for the formal general census. (3) We must carry out energetically the work of propaganda, explain in many ways the significance of the census, and make it known to every household. (4) We must prepare necessary goods and material for census work by adhering to the principle of diligence and frugality and practicing economy to get more done on less money.

NINGXIA HUI AUTONOMOUS REGION STRENGTHENS POPULATION REGISTRATION

Yinchuan NINGXIA RIBAO in Chinese 27 Jul 81 p 1

[Article: "Autonomous Region People's Government Calls Regional Meeting To Strengthen Population Registration and To Establish or Improve Household Administrative System"]

[Text] Recently, the Ningxia Autonomous Region People's Government held in Yinchuan a regional conference on strengthening the work of population and household registration. The meeting earnestly studied the instructions from the Party Central Committee and the State Council concerning the upcoming census and the reorganization of the work of population and household registration, and discussed and planned ways of strengthening the work of registration in the entire autonomous region.

More than 70 people attended this meeting, including the responsible persons of census leading groups of the region's prefectures, cities and counties (wards), the department of public security and other departments.

The meeting held that the registration of the number of households and total population is an important administrative system of the state, which plays an important role in building socialism, maintaining social order and safeguarding the rights and interests of the citizens. However, the 10-year turmoil had seriously undermined the work of household administration, created a lot of confusion in the administration, not only impaired social order and the accuracy of population statistics, but also brought about very great difficulties to the third national census. Therefore, it is exceedingly necessary to check on the population registration and establish or improve a regular household administrative system.

The meeting stressed that checking up on the registration of households and population is a very extensive, complex and difficult work of the national policy, which involves thousands upon thousands of families and households as well as all quarters of society, and is related to the close interests of the broad masses of the people. Therefore, it can be accomplished only by mobilizing and organizing the forces of all quarters under the unified leadership of the party committees and governments [at all levels]. All citizens, especially leading cadres of all levels and members of the Communist Party, should show concern for and give support to this work, and observe strictly the related stipulations of the "Regulations for Household Registration." Those few who violated the system of household registration should be urged to rectify their mistake, and each case should be handled appropriately according to the degree of seriousness. Those who have committed felonies by perverting justice for a bribe should be dealt with seriously by finding out the facts for final prosecution.

BRIEFS

JIANGSU EDUCATION--The Jiangsu Provincial People's Government recently issued a circular on classes for paying students established by some universities and colleges. The circular points out that some universities and colleges in the province are still planning to run such classes for the children of their own faculty members who have failed to pass entrance examinations. The circular calls on universities and colleges to discontinue these classes and not to open new ones. [Nanjing Jiangsu Provincial Service in Mandarin 2300 GMT 23 Sep 81]

LIAONING OVERSEAS CHINESE GATHERING--The Overseas Chinese Affairs Office of the Liaoning Provincial People's Government, the Returned Overseas Federation and the Overseas Chinese Work Group under the Provincial CPPCC Committee held a gathering in Shenyang on 27 September to mark the 32nd National Day. Attending the gathering were some 1,000 persons, including responsible comrades of departments concerned and representatives of returned overseas Chinese and their dependents. The provincial branch of the Revolutionary Committee of the Kuomintang, the China Democratic League and the China Democratic National Construction Association also held a joint art and literary reception on 27 September to mark National Day. [SK281114 Shenyang Liaoning Provincial Service in Mandarin 1100 GMT 27 Sep 81]

GUANGDONG FORUM ON 1911 REVOLUTION--The Guangdong Provincial Committee of the Kuomintang Revolutionary Committee held an academic forum in Guangzhou on 19 September to mark the 70th anniversary of the 1911 revolution. The 30 participants included history workers, professors and former high-ranking officers of the Kuomintang. In connection with their personal experiences and fruits of research, they held serious discussions on the great historic significance of the 1911 revolution and the tremendous merits of Sun Yat-sen in leading it. They pointed out: Mr Sun Yat-sen's testament. The Taiwan authorities must move with the tide of history, effect KMT-CCP cooperation for the third time, and follow the broad and brilliant road of peaceful reunification of the motherland. This is the only way out. [Text] [HK210638 Guangzhou Guangdong Provincial Service in Mandarin 2330 GMT 20 Sep 81]

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CORRECT PRACTICE OF CRITICISM, SELF-CRITICISM REVIVED

Jinan DAZHONG RIBAO in Chinese 19 Aug 81 p 1

[Editorial: "We Must Conscientiously Carry Out Criticism and Self-Criticism"]

[Text] The practice of earnest criticism and self-criticism is our finest tradition, it is one of the remarkable features that distinguishes our party from all other political parties. During the long term revolutionary struggle, the reason our party was able to endure hardships and dangers and to achieve victories was due to the fact that the practice of criticism and self-criticism was regarded as the party's best weapon for remolding themselves, thus preserving the party's progress and the soundness of the leadership. In the decade of internal unrest, this traditional work style of the party was seriously undermined and is just now being revived and carried forward. In his speech at the meeting celebrating the 60th anniversary of the founding of the CCP, Comrade Hu Yaobang pointed out: "The contradictions between proletarian ideology and non-proletarian ideology, and between correct and erroneous thinking within our party, require that we make more effective use of the best weapon Communists have for remolding themselves, namely, the practice of criticism and self-criticism." Clearly, only if we take up this weapon in earnest and constantly cleanse ourselves of impurities can we keep our revolutionary spirit young.

It is worth keeping in mind that at the present time, the negative influences of the decade of internal disorder are still a grave problem for a number of comrades. They still have a confused understanding and erroneous views concerning the regular practice of criticism and self-criticism within the party. Indeed, their vulgar practice of "keeping on good terms with everyone" is of some concern. For example, some know perfectly well this is wrong but, thinking it is best to say little, adopt a liberal attitude toward erroneous tendencies; others believe in the philosophy of "seeking good relations with all and sundry at the expense of principle," in burning more joss sticks, in zealous kowtowing and in cultivating more flowers and fewer thorns; still others, even though they practice some criticism, they do so in a perfunctory manner, keeping silent about major charges while admitting minor ones. In particular, it should be stressed that some people have denounced the normal practice of criticism as a "bludgeon" and will not let others criticize their errors and shortcomings; others think that upholding stability and unity is incompatible with the practice of criticism and self-criticism and therefore reject and deny criticism and self-criticism. In the ideological and cultural sphere there is a tiny minority opposed to criticism and self-criticism who essentially want to get out from under the leadership of the party, to break away from the path of socialism and to engage in bourgeois liberalization. These erroneous tendencies are extremely destructive in that the elimination of the powerful Marxist weapon of criticism and self-criticism leads to the breakdown of discipline, the disruption of popular support and the spread of evil trends and noxious influences. In short, it basically runs counter to the interests of the party and the people. We must clearly define right and wrong and deepen their understanding.

Why do some people speak of others' criticism as a "bludgeon"? The reasons are many-sided. Among these comrades the majority are unable to discern the dividing line between criticism and a "bludgeon." For a long time Lin Biao and the "gang of four," under the pretext of criticism, carried out bludgeonings to usurp the party and seize power. They ruthlessly attacked and injured the proletarian revolutionaries of the older generation and vast numbers of cadres and people. This type of evil influence made many comrades fearful of criticism, they saw criticism as a "bludgeon." Although this is understandable, it is, nevertheless, mistaken. There is still a small group of people who either present various problems or have rigid ways of thinking: they still persist in supporting the mistaken stand of the two "whatevers," which is incompatible with the party line and general and specific policies, or they have been influenced by bourgeois and other non-proletarian ideologies. They have deviated from the party's four fundamental principles and have engaged in bourgeois liberalism etc., therefore they fear and oppose being criticized by others. They frequently denounce criticism as a "bludgeon" and furthermore seize on some small point to counterattack. Obviously they have made "No Bludgeoning Allowed" an excuse to oppose becoming the object of criticism, it acts as a shield to protect their own errors. This lets them bring charges against others but does not allow others to criticize them. This clearly is even more erroneous, it is also extermely dangerous. It should again be mentioned at this point that carrying out criticism and self-criticism is part of the normal practice of democracy. Those who engage in criticism must strive to be fair and just. Those comrades who are the objects of criticism should not demand that others be 100 percent accurate, rather, they ought to adopt the approach of "correcting mistakes if you have made any and guarding against them if you have not." Even if the criticism is not sufficiently pertinent or apropos and may even be wrong, they still should not condemn it at the slightest provocation as a "bludgeon." It is difficult for anyone to avoid committing errors. This is not too worrisome, what is worse is concealing one's faults for fear of criticism, refuting criticism and not rectifying one's mistakes. We should keep the instructions of Chairman Mao firmly in mind: "Chinese Communists, taking the interests of China's broad masses as their starting point, believe that their cause is entirely just, they do not hesitate to sacrifice their all. They are ready at all times to offer their lives for our cause. Could it be that they are still those reluctant to discard ideologies, views, opinions, and methods that do not conform to the demands of the people?"

To think of the practice of criticism as being incompatible with the preservation of stability and unity is a mistaken metephysical concept. The state of stability and unity is not easily attained, we must treasure it dearly and resolutely safeguard it. The 6th Plenary Session of the 11th CCP Central Committee called on the whole party, the whole army and all nationalities throughout the country to raise high the banner of Marxism-Leninism and Mao Zedong Thought, to rally closely around the Party Central Committee, to continue displaying the spirit of "The Foolish Old Man Who Moved the Mountain," to make resolutions to overcome all difficulties, to exert themselves in the struggle to gradually build our nation into a modernized, highly democratic, highly civilized, powerful socialist country. We must respond to this call and, uniting as one to look forward, concentrate our energy on carrying out the four modernizations. It should be stressed that the four fundamental principles constitute the common political basis for the unity of the whole party and the unity of the entire people. If we fail to criticize and put an end to opinions and deeds that violate and oppose the four fundamental principles, it will shake the foundations of this unity. How could this unity be consolidated then? Comrade Mao Zedong summed up a well-known formula for solving contradictions among the people, that is, to start from the desire for unity, undergo criticism or struggle, then arrive at a new unity on a new basis. Put more succinctly: unity--criticism--unity. From this it can be seen that unity and criticism are mutually supplementary and mutually complementary; they are linked closely together. The entire history of the party and countless facts all show beyond all dispute that if we do not start from the desire for unity and do not stress the goal of unity, we will be unable to engage in correct criticism. If we do not have well-founded criticism and self-criticism we will not be able to achieve true unity. At present, because we must safeguard stability and unity, we must carry out the necessary criticism against certain erroneous tendencies that run counter to the four fundamental principles and criticize other incorrect ideologies and work styles.

At the present time there exist all sorts of incorrect tendencies within the party and in society, particularly in the ideological and cultural sphere. We should make a concrete analysis of each different situation. However, the major problem at this time is the ideological state of party organizations at all levels. It should be noted that when confronted with all the various incorrect ideological trends and tendencies that violated the four fundamental principles, a number of party organizations did not seriously promote criticism or actively wage a struggle. Rather, they found themselves weak and powerless, in a state of disunity. If we do not date to criticize and struggle against incorrect ideas and tendencies, what kind of fighting force are we? Party organizations at all levels must take up the weapon of criticism and self-criticism which means taking a clear-cut stand in the face of erroneous tendencies and carrying out criticism in a bold manner. We absolutely must not be weak and powerless, letting things go unchecked. Of course, leading comrades at all levels should be strict with themselves and have the courage to criticize themselves and accept the criticism of others. As our forefathers put it: "when others pointed out his faults, he was pleased," "to hate excellent wine yet love good words" and "everyday I examine three aspects of my character." A person who can only criticize others and can't criticize himself does not make a good leader either.

"The Resolution On Certain Questions in the History of Our Party Since the Founding of the People's Republic of China" which was passed unanimously by the 6th Plenary Session, established a way of realistically evaluating merits and mistakes, rights and wrongs, and set a glorious model for carrying out criticism and self-criticism. Today it is not only imperative, but also a prerequisite that we develop and broaden the party's traditional style of criticism and self-criticism to an even greater degree than at any time in the past. In carrying out criticism we must start with reality. This means rectifying existing mistakes without hiding contradictions or magnifying them. Criticism should be well-reasoned and instructive so that it can help comrades raise their level of political awareness. It should not be based on speculation. We should pay attention to attitudes and methods and under no circumstances should we engage in excessive struggle. In sum, criticism and self-criticism must be carried out without exaggeration, the mistake of excessive struggle must be avoided at all costs. All this will ensure that our party is healthy through and through, that each CCP member will keep his revolutionary spirit forever young and that the party plays an even stronger leading role in the establishment of socialist modernization in our great country.

PARTY AND STATE

NEED TO CRITICIZE, ELIMINATE RIGHTIST, LEFTIST IDEOLOGIES STRESSED

Wuhan HUBEI RIBAO in Chinese 25 Aug 81 p 1

[Article by HUBEI RIBAO commentator: "The Weapon of Criticism Cannot Be Abandoned"]

[Text] Criticism, including self-criticism, is a powerful weapon for the people in resolving their contradictions and overcoming various erroneous ideologies and unhealthy tendencies. This theory, which has been verified by our party's practice during 60 years of struggle, is frequently mentioned in the classical works of Marx, Engels, Lenin, Stalin, and Comrade Mao Zedong. Although Lin Biao and the "gang of four" used "criticism" as a form of punishment, thus distorting its original meaning, its value as the party's heirloom will be appreciated by the people as soon as its positive aspects are distinguished from its negative aspects.

Ever since Lin Biao and the "gang of four" were criticized for using criticism as a form of punishment against the cadres and masses, some people have demonstrated a lack of understanding of the vital significance of the development of criticism. They have failed to distinguish the correct form of criticism from the stick, thus treating the two things in much the same way. Some people are afraid to criticize others for fear of being accused of wielding the stick, while others who should be criticized have rejected criticism under the pretext of struggling against the "threat of the stick." There is another group of people who have expressed sympathy and support for those being criticized, without investigating whether the criticism is correct or not. This is indeed an unhealthy tendency. Although the factors leading to this tendency are numerous, it has resulted mainly from a lack of well-organized and strictly executed ideological work. Our leading bodies at all levels must first pick up the weapon of criticism in order to make their life more exciting. We are in a period of historical transformation. During this period, one newly emerging force after another has emerged, along with many healthy elements which are growing in strength. In the face of these forces, however, some erroneous ideas and ideologies and even reactionary forces have also reasserted themselves. This is something seemingly dictated by history—a point which has been verified by social practices since the party's Third Plenum. Although the party's line in calling for seeking truth from facts and emancipating the mind has been instrumental in bringing prosperity to our nation, some trends of thought which represent a departure from and are detrimental to the four basic principles have gained momentum in some localities. For example, some people have expressed doubts and misgivings about Marxism-Leninism and Mao Zedong Thought; a bourgeois laissez-faire tendency to depart from the party leadership and from socialist orientation on the literary and artistic front has appeared, along with ultraindividualism and anarchistic trends of thought. Some even have gone so far as to make reactionary statements. What attitude should we adopt toward these erroneous ideas and unhealthy tendencies? Whether we can criticize and struggle against them in a well-reasoned way is a matter of great importance to our endeavor to uphold the four basic principles and to unify the thinking of the entire party and all our countrymen behind the goal of the four modernizations, and it is a test of our party's militant power.

The reason that we must first emphasize the need to put the weapon of criticism to good use has to do with the current situation, in which our party's ideological work seems in disarray and is on the verge of steadily weakening. Doing so does not imply that we are no longer concerned with the method of criticism and its application. After setting forth the line and principles, our revolutionary teachers always gave prominent place to the study of tactical and strategic problems. Comrade Mao Zedong always graphically likened the study of methodological matters to seeking ways to cross a river, such as building a "bridge" or a "ship." Our emphasis on the need to pay attention to the method of criticism stems not only from the fact that the application of improper methods of criticism has produced results contrary to our intended objective, but also from the fact that some people who are unskilled in the application of the weapon of criticism still tend to put the "leftist" methods of the past to use in the course of criticism. As one example, some people suddenly became too noisy and too demogogic as distinguished from their earlier quiet attitude after being criticized for being too timid to make criticism. In this way, they have disrupted the orderly process of criticism and struggle. Certainly, attention must be paid to preventing the development of this situation. Without paying attention to the study of the method of criticism, we may repeat our past mistakes. Comrade Mao Zedong said: "In an ideological struggle, which is unlike any other struggle, we can use only the meticulous method of reasoning and persuasion instead of crude coercion." We must remember this teaching. In the course of criticism, we must first seek truth from facts and strictly distinguish between the two different types of contradictions. In the course of criticizing defective literary and artistic works, we must also put reasonable and appropriate methods to good use, emphasize good will, and put this good will in print. Only by emphasizing the good method of criticism can we develop criticism in a better way and bring the process of criticism to a successful conclusion. Under no circumstances should anyone be allowed to reject or avoid criticism.

What must be further pointed out is that efforts must be made to prevent one tendency from covering up another. In real life, some comrades have frequently applied metaphysical viewpoints and methods to observe and handle problems and have followed a radical approach to them. When rightists are criticized, they jump to the conclusion that the "leftist" view they hold is correct. They even used such a view to challenge rightist ideas. When "leftists" are criticized, they preach that the farther one moves to the right, the better. They have also applied a rightist stand in opposition to the "leftist" tendency. By repeating this process endlessly, they should be held responsible for failing to eliminate various erroneous ideologies and for sharpening the contradictions. Our principle is to seek truth from facts and to oppose both the "leftists" and the rightists whenever they assert themselves. In the course of struggle against the "leftists" or rightists, we must adopt the correct stand of Marxism-Leninism and Mao Zedong Thought, and display determination to eliminate the influence of the "leftist" guiding ideology on certain operations. At the same time, we must consider it necessary to criticize and even to struggle against the laissez-faire trend of thought prevailing in our society. When coming to grips with one end, we should never forget to grasp the other end. It is clear that if we fail to stand up solemnly to those erroneous trends of thought in our society today, and if they are allowed to spread, they will place our cause in jeopardy and will hand a victory to the proponents of the "leftists" ideology who would say: "We told you that this wasn't going to work and that it would get you in trouble!" In the course of eliminating laissez-faire trends of thought, if we fail to focus our attention on eradicating the remnant influences of "leftist" guiding ideology, bureaucracy, special privileges, and other unhealthy tendencies, we will find it difficult to get the job done.

Our leadership at all levels and Communist Party members on the ideological and other fronts must make every possible effort to learn to apply the weapon of criticism and self-criticism in our endeavor to achieve unity and improve our work.

CONSIDERATION OF CIRCUMSTANCES SAID IMPORTANT IN LAW ENFORCEMENT

Beijing RENMIN RIBAO in Chinese 14 Sep 81 p 5

[Article by Wang Guiwu [3769 2710 0063]: "Law Enforcement Must Consider the General Situation"]

[Text] A short time ago, the Political and Judicial Work Committee of the Central Committee called a working conference on public security work at five large cities, which were Beijing, Tianjin, Shanghai, Guangzhou and Hankou, to discuss and determine some principles and policies in current public security work. This was followed by the standing committee of the National People's Congress passing three statutory decrees, one of them being a "Resolution on the Treatment of Escapees From Corrective Labor, Repeat Offenders and Reeducation Personnel." The correctness and the impact of these principles, policies and legal provisions have already become evident in actual practice; the number of criminal cases has gone down and public security is much improved.

This stage of our struggle for the consolidation of public security again shows up the importance of strengthening the party's leadership in political and judicial work. Strengthening the leadership of the party can effectively guarantee the implementation of the law. During this period, mobilization of the masses, carried out under the leadership of the party committees at all levels and implementation of the "Resolution on the Treatment of Escapees From Corrective Labor, Repeat Offenders and Reeducation Personnel" induced many escapees from corrective labor and reeducation personnel to return voluntarily to the reform institutions, which is a vivid illustration of the effectiveness of the policies.

An important aspect of the party's leadership in political and judicial work is to put forward correct principles and policies according to the needs that the present situation of our struggle demands and to direct and guide the struggle at every stage. The five-city public security conference put forward different policies, based on the prevailing situation and aimed at the different conditions of the criminal cases. In cases of murder, arson, robbery, rape, crimes committed with explosives and other serious flagrant crimes, our policy shall be one of severity and prompt punishment carried out according to law, taking vigorous action to counter the blatant insolence of the criminals. Toward young people who have committed light offences our policy is one of emphasizing education, reform by persuasion and redeeming these persons, the way that parents treat their sick children, care for them and nurse them, thus striving to get most of them to reform themselves and become useful elements in our work of the four modernizations. Since these policies were put forward on the basis of actual conditions, they played an effective role in law enforcement and in the appropriate handling of criminal cases, striking hard in a small number of cases and using education in the majority of cases.

In determining policies and laws, one must start out from the actual conditions, and in enforcing policies and laws one must also start out from the actual conditions. The so-called actual conditions are of two kinds, one is the concrete circumstances of the cases and one is the situation of the struggle at a particular time. The facts are the basis, the law is the guideline. In dealing with criminal cases, we must first of all clarify the concrete facts of the crime and the circumstances of the case, but we must simultaneously consider the needs that our current struggle demands. Within the sphere of our laws, we must handle urgent cases with urgency and deal slowly with cases that deserve slow handling, deal harshly with serious cases and deal leniently with light cases. We must never deal with cases behind closed doors and disregard the overall situation. The conditions of our struggle at a certain time do not determine culpability, but they are necessary preconditions to decide whether to punish severely or leniently. We know that the basis for measuring out lighter or heavier penalties is the degree of harmfulness to society, and the degree of harmfulness to society is not only decided by the sum total of all the various elements constituting the crime of a case, but is also influenced by extraneous conditions. Fabricating and spreading rumors during times of war and thereby disturbing the minds of our soldiers is in its harmfulness greater than doing the same in peacetime. Engaging in speculation and profiteering and driving up prices when the market is short of supplies and commodity prices tend to go up is in its harmfulness to society greater than doing the same when commodity prices are stable. Waylaying women and committing rape at times when conditions of public security are bad and have deteriorated so that a woman cannot venture out alone at night, is in its harmfulness to society greater than the same action under normal conditions. Since the harmfulness to society differs, the penalty for a crime must of course be measured out differently; it cannot be the same everytime and in every situation. Consequently, to punish criminals caught in the act of a serious crime severely and speedily is not only a need in view of the situation of our struggle at the time, but also a demand of the law itself.

The firm stability of the law can under certain conditions combine with an adaptability of the law. Our country's criminal law contains a rather wide range of various penalties. On the one hand this is out of consideration for the fact that cases differ in a thousand ways, so that there is now not one penalty that has not some latitude to be rendered lighter or more severe. On the other hand this is because of the necessity to adapt it to the different needs of our struggle under different circumstances. It is precisely because the law is endowed with this adaptability to varying circumstances and different cases that it can preserve its stability and vitality.

The reason why many comrades differ on the question of relating enforcement of the law with the circumstances of the cases is that they feel anxious lest the mistakes of the past, the "follow closely the situation," "coordinate with the movement," and the broadening of the area of attack may reoccur. Actually, that is a misunderstanding due to an insufficient clarification of the facts of the problem. The reason why the mistake of overextending the class struggle could have occurred in the past and why unjust, wrong and false chages have been made was that the situation of the class struggle was assessed contrary to the objective reality and that a political movement was launched for subjective and man-made reasons without objective foundation; it was merely the result of blind and foolhardy concepts. That "situation" everybody was to "follow closely" in the past was in actual fact only a lopsided assessment, or even only a subjective fictitious fabrication, which, objectively, did not exist at all or did not basically exist. Conducting work according to this kind of lopsided or fictitious assessment and furthermore demanding a "close following" will of course lead to mistakes. At present our party's political line has already returned to the correct path of Marxism, and the Central Committee of the party, with its objective assessment of the public security situation, has set forth correct principles and policies to guide our struggle for a rectification of our public security. This is not only vastly different from the mistaken measures of the past, but also a result from our efforts in general to bring order out of chaos.

In this context we also have to discuss briefly the relationship between the enforcement of the law and carrying out political policies. We know that law is the final materialization and formulation of political policy. The spirit is the same in both, only the outer appearance and the inherent coercive power are different. If we merely give all our attention to political policies and ignore law, or go so far as to regard law as something that can be dispensed with, this would be an absolutely mistaken viewpoint. However, if we consider having laws as grounds for disregarding all our political policies, or to consider that the enforcement of our laws need not relate to political policies, this would be equally an absolute mistake. There is not the slightest doubt that we shall have to perfect our socialist legal system and act strictly according to law, but the effective policies of the party and the state must continue to be implemented and carried out. Policy and law not only mutually support each other, but the important principles and policies of the party furthermore function as guide in carrying out our laws. For instance, the policies that we have mentioned earlier, to punish severely and speedily those caught in the act of serious crimes, to reeducate and redeem young people who have strayed, and our consistently upheld policy of less arrests and more leniency toward thos who confess, all these policies play an important role in guiding law enforcement. An important aspect of our party's work of guidance in political and judicial affairs consists in determining the correct principles and policies through an analysis of the situation. If one were to deny the guiding function of principles and policies with regard to law enforcement, one would cripple or negate the guiding function of the party.

What has been said earlier on the relationship between the situation, the policies and law actually refers to the relationship between law and politics. Law is part of politics and is also to serve politics. However, once a law has been decided upon, it possesses a relative independence and a relative stability and furthermore commands utmost authority. It must not be changed from one day to the other and must even less be allowed to be willfully abrogated. Since the smashing of the "gang of four," we have already engaged in a refutation of legal nihilism, which is an ideology that mainly manifests a denial of the relative independence and relative stability of the law, replacing law with the dictum of men and disregarding the legal system. It is absolutely necessary to refute this mistaken ideology. Up to the present, disregard for the legal system has not at all been completely overcome, and the need to liquidate such thinking remains with us. However, when we criticize and refute legal nihilism, we must be wary not to go to the other extreme, namely to regard law as omnipotent and as everything there is. This viewpoint turns the relative independence of law into an absolute one, and asserts that it can exist independently and divorced from politics. This viewpoint is wrong and harmful. It is therefore necessary on the battlefront of political and judicial work, as it is necessary on all other fronts, to grasp the weapon of party criticism and self-criticism and correctly launch the struggle on two fronts to ensure that political and judicial work will advance in the correct direction.

PARTY AND STATE

EXTIRPATION OF FEUDALISM AVERRED INCOMPLETE

Hong Kong CHENG MING [CONTENDING] in Chinese No 47, 1 Sep 81 p 86

[Article signed Gong [1562]: "Was the Democratic Revolution Thoroughgoing? What is the Core of the Evil Legacy of Feudalism? Philosophical Circles in Chongqing Discuss the Evil Legacy of Feudalism in Our Country"]

[Text] November last year, the Philosophical Society of Chongqing convened a symposium to discuss the evil legacy of feudalism. A comprehensive introduction of the proceedings appeared in the third issue of this year's GUONEI ZHEXUE DONGTAI [PHILOSOPHICAL TRENDS IN CHINA]. The following are selected excerpts: Some people believe that the feudal influence in our country is not a mere "vestige," but actually a kind of "force." Apart from the extended history of feudalism, there is another reason for this, namely the "two not-thoroughgoings," one being the bourgeois democratic revolution of Sun Yatsen and the other "not-thoroughgoing" was the New Democratic revolution led by the communist party. Some people do not agree with this formulation, asserting that following the socialist revolution and the socialist transformation, there was nothing else left of feudalism but mere "vestiges," not a "force." If we would make an assessment to the contrary, we would be obscuring the dividing line between the old and the new societies and committing the error of "magnifying antifeudalism." As to the two "not-thoroughgoings," the first one was indeed not thoroughgoing, the second "not-thoroughgoing" is non-existent; that revolution successfully solved the core problem of revolution, the question of political power, overthrew the "three big mountains," established a proletarian dictatorship, therefore was a revolution of considerable thoroughness. People who hold this view believe that any revolution in its time can concentrate only on solving some problems, but not all problems, and can even less solve with one stroke the problem of the old ideological influences since ideologies are relatively independent. If one were to adopt such a strict standard in judging whether a revolution is thoroughgoing, then there would have never been a "thoroughgoing" revolution in all history. There are also some people who believe that considering the realities of our country, the formulation "evil legacy of feudamlism" is most appropriate.

Most participants at the symposium were of the opinion that there is a common core in all aspects of the evil legacy of feudalism in our country, which can serve as an explanation for all feudal influences. Views differ as to what this common core is and there are three opinions on that point: 1. The core consists in special prerogatives, concretely manifested in a leadership system with an excessive centralization of state power in the hands of one individual, many concurrent posts held by one individual, life tenure of offices and a system of special privileges. In the managerial organization: too much interference in the administration of enterprises, no consideration for the initiative of the production teams, no respect for objective rules, arbitrary coercive orders, etc. 2. The core consists in autocratic despotism. Due to the following conditions, autocratic despotism played an important role in our country. For instance, our revolutionary victory was won as the result of an extended war. War demands concentration of power and obedience. This fostered in certain groups of cadres a workstyle of individual decisions in all important questions. Furthermore, Europe has had several instances of the nobility sharing power in "republican" systems and also "theocratic" systems where the religious power was above monarchical power, so that autocratic despotism suffered restraints. However, none of the above conditions occurred in our country, the monarchical powers ruled high above everything else. Moreover, the CCP was for a long time under the guidance of the Communist International. Among the various national communist parties within the Communist International, there was a general trend of ignoring democracy and toward concentration of power in the hands of individuals. This had a strong influence on the CCP. After the establishment of our government, the organizational structure was imported from the Soviet Union and with it came deep-rooted vestiges of the Russian feudal autocratic system. In this way the autocratic despotism in our country was linked with the autocratic despotism of foreign countries. 3. The core lies in the vestiges of the ancient clan system, which comprises blood lineage, patriarchical rule, hierarchical stratification, rule by women, clan responsibility for criminal acts, a natural economy of self-sufficiency, etc. The participants at the symposium were of the opinion that it will be a long-term task to clear up the "evil legacy" and that it will require an equal effort in the three aspects: ideological education, reform of the organizational structure and a vigorous development of the production forces.

TAIPING EGALITARIANISM EVALUATED

Beijing LISHI YANJIU [HISTORICAL RESEARCH] in Chinese No 3, 15 Jun 81 pp 77-90

[Article by Rong Shen [2051 4563]: "How Are We To Regard the Egalitarianism of the Taiping Regime"]

[Excerpts] The theory and practice of egalitarianism of the Taiping regime is a most outstanding case not only in Chinese history but in the history of the world. The bold experiment that they carried out is a record of the failure of absolute egalitarianism, and as such a valuable lesson bequeathed to us by the heroic men of the Taiping regime. Subjecting this record of failure of the Taiping regime to an earnest study and summing up is the best memory that we can bestow on the revolutionary Taiping movement.

Historical Study of Egalitarian and Equal Concepts

For a thorough analysis of egalitarianism, it is necessary to make a historical study of the concepts of egalitarianism and equality.

The earliest and also fairly explicit expression of the egalitarian idea is to be found in the following passage from Confucius: "...are not troubled lest their people are few but are troubled that they are not equal; are not troubled with fear of poverty but are troubled with fear of tranquility. For when there is equality, there will be no poverty; when there is harmony there will be no scarcity of people; and when there is tranquility, there will be no rebellious upsettings." ("The Analects, Chapter Li Shi") The core idea of this passage is that if only there is an equal distribution of wealth, there will be none of the difference between rich and poor, and this in turn will result in social stability. As to the general state of material wealth or poverty, this is of no concern at all. Later, we find in chapter Li Yun of the Book of Rites, which came into being as a book about the time of the Warring States, the Qin or the Han Dynasties, a passage attributed to Confucius: "When the Great Doctrine shall prevail, the world is shared by all, the ablest men are selected for office, the rulers will strive for sincerety and harmony. Then, people will be affectionate not only to their own parents and have parental love not only for their own children. They will ensure an untroubled end for their aged, all necessities to the mature, all needs to the children to develop. The socially unfortunate, the sick and disabled will be cared for. Men will find work and women families to marry into. Nothing shall be wasted, but none should hoard. Everyone shall be eager to work, but not solely for himself. Evil plots will never by executed and there will be no robbery, thefts, uprisings and banditry. There will be no need to close the outer doors of houses. This will be a state of universal harmony."

Where do these dieas originate?

A society's existence determines a society's consciousness. "At all times, consciousness can only be an awareness of existence and man's existence is his actual life process." ("Collected Works of Marx and Lenin," Vol 3, p 29) No ideology is produced in the human brain out of a vacuum. Thinkers with even the most extraordinarily rich imagination derive their doctrines without exception from the objective existence, possibly an objective existence that has already become remote past. Thinkers can draw support from ideological material that has been transmitted from the past, in writing or orally, and will then set forth their own new doctrines. The new doctrine will necessarily be deeply rooted in the material and economic realities. The political theories expressed in the Confucian Analects and in the Book of Rites in some way reflect the primitive society of the past, these reflections having of course been embellished because the primitive society of the early human history was extremely poor, and that is when the means of livelihood were distributed equally.

Owing to the fact that the productive forces in the primitive society were extremely weak and the means of livelihood extremely poor, men were socially of equal status and the means of livelihood were distributed equally. When the productive forces became more developed and surplus products began to appear, that was the end of egalitarian distribution in human history. Even though a number of people have in the past proposed the equal distribution of wealth in society, it has never again been possible to realize an egalitarian distribution. In a class society, political equality and equality of distribution completely disappear and in its stead comes cruel political suppression and economic exploitation. When facing their reality full of contradictions and struggle, many ancient thinkers frequently embellished the egalitarian and equal systems of the clan communes and painted them for their contemporaries as pictures of paradise on earth. The "great harmony on earth" in the Book of Rites is a typical example. This has later become ideological material for many a thinker over the past 2,000 years to borrow and work over. Needless to say, the thinkers of the landlord class did so, even bourgeois revolutionaries, such as Sun Yatsen and leaders of peasantry, such as Hong Xiuquan [3163 4483 0356] have done so. In his "Precepts of Original Principles To Awaken the World," Hong Xiuquan quoted from the Book of Rites the passage on the great harmony on earth and held it up as the highest ideal for a society to look forward to.

In general, the landlord class had no thought of political equality and even less the slaveholder class. Both these classes relied on ownership rights over the working masses, or a relationship of dependence, to extort surplus labor. Their laws and morals are brazenly unequal. They enjoyed all kinds of privileges, that tolerated no encroachments, and they also made no secrets of it in explicit stipulations at great length.

The bourgeoisie is out to exploit the surplus value through an exchange at equal value of capital and labor (a special commodity). They demand therefore equal rights for all owners of commodities in order to carry out exchanges on an equal basis. The economic conditions of the capitalist society determine the equality concept of the bourgeois class. The concept of equality of the bourgeoisie means equality in trade and equality in exploiting the hired workers. Millionaires and paupers may be financially worlds apart, but are equal before the law. Since the feudal privileges hindered capitalist development, the bourgeoisie fought the feudal system and demanded abolition of feudal privileges.

The proletariat proposed an equality that was not merely abolition of the feudal privileges, but elimination of classes, of exploitation and of oppression, they demand public ownership and a system of "from each according to his ability, to each according to his work," and furthermore, for the time when the production forces will have been highly developed, abolition of all class distinctions and the realization of a system of "from each according to his ability, to each according to his needs."

The peasantry's demand for equality is the spontaneous resistance against extreme social inequality, it is pure manifestation of revolutionary instinct. However, the concept of equality of the peasantry is blended with egalitarianism. The equality that they demand is an equality of distribution. As the small-farm producer sees it, if everybody's wealth is equal, that would make everybody equal. The economic position of the small producer determines how he can see the world and transform the world, namely only according to the viewpoint of the small producer. Egalitarianism, also called absolute egalitarianism, is their highest ideal. When egalitarianism was used to attack feudal exploitation, it was revolutionary and progressive. In this point, and only in this point, we affirm that it had a positive significance in the fight against feudal exploitation.

The Ideal of Egalitarianism and Equality at Its Climax

The first manifestation of the Taiping regime's ideal of egalitarianism is its system of the sacred treasury. In the "Records of the Taiping Uprising" by Hamberg we read: Before the uprising at Jintian "Hong Xiuquan notified all followers of the God Worshipper Societies of the different districts to assemble promptly in one place. Already for some time prior to this, the worshippers of God felt the necessity of uniting together for common defense against their enemies. They had commenced to convert their property of fields and houses into money and to deliver the proceeds thereof into the general treasury. Their needs of food and clothing were all paid from the common fund on an equal basis. The circumstance that they shared all in common greatly added to their numbers and thus they were prepared to abandon their homes at a moment's warning." Under this system of the sacred treasure, the abundant properties of the landlords and of the despotic gentry was not taken over and equally redistributed, but the followers of the God Worshipping Societies sold their property and contributed the proceeds to the sacred treasury to have a common sharing of all property and equal consumption. This kind of egalitarianism expresses the aspirations of the small-scale agricultural producers to unite for mutual assistance and joint defense against the enemy. The desire for unity and mutual assistance had become evident to varying degrees in peasant uprisings or secret societies of the past. In this sense it may be said that the system of the sacred treasury carried on and developed a tradition of small-scale agricultural producers to unite for mutual assistance and common defense, but the concrete methods were obviously following the "Bible." In chapter 2 of the Acts of the Apostles of the New Testament it says: "And fear came upon every soul; many wonders also and signs were done by the apostles, and all they that believed were together and had all things common. Their possessions and goods they sold, and divided them to all according as everyone had need." In chapter 4 it says: "And the multitude of believers had but one heart and one soul; neither did anyone say that aught of the things which he possessed was his own, but all things were common unto them. ...For neither was there any one needy among them. For as many as were owners of lands and houses, sold them and brought the price of the things they sold, and laid it down before the feet of the apostles. And distribution was made to every one according as he had need." In this connection the "Bible" also records a story: a certain man sold a piece of land, handed over the full proceeds and nothing happened to him. Another man and his wife fraudulently kept back part of the proceeds of their land and both were punished by God; they suddenly collapsed and died. All this shows that apart from creating the name "sacred treasury," the Taiping system basically conforms with the record in the "Bible."

After the Jintian uprising, the system of the sacred treasury was expanded into the field of military discipline, where it was stipulated: "All gold, treasures, silk and valuables captured when 'demons' were killed and cities captured, must not be kept as private property, but must all be turned in into the sacred treasury of the Heavenly Dynasty." This prohibition was repeated by Hong Xiuquan at Yongan and Changsha. It was first expressed as: "violaters will be considered for punishment," which was later changed to a sterner: "when a violation has been ascertained, the guilty party will be beheaded and his head displayed in public." Among the troops, the system of not allowing any private property and of distributing equally clothes, food and daily necessities was strictly observed. This was an absolutely sound method and effectively strengthened the solidarity between officers and men, soldiers and civilians and among the soldiers, ensured that the troops were properly supplied, prevented greed for booty and pillaging and as a consequence raised the fighting strength of the Taiping army. The sacred treasury system played an extremely important role in the development of the Taiping army. Later it was extended into the social sphere and what was first a military discipline became law, which was the first step on a path of mistakes. Along this mistaken direction, things were carried on in a foolhardy way: people were not allowed to have private property, all property was to belong to the sacred treasury of the Heavenly Dynasty. As the next step, money was abolished and the interflow of commodities stopped. After establishing their Heavenly Capital, the Taiping regime issued a document called "Regulations Governing the Treatment of the People," the main points of which were: 1. There shall be no land tax in money or kind. 2. All the people's land and the annual harvests belong to the Heavenly King. 3. As sustenance, every adult shall receive one dan of rice, every child half that amount, per month. 4. The capital and profits of all shops and stores shall be the Heavenly King's capital and profits. The people shall not be allowed to use it for their private purposes, all are the Heavenly King's property. In some writings the term Heavenly Father is used instead of Heavenly King, but within the scope of our discussion the two terms are essentially the same and this question need not be discussed.

The heroes of the Taiping regime gave their egalitarian ideals a courageous test at the Heavenly Capital. All workers in various handicraft shops and handicraft factories were collected into groups according to their skills. These groups were called "craftsmen's camps" or "official workers agencies." This kind of organization had been set up soon after the Jintian uprising, but then it had only been a rear service logistic department for the troops. The organization had been simple and producing only for the needs of the army; influence on social production and product exchanges had been minimal. The "craftsmen's camps" and "handicraft factories" set up at the Heavenly Capital, however, were quite different. They broke up the handicraft shops and handicraft factories that had been beneficial for the development of production. They nationalized the means of production, abolished individual handicraft industry, had government officials manage them and instituted collective production. At the same time they abolished private trade, abolished currency, and the Taiping government supplied the people uniformly with all their daily necessities. Families were broken up and men, women, older and younger people were separated into groups by sex and age and allocated to different centers. Life in the Heavenly Capital was made uniform for all and the social organization was transformed on military lines.

Toward the end of 1853, the Taiping regime printed the "Land System of the Heavenly Dynasty." This document is an elaboration of the "Regulations Governing the Treatment of the People." Although the whole document is only about 3,000 characters long, it comprises all aspects of social life. Mainly eight points in it relate to the problems discussed in the present article:

1. Based on theological principles and supported by administrative powers, all private economy was abolished. "No man shall acquire private property and all things belong to the Lord." All land was converted into common property. It was classified into nine categories according to its productivity and was distributed with proper consideration of its quality, to have the people form the land on an equal basis.

2. All agricultural production and all by-products production are common property.

3. A great reorganization was effected throughout society. Every 25 families formed one unit called "liang." The liang was the lowest organizational unit; it was an administrative as well as economic unit. Its power structure was that of the feudal patriarchial system. The liang sergeant was the patriarch in charge of administration, production, distribution, religion, education, public security, jurisdiction and all other affairs of his unit.

4. In this "small but complete" natural economic setup, every house had to plant mulberry trees in front and in the back, the men were to work in the fields, the women to raise silkworms, spin hemp and sew clothes. Every family was to have 5 hens and 2 sows. In the slack seasons on the farms, people were to engage in handicraft production in emulation of the farmer-soldier system of antiquity.

5. As to the means of livelihood, there was an egalitarian system of distribution. Life was made uniform for all, everybody ate the same and dressed the same. Apart from clothing and food, all special needs were also provided in an absolutely egalitarian way.

6. Widowers, widows, orphans, childless, disabled and sick, the six categories of people who had lost their full capacity to work, were all to be cared for by the Taiping government. Children were to enjoy free education and were to go to church every day to study the Old and New Testament and the Book of Truth-Commanded Edicts.

7. To realize equality in consumption: if there was abundance in some places and poor harvests in others, a method to equalize the situation was to be adopted to level out availability of supplies in abundant and poor localities.

8. The major objective of all these measures was to have "everyone enjoy equally the great happiness given by the Heavenly Father, Supreme Lord and August God. Land shall be farmed by all, rice eaten by all, clothes worn by all, money spent by all. There shall be no inequality and no person shall be without food or fuel."

Whether in the egalitarian ideas described in the "Land System of the Heavenly Dynasty," or in the egalitarian measures implemented for a time in the Heavenly Capital, egalitarianism reached a height never before experienced in peasant uprisings of the past. In the feudal society, the small-scale agricultural producers suffered cruel exploitation and oppression by the landlord class and their state, and their economic position and level of livelihood was extremely low. They hated the great disparity between the rich and the poor and were filled with a strong desire to change this unreasonable situation. However, they can conceive the world and transform the world only according to the standards of small-scale producers. What they can think of and what can achieve is precisely only an equal division of the wealth of society. The egalitarianism of the Taiping regime is a typical example for the ideals of the agricultural small-scale producers, as such developed to its greatest height in all Chinese history and rare throughout world history.

Criticism of Absolute Egalitarianism

When commenting on the egalitarianism of the Taiping regime, many comrades called it utopian socialism; it is worthwhile giving this some consideration. Utopian socialism has come into being in the wake of the capitalist production methods, as something in line with immature capitalist production conditions and immature class conditions and as an expression of the early desire of the immature proletariat for a reform of society. Outstanding representatives of utopian socialism already sharply criticized the bourgeois system and pointed out that capitalism will not exist forever and must be replaced by socialism. Their descriptions of the future society contained much that is positive and correct. The doctrines of three great utopian socialists are one of the three sources of Marxism. However, due to their lack of understanding of the developmental laws of capitalism, they laid plans for the transformation of society only on the basis of subjective desires. They had no eye for the great historical role of the proletariat and therefore wanted to bring about socialism not through class struggle but through propaganda and persuasion among the bourgeoisie and through experimental demonstrations.

The egalitarianism of the Taiping regime was quite different. Their ideas of a kind of equal division of all wealth had come into being on the basis of a small-scale agricultural economy and their intention was to change the entire society into a small-scale agricultural economy that is uniform, equal and without differentiations. They indended to abolish commodity exchanges and to stagnate for all times to come in a natural economy where men farm and women spin, an economy which is self-sufficient without the need for assistance in anything. One of their ideas, namely to divide up the land equally according to the number of people, expresses the desire of millions of peasants under feudal oppression for an equal division of land; this is of positive significance and is to be approved. The Taiping regime's overall plan for the reform of society followed the idea of an absolute egalitarianism. It does not represent a historically progressive movement and does not reflect a demand for any further development of the productive forces. These ideas of absolute egalitarianism should be studied, analyzed and criticized from a Marxist viewpoint.

In the early stage when the Taiping army instituted their system of the sacred treasury, the source of their wealth was contributions from their followers and war booty, or obtained in "vanguard actions," but not the product of work in any production process. The equal distribution carried out by the troops was not an egalitarianism of the distribution district, but a system of supplying military needs quite unconnected with any remuneration for labor. As such it was fully justified and the results prove that it was effective. However, extension of the sacred treasury system to the society in general, advocating that people have no private property and that "everything belong to the Supreme Lord," touched on the various ownership rights of the landlord class, but also of the merchants and handicraftsmen. Even the pitifully small pieces of land and property of the small-scale peasants were also declared as belonging to the Heavenly King (or Heavenly Father). Even if we understand it as being taken over by the state, the character of it is the same. The demand by the small-scale peasants for the equal distribution of wealth is revolutionary and justified if it is directed against the landlord class, but it is reactionary and retrogressive if it is directed against merchants and peasant handicraft industry. They actually planned that "aside from the new grain each may receive, the remainder must be deposited in the public granary," even chickens and dogs had to be turned over to the treasury, and the workers were left with nothing at all of any surplus products. That is egalitarianism in the domain of distribution; it is a completely different thing than the sacred treasury system practiced in the early days among the troops. Now they believed blindly in administrative powers to control all economic life; hard-working peasants must be promoted and rewarded, lazy peasants punished and fined. These punishments and fines are still a kind of coercive measures beyond economics. As to the remuneration of labor, no consideration was paid to whether a man was hard-working or lazy, whether physically strong or weak, whether the job was light or strenuous, whether experience was required. The quantity or quality of the product were also not taken into account. The means of subsistence that were given each worker were of an equal average figure. This method of distribution may appear reasonable to small-scale agricultural producers who are oblivious to the fact that such methods dampen enthusiasm and allow one section of the workers to grab away without compensation the fruits of work of another section of the workers. The starting point of their method was a reasonable aspiration, but they ended up with a most unreasonable result. Their plan went even so far as to take complete care of the livelihood of every kind of person in their society, to have them all "enjoy the great happiness given by the Heavenly Father, Supreme Lord and August God." Since they wanted to ensure equal distribution to every member of the whole body of their society while their production forces were at a low level of development, they had to reduce the consumption of each person to the lowest possible level. Egalitarianism, we therefore find, is naturally accompanied by ascetism. Equal distribution without differentiations of the limited supplies of means of subsistence can only result in a state where all can eat only if there is rice and everybody goes hungry when there is no rice.

The leaders of the Taiping regime obviously did not understand that production and life in human society show thousands of differences. They intended to employ simple methods to solve the immense variety of intricate and complex problems. They drew up an ideal pattern which was geometrical and had the special features of being tidy, symmetrical, uniform and monotonous. In the said document of around 3,000 characters, the character "fan" [all] was used 30 times. The provisions that follow the character fan in the text fully display the above-mentioned special features. The leaders of the Taiping regime did not understand that in a country of such vast dimensions, each district has its own peculiar natural conditions, its own ethnic peculiarities, different customs, different production departments and products of these departments that differ widely. Taking agriculture alone, crops, domestic fowl and animals are of a wide variety and there is an immense variety in cropping systems and customs of raising livestock. When they made an earnest effort to abolish the difference of rich and poor, they also intended to obliterate all differences in society. They distinguished nine categories of land throughout the whole country according to the quantity of a certain crop per mu of land. This made it very difficult to even take the first step in an equal distribution of land. The document also stipulates: "Everybody throughout the empire shall plant mulberry trees along the walls; every woman shall raise silkworms and sew clothes; every family throughout the empire shall have five hens and two sows, which must not be allowed to miss their proper season for procreation." They were oblivious to the fact that not all localities are suitable for mulberry trees and not all localities are suitable for raising pigs. People in different families and households are very different and not all without exception want to raise pigs and chickens. It was even stipulated that the number of animals to be raised had to be absolutely the same.

The sources for the egalitarian ideas of the Taiping regime go back to ancient times. However, judging from the many mistakes in the "Land System of the Heavenly Dynasty," this document seems like a careless "Ji-jiu bian" [title of an ancient primer, could be literally translated as "hurriedly put together"]. We are here not pointing to the various mistakes of a fundamental nature which could not be avoided in view of the narrow outlook of the peasantry. What we point to here are things which were within their scope of knowledge and skills, such as requiring each family to raise an absolutely equal number of hens and sows, etc. These are mistakes caused purely by negligence; with a little thought they could have found out that certain items were impossible of execution. However, in a new edition of the same document, 7 years later, the mistakes had still not yet been corrected. Perhaps after the manuscript of the "Land System of the Heavenly Dynasty" was sent to be printed, nobody read it over again carefully. Otherwise why should spots of coarse neglect have been left in it?

For hundreds of years, the peasantry stagnated in the use of outmoded tools of production of a low level of efficiency and went about their work of farming in dispersed and individual manual labor on small plots of land. In their narrow view, all they could see all the time were the small plots of land and the many families of individual farmers. Many peasant families were organized into a large number of villages, and a countless number of villages constituted the whole world. The whole world was an aggregate of countless numbers and concrete numbers. Men farm, women spin, plant mulberry trees and raise silkworms; this has been so for countless generations. Not only did they not think of changing these traditional production and life patterns but they even intended to use administrative powers to consolidate this state and promote it to the extreme. All surplus production exceeding the average figures had to be turned in to the state. The production unit of 25 families could retain only what was needed for consumption, but no material could be retained for an expansion of reproduction. Under the best possible conditions, it was only possible to maintain the reproduction at the original level of production. Maintaining this level of reproduction was also very difficult. In that case isn't it merely idle talk to say "everybody will have food and fuel"?

In the eyes of the agricultural small-scale producer a national economy of self-sufficiency where men farm and women spin, seemed a most reasonable economic system. For this reason, the "Land System of the Heavenly Dynasty" abolished commodity production and exchanges; every worker was working to satisfy his consumption needs, and as to the means of sustenance, a form of direct distribution of products was followed. Although the word "money" appears in the text of the document, it was only by a negligent oversight of the writer, because all surplus production was to be turned over to the state treasury and there was to be no commodity exchange, so of what possible use could money be? Every economic unit was to produce almost the entire quantity of all means of sustenance needed by the 25 families of the production unit. There was in this system no social division of labor. Agrigultural and handicraft industry were solidely a part of the "liang" unit. Only an utopia could be a basic unit in this kind of a production system, capable of self-sufficiency and of closing itself off from the outside world. The citizens of such an utopia would have to rely mostly on barter in kind for their means of livelihood and not on social exchanges. Just as Marx had described it: "The area on which they carry on production, that is, the small plot of land, will not allow the peasants to engage in any division of labor during the time of cultivation, or to apply any kind of science. They will therefore not have any development of any kind or sorts, or have any other skills, or a full measure of social relations." ("Selected Works of Marx and Engels," Vol 1, p 693) It is absolutely clear that in describing their plan for the ideal society of the future, the leaders of the Taiping regime wanted to use the economic standards of the small-scale peasant economy to transform the whole world into a uniform, egalitarian small-scale peasant economy. This cannot and should not be done. To proceed foolhardily according to this kind of absolute egalitarian ideology would mean abolishing social division of labor, destroying commodity economy and destroying the seeds of capitalism. When destroying the ownership system of the landlords, the land ownership system of the peasants who cultivated their own land was also destroyed. The workers could not possibly derive any benefit from a system of "no one shall take anything as their own, all things belong to the Supreme Lord," and the objective of "equality in everything, every person to have food and fuel" would also have remained unattainable forever. At a time when production forces were at a very low level and social production extremely poor, the implementation of equality in everything could have only devastated the production forces, with the result that there never would be "every person having food and fuel," but rather a universal poverty. The practical experiences in the Heavenly Capital fully proved this point.

Did the small-scale agricultural producers welcome the "Land System of the Heavenly Dynasty"? In the past we answered without hesitation that they welcomed it of course, but so far we cannot find any actual basis for this assumption. Historical material on the Taiping regime is immense, but there is not one paragraph that would indicate a small-scale peasant support for the "Land System of the Heavenly Dynasty." There is also much material on the peasant support for the Taiping regime and on the peasants welcoming and supporting the Taiping troops, however, all this was not because they were inspired by the "Land System of the Heavenly Dynasty." "On receipt of certificates, all leased land shall belong to those who cultivate it;" "The fact of who actually cultivates the land shall be decisive, no one else may claim to own the land and collect rent;" "Once grain tax was paid to the 'long-haired ones,' no more grain tax is due to owners of fields." These are the measures that filled the peasants with great joy, but what inspired the great joy was still not the "Land System of the Heavenly Dynasty," but land policies that differed from those of the "Land System of the Heavenly Dynasty." The peasants certainly supported equal distribution of land, but the peasants were not likely to support measures that first split up the land and distributed it in an equal basis and then did not make it the property of the peasants, but the property of the Heavenly Father (or Heavenly King or the Heavenly Kingdom). They would also not have supported that the harvest from this land, which had been equally distributed to them, was not to belong to the peasants but to the sacred treasury. The peasants would of course have been very happy if there were equality in all things and everybody had food and fuel, but the result of the great equality did not really bring "food and fuel" for the peasants and that was not what could make the peasants happy. The peasants will have found it difficult to go along with the new social organization, economic life and coarse ascetism, which are all things that demanded of them that they abruptly abandon the life style to which they had been accustomed.

Asceticism practiced in the military units was highly effective. It helped the Taiping troops overcome their material deficiencies, defeat a strong enemy that blocked their advance and pursued from the rear, and finally helped win victory in their revolutionary war. After establishing their Heavenly Capital, which the Taiping regime termed "after entering the small paradise," not only did they not relax their ascetism, but on the contrary, stepped it up and extended it from the military to the society in general, thereby arousing strong dissatisfaction among the citizens of the Heavenly Capital. In April 1854, Yang Xiuqing [2799 4483 3237] made this point the subject of an imperial proclamation, using "Heavenly sentiment and reason" to persuade the people. He said: "...having received an indication of the divine will, we have separated men and women to impede all licentiousness. This is only a temporary separation. After the 'sinful province' (meaning Zhili Province) will have been chastized, all will reunite. There is still among you people great lament about the dissipation of family circumstances, separation from blood relations, complete loss of all property and sudden dispersion of wives and children." The Eastern King had consented that after the overthrow of the Qing Dynasty, ascetism would be given up and the people would be permitted to reunite in family life. This ascetism aroused dissatisfaction at the court and among the military. Finally, the Eastern King decreed that some counts and ministers urge and admonish everybody time and again: "Illicit schemes bring brief, but not real pleasure. The momentary happiness hurriedly snatched is not real happiness." He preached at length the "Heavenly sentiment and reason" for not allowing husbands and wives to live together and cited cases of punishment by Heavenly law for husbands and wives who had secretly reunited, in order to deter anyone from committing the same sin. He said: "At present, when the remnant 'demons' have not yet been exterminated, time has not yet come for happy family life." He admonished everyone 'to endure steadfastly to the end, to combine our strength and be of one mind," in the hope of "dispersing the 'demonic' atmosphere and create a unity in universal peace." He strongly emphasized that the separation of men and women in separate camps must be strictly enforced, even "visiting parents or enquiring after one's wife" "may only take place in the form of asking questions at the door at a distance of several footstips. Voices must be loud and clear, no one must enter the camp of our sisters and there must be no free mixing of men and women." ("Books Published by the Taiping Regime," Jiangsu People's Publishing Company, 1979, Vol 2, pp 529-533) These calls for asceticism are closely linked with the egalitarian ideology. The Taiping regime pushed egalitarianism to its highest point and did the same with ascetism to even split up and disperse the families of the people.

The leader of the peasant uprising toward the end of the Ming Dynasty, Li Zicheng after entering Beijing, was still able to maintain his original style of hard work and plain living, eating coarse food and dressing simple, share weal and woe with his soldiers, but he had no control over his underlings who were indulging in sensual pleasures and creature comforts. With the leaders of the Taiping regime, the opposite was the case. All the kings who had first risen in the revolt were indulging in sensual pleasures and creature comforts but dictated ascetism to restrain their underlings. The situation was different in these two cases but the consequences were the same. These facts show us that if the peasantry is without the leadership of the proletariat and relies only on its own strength, it will not accomplish a transformation of the objective world, nor a transformation of the subjective world.

Another Climax in Deviation from the Egalitarian Ideology

The "Land System of the Heavenly Dynasty," which was full of egalitarian ideology, has never had a wide circulation, and the propaganda material that was widely circulated seldom had an egalitarian content. Egalitarian ideology found expression in only a few propaganda items that were not widely distributed. The propaganda items that were widely distributed were ardently devoted to propagating autocratic monarchism and a system of feudal hierarchy. In their actual practice, the leaders of the Taiping regime in the main did not carry out egalitarianism and egality, but rather a system of autocratic monarchism and a strict hierarchical system.

The "Land System of the Heavenly Dynasty" was actually never implemented and seemingly never intended for actual implementation. However, the heroes of the Taiping regime carried out in their Heavenly Capital a one-time experiment in social reform according to the world view of the small-scale peasant. They performed a major operation, opening up chest and abdomen, on the social chronic and stubborn disease of the great difference between rich and poor, but with the unexpected consequence of utter chaos in the social and economic life. The sources of food supply were cut, free-of-charge eating from "the big rice pot" made nobody have enough food, so that everybody had to sip equally some watery gruel. The result of "equality in everything" was not "food and fuel for everybody." The soldiers did not have enough to eat, the sacred treasury was empty, the regime needed taxes to maintain itself, so finally they could not but order "to deliver up grain and pay taxes as of old." The term "as of old" in paying taxes in grain and money signifies that ownership of land was also "as of old," and everything else slowly changed back to "as of old." This is a historical law which the peasantry has no power to resist.

However, the first things that reverted to "as of old" were not at all the taxes in kind and in money but autocratic monarchism and a feudal hierarchical system.

Before the uprising at Jintian, when Hong Xiuquan was first possessed with a revolutionary, anti-Qing Dynasty ideology he created on a big scale the public opinion of his being the Son of Heaven by Heavenly command. An omniscient, almighty deity that had created the world had come personally to escort Hong Xiuquan to Heaven where he conferred on Hong the title "Quan, the Heavenly King of Universal Peace and Sovereign of Fundamental Truth," and personally sent him back to earth to be Truth-Commanded Son of Heaven. This public opinion about his being a Truth-Commanded Son of Heaven, even though it is the display of something old in a new guise, was in substance to the effect that his monarchical powers had been bestowed by God. The purpose of proclaiming that the source of his monarchical powers is the Supreme Deity is to strengthen the monarchical powers with the prestige and authority of divine power and to emphasize that this monarchical power, supported by the Supreme Deity, must not be violated. This is the common form of the theory of autocratic monarchism.

After Hong Xiuquan ascended the throne at Dongxiang, he issued his first imperial proclamation in which he emphasized autocratic monarchism and made the Heavenly Father say: "I dispatch you to earth to be Heavenly King. These words are a Heavenly order and must be obeyed by you." In this proclamation Hong Xiuquan depicts himself as representative on earth of God and insists that every word of his conforms to a Heavenly command.

When the Taiping army seized Wuchang and thus had just captured its first industrial and commercial metropole, Hong Xiuquan was in a great hurry to select his imperial concubines. Before the capital was established, he, too impatient to wait, built in advance a seraglio of considerable dimensions. To protect the honor of his concubines that had grown to large numbers, he issued a law of unparalleled sternness, in which decapitation without pardon is ordered in four cases: 1. All in the imperial harem shall be addressed as imperial concubines, anyone mentioning their personal or family names or their ranks will be decapitated without pardon. 2. No one is to ever look at the face of those in the imperial harem, you should lower your heads and cast down your eyes; anyone who should dare to raise his head and look will be decapitated without pardon. 3. Nothing that is said in the harem must be spread outside, anyone who dares to spread such talk will be decapitated without pardon. 4. Any talk by my subjects must not be transmitted into the harem; anyone who dates to transmit such talk will be decapitated without pardon. He furthermore proclaimed emphatically that this is "the sacred will of the Heavenly Father and Heavenly Brother," evil ones are to be beheaded, righteous ones shall survive. May the Heavenly Dynasty and Heavenly Kingdom live on forever and generations to come observe its rules. Anyone violating the honor of the imperial concubines was declared an "evil one" and therefore to be decapitated without pardon according to the above principle. This really reminds of something in the "Poems for Children" written earlier: "Life and death emanate from Heaven's Son; let every officer avoid disobedience." It is frightening to think that autocratic despotism could have developed at such a rapid pace in the short time of about 2 years from the time of the Jintian uprising. After having established himself in the Heavenly Capital, Hong Xiuquan stayed deep inside the Palace of the Heavenly King. All military and political affairs were handled by Yang Xiuqing, but as to the supreme power of monarch, Hong Xiuquan did not relax his grip the least bit.

The powers of the Heavenly King were limitless, and he had of course spread among the public that his wisdom was also superhuman and divine. "Whatever he utters is an imperial decree, is a Heavenly command." "Every word, even a half-word of his is an imperial decree." That was to mean every word that he said, even half a word, is to be taken as a sacred decree which corresponds with the intentions of Heaven. "When a decree of the Heavenly King comes to us, we sound the gongs, we immediately go down on our knees to receive it and voice our approval. Anyone who would not accept it, disobeys Heaven, and to denounce and censure him would not be harsh." ("Collected Material on the Taiping Regime," Vol 2, p 464) When the imperial decrees were transmitted down, the people had to sould the gongs immediately and shout their joyful welcome, and anyone not doing so would suffer censure and reprimand. In the "Poems of the Heavenly Father," it is repeatedly emphasized that every person must obey the decrees of the Heavenly Father unconditionally; no disobedience or delay would be condoned and punishment for such would be decapitation. Hong Xiuquan proclaimed: "Mistakes are only made by my officials, never by your Lord," to indicate that the ruler can never be mistaken. If mistakes should occur, responsibility rests with his officials. His officials fawned on Hong Xiuquan: "The mouth of the Heavenly King is the mouth of Heaven, his words are the words of Heaven." ("Collection of Material of Contemporary History, The Taiping Empire" Vol 1, p 303) Hong Xiuquan did not have command of a great army. The men in command of great armies, such as Yang Xiuqing, Wei Changhui, Shi Dakai, and in later years Chen Yucheng, Li Xiucheng, served subserviently under Hong's autocratic rule. Even a man like Yang Xiuqing with his "great power and prestige spread far and wide and not afraid to do anything" was eager to get a title of nobility bestowed on himself by "His Majesty." Although he pursued this with some pressure, he still wanted Hong Xiuquan in his capacity of monarch to issue the decree that would bestow the title. The only "magic weapon" that Hong Xiuquan held was that the monarchical power was bestowed on him by Heaven, that is, that he was "Heaven-born, Truth-ordained Lord." Even though men like Yang Xiuqing may have seen through the "mystery of that "divine right." no one dared, or rather, no one wished to puncture this mystique.

The Taiping regime also developed to the highest perfection a system of feudal hierarchy and a whole set of ceremonial rules in connection with its autocratic monarchism, to demonstrate the exalted position of the monarch. When we read the books published by the Taiping regime itself, we gain a clear sense of how utterly at variance with the historical reality it is if some comrades praise that regime at great length as a "peasant democracy!" First of all, read "The Taiping Ceremonial," of which there exist two editions, one dated the first year of the Taiping regime [1852] and a later a blockprint of 1858. If you leaf through these writings you can see what an extremely serious matter the feudal ranks and ceremonies were. The various kings who were the earliest to join the uprising were to call each other brothers and were to be equal before the emperor, but not equal in other mundane affairs. As for instance, Yang Xiuqing, "the most important and prominent man of the dynasty," must be only addressed as "jiu qian sui" [may you live 9,000 years] and all the other kings 1,000 years less, downgraded according to their specific ranks. When Yang Xiuaing asked for an audience, the Heavenly King would determine the date and time. Yang would then come in at the head of a long line of kings and marquises, call out "wan sui" [may you live a 10,000 years] three times and kneel. During audiences with the Heavenly King, Yang was exempted from kneeling, but had to stand at the foot of the flight of steps to the throne. All other minor kings had to kneel at the foot of the throne. Even if it was only a written procedure, there was no exceeding the rules as to who was to "stand in front of the throne" and who was to "kneel in front of the throne." It seems on this point Hong Xiuquan knew better than Liu Bang when Liu ascended the throne. Although Hong had nobody like Shu-sun Tong at his side, he had a full and detailed ceremonial to demonstrate the exalted position of the monarch and to determine according to rank the different ceremonial guards, carriage horses, costumes, forms of address, etc. Different forms of address were regulated according to the different ranks, even for the children of the kings and for children from ministers down to "liang" sergeants, from generalissimo down to the wives of all ranks of officers and for all relatives of the kings. The provisions of the "Forms of Address for Nobility and Officials of the Heavenly Dynasty" determine that in making a report to a special nobleman or official, the writer must use the term "bing xiang" [report in full], refer to himself as "xiao guan" [this minor official], the document must end with "jin an" [golden peace] and the term "favor" must be written "jin en" [golden favor]. In submitting reports to the regular noblemen and officials, the writer must use the term "bin bao" [full report], refer to himself as "xiao guan" [this minor official], the document must end with "rui an" [auspicious peace], a decree must be referred to as "rui yu" [auspicious decree] and the term "favor" must be written "rui en" [auspicious favor]...The forms of address to all other noblemen and officials was strictly determined according to their different ranks. The colors red and yellow were highly valued by the Heavenly Dynasty, as noble only noblemen and officials of various ranks could have themselves made various costumes in these colors according to their higher or lower ranks, the common people were not allowed to make themselves dresses of this kind and violations would be punished without fail with decapitation. The elaborate detail and the great and strict stratification of ranks as in the hierarchical system of the Taiping regime is very rare in history.

The Taiping regime instituted a system of hereditary posts for officials. For the various kings, the hereditary nature of their positions was already clearly determined in "Taiping Ceremonial" of 1851. In the same year the Heavenly King decreed at Yongan a confirmation of this institution of hereditary posts in emphatic terms and even extended the sphere of its application. "All those meritorious officers who together with us conquered the hills and rivers shall on the higher level be invested with the titles of chancellor, senior secretary, commander, general or imperial guard, or at the least with the title of corps general. These titles shall be hereditary, and those who bear the titles will be permitted to attend the Heavenly Court in dragon robe and horn-encrusted girdle." In the "Land System of the Heavenly Dynasty" it is again clearly stipulated that "all meritorious officers shall receive emoluments from the Taiping regime for all generations to come."

The officials of the Taiping regime enjoyed a great variety of special privileges depending on their rank. They did not consider this a shameful betrayal of their egalitarian ideals. On the contrary, they considered the enjoyment of special privileges as honor and furthermore considered it a "principle of heavenly nature" to strive and struggle for such special privileges when they exhorted all brothers and sisters to "do the very utmost to uphold the Lord, show determination in support of our Sovereign." The "Book on the Principles of Heavenly Nature" instructed the brothers and sisters: "However, our younger brothers and sisters often say that we have not enjoyed happiness. But let me ask you something. When with worldly sentiments you were still at home, whether you were farmers, craftsmen or merchants, you worked day and night with callouses on your hands and feet, and you tasted all the bitterness of life. How does that life compare with our life today, now that we uphold Heaven, support our Sovereign, and each receives the mercy of the Eastern King and other kings, and shares in their glory? When we drive out in our chariots splendidly dressed, with many servants and attendants, there are those who attend to our horses and those who move fans for us. With shouting attendants before and behind, our pomp and glory can be said to be beyond this world. Think of it, did you, in your former worldly circumstance, have such glory?" There is no sign of egalitarian ideology, they rather vied with each other for the enjoyment of feudal privileges. The first to enjoy these privileges, and to enjoy them most abundantly were of course those in the highest positions, that is, the kings who had joined the uprising earliest. After entering the Heavenly Capital, each had himself built a luxurious palace, and if there were not enough skilled workmen, they would even order to recruit them from other places. On the Heavenly Kings's birthday, the Eastern King issued an order to all "great and small officials and officers within the court and within the army, royal relatives and imperial kinsmen, soldiers, sailors, brothers" to prepare "rare and valuable gifts for presentation to the Heavenly Court." On his son completing his first month, there was another order from the Eastern King to "imperial clansmen and all deputy generals to transmit to all officials and the people to prepare a good quantity of rare and valuable articles and have them sent to the capital by trusted messengers." The "Land System of the Heavenly Dynasty," printed only a short time before, prescribed that the grandchild on reaching his first month shall be paid from the treasury "a 1,000 pieces of coin and 100 jin of grain." Isn't there a big difference between this and the "rare and valuable items"?

The special privileges of the Taiping leaders are evident everywhere. If a man had a high court position, his underlings and relatives could also enjoy special privileges. A certain horse farmer met an uncle of the Eastern King, of the same age as the Eastern King, but the farmer failed to pay his respects. Several people were implicated in this case and the farmer was condemned to be torn asunder between chariots. A certain councillor by the name of Li Fengxian insulted a secretary in the Eastern Palace by immodest speech. He was sentenced to death for this crime. The Taiping regime was not a pure peasant struggle led by a progressive class, therefore not to our surprise a regime of ranks and privileges. We only want to make it clear here that the Taiping regime did not at all act democratic and equal as some comrades have said. The feudalism of the peasantry and the feudalism of the landlord class are both feudalisms, and as such left-over poison which deserves our criticism and rejection.

The reader may already have noted that this article has not adduced much important material, for instance the "Zeiqing huizuan" [Collected Material on the Conditions of the Rebels] by Zhang Dejian [1728 1795 1017] and other writings of literati of the landlord class. This is because many comrades as soon as they hear that a peasant uprising has engaged in monarchism and hierarchic stratification, will immediately without hesitation say that this is slander. By adducing as little as possible material from opponents of the revolution, we hope to avoid complicating the issue.

If there is talk here of slander, it shows a misunderstanding of the version from the peasantry's point of view. That is, that the Taiping regime, which arose in the preparatory period of the bourgeois revolution, did not regard autocratic monarchism and rank stratification as a shameful and ugly thing, even though they developed egalitarianism and equality to its highest perfection in all the old-style peasant wars. This point becomes very clear if we read the documents of the Taiping regime itself and see how they sing the praises of the Heaven-born, Truth-ordained one and repeatedly emphasize "the difference between noblemen and lowly-born and the necessity to differentiate between the respectable and the mean."

Some comrades have said that this was so because a small number of leaders had become addicted to nepotism, and that the problem was not related to the peasantry as a class; the peasantry as a class was still showing peasant democracy. This comment is worth discussing. Although the concrete acts that were performed as a result of autocratic monarchism and the stratification by ranks contain a strong element of individualism and even elements of individual character and intellectual resourcefulness, the reasons for the fact that autocratic monarchism could prevail for a time must be sought in the social sphere.

At the time of the Taiping regime, feudal autocratic systems had existed for over 2,000 years. The small-scale agricultural producers were by far the dominant sector of the population and agricultural production forces had stagnated at an extremely low level for a very long time. Stuck in the rut of old conventions and practices, the agricultural small-scale producers relied on manual operations (including animal and water power), working in units of one family or one household in a small-scale farming economy, scattered and isolated without any or only little relation with the cities. Within his family, the head of the family was the highest authority in all matters. This system of patriarchal authority was upheld and protected by public opinion, general ethics and the laws of the entire society. The small-scale peasants, having lived for ages under this feudal patriarchal system, acquired a world view that incorporated a limitless adoration of individual power. They adored and exalted, lofty authority that protected their interests and blindly believed in that authority as a savior who grants favors and bounty. However, there is no such authority or savior in the world and therefore could only be manufactured by manipulating public opinion. A Truth-ordained Son of Heaven with all the trimmings was created in a multifarious manipulation of the public opinion. The authority of a human ruler assumed superhuman forms. Divine authority became the indispensable pillar of support for the monarchical authority. Only by being ordained by God would monarchical authority become one that would cow everyone into submission. This authority with its direct links to Heaven and God is one that the small-scale peasants are ready and delighted to accept and that they will gladly worship and believe in. Only when days of complete darkness will arrive and life becomes an unbearable misery, they will feel compelled to rise in revolt and will then of necessity raise and support a new Heaven ordained authority. Marx made an extremely penetrating analysis when he discussed the French peasantry: "They are not able to be their own representative but must have someone else represent them. Their representative must also be their dominating master, an authority that stands high above them, a governmental power without restraints. This power is to protect them from infringements by other classes and will also bestow from above all bounties and favors. In the last analysis, the political influence of the small-scale peasantry is therefore manifested in having administrative power controlling society." ("Selected Works of Marx and Engels," Vol 1, p 693) The history of the Taiping regime provides a great number of examples which prove that this analysis by Marx is of universal significance and fully applicable to China. It is therefore absolutely impossible to regard the autocratic monarchism practiced by the Taiping regime as the mistake of a small number of its leaders.

Try to find in the history of the Taiping regime any proponent of "peasant democracy" who had come forward to oppose their autocratic monarchism and stratification by rank? It is true that during the Taiping regime there had been some popular resentment and opposition, but not one item of all the material can prove that this resentment and opposition was directed against the system of autocratic monarchism. Some of it was directed against the extremes of egalitarianism practiced in the Heavenly Capital, some against the tenancy system in territory under the control of the Taiping regime. There was even less opposition among the officials of the Taiping regime. Even Hong Rengan [3163 0088 3771], who in Hong Kong had been influenced by some Western democratic ideology, sung the praises of autocratic monarchism and with not even one word voiced any dissatisfaction. Li Xiucheng expressed many complaints against the depostism of Hong Xiuquan; he mainly blamed him, not for the reason that Li was opposed to autocratic monarchism, but for Hong "trusting fully in Heaven and being unwilling to trust any man." Li Xiucheng was a loyal supporter of the monarchical system. In the most critical moment of breaking out from an encirclement, he paid no attention to his old mother, but rushed to protect the heir to the throne--a stupid, weak infant, a Heavenly King. Among the first to criticize the autocratic monarchism of Hong Xiuquan and his men were not any proponents of "peasant democracy," but the bourgeois revolutionary democrat Sun Yatsen. When he elucidated the democratic rights of the people, he criticized the autocratic monarchism of Hong Xiuquan and his men. ("Selected Works of Sun Yatsen," Vol 2, pp 675-676)

The ideology of egalitarianism and equality is an expression of resistance by the peasantry against feudal exploitation; it is an ideological weapon of the peasantry, but not an effective weapon. With this primitive ideological weapon the battle against a feudal tradition of several thousand years is immediately lost as soon as swords are crossed. Isn't it a clear illustration for the fact that the peasantry as a class lacked rearmament with a modern ideology when they so willingly implemented in those days that system of autocratic monarchism and hierarchical stratification?

The theories and practices of the Taiping regime provide us with a typical example for the study of egalitarianism. In 1944, Comrade Mao Zedong said that to this day we have not yet made an earnest start in the study of the experiences of the Taiping regime.

The present article cannot claim to be a study. I have only taken the opportunity of the 130th anniversary of the Taiping uprising to raise this question, to invite instruction from scholarly circles. Please let me have the benefit of your criticism of all my mistakes.

HUBEI UPHOLDS SIXTH PLENUM RESOLUTION

Wuhan HUBEI RIBAO 26 Jul 81 p 1

[Text] The Hubei provincial conference of representatives of the CCP convened in Wuhan from 13 July to 25 July, 1981. The spirit of the Sixth Plenary Session of the 11th CCP Central Committee was conveyed by Comrade Chen Pixian [7109 0012 7359]; the congress studied and discussed the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China," which was adopted by the 6th Plenum, the plenums "Communique," and Comrade Hu Yaobang's speech given at the meeting celebrating the 60th anniversary of the CCP.

The conference of representatives unanimously felt that the Sixth Plenary Session of the 11th CCP Central Committee was a continuation and a great development of the Third Plenary Session of the 11th CCP Central Committee, and that it was a meeting of paramount importance in the history of our party. The Sixth Plenum adopted the "Resolution on Certain Questions in the History of our Party Since the Founding of the People's Republic of China," and elected new and old important leading members of the Central Committee, thereby completing the historical mission of bringing order out of chaos under the guiding ideology of the party. This enabled the entire party to forge ahead united, to concentrate its main energies on socialist modernization, to carry the national economy further ahead, and to effectively build the spiritual civilization of socialism. The "Resolution on Certain Questions in the History of our Party Since the Founding of the People's Republic of China," which was passed by the Central Committee, went through a fairly long period of complete deliberation. With the development of democracy and the pooling of the wisdom of the masses as a basis, our historical experience was realistically summed up, drawing a clear line between merits and faults and pointing out clearly the direction in which our nation's socialist cause and our party's work is continuing forward. This has had a profound significance on the unifying of the entire party's thought and in the struggle to accomplish, with one heart and one mind, the historical mission of this new age. The conference of representatives ardently supported the election of new and old important members of the Central Committee by the Sixth Plenum. It unanimously endorsed the election of Comrade Hu Yaobang as party chairman, Deng Xiaoping as chairmand of the Military Commission of the Central Committee, and Zhao Ziyang as vice-chairman of the CCP: endorsed the Sixth Plenum's approval of Hua Guofeng's resignation from his post as chairman of the CCP and chairman of the Military Commission of the Central Committee, and his election as vice-chairman of the CCP; endorsed the order of names for chairman and vice-chairmen of the standing committee as follows: Hu Yaobang, Ye Jianying, Deng Xiaoping, Zhao Ziyang, Li Xiannian, Chen Yun, and Hua Guofeng; and endorsed the election of Comrade Xi Zhongxun as secretary of the Secretariat of CCP Central Committee. The conference of representatives felt that this election of old and new members strengthened the collective leadership and the uniting as one of the party Central Committee's core of leadership on the basis of Marxism, implemented the party's correct line since the Third Plenary Session of the 11th Committee, and restored and developed the traditionally extremely important organizational guarantees of the party. In order to earnestly transmit, study and implement the spirit of the Sixth Plenum among the party members and broad masses of the entire province, the following resolutions were especially made:

1. Earnestly study and propagate the "Resolution of Certain Questions in the History of Our Party Since the Founding of the People's Republic of China." Provincial party organizations at all levels must make the study of the "Resolution" one of the Central tasks of the second half of this year, and, based on the demands of related documents of the Central Committee, go a step further in making concrete arrangements and in earnestly paying attention. With study of the "Resolution" as the key, integrate study of the "Communique" of the plenary session with Hu Yaobang's speech made at the meeting in celebration of the 60th anniversary of the founding of the CCP.

Every party organization and party member must earnestly study, and carefully and thoroughly read these documents repeatedly, integrate them with reality, and acquire a deep understanding of them. Responsible comrades of party committees at all levels must set an example and lead in studying. First we must pay close attention to the studing done by cadres at all levels, especially that of leading cadres above the county level. Party committees at all levels must adopt the running of study classes, lecture courses, and other methods, and organize cadre study by turn, which nonparty cadres of the same grade can also attend. United Front work departments at all levels should organize study for non-party people and should conscientiously provide guidance. Party and cadres schools at all levels should make appropriate adjustments of educational plans based on the requirements of this study. Political education, in schools of all levels types, should in the second half of this year take this resolution as one of the principal points.

After study we must have a realistic understanding and grasp of the spiritual essence of the documents, and have a correct understanding of comrade Mao's historical role and of Mao Zedong Thought; we must realistically evaluate the achievements and mistakes of the past 32 years since the establishment of our nation; we must achieve unity in knowledge and unite as one to look forward. In dealing with key questions we must have a correct understanding of the effect on the party of the guiding role of comrade Mao Zedong's place in history and of Mao Zedong Thought. Certainly it must be clear that comrade Mao's achievements are primary while his mistakes are secondary. We must distinguish between Mao Zedong Thought and the errors Comrade Mao committed in the later years of his life. The fundamental tenets and the basic viewpoints of Mao Zedong Thought have been and will remain the guiding ideology of our party. We certainly should earnestly study and apply its positions, viewpoints and methods in studying the new conditions which arise as a result of practice, and in solving new problems, guaranteeing that the work of our party advances victoriously along the scientific path of Marxism-Leninism-Mao Zedong Thought. Therefore, we must correct our style of study and continue to earnestly study the major works of Marx, Lenin and Chairman Mao, as well as the major works of other proletarian revolutionaries of the older generation.

We must have a led and planned implementation of wide-ranging, profound propaganda and education aimed at the entire party membership and the broad masses. Leading cadres at all levels must go down to the grass-roots level and personally explain and publicize the "Resolution." In addition, they should train the propagandists and lecturers and launch wide-ranging publicizing activities. The higher level comrades must strengthen the guidance and examination of the study of the lower level comrades; lower level comrades must periodically report to the higher level comrades on the situation concerning their study. We must grasp this study in a down-to-earth manner, have a common understanding among all the provincial party members and people concerning the basic conclusion of the "Resolution," unite and look forward, work as on and struggle side by side.

2. After a thorough implementation of the spirit of the Sixth Plenum we must energetically strengthen the party ideologically and organizationally. The "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China," concerning the positive and negative experiences following the establishment of our country, especially in the lessons learned from the "Cultural Revolution," summed up the 10 experiences of the correct path of the socialist modern construction best suited to the conditions of our country, of which one crucial one was doing a good job of the building work of the party. Comrade Hu Yaobang in his speech at the meeting in celebration of the party's 60th anniversary, aiming at the present actual conditions of our party, put forth six basic demands for the strengthening of the building of our party. Provincial party organizations at all levels must adhere to the spirit of both the "Resolution" and Comrade Hu Yaobang's speech. With a high level of awareness, we must work hard to make the building of party organizations in this provice an adherance to the party's correct line, rally closely around and lead the masses of this provice in carrying out the socialist modernization of a powerful fighting force.

We must make a serious study of the "Resolution." We must raise the theoretical level of understanding of Marxism-Leninism-Mao Zedong Thought of each cadres in this provice. All members of the CCP must politically hold together with the Central Committee, consciously carry out and enforce the line, policy and guiding principles determined by the party since the Third Plenum, further continue in thought and practice the vigorous effort to eliminate the mistaken influence of leftism, get rid of all other mistaken obstructionist tendencies, support the four fundamental principles of the socialist road, the people's democratic dictatorship (i.e., the dictatorship of the proletarian) the Communist Party's leadership, and Marxism-Leninism-Mao Zedong Thought, be qualified CCP members, consciously serve the people wholeheartedly and contribute their all for socialist modernization.

We must actively choose and foster middle-aged and young cadres who have both ability and political integrity, and appoint them to leading positions at all levels, step-by-step, in a planned way. Under the premise of revolutionizing we should progressively make the leading groups at all levels younger, well-educated, and professionally competent. Meanwhile, we must respect and make adequate arrangements for older cadres, and bring into full play their important role in passing on their experience, giving help and setting examples. We must further strengthen the democratic life of the entire party organization, adhere to and uphold democratic centralism, and strengthen party organization and discipline. Party committees at all levels must put into practice collective leadership and the division of labor with individual responsibility. Members must comply with decisions made by the party committee. The work that each person shares a responsibility for must be done seriously and conscientously. We must have a deeper understanding that the sytyle of work of the party in power is a matter of life or death for the party. The actions and words of every party member must comply with the resolution "Concerning Several Standards for Inner-Party Political Life." Those members holding leadership positions should take part in the regular activites of the organization, just like ordinary members, comply with party discipline and national law in an exemplary manner, maintain close ties with the masses, both in and out of the party, strengthen investigation and study, listen attentively to the opinions of the masses, and consciously accept the supervision of the masses. They must resolutely overcome being divorced from reality, divorce themselves from the evil tendencies of the masses, and overcome all types of mistaken thought which deviates from the principles of the party. They must enhance party spirit, eradicate factionalism, oppose bourgeois, liberal tendencies, anarchism and out-and-out egotism, and correct all unhealthy tendencies. The model deeds of fine party members must be vigorously commended, and the party's three important styles of work-integration of theory with practice, forging of close ties with the masses, and criticism and self-criticism-should be genuinely restored and developed, bringing into full play the vanguard and exemplary role of members of the CCP.

3. Provincial CCP members, and above all leading party cadres at all levels, must set an example, resolutely answer the solemn call of the the Sixth Plenum, hold high the banner of Marxism-Leninism-Mao Zedong Thought, rally even closer around the central Committee, continue to develope the revolutionary spirit of the Foolish Old Men who moved the mountain, be determined, surmount every difficulty, and exert themselves in the struggle to gradually build our nation into a modern, highly democratic and highly civilized strong socialist nation.

At present, the political and economic situation in this provice is comparable to that of the rest of the country. Provincial party organizations at all levels together with the broad masses have resolutely implemented the further economic adjustment, and politically, the further bringing about of stable policies which were advanced by the line of the Third Plenum and last December's Central Committee Work Conference, already achieving great successes. However, we absolutely cannot be satisfied with the present situation, but should forge ahead and advance on the crest of victory.

We must certainly regard the spirit of the Sixth Plenum as a powerful moving force, concentrate our main energy, further grasp firmly all aspects of economic adjustment and political stability, and especially, try every possible way to increase industrial and agricultural production. In industry we must do a good job of tapping potential and reforming and improving existing enterprises. We must do a good job of specialized cooperation, reorganizing and combining, put into practice an economic system of job responsibility, actively strive to apply the achievements of scientific research, increase production and economize, bring econonomics results into play, and, under the premise of the right product for the right market and improving quality, work hard to increase the industrial value of gross output by eight percent this year. In agriculture we must go a step further in implementing each of the party's policies in the villages and in promoting joint production and calculation of payment, gradually perfecting all types of production responsibility systems, without a slackening in the production of food stuffs, while at the same time actively developing many kinds of management, vigorously spreading scientific agricultural technology, actively resisiting all kinds of natural disasters, paying attention to current agricultural production, and seizing the entire bumper harvest. We must do a good job in finance and trade, promote the development of industrial and agricultural production, further stimulate urban and rural markets, strengthen the administration of markets, stabilize prices, serve better the livelihood of the people, and in addition, ensure the completion of the task of finance; we must regard family planning as an important item of the nation economy and earnestly pay close attention to it; we must pay attention to the development of small cities and towns, and, under the leadership of the state-run economy, energetically develop a collective economy, and give seroius assistance to the development of the non-agricultural industrial economies of the cities and towns, encouraging them to engage in such small-scale trades as handicrafts, retail, food, repair, service, ect; we must further strengthen and improve the ideological and political work of the party, continue to implement all policies, and pay close attention to the completion of the concrete task of bringing order out of chaos; we must further strengthen and improve the leadership of the party in science, education, culture, health, physical fitness and all other undertakings, and pay close attention to the education and cultivation of young people. We must further develop the five stresses and four points of beauty movement; we must fully develop socialist democracy, strengthen unity between the army and the government and the army and the people, strengthen the work of the people's militia, and strengthen the people's democratic dictatorship. We must severely punish according to law the sabotage done by counter-revolutionaries and Lin Biao, and the remnants of the Jiang Qing counter-revolutuonary clique, and resolutely attack those criminal offenders who seriously jeopardize society, closely integrate the work of strengthening specialized organs with reliance on the broad masses, get the entire party to work, coordinate administration, do a better job in public security, and consolidate and delvelop a stable and unified political situation.

Party committees at all levels throughout the province must immedialtely go into action and lead together CCP members, Communist Youth League members and the broad masses on all fronts, under the guiding spirit of the Sixth Plenum, unify knowledge, strengthen unity, brace up, go all out, struggle hard, and cautiously and conscientously make an even greater contribution to the building of a socialist economy and the building of a lively spirit!

SOCIOLOGICAL, EDUCATION AND CULTURE

END TO ADMINISTRATIVE INTERFERENCE IN SCIENTIFIC WORK DEMANDED

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 1, 1981 pp 10-13

[Conference Report: "Who Should Evaluate Scientific Achievements and Talent? A Conference Sponsored Jointly by the Chinese Dialectics of Nature Association and the JOURNAL OF DIALECTICS OF NATURE"]

> [Text] Editor's note: A debate has developed over the question of the evaluation of Comrade Liu Yuguang [0491 0068 0342] and his work. On 6 November 1980, the Chinese Dialectics of Nature Association and this journal jointly invited scientists and science administration cadres to a conference to discuss the issue of appraising scientific and technical achievements and assessing scientific and technical talent and to introduce the experiences and lessons learned at home and abroad; to analyze the important issues that still exist in this area in China; and to discuss the fundamental principles of the direction that work in this area should follow in the future. We herewith publish summaries of the speeches given by the participants.

He Zuoxiu [0149 4373 1652] (Deputy Director of the Institute of Theoretical Physics; Research Fellow): I am not a biologist and have no right to speak on Comrade Liu Yaguang's research, nor do I wish to comment on his work. But I would like to address the issue of ways to deal with this kind of matter. Situations like Liu Yaguang's exist in physics. They exist in China and abroad and are not rarities. The thing is, these matters should not be resolved outside of science. Matters of right and wrong in science should be resolved by science itself, and outsiders should not flagrantly interfere.

There is also a matter of principle here. Just how should China's scientists be treated? I think that it would be hard to find intellectuals anywhere else in the world who are as ardently patriotic or socialist-loving as China's scientists. They have worked hard at building an enterprise, have put their shoulders to the wheel, have been willing to bear the burdens of office, and have shared the joys and sorrows along with the nation and the people. When Comrade Deng Xiaoping, as a representative of the party Central Committee, was at the China Science University rehabilitating scientists, he gratified people by saying that scientists are members of the working class. This being the case, why can't we act like scientists in the matter of evaluating scientific and technical accomplishments and talent? Whether or not the right of evaluation is handed over to scientists is an issue concerning whether or not we have confidence in scientific workers or science.

Li Peishan [2621 0160 3790] (Deputy Director of the Institute of the History of Natural Sciences; Associate Research Fellow) (Entire text published separately).

Bao Wenkui [7637 2429 1145] (Deputy Director of the Institute of Crop Breeding of The Chinese Academy of Agricultural Sciences; Research Fellow): We who are engaged in agricultural science have suffered enough from administrative cadres. During the Great Leap Forward, when the satellite of high yields was launched, we did not have faith in it, but whoever dared to speak the truth was dragged out onto the stage and criticized. After the fact, they said they had committed the error of "exaggeration," when in fact there was no "exaggeration" at all, just outrageous lies! In breeding work they talked big about distant hybridization and propagandized its results, but scientists did not open their mouths and thus there were no reliable results to be seen. Interplanting of peas and wheat had been reported in the past but had never stood up to testing. Recently it was reported again in the papers, but there was no scientific attitude. This sort of work has no scientific basis and wastes manpower and resources; yet people keep on doing it and supporting it. Recently I heard that someplace they reported the successful crossbreeding of wheat and oats, and soon the sum of several hundred thousand yuan was appropriated for it. This is a misuse of money, especially when scientific research funds are hard to come by.

The attack on Li Senke [2621 2773 4430] not only struck a blow at experimental methods in our agricultural science research, but it also overthrew the management methods of agricultural science research. Accurate experimental data cannot be produced, statistical methods are criticized as hairsplitting, and statistical agricultural output is a big problem because figures are unreliable. Furthermore, this has had a great impact on our study style. Some people have a "way of thinking," but not a "way of doing." They have glib tongues and a great capacity for activity. There are many such people, and they can make weeds grow in the garden of science. We should certainly seek truth from facts, and important results should yield data. We are not being obstinate; if you have resources to persuade us to the contrary, we can believe. The foundation work of some people has not passed the test, but still they aim high: today they do this, while tomorrow they will do that and claim that their general direction is correct. It seems that the significance is great, but they cannot distinguish it very well. Leadership organs also want to believe, and the money they appropriate is just as good as thrown down a hole.

Shen Shumin [3088 3219 2404] (Director of Information Office of the Institute of Biophysics; Associate Research Fellow): The situation in science today is good, but scientific imposters still objectively exist, and it is necessary to attract everyone's attention to this point and not evade the issue. The Liu Yaguang "incident" demonstrates that some leaders do not have faith in scientists and do not understand scientists. It should be understood that those who truly engage in science have their morality. If you are always engaged in scholarship and use the results to obtain the faith and support of science, why go looking for support among writers and important people? When we talk about leadership work and propaganda work, we do so in dialectical terms, but when we start to do [the work], we prefer absolutist terms. They say to respect the elders, so famous people cannot be touched; they say to take young people seriously, so young people cannot be criticized, for criticism is "oppression" and that's bad. Science needs criticism. In evaluating scientific achievements and talent, it is unscientific to spare sensibilities when criticizing. But real life often tells us that speaking the truth hurts. As a result, some people are all friendliness on the surface and say that they're both alright, but behind each other's backs they cannot stand each other. In the process of compiling an encyclopedia, there was a discussion about which scientists in a discipline could be included, but because there was no agreement, not one scientist was included--just to keep the peace. How can this do? I propose that we set conditions and make demands regarding the matter of evaluating scholarship. You cannot report results as soon as an essay is written, or even report results before an abstract has been written. The thesis should be appraised or at least examined for half a year. If there is a mechanism and an organization for appraisal, there should be confidence in it and an admission of its authority to make resolutions, and it should approve revisions of the resolutions and not be easily denied by outside forces.

Qiu Renzong [6726 0088 1350] (Director of the Office of Dialectics of Nature Research, Institute of Philosophy, Chinese Academy of Social Sciences; Associate Research Fellow): Scientific achievements can be compared to the variations which appear in an organism. Variations in an organism advance the organism through natural selection by preserving favorable variations and eliminating unfavorable ones. Appraisal of scientific achievement plays the role of selection and plays an important regulatory function in the forward progress of the health of science. Appraisal of scientific achievement should obey the developmental laws of science itself. Historically, interference from outside science has never had good results. Soviet medicine is backward even today because early on, administrative methods compelled the reform of medicine, using the Pavlovian theory. We have had similar lessons. Administrative orders or the press propagandized and promoted the ideas, before [these ideas] were appraised by science, that acupuncture cured the deaf and dumb and that bittern flakes cured illnesses, etc., with disastrous effects. These issues have not yet been resolved.

One should rely on scientists for an appraisal of scientific achievements. First of all, this means appraisal by peers. Peers can always carry out an appraisal that is more in conformity with reality than can outsiders. This principle is very simple, but the trouble caused by outsiders leading insiders, or the mistaken idea that Marxism can substitute for natural science, comes about because we have forgotten this principle. Secondly, evaluation by peers means collective appraisal. It is still not good to rely on only one or two scientific workers for an appraisal of scientific achievement, but one must rely on the collective strength of scientific workers. This collective is not simply the adding on of individual scientific workers. At appraisal meetings, scientific workers freely express their views. This exchange of views produces a "chemical change." Thus it isn't replaced by an individual search for opinions. Thirdly, and more importantly, this method of appraisal itself has a mechanism for correcting mistakes easily. Although mistakes can occur in scientific appraisal, it is far easier for mistakes to be committed in the other methods, and the mistakes are not easy to correct. The true scientific worker can respect practice and fact, and thus it is easier for him to correct mistakes.

Mao Guizhen [3029 2710 7201] (Deputy Head of the Vocational Office of the Institute of Microbiology): During the time he was part of my shop, Liu Yaguang reported "breakthroughs" four times. Not one of them was genuine. But he had the ability to manipulate. Once he had reported, someone would comment on it; once the report was commented on, we would undertake it. I was called to meetings at the academy over 20 times to evaluate his results and study his work or to fix up and respond to his reports. The leaders of the Academy of Sciences and the leaders of the Central Committee have many times commented on similar reports from who knows how many people. We who are working personnel in basic-level scientific research units normally have much work to do. If he really had made achievements which were beneficial, it would have been worth the time and energy spent. But he had made no achievements, and just because he could make a fuss he made us go around in circles, so how could our energies be devoted to the four modernizations? The affairs of the party and nation are piled as high as mountains, but leadership comrades insist on getting into things they don't understand. This makes it very hard on us and causes great anxiety.

Xu Liangying [6079 5328 5391] (Institute of History of Natural Science; Associate Research Fellow): There are many lessons which should be drawn from the Liu Yaguang matter, but the question is, can we absorb them? If we rely on the leadership to evaluate scientific and technical achievements and talent, and if the leadership is clever, our lives will be easier; however, if the leadership is muddleheaded, our lives will be a little harder. Science cannot be conducted this way.

If the evaluation of achievements is managed by administrative leaders, then it can become increasingly chaotic. A nation which is politically democratic and academically free cannot do things this way. For a time in the past, the Soviet Union spread the notion of the principle of science's part nature. Actually, science belongs to all mankind, and since it has no class nature, it is impossible to talk about its party nature. Historically, however, scientific research has formed some common principles that all classes must observe: practice is the sole criterion of truth; everyone is equal before the truth; scientific concepts and theories must be logically correct and stand up to analysis; research achievements of predecessors must be respected, experimental facts should be able to be replicated; and plagiarism and falsification are recognized as unethical behavior. If an individual has willfully violated these principles, his scientific career is finished. Evaluation of scientific achievements and talent can rely only on peer evaluation, because scientists have a common language, common standards of right and wrong, and common ethical demands. Sometimes they make mistakes in their appraisals, but peer evaluation has a feedback and a self-regulating function, so that errors in understanding are not difficult to correct. But outsiders cannot participate in peer evaluation, for if they make a mistake it is hard to correct easily. There are limits to each person's understanding, and it is impossible to judge all scientific rights and wrongs. Einstein said it well: "Whoever wants to be the judge in the realm of truth and knowledge will be drowned in the laughter of God."

If we want to develop science, then we certainly should separate scholarly leadership and administrative leadership, certainly should study the good things that have appeared in the process of capitalist development, should eliminate outside interference in science, and should not engage in official favoritism or in hoodwinking by means of administrative and public opinion. We should give science some right of self-government.

Yang Yiwen [2799 2496 2429] (Head of the Second Office, Bureau of Science and Technology, Ministry of Public Health): We should treat the Liu Yaguang matter conscientiously and get right and wrong clarified. The research units subordinate to the Ministry of Public Health have very limited expenses. Some new medicines have been developed and evaluated and are urgently needed, but because there are no funds to distribute them, they cannot be put into production. Yet in a short time, Liu Yaguang can get 2 million yuan. Where is the justice in that?

We should be careful aboxt disseminating information concerning medicines--a matter of human life. If medicines are not tested on animals and are not evaluated, then reporting them and promoting their use can become a real problem. Take curing infantile paralysis, exploding bladderstones, or treatment with magnetic eyeglasses. Once they had been reported in the newspapers, specialists with different views had no place to express their opinions, and these questions should have been reviewed. All fields now have newspapers, and so, since we accept the importance of science, we call for a scientist's newspaper to reflect freely the opinions of scientists.

Meng Zhaowen [1322 2507 2429] (Academic Office, Chinese Academy of Sciences): I would like to discuss the flaws in leadership work from another angle. For scientific leaders to be the only ones to evaluate results is far from adequate. Leaving aside the matter of Liu Yaguang's work, and speaking only of Chinese medicine in molecular biology research, in the past people generally approved of it, but some scientific leadership agencies had never paid careful attention to this work before. For example, there was the use of molecular biology to carry out research in Chinese medicine, the direction of the research, and whether we should stress it; furthermore, if we stressed it, how should we stress it, where should we start, how should we select the scientific leaders, should we establish a research agency, and so forth. Scientific leadership agencies should take the initiative in grasping this work and should have the right to implement the plans they decide on themselves; they should not have to be led around by the nose by the endless letters and petitions sent up and down, as they do now.

This kind of autonomous, positive, effective scientific leadership has experienced success. The wholly synthetic bovine insulin and the straton model produced by the Basic Particle Theory Group of Beijing in the 1960's were both outstanding. Their outstanding feature was that the administrative leadership provided strong support and coordination and did not run things by itself without consulting others. Those academics chosen to take the lead were very active.

The direction chosen was correct and the measures just right. A group of outstanding and creative young people were trained and chosen. Because they insisted on tackling key problems, and because they dared to and were good at taking the offensive, in the end they produced outstanding achievements. So why now in basic research is there this situation in which each person works only on one small topic? One reason probably is that, over the years, scientific leadership agencies have formed many conventions in thinking and administering, and if things are not resolved within the bounds of these conventions they cannot really develop fully the scientific leadership agency's role. Now, one reason is not entirely that there is no money, for Liu Yaguang's 2 million yuan in expenses was approved just like that! The second reason isn't that there is no outstanding talent, for we have much talent now but have not used it well; otherwise how could large numbers of students go abroad for advanced training? The key is that we require vigorous and highly effective scientific leadership agencies, and in these agencies we need bold and knowledgeable leaders, and we need to let them have authority so that they will unify people from all areas and use their efforts in the key points.

Furthermore, we should resolve the question of information channels not being clear. A great many people could comment on the Liu Yaguang matter, but in actual work at lower levels there are many urgent matters that cannot be reported to the upper echelons. I propose a periodical that can publish different views on scientific questions extensively. It is now very difficult to publish opinions and articles. Page limitations, editorial intent, and especially not going beyond limits set by the administration have all had an impact on the publishing of opinions. If periodical opinion would let different views be fully published, it would add a restriction to administrative interference.

Written speech by Liu Shuzong [0491 6615 1350] (General Office, Institute of Mining and Metallurgy, Ministry of Metallurgy): The evaluation of scientific achievements and talent should rely on peer evaluation and verification of experiments. This should be very clear. But why can't it be carried out? Since the Liu Yaguang "incident" has appeared publicly in the press, we must be clear about it. Right and wrong in science and right and wrong with regard to the incident should both be clarified. The question of principle and the specific instance should both be resolved. Now that the country is stressing science, the suppression of talent should be regarded as a major issue, but at the same time we should emphasize the fact that some people are swindling and bluffing by wearing the label "talent." Such people are not few in number. They engage in psuedoscience and cause damage to the country and the people. Science explores the unknown, it permits fancy and hypothesis, and in conducting experiments it permits errors; however, it absolutely does not permit falsifying data, plagiarizing other people's achievements, or lying about achievements. Such people and such behavior should be dealt with after thorough examination. We should develop legislation regarding science, and establish conditions for rewards and punishment. If an architect makes an error in design, he goes to jail. There should be a way to deal with the creation of data and the plagiarizing of achievements. We should now establish an overall system of assessing talent and achievements, and set up agencies that have authority.

HEEDING OF LESSONS OF HISTORY REGARDING SCIENCE URGED

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese
No 1, 1981 pp 13-16

[Article by Li Peishan [2626 0160 3790], Institute of History of Natural Sciences, Chinese Academy of Sciences: "Firmly Bear in Mind Historical Experiences and Lessons"]

[Text] In the debate over the question of Comrade Liu Yaguang [0491 0068 0342], after more than 5 years of debate, many comrades in science have finally come to a rational conclusion. I think that this is because, in terms of the general situation, democratic principles have gradually come to be realized in political life since the smashing of the "gang of four" and, in terms of the situation within science, comrades have not only called on the leaders to pay serious attention to the opinions of scientists, but have themselves dared to fight for their democratic rights. This is thoroughly delightful.

The evaluation of scientific achievements and scientific talent is actually a two-sided issue. Around this question, in the history of science, there are no small number of experiences and lessons from which we could learn.

First, let me cite successful experiences which are acknowledged by the world. In the entire 80-year history of the Nobel Prize for science, from 1901 to the present, there have been 339 scientists who have received awards (including 3 persons who have received awards twice). Because the awarding of this prize is decided by a committee of scientists of very high level and according to strict selection methods, almost all of the scientific topics which have received awards have undergone a period of testing and are important achievements recognized by science. Thus the prize enjoys great esteem in world science and, at the same time, the scientists who win the prize gain great honor. Examining the topics which have won the prize in the past 80 years, [we see that] the overwhelming majority of topics occupy important positions in the history of the development of modern science. Thus, science acknowledges that this prize plays a progressive role in the development of science. From the materials I examined, what has been most discussed about the Nobel Prize is that some important scientific achievements have not been selected, and in some essays there have even appeared lists of scientists and scientific work which "have not yet been awarded the Nobel Prize." The only one we could argue with is the award of the Nobel Prize for medicine in 1926 to the Dane, Johannes Fibiger

(1867-1928), for discovering hyperplasia in malignant tumors, but for 40 years after this discovery, no awards were made for tumor research until 1966, when the prize for medicine was awarded to two scientists who did research on tumors. (For one of them, F. P. Rous, the runner-up for the prize in 1926, it was the result of 60 years of experimentation and observation.) Apart from the Nobel Prize, there are other foundations which have accumulated much useful experience in selecting scientists and providing support for their scientific research.

There are also some world-acknowledged lessons which are the opposite of those discussed above. In the 1940's, the Soviet Union supported Lysenko with all its might and repudiated wholesale the achievements of Mendel and Morgan. This is a classic case of the use of political power to interfere flagrantly in academic matters. Also included here is the erroneous evaluation of scientific achievements and talent. The basic lesson is that the criticizing of a question of scientific right and wrong, which should have been resolved through debate among scientists, as a "reactionary," "capitalist," and "racist" political issue and as "idealism and metaphysics," and in addition the direct intervention by the Central Committee of the CPSU and Stalin, created an opportunity that Lysenko's school of scientific imposters could exploit--and they used this opportunity to make an erroneous judgment which turned right and wrong upside down.

In the mid-1930's, Lysenko skyrocketed to the top during the political attack that was launched against scientists who had dissident scientific viewpoints. Though this was already very abnormal, it was still a local matter. Later on, Lysenko's crude workstyle was publicly criticized by Yuri Zhdnov, head of the Science Office of the Propaganda Section of the Central Committee of the CPSU. But by 1948, before the All-Union Conference of the Academy of Agricultural Sciences, the situation had taken an abrupt turn. After the victory in the Fatherland War, the Central Committee of the CPSU passed a series of resolutions in the realm of ideology "criticizing bourgeois thinking." Representative of this was the meeting convened at the instigation of Stalin and the CPSU Central Committee to criticize "The History of Western European Philosophy," written by Aleksandrov. In June 1947, A. A. Zhdanov, who was made responsible for ideological work by the CPSU Central Committee, gave a speech at that meeting. The speech made the issue of natural science a constituent part of this "comprehensive attack" carried out against domestic "bourgeois ideological remnants" and foreign "hostile ideologies." He called on the philosophical front to participate in related criticism and "propel natural science forward" in the Soviet Union. After this, a series of meetings was held to criticize idealism in natural science. The All-Union Conference of the Academy of Agricultural Sciences, held in August 1948, was a conference which had the highest political standards as well as the greatest influence. Nearly 1,000 persons attended this conference. Lysenko's report at the meeting, "On the Present Situation in Biological science," had been approved by Stalin and the CPSU Central Committee. The report labeled "Michurin Biology," proposed by Lysenko, as "progressive" and "materialist"; but it tagged the genetics of Mendel and Morgan as "reactionary," "bourgeois," "idealistic metaphysics," proclaiming: "We should expunge Mendel, Morgan, and Weismannism from our science." Before and after the meeting, considerable political pressure was exerted on persons who held dissident views.

Before the meeting, Yuri Zhdanov, who had criticized Lysenko in the past, had to submit a self-criticism to Stalin and admit that he had made a "fundamental error in guiding the two conflicting trends in biology to a reconciliation," that "sharp public criticism of Academician Lysenko was a mistake," and that he "had not dealt this antiscientific view (i.e., the scientific viewpoint of Mendel and Morgan) a mortal blow," etc. This self-criticism was published in PRAVDA prior to the conclusion of the conference. Afterward, the Presidium of the Academy of Sciences of the USSR especially convened a meeting to make a self-criticism and made a series of decisions on dismissals, closing laboratories, changing the editorial committees of journals, and revising research plans so as "to expunge" Mendelian genetics. At the time, the Soviet Union considered this conference a definite step in its "thorough victory" gained by dialectical materialism in genetics.

Apart from genetics, the scientific community of the Soviet Union made a series of erroneous decisions. For example, in the summer of 1950, the Academy of Sciences of the USSR and the Academy of Medicine of the USSR jointly issued a resolution vigorously praising Pavlovian biology, inappropriately elevating it to the height of "reforming medicine and psychology," and pointing the spear of criticism against the cytopathology of Weierxiao [phonetic] [7614 1422 5135-Welch?] and a group of Soviet scientists. After May 1950, the Academy of Sciences of the USSR and the Biology Section and the Higher Education Section of the Academy of Sciences of the USSR held several conferences resolving to support vigorously Lebaixinsikaya's [phonetic] [0519A 2672 6580 2448 0595 1246-Lebaishinskaya?] theory of cellular huozhi [3172 6347] (later proved to be unscientific) and criticized Weierxiao's cellular theory. At about the same time, the Biology Section of the Academy of Sciences of the USSR also announced its support for the theory of Boxiyang [phonetic] [3134 1585 2254], based on falsified experiments, that bacteria could turn into viruses and vice versa. In 1951, the Academy of Sciences of the USSR convened yet another large all-union symposium on the theory of chemical structure and criticized the resonance theory proposed by the American Pauling, which plays an important role in research on molecular structures, etc. This series of conference resolutions departed from the laws of scientific development and from the fundamental principles which scientific research should follow and, as a result, considered major, internationally recognized scientific accomplishments as "bourgeois," "reactionary" "pseudoscience," and vigorously supported and publicized all pseudoscience which was wrapped in the cloak of "materialism" as "major, materialist, progressive scientific accomplishments."

If we examine these questions against the historical background of contemporary scientific development, they are truly unthinkable. In 1948, when Morgan's theory was being "expunged" in the Soviet Union, it was making great strides internationally. The "genetic theory" was proven through repeated experimentation by scientists in many countries. While in today's terms their work was somewhat imperfect and had its limitations, this was unavoidable (any achievement acknowledged by science as great today will, after a certain number of years, be considered imperfect and to have limitations). Molecular genetics dawned in the 1940's: the theory of "one gene, one enzyme" which was proposed in 1941 was universally accepted by biology by 1946. That DNA is the stuff of heredity had already been proven in an experiment in 1944. All these important scientific advances were very clearly understood by true biologists in the USSR, and in "criticism meetings" some scientists cited these accomplishments and raised these questions. But all these scientific facts could not prevent genetics in the USSR from suffering this disaster.

If we do not discuss these matters in isolation, but consider them against the background of the political history of all of Soviet society at the time, we then can understand that this is the inevitable outcome of the special historical conditions of the time. Comrade Stalin, the supreme leader of the Soviet Government and the Central Committee of the CPSU, who led the Soviet Union's socialist revolution and construction after Lenin passed away, made great achievements and had very high prestige both at home and abroad. But at the same time, he established his personal "absolute authority" in a series of political struggles and in the expansion of the battle against counterrevolutionaries since the 1920's. Worship of him had already become common practice inside and outside the party, reaching its highest peak after the victory in the Fatherland War. "Worship of the individual" severely damaged the democratic principles of the political life of the party and nation, and many things were decided on his personal say-so. Under such conditions, the laws of scientific development and the democratic rights of scientists were of little importance. Stalin's interference in scientific questions became an irresistable political pressure. As a result, this period in history significantly complicated the history of science in the 20th century.

This "struggle" of the Soviet Union in the realm of academe directly affected science in China, disturbing in particular China's work in biology, medicine and agronomy, with the greatest damage done to genetics. Under similar "political pressure" in China, much genetic research was halted and many geneticists were constantly "examined ideologically." Professor Bao Wenkui [7637 2429 1145], who is attending this conference today, was conducting research on polyploid breeding at the time, and the wheat seedlings in his experimental fields were forcibly dug up. In 1956, great changes took place in the Soviet academic world. At the end of 1952, someone wrote an essay criticizing Lysenko's preposterous thesis concerning species and their formation. In March 1953, after Stalin passed away, this academic discussion began to broaden. Over 200 articles were written, including some which not only criticized Lysenko's mistaken scientific viewpoint but also exposed the fact that the evidence Lysenko had used to support his theory of the formation of species was untrue. At the end of 1955, over 300 scientists signed a petition demanding Lysenko's dismissal as head of the Academy of Agricultural Sciences. In April 1956, the Soviet Council of Ministers accepted Lysenko's resignation. The development of this stage of affairs caught the attention of China's party and government. China's geneticists reacted to this violently. The Science Office of the Propaganda Section of the Central Committee of the CCP carried out a conscientious study of this "struggle" in the Soviet Union and its influence on China. In the spring of 1956, our party put forth the hundred flowers direction for science, and in August of the same year it convened the Qingdao Conference of Geneticists; free discussion in academic questions took a turn for the better. Before long, however, the antirightist struggle began, criticizing the thinking that "outsiders cannot lead insiders" and criticizing the so-called "antisocialist scientific program." Later, with the continuing development of frequent "academic criticism," the hundred flowers course frequently encountered [illegible] representations. The ubiquitous criticism of "bourgeois academic authorities" and of "reactionary viewpoints in the natural science theoretical front" during the 10 years of chaos brought unprecedented devastation to scientific work. Looked at today, China for a long period of time has had a background of political history similar to that of the Stalin era. "The cult of personality" was in vogue, and for a long time there was a blurring of the lines between politics and philosophy on the one hand and science on the other. This made it impossible for us to learn the proper lessons from events in the Soviet Union.

In evaluating scientific achievements and talent, we must do things in accordance with the laws of scientific development and the fundamental principles which scientific work should obey. The development of science is founded on the constant accumulation and acceptance of experience and knowledge, and thus we must conscientiously study and respect the scientific accomplishments of our predecessors. The development of science is also a process of constant creation. Thus there are no taboo areas in science, no absolute authorities, and even less are there any eternally irrefutable, final conclusions. Scientific work must be based on fact; all plagiarism and resorting to deception constitute immoral conduct. Deciding the right and wrong of science must conform to the principle of "practice is the sole criterion of truth." It can be resolved only through free discussion and debate among scientific workers and must eliminate the obstacles of interference from outside and the force of custom. Here, political democracy and academic freedom are the necessary guarantees of the thriving and prospering of science. Lessons and experience, whether of the Soviet Union or of our own country, show that the interference of political power cannot resolve the issue of evaluating scientific right and wrong, but that it can smother science and obstruct the development of scientific work. In all the support of political and economic forces and the management of science by state agencies, only by following the laws of scientific development and obeying the principles of scientific work can science be effectively advanced.

These principles appear to be very simple, but in practice they are frequently departed from quite far. In the 30 years since the founding of the People's Republic of China, scientific work has followed a tortuous path. After the smashing of the "gang of four," party committees at all levels vigorously stressed the work of implementing policy and, whether dealing with individuals or affairs, vigorously set things to rights and mobilized the initiative of intellectuals in general. However, we still have not conducted specific examinations of classic cases that have taken place in different historical stages, nor have we scientifically analyzed the social causes that gave rise to these questions. We hope that concerned leadership sections will, through study and analysis of some classic cases, summarize the experience and lessons of scientific work in the 30 years since the founding of the People's Republic of China and draft a resolution concerning certain historical questions related to China's scientific work, in order to thoroughly reform our leadership and management of scientific work.

SCIENTISTS SEEN AS BEST JUDGES OF SCIENTIFIC TALENT

Beijing ZIRAN BIANZHENGFA TONGXUN [JOURNAL OF DIALECTICS OF NATURE] in Chinese No 1, 1981 pp 16-18

[Article by Shi Xiyuan [4258 1585 0337]: "On Distinguishing Persons With Scientific Talents"]

[Text] Persons with scientific talent are the foundation of science. For many years, due to the crisis in talented people that was created by the ultraleftist line, there has naturally been a general social concern about people with scientific talent. But talent not only has distinctions of superiority and inferiority, it also has distinctions of truth and falsity, so, while valuing persons of talent, how to distinguish persons who have scientific talent is something which should attract our special attention.

[The term] persons with scientific talent refers to persons who can make creative contributions to the development of science. The objective standards for evaluating talented persons should consider scientific achievements. A person without scientific achievements may have talent in other areas, but he still cannot be considered a person with scientific talent. A quick mind, hard work, modesty and prudence, and unity and mutual aid are unquestionably qualities and merits which many persons with scientific talent should have, but having them does not mean a person has scientific talent. Having studied at a famous university, having worked at a certain scientific research agency, having been the assistant of a famous scientist, or having been recognized by a leading personality also should not be the basis for being appraised as a person with scientific talent. On the other hand, political mistakes, arrogance and self-satisfaction, offending the leadership, and an undisciplined lifestyle should not be the basis for denying that people have scientific talent. A great scientist must have excellent academic morality and the intention to serve the nation and all mankind; a scientist with important achievements must have a spirit of energetic exploration in his field of science, a keen ability to discriminate, or ingenious experimental methods. In the final analysis, however, it is still concrete scientific achievements that count.

A scientific achievement is generally revealed in a research article. At the same time, we should understand that the article is not the same thing as the achievement. Because an article contains a certain amount of true knowledge and a certain amount of new information, it has its differences in degree of new and old, truth and falsity, and level of excellence. At present, the mechanisms for discrimination in the world of science are still imperfect. Scientific research has undergone a long period of disruption, and in recent work to assign academic titles, the quantity of articles has frequently been made an important standard of assessment. We have had no alternative but to do it this way, but we cannot go on considering this the correct method. Otherwise, important subjects which are of great significance, considerable difficulty, and a highly exploratory nature will be investigated by [only a] few persons, and important groups of topics which are already being explored will daunt the morale of the troops. Among some workers there had already appeared a tendency toward superficial pursuit of a quantity of articles. Many people think only of getting hold of a small topic in pursuit of "keeping the news pouring out," and still others intentionally break up an article into smaller pieces, or even do not hesitate to resort to falsification or giving false information about achievements. Following along with this, in the name of opposing "sharing the work of others" (I do not approve of "sharing the work of others"), the tendency to carve out one's own sphere and seal it off from others is becoming increasingly popular. These petit bourgeois workstyles which are reappearing in scientific labor are diametrically opposed to the demands of scientific and academic modernization.

Talented persons are hard to come by, and persons talented in science are naturally hard to come by. To stop the "devaluation" of talent, it is necessary to eliminate the disruption of unscientific standards and to develop, train, use and protect talent correctly.

Whether or not an individual has made a creative contribution to the development of science cannot be determined by a subjective evaluation of that individual. Persons of talent are a social phenomenon, and distinguishing persons of talent is a social distinction. Judgment can be made only by linking up with the specific circumstances within branches of science. The people who have this ability to distinguish are the "experts" who are pursuing scientific research in the same or similar fields. This is why it is necessary to implement peer evaluation. In the past, scientists were deprived of, or crippled in, their position in evaluation work because the line calling for criticism of experts "gave prominence to politics." For a time, some "achievements" and "persons of talent" appeared by means of "individual boasting--leadership verdict--periodical propaganda," which in the 10 years of chaos during the "Cultural Revolution" caused us to experience in science a time of brilliant "heroes" with very few true achievements.

New discoveries in science should be evaluated by experts collectively, because scientists also suffer from limitations in their individual abilities to understand. Scientists in the same field and same period may make mistakes in evaluation because of their limitations, but generally speaking, these mistakes are not only fairly easy to correct through scientific experiments, but in comparison with those of nonexperts, their mistakes are much less serious and much fewer. In 1973, the American scientist Summerlin announced that onto a white mouse he had grafted a piece of black mouse skin which had been preserved in a culture, and that it was not rejected. Others could not replicate his results, and later his assistant revealed that the black skin had been colored. This sort of situation is not hard to expose in science and cannot have a very great impact on science or society as a whole. On the other hand, in the Soviet Union in the 1940's, out of political needs and philosophical concepts, Stalin used politically coercive methods to promote the pseudoscience of Lysenko and (Lebaishinskaya) with the result that science suffered a disaster for an entire "camp." Since liberation, the academic criticism which has been carried out in the field of natural science in China has for the most part been started by outsiders and used political and philosphical standards. Major instances have been criticism of the theory of relativity, the second law of thermodynamics, genetic theory, cytopathology, and psychology (though this does not mean criticism within academic discussion). Minor instances have included the accusation that considering nutrition to be a cause of Keshan disease is "an attack on the socialist system"; condemning as a "vicious attack on the great leader" the view that there are black spots on the sun; condemning as "opposition to the supreme directive" the view that the history of mankind is over 3 million years old; etc. On the other hand, things with no scientific basis whatsoever have been welcomed into the halls of science: the high-output "satellite" of 100,000 jin per mu, the glossy ganoderma research of respectful "devotion," the modern passion for perpetual motion and the elixir of immortality have all been praised by those outside the field; even though they failed, there has been the consolidation of saying that the general direction is correct!

Facts show that the laws of nature and the laws of scientific development cannot be changed by the influence or prestige of anyone. "Every field has its specialty." Not only political scientists, military specialists, economists, and literary specialists, but scientists, too, cannot be proficient in all scientific knowledge. As Mr Lu Xun said, "We should observe that what makes famous people famous is because they are in one field, but we should be wary of free talk concerning anything outside that field."

In recent years in China, public opinion and propaganda have discussed justice for scientists and science, and this is a good thing. But not enough attention has been paid to the weaknesses and dark sides of science. Actually, only by rewarding the good, helping the deficient, and exposing the false among those in science can healthy trends be fostered and the development of science be promoted.

Science should have an excellent atmosphere. Science tolerates failure but not deceit. There is the individual's pursuit of fame, the pursuit of truth and a high regard for publicizing results, and even a high regard for scientific value. But practicing fraud and blowing one's own trumpet cannot stand the scrutiny of science and must seek the help of forces outside of science. If our journals and propaganda do not conduct conscientious research and investigations and do not rely on scientists to evaluate scientific right and wrong, they depart from science and pursue news and artistic results, painting the sores of science as blooming flowers. Isn't that being more of a hindrance than a help to science?

Under a system where the level of scientific education of all the people is not high and where there is highly centralized authority, abuses also affect scientific management. On the one hand it is unfavorable for the training, discovery, and use of people with talent, while on the other hand there are many opportunities in which those who boast, deceive, and have an improper workstyle can take advantage. Some leadership comrades who have a feudal, special-privilege mentality, a heavyhanded workstyle, and a deficient ability to discriminate in scientific matters insist on controlling many things they shouldn't. They frequently observe and handle scientific matters by the same standards they have used to handle administrative matters for decades. They support certain persons or projects largely on the basis that "such and such a central government cadre had commented on a report," "this work has great significance." "It conforms to the basic principles of materialism," "the general direction is correct," "a famous and friendly foreign scientist is very interested in this," etc. Once they have made up their minds, they do not want to hear different opinions. Today, leader A indicates he supports this; tomorrow, leader B indicates he supports that. This method of selecting persons with talent and determining research plans, as far as those who work hard are concerned, is "heaven is high and the emperor is far away," and as far as those who are opportunists are concerned, it is frequently "get it without wasting effort." This way of doing things departs from the scientific path, with the result that unprincipled study style and bureaucratic workstyle get together and severely damage the development of science.

Socialist democracy should guarantee that there is interaction between each member of society and not a relationship of absolute obedience. Society is a complex system made up of many strata and many sections, and members of society should attend to their duties and fully develop their creative abilities at their posts. The political scientist has his own important mission to undertake; he can rely on the scientist to evaluate and choose scientific talent. He need not rely on his subjective, unscientific standards to select scientific talent. In terms of cybernetics, if higher agencies are the direct specific regulators of internal processes of a subsystem, the entire system will be thrown into disorder.

To really resolve the question of persons of talent, it is necessary to be much more flexible in systems and policies, to give scientific workers more freedom, to make them genuflect less, and to give their "talent" an opportunity to be displayed and developed so that their scientific thinking, research papers, technical inventions, and work proposals will have an opportunity to be published and exchanged and thus be evaluated and verified by the people. In this sense, though the article is not equal to the achievements, it should create the conditions for scientific workers to publish more. And only by publishing can achievements be distinguished. Knowing the "talent," one can then "use" it. To do this, it is necessary to vigorously develop scientific publishing and a healthy science appraisal agency and system. In this way we can move ahead step by step. But what most urgently needs to be resolved now is to give entirely to scientists the authority to evaluate scientific achievements and talent.

SOCIOLOGICAL, EDUCATION AND CULTURE

WRITERS URGED TO STUDY SOCIETY IN DEPTH

Beijing RENMIN RIBAO in Chinese 8 Jul 81 p 5

[Article by Liu Jianjun [0491 1696 6511] and Meng Wanfu: [5536 8001 1133]: "Writers Must Voluntarily Plunge Into the Thick of Life"]

[Text] Comrade Mao Zedong and Comrade Zhou Enlai many times called on literary and art workers to go into the thick of life, to voluntarily plunge into the fiery struggles of the masses. In the new historical period of the four modernizations of our country, Comrade Deng Xiaoping again pointed out: "Voluntarily derive source material, subject matter, plots, language, poetical feelings and pictorial effects from the life of the people, nourish ourselves with the aspiring spirit people use to create history--this is the fundamental path for the thriving development of our socialist literature and art." The masses of the people have diverse demands regarding the forms and subject matters of literature and art.

The paths of life taken by writers using different forms and subject matters for their creative work are also diverse. But each writer must, in accordance with his own conditions and possibilities, choose his own way of going into the thick of life. Every writer must voluntarily go among the masses and expand his vision. There should be no exceptions. Guided by Chairman Mao's "Talks" at Yanan, many of our writers such as Zhao Shuli, Zhou Libo, Liu Qing and Du Pengcheng had, after serious consideration, chosen the same path of life, that is, to sink roots in a permanent base for a long period of time, make investigations and research there, live and write there. This had laid a solid foundation for their subsequent creative work.

Both Zhao Shuli and Zhou Libo left for the countryside soon after they had entered the city. Liu Qing settled down in the countryside of Changan. Du Pengcheng, after completing "The Defense of Yanan," went to experience life in depth at the construction site of the Baocheng Railroad. For a period of time little was heard of them in the literary and art circles. Some comrades in the literary and art circles began to have doubts about the path they had chosen, wondering whether a writer can produce good works if he did not travel to many places, gather materials of all kinds, and view things on an extensive scope, but limited himself to a relatively small world. Practice is the only yardstick to testing truth. "The Builders," Great Changes in a Mountain Village," "Sanliwan'" "In Days of Peace" were born. The answer to whether these writers had chosen the right path was there for all to see.

Would a writer's long residence in a village, a factory or an armed force unit affect the breadth and depth of his observation of life? Comrade Mao Zedong pointed out: "There are two ways of investigation. One is to look at flowers while riding on horseba one is to dismount from the horse and look at the flowers." These can al be regarded as the two ways for writers to get into the thick of life. All writers, especially young writers who have not yet accumulated a great deal of life experience and whose contact with society is yet narrow, need to "look at flowers while riding on horseback," utilizing all kinds of opportunities to expand their contacts with life as much as possible. But just as Comrade Mao Zedong said, "It is far from enought to just take a look and move on. It is also necessary to use the second method and that is to dismount from the horse and look at the flowers, to look carefully, to analyze one 'flower,' to dissect one 'sparrow.'" Dismounting from horseback and looking at flowers, and dissecting a sparrow--these are the principal and basic methods for writers to go into the thick of life, to study society and people.

Whether young writers without much experience of life or accomplished veteran writers, they must adopt this method if they are to make a breakthrough in getting into the thick of life. Only when a writer has dissected a sparrow can his fleeting impressions of life gained from "looking at flowers while riding on horseback" truly become a part of his accumulated experience. Even writers with a fairly rich store of life experience, if they do not continue to dissect the sparrow with regard to the ever advancing life, will be unable to create works portraying the new world and new people and possessing new levels.

Comrades Zhao Shuli, Zhou Libo, Liu Qing and Du Pengcheng spent a relatively long time to settle down and observe and study society in one place. This, from the viewpoint of method, is a way of dissecting a sparrow. They believe that gaining a lot of second-hand materials alone is not enough to help a writer discover the essential qualities of life. The key lies in the depth of a writer's understanding of life. As far as a writer's work is concerned, the relationships in an ordinary village, factory or armed force unit are complex enough, whether internal or external, whether between superiors and subordinates, or between people on the same level, all embodying a wealth of content of life in society. Therefore, to truly understand a village or a factory through dissecting a sparrow often means understanding the entire society.

Life in society is rich and many-faceted. Any writer, even when equipped with all kinds of conveniences in a lifetime, will be unable to come into personal contact with all facets of life, to personally observe the course of all the events that happened in life. This is neither possible nor necessary. While in the thick of life, writers do not concern themselves with gathering a great volume of matters and events, or finding averages, but with uncovering the essential qualities of matters and events. Always they will try and understand the universal essential qualities of matters or events, even the entire picture of life, through analyzing and studying individual matters or events. In depicting the life story of Xianglin's Wife, Lu Wun presents in a nutshell the tragic fate of all working women in feudal China. Fadeyev in his "Destruction" portrays the Soviet people's fearless revolutionary fighting spirit through the activities of a tiny band of guerrillas. When writing the works mentioned above, these writers only came into limited contact with life, but it did not prevent them from understanding and portraying life in breadth and depth. "There may be a great many sparrows, but it is not necessary to dissect every one of them. Dissecting one or two will be enough." The basic form of contradictions of a matter or an event, and the essential qualities and evolutionary laws determined by it, exist in all similar individual matters or events. When a writer observes and dissects a village, a factory or an armed force unit against the social background of a given historical period, he will be able to understand certain essential aspects of life in the society of that given historical period.

Socialist literary creations, especially full-length novels, must possess historical breadth and depth. Depth is the soul of breadth. The depth of a writer's life decides the breadth and depth of the historical content of his work. Dissecting the sparrow is the fundamental way for writers to gain a deep and comprehensive understanding of life. "The sparrow may be small but it has all the vital organs." Zhao Shuli, Zhou Libo and Liu Qing all settled down in places which were but a small part of a district or a county. Yet practically all the historical content and basic features of life in the Chinese countryside can be found there. As long as one does not look at a village as a flat picture but regard it in the round and study the contradictions and developments of the different classes and social strata from the view of class analysis, one will come to know the village inside out and will then gain a thorough understanding of the Chinese countryside as a whole. Zhao Shuli, Zhou Libo and Liu Qing went into the thick of life in one place, dissected a sparrow there, and viewed the entire Chinese countryside through that one village. They were able to promptly capture the shock and repercussions each social movement had on different people in the countryside. They were able to understand fully the modes of contradictions and struggles of the different periods of development. A writer's work is mainly to understand people, study people, portray people. Therefore, to go into the thick of life of a specific component of society and dissect a sparrow is helpful in the task of studying people. Zhao Shuli, Zhou Libo and Liu Qing's long root-sinking residence in the countryside laid a solid foundation for their effort to portray vivid typical characters and generalize in breadth and depth the birth and development of socialism in the Chinese countryside.

A part is after all not the whole. Dissecting a sparrow does not mean writers should not try to understand the whole. Liu Qing once said, "A writer in a village, factory or armed force unit is not a buyer isolated from others but an enthusiastic revolutionary activist. The party organization, party documents and party newspapers all go to help him understand the local, out-of-town and national situations." Comrades Zhao Shuli, Zhou Libo, Liu Qing and Du Pengcheng did not limit their vision to one small place. Through their own involvement in the party's work at the grass-roots level, through studying Marxism-Leninism and the party's principles and policies, they expanded their visions and linked themselves closely with our country, our nation, and the fate of our people. Writers good at learning will always be able to break the bounds of all kinds and soar freely in the wide world of life.

The way these writers voluntarily go into the thick of life, observe and study society in depth, dissect a sparrow, is of universal significance. The soil of the people's life contains all the vital juices needed for artistic creation. Our writers and artists must first sink their roots in this soil and suck up these vital juices before they can create artistic flowers treasured by the people.

SOCIOLOGICAL, EDUCATION AND CULTURE

SPIRITUAL LEVEL OF LITERARY, ART WORK DISCUSSED

Beijing RENMIN RIBAO in Chinese 8 Aug 81 p 8

[Article by Guo Zhigang [6753 1807 0474]: "Literary and Art Creations Demand Lofty Ideological Level"]

[Text] People often like to call literary and art works "spiritual food" and writers "engineers of the human soul." The words "spiritual" and "soul" contain in all solemnity the reader's stringent demand on the ideological level of writers and their works. A writer's ideological level, whether high or low, as shown in his works, will have a direct influence on the method of treatment of his subject matter and the depth of his treatment. It will determine whether or not the "spiritual food" he provides will contain sufficient ideological and artistic nutrients.

We have seen that some works, while reflecting acute social problems and the heavy pressures life exerts on the chief characters, still present the character's spiritual world as a noble one, and the impression given is a fine one. On the other hand, there are also works that depict such "social worries" as the housing problem in present-day life, and while the phenomena of life shown are varied and many-colored, the chief characters' spiritual world is a barren one. From a partial viewpoint, the social phenomena and the characters' thoughts and feelings depicted in these works may not be far from the truth, for they do reflect the true thoughts and moods of a fair section of the people. Yet from the viewpoint of historical development of socialist society, that is, from the viewpoint of life as a whole, the writing is not sufficiently truthful, for a highly developed material civilization by itself does not constitute socialism of universal poverty advocated by Lin Biao and the gang of four. Socialism, however, is not merely to satisfy the people's material needs but to ensure that people's talent will find full development, to establish a new kind of human relationship, to bring up a new, socialist type of people, to uplift people's spiritual world." Precisely on this point, some works are giving less stress on spiritual things. They raise the chips for material things but lower human values. Therefore, while such works may not be lacking in excellent descriptions, they cannot provide people with greater and more beautiful artistic enjoyment, because the characters show a great paucity of spiritual life.

In the same way, treatment of the same type of subject matter by different authors will produce different effects in ideological quality. Let us cite an example. Take the two medium-length novels, "On the River With No Navigation Marks" (by Ye Weilin, published in the No 3 1980 issue of FURONG [HIBISCUS]) and "When Evening Glow Vanishes" (by Li Ping, published in the No 1 1981 issue of SHIYUE (October)). As far as the artistic talent of the two authors is concerned, the latter is perhaps more outstanding. But as far as the novels' ideological quality is concerned, the former shows a higher level. Both works reflect life in society during the ten years of turmoil. "On the River With No Navigation Marks," through the legend-like Sister Bird, tells people, "Don't feel frustrated, don't be depressed." The bird's richly symbolic song appears again and again to say: "Live a good life, live a good life." In spite of the numerous disasters that befall the character in his course of navigation, the story inspires people with confidence and hope. Correspondingly, the colors and hues of life as a whole as painted in the story are consistently healthy and bright. "When Evening Glow Vanishes" is more complex. On the one hand, the author vividly presents certain social and personal life silhouettes of the 10 years of turmoil in flowing and skillful lyrical style. Especially so is his sensitive description of the emotional repercussions, changes and wounds brought on by the turmoil. Unfortunately, the author does not let his characters shake free of their despondency and trauma. Instead, with appreciative approval, he watches his characters comfort their wounded souls with religious faith. This has resulted in some irremediable shortcomings in this piece of skillful writing: not only the mood tends to be gray and passive, the descriptions of episodes too seem somewhat distorted.

What kind of spiritual level our literary and art works should have is a question to be seriously considered. All truly moving literary and art works in the history of Chinese and foreign literatures show a relatively high ideological level, all embodying the level of ideological understanding and the moral-ethical level of their own times. And the majority of readers of any period always hope to benefit from the advanced ideas contained in literary and art works and gain from them a higher level of ideological and artistic enjoyment. Since they are regarded as "engineers of the human soul," writers should arm themselves with the most advanced ideology and be able to stand higher and look farther and deeper into the complex life. Otherwise, how is he to mold the souls of his characters, and how is he to mold his readers' souls through the souls of his characters?

POOR QUALITY OF TEACHING, TEACHERS IN SHANXI DECRIED

Taiyuan SHANXI RIBAO in Chinese 1 Aug 81 p 1

[Commentary: "Teaching of Politics Must Be Strengthened and Improved"]

[Text] The Ministry of Education stipulates that, starting this fall, regular middle schools will start five courses in politics and will make moral training, concept of the law, and basic knowledge of Marxism-Leninism an important part of the teaching [curriculum]. This is an important measure in strengthening and improving the teaching of courses in politics.

As a course in the regular middle schools, politics is an important place for young people to get a preliminary notion of Marxism-Leninism and Mao Zedong Thought. Because middle school students are in an important period of physical and intellectual growth, there is the advantage that they are eager for knowledge, but there is also the disadvantage that they lack the ability to identify and resist mistaken ideological currents. Thus, if we fully develop the role of courses in politics so as to help them master the theoretical weapons, discriminate right from wrong, and raise their consciousness, this will play an important role in laying the foundation for the formation of their lifelong world view. The long-range impact of this is inestimable.

One problem that should be noted in regarding the teaching of courses in politics in our province's middle schools is the fact that the quality of teaching is not high and the level of the students is generally declining. One important reason is that this has not aroused the concern of school leaders, faculty, students, or parents. Leaders in some schools think that courses in politics are "snap" courses and take an indifferent attitude toward the rate of advancement and quality. It seems that as long as there is a crash effort prior to the examinations, that will do. Thus the quality of instruction is not examined, nor is public teaching organized. In teaching, what can be crammed in is, and everything else is left aside. In assigning teachers, no thought is given to background in theory or ideological consciousness; it has even gotten to the point where teachers who cannot teach anything else are named to teach courses in politics.

The key to quality teaching is the teacher. One weak link in the teaching of courses in politics in Shanxi at this time is the insufficient numbers and low quality of teachers for political courses. Educational administrative departments and school leaders in many places still rarely pay any attention to the self-development of teachers of political courses. Every winter vacation, they train the faculty in most subjects, but the training and improvement of politics teachers are never part of training plans.

To thoroughly improve the teaching of politics, school leaders and education departments at all levels must conscientiously investigate and summarize the experiences and lessons in this area and adopt effective measures so that politics will really become an important part of school education. They must do a better job of carrying out the educational direction of the overall development of body, mind, and morality.

SHANXI EMPHASIZES TEACHING OF POLITICS IN MIDDLE SCHOOLS

Taiyuan SHANXI RIBAO in Chinese 1 Aug 81 p 1

[Article: "Regular Middle Schools Will Start Five Courses in Politics; Provincial Office of Education Convenes Conference on Use of New Teaching Materials for Political Courses in Middle Schools"]

[Text] The conference on the use of political course teaching materials in middle schools in Shanxi Province, which ended in mid-July, felt that the five courses in politics being started this fall would strengthen the scientific, systematic, and practical nature and would be good for strengthening the moral training, concept of the law, and teaching of the basic viewpoints and theory of Marxism-Leninism and Mao Zedong Thought to young people.

According to the new instructional plans of the Ministry of Education, starting this fall, Self-Cultivation of Young People will be taught in the first year of junior middle schools, A General Knowledge of Law will be taught in the second year of junior middle schools, and A Brief History of the Development of Socialism will be taught in the third year of junior middle schools. A General Knowledge of Political Economy will be taught in the first year of senior middle schools, and A General Knowledge of Dialectical Materialism will be taught in the second year of senior middle schools. So that teachers of political courses will correctly understand and use these new teaching materials and be well prepared before class, the provincial office of education convened a conference of representatives of local, municipal, and county teachers of courses in politics. After 9 days of study and discussion by groups and by courses, everyone agreed that they fully considered that educating young people in moral training and the concept of the law and increasing the teaching of the basic theory and concepts of Marxism-Leninism would further improve the content and system of political courses. They said that making courses in politics an important part of the middle school [curriculum] is an important way to spread Marxism-Leninism and Mao Zedong Thought and an important link in training the communist moral character of young people. Those who are teaching courses in politics must shoulder the heavy task of training young people to uphold communist ideals; any ideas or methods of playing down or putting aside the teaching of courses in politics is wrong. The conference especially discussed and studied the question of how to teach students the "Resolution on Certain Questions in the History of Our Party Since the Founding of the People's Republic of China."

FBIS FOREIGN BROADCAST INFORMATION SERVICE

NOTE

JPRS publications contain information primarily from foreign newspapers, periodicals and books, but also from news agency transmissions and broadcasts. Materials from foreign-language sources are translated; those from English-language sources are transcribed or reprinted, with the original phrasing and other characteristics retained.

Headlines, editorial reports, and material enclosed in brackets [] are supplied by JPRS. Processing indicators such as [Text] or [Excerpt] in the first line of each item, or following the last line of a brief, indicate how the original information was processed. Where no processing indicator is given, the information was summarized or extracted.

Unfamiliar names rendered phonetically or transliterated are enclosed in parentheses. Words or names preceded by a question mark and enclosed in parentheses were not clear in the original but have been supplied as appropriate in context. Other unattributed parenthetical notes within the body of an item originate with the source. Times within items are as given by source.

The contents of this publication in no way represent the policies, views or attitudes of the U.S. Government.

PROCUREMENT OF PUBLICATIONS

JPRS publications may be ordered from the National Technical Information Service, Springfield, Virginia 22161. In ordering, it is recommended that the JPRS number, title, date and author, if applicable, of publication be cited.

Current JPRS publications are announced in Government Reports Announcements issued semi-monthly by the National Technical Information Service, and are listed in the Monthly Catalog of U.S. Government Publications issued by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

Correspondence pertaining to matters other than procurement may be addressed to Joint Publications Research Service, 1000 North Glebe Road, Arlington, Virginia 22201.

CIRCUMSTANCES OF LIN BIAO PLANE CRASH ANALYZED

Beijing HANGKONG ZHISHI [AEROSPACE KNOWLEDGE MAGAZINE] in Chinese No 9, 1981 pp 26-29

[Article: "The Riddle of Lin Biao's Plane Crash"]

[Text] Ten years ago, on the morning of 13 September 1971, the Lin Biao gang fled in panic, traitors to their country. After their private Trident jet, No 256, crossed the border out of China, it crashed in Wendu'erhan District in Mongolia. Some readers have written requesting this magazine to give some details on the crash and its cause. Because all of the nine persons aboard were killed in the crash, the aircraft was burned, and no tape recordings were found aboard, an answer can be given to the riddle only on the basis of circumstantial evidence. Below we excerpt three relevant documents for our readers' information.

1. Lin Biao's Flight From China

The news of Chairman Mao's sudden return to Beijing was like a thunderclap awakening the Lin Biao gang from their pipe dream of an armed coup. In an instant, the conspiracy which had been painstakingly planned over 6 days and nights evaporated. The gang was thrown into an agony of apprehension, like ants on a hot skillet.

In the villa at Lianhuashi No 96, Beidaihe, an ashen-faced Lin Biao sat silently on the sofa, staring at nothing; the sound of Ye Qun's desolate sobbing was audible to attendants outside.

On the morning of 12 September, Lin Liguo made a telephone call to Beidaihe from Beijing and recovered new instructions on Lin Biao's plan to flee south.

Zhou Yuchi and Hu Ping arranged for eight aircraft for the flight to Guangzhou, and in the afternoon they set a private Trident jet, No 256, to carry Lin Liguo back to the Shanhaiguan Airport; the plane was kept there for the use of Lin Biao, Ye Qun and Lin Liguo.

Lin Ligou and Liu Peifeng boarded Lin Biao's jet. At about 8:00 pm the plane landed at Shanhaiguan airport. They missed the car sent for them from Beidaihe and instead hastily drove to Lin Biao's residence in Beidaihe in a jeep from the airport.

At about 10:00 pm, the security unit in Beidaihe learned that Lin Biao, Ye Qun and Lin Liguo planned to flee traitorously by air on the next day (the 13th) at 6:00 am; their destination was Guangzhou and their intent might be treason. Huang, Wu, Li and Qiu, who were also part of the group, had arranged to take off from Beijing at the same time.

The security unit immediately reported to Beijing.

At this time, Fujian Hall in the Great Hall of the People was ablaze with light: Premier Zhou Enlai was presiding over discussions of the draft "Report on the Work of the Government" which was to be presented at the Fourth National People's Congress. At 10:30 pm, the premier's secretary came to his side and told him in a low voice that the central security office had called and wished to make a report directly to the premier. The premier picked up the telephone and listened to the report. He knit his heavy eyebrows, then instructed the caller to tell the security unit to keep a close watch on the situation and report as necessary.

The premier immediately made a call to Wu Faxian and asked him, "Why has an Air Force Trident flown to the Shanhaiguan airport? Who was on the plane?" He then told Wu Faxian, "Order the airplane to return immediately without bringing anyone back to Beijing."

When he received the call, Wu Faxian told the premier a lie concocted by Hu Ping to the effect that this was a newly fitted-out Trident on night flying trials which had experienced a malfunction while at the Shanhaiguan airport and could not return.

The premier immediately ordered that the plane should stay where it was until repaired, than return immediately.

Hu Ping gave a fabricated excuse for not carrying out the premier's orders, then tipped off Zhou Yuchi, instructing him to call Beidaihe immediately and tell Lin Liguo to come to a decision quickly; he also telephoned Pan Jingyin, the pilot of aircraft No 256 at Shanhaiguan, in order to coordinate their story on the supposed malfunction.

When Lin Biao and Ye Qun learned that the premier was asking about the Trident jet, they were thrown into a panic. In order to cover up their plan to flee south to Guangzhou, at 11:22 pm Ye Qun called Premier Zhou to say that "Vice Chairman Lin wanted to travel."

"By air or by land?" asked the premier.

"By air," Ye Qun answered.

"Do you have a plane there?"

"No."

In reality, Lin Biao's plane, No 256, was then at the Shanhaiguan airport, in addition to an Il-14 that had been dispatched a few days earlier. Why did Ye Qun lie and say that they had no airplane? This let the cat out of the bag.

At that time, Shanhaiguan Airport was under the Navy's command, and the premier immediately telephoned Li Zuopeng: "Aircraft No 256 at Shanhaiguan Airport must not be allowed to leave unless I, Huang Yongsheng, Wu Faxian and you all give the order."

But the order which Li Zuopeng passed on to the Navy at Shanhaiguan Airport misrepresented the premier's instructions as: "The aircraft may take off only if one of the four leaders gives the order."

That night one report after another came to Beijing from the Beidaihe security unit. The telephone in the office in the East Hall of the Great Hall of the People rang incessantly, and the premier went out and returned innumerable times. The meeting in Fujian Auditorium was at a standstill.

After 11:00 pm on the night of 12 September, Lin Biao changed his plan and decided to flee north to Irkutsk in the Soviet Union, i.e., to defect.

In haste, Lin Liguo telephoned Zhou Yuchi in Beijing: "The Head is leaving immediately, so the sooner you act, the better."

At 11:40, the security guard in the villa called security group headquarters to report:

"Now he (Lin Biao) has left the house for the air raid shelter."

"Now they have gotten into a Hongqi automobile in the air raid shelter."

"Now the car is leaving."

The cadres in the security unit immediately hurried out of the headquarters. It was a pitch-black night. A senior official's bulletproof Hongqi sedan turned on its headlights and approached at high speed. In it were Lin Biao, Ye Qun and Lin Liguo. When the vehicle approached the headquarters, the security forces signaled it to stop. Ye Qun shouted from inside the car: "The security unit is disloyal to Vice Chairman Lin! Run them down!" The vehicle roared past at high speed. The responsible persons from the security force pursued in a sedan and a jeep.

The Lin Biao gang's sedan crossed the shore bridge at over 100 kilometers per hour, very quickly outran two carloads of security forces which just a few minutes before had received the order to go to the airfield and prevent the aircraft from taking off, and sped off toward Shanhaiguan Airport. The vehicle drove directly to the Trident, and before it could stop, Lin Biao and his gang tumbled out. Ye Qun, Lin Liguo and Li Peifeng, brandishing pistols, shouted, "Quickly! Quickly! Take off quickly!" Ye Qun with hair disheveled and Lin Biao with his bald pate shining hastily rushed to the aircraft. Without waiting for the passenger stairway to be brought up, they frantically climbed up the pilot's ladder one after the other, with Ye Qun's high heels almost treading on Lin Biao's bald head. They did not wait for the copilot, navigator or radioman to board or for the door to be closed before instructing the pilot to take off without clearance. As they taxied down the runway, the right wing smashed the filling cover of a fuel truck parked beside the runway, shattering a glass light cover and some plexiglass on the right wing. With the airport lights turned off in accordance with orders, and without all of the usual communications safeguards, they made a forced takeoff without clearance at 12:32 am on 13 September in the pitch dark and fled in panic.

At 12:20 am on the 13th, when Lin Biao's plane was preparing for the takeoff, responsible airport personnel made three calls to Li Zuopeng to report that the plane was making preparations for takeoff and asked what they should do. But Li Zuopeng did not give the order to take emergency measures to prevent the plane from taking off.

"Lin Biao has escaped by plane!" the Beidaihe security unit reported to Beijing. This was at 12:32 am on the 13th.

"Lin Biao's plane is flying north," the Air Force headquarters command and control center reported to the premier.

Premier Zhou gave the order to close all airports in the country, to ground all planes, and to search the skies with all radars.

The Air Force command and control center's radars tracked Lin Biao's plane closely, and kept the premier continuously informed as to its position and heading.

"If you call No 256 by radio will they be able to hear you?" asked the premier.

"Yes," answered the controller.

"I want to talk to Pan Jingyin (the pilot). Please put me through," said the premier.

"He has the set on, but he doesn't answer."

"Then please call No 256 and ask them to return and land at either Beijing East or Beijing West. Say that I personally will meet them at the airport."

"They don't answer," the controller told the premier.

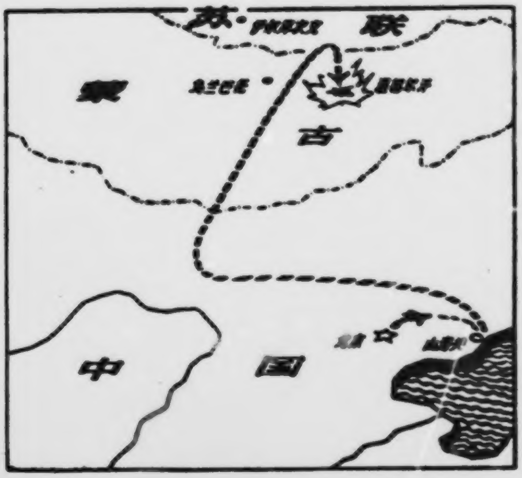
In a crafty maneuver, the plane turned westward toward the western part of Nei Monggol But when it was over western Nei Monggol it suddenly turned north.

"The plane has crossed the border into Mongolia. It's off the radar screen," the controller reported. This was at 1:50 on the morning of 13 September.

Lin Biao was defecting to the enemy! Zhou Enlai slammed down the telephone and immediately hurried by car to Chairman Mao's residence in Zhongnanhai to report. Angrily, Chairman Mao said: "Heaven wants to rain, a young woman wants to marry--let him go!"

On the 13th, from early in the morning until 3:00 or 4:00 in the afternoon, Premier Zhou personally called the persons in charge in the major military regions and the 29 provinces, autonomous regions and directly subordinated cities to give them instructions, and kept Chairman Mao abreast of the situation.

Everything was now in order. Premier Zhou had not rested for more than 50 hours. It was noon of 14 September. The premier lay down, but it was a long while before he fell asleep. At 2:00 pm, the telephone rang. "This is the Foreign Ministry. We have just received a telegram from the Mongolian Embassy which must be delivered immediately to the premier." When the Foreign Ministry brought the telegram, the secretary hesitated: "I've just gotten the premier to go and get some rest, and I haven't the heart to wake him up. But if I don't, I might be delaying something important." He paced back and forth before the premier's room, but finally tiptoed to the premier's bedside and awakened him. When the premier heard that a telegram had arrived from the Mongolian Embassy, he got up hastily and told the secretary to read it to him immediately. When the premier heard that Lin Biao's No 256 Trident had crashed at 2:30 am on the 13th near Wendu'erhan in Mongolia and that the eight men and one woman aboard had been killed, he kept repeating in delight, "Ah! All dead! All dead!"



Lin Biao's route as he feld the country by plane.

(From the New China News Agency broadcast "The Bankruptcy of Lin Biao's Counter-revolutionary Coup"; heading and map added by editor.)

2. A Conjectural Reconstruction of the Crash of the Trident

At 8:30 on 14 September 1971, the Deputy Minister of Foreign Affairs of the Mongolian People's Republic made an urgent appointment with the Chinese ambassador. In the elegant phraseology habitual to diplomats, the two briefly exchanged polite observations about the weather, after which the Deputy Foreign Minister informed the Chinese representative without further prelude that shortly after 2:00 am on 13 September a Chinese jet plane had crashed 10 kilometers south of Bei'erhe Mining District in Kente Province, Mongolia. All of the passengers, including one woman, had been killed. He also lodged a verbal protest regarding the Chinese aircraft's entry into Mongolian air space.

The next day, personnel of the Chinese embassy, accompanied by relevant persons from Mongolia, visited the crash site. The wreckage of a Trident jet aircraft lay strewn about a flat, open area about 3,000 meters long with hills to the north and south. On the tail section, which was relatively intact, were the Chinese flag and the numbers 256. One of the shorn-off wings bore the words "Civil Aviation." A gust of wind brought the acrid smell of burning flesh. To the north of the plane, nine bodies lay on their backs, on the ground, with the faces burned beyond recognition, their clothing burned off and their bodies bloated like wax effigies. The comrades from the embassy took out cameras and recorded the scene on film.

But was this an ordinary civil aviation accident? None of the people on the scene realized that they were eyewitnesses to the end of an important drama in modern Chinese history.

Today, 10 years after the "September 13th Incident" was made known, when we look back over this historic event it prompts us to even greater hatred of the Lin Biao counterrevolutionary clique. Let us pull back the curtain of history.

At 1:50 am on the 13th, aircraft No 256 entered Mongolian airspace over boundary market No 414.

What were the passengers doing at that moment?

This was Lin Biao's third trip to the Soviet Union. Of the previous two trips, one was a trip to recover from wounds during the war of resistance against the Japanese, and one was a trip for medical treatment shortly after Liberation. On these two occasions we may say that he went with honor and returned with glory. But this time? Perhaps the next day, headlines on all the world's major newspapers would announce the explosive news: "China's Deputy Commander-in-Chief Appears in Moscow". But this would have been an inglorious defection. As Lin Biao gazed at the dark steppes outside the window, what passed through his mind?

Was Lin Liguo thinking about the pretty girls and vodka in Moscow, or of his lost "imperial concubine," or of the lust for power which he had not lost? As he hummed "Moscow Nights," his voice and attitude would not have produced an attractive impression.

As for Ye Qun, because she was too good at biding her time and hiding her feelings, her real thoughts on this occasion would be hard to guess.

Of course, these are nothing but ugly echoes, not worth our recounting. We have no way of knowing what buffoonish things the people on the plane actually did. Some 10 minutes after the airplane crossed the border, it disappeared even from our radar screens. We can understand what happened next from experts' analysis of the crash site and the remains of the aircraft. The description below is based on these analyses and relevant documents. But we might as well give our thoughts free rein at this point: if the events on board the plane were shown on a movie screen, they might have looked something like this:

Ten minutes after the aircraft flew over the border, Lin Liguo came terror-stricken out of the pilot's cabin and shouted to Lin Biao and Ye Qun: "The fuel! The fuel! The plane is running out of fuel!" If the plane ran out of fuel, the engines would stop, and if they could not land immediately they knew what would happen.

Lin Biao still had that unnatural composure. Ye Qun pulled Lin Liguo into the pilot's cabin, where she saw Pan Jingyin sweating profusely as he worked the control stock. The red light indicating that the fuel was about to run out was blinking on and off. For a moment Ye Qun was speechless with fear. But Pan Jingyin broke the silence, shouting: "We can make a forced landing ahead!" Ye Qun and Lin Liguo stared ahead as though, storm-tossed on the seas, they had sighted a lifeboat. Lin Liguo knew a little about flying and quickly ordered, "Go down lower and look over the terrain!"

The aircraft flew lower. Before them appeared an open grassland three kilometers from north to south with a hilly area on the south and mountains to the north. This was an ideal place for a forced landing. The aircraft turned from its original southeast-northwest course to a north to south heading for the landing. It was now 2:18 on the 13th.

No 256 had been flying 118 minutes since it left Shanhaiguan and had covered 1,080 kilometers. When it took off, the aircraft had 12 1/2 tons of fuel in its tanks. Flying at an altitude of 3,000-4,000 meters, a Trident uses 5 tons of fuel an hour. At this point the plane still had 2 1/2 tons of fuel and would be able to continue flying for more than 20 minutes. Sixty kilometers ahead was a Mongolian military airfield which they could have reached in only a few minutes. But because Pan Jingyan was fearful and there was no navigator aboard and no ground guidance, he could not determine the plane's correct position and did not know that the airfield was nearby. Now all that was before him was the hope of a forced landing.

The plane whistled downward. According to normal forced-landing procedure, Pan Jinyan opened the slots and cut his speed. But he did not put down his flaps, and the thrust reversers were not used, because normally these operations are carried out by the copilot.

The plane made a high-speed pancake landing and began to bounce and pitch. After it had slid 180 meters both wings were torn off, so that it became a pointed metal cylinder and hurtled on at an even higher speed, until the powerful friction forces ruptured its fuel tanks and tore apart the fuselage, all aboard the plane were thrown out, and the grassland erupted in flames.

All this took only a few minutes or even a few seconds. We have already described the crash scene and we will not repeat it here.

At 11:00 on 16 September, 80 hours after the fugitives met their death, they were buried on the side of a large, unnamed hill a kilometer from the site of the crash. Their bodies were placed in wooden coffins and buried side by side in a mass grave 1.5 meters deep. There was no dirge and no tears. There was only the soughing of the wind over the grassland. Lin Biao's, Ye Qun's and Lin Liguo's inflated ambition and insatiable desires were buried along with their remains in this desolate prairie. But at least one of their desires while they lived had become a reality.

Before the Second Plenary Session of the Ninth Central Committee, Lin Biao and Ye Qun took a solemn oath to wage a common struggle to realize their abmition of usurping power. Lin Biao changed a few words in a quotation from Comrade Tian Han's famous play "Guan Hanqing" and presented the lines to Ye Qun:

"Although we have not both grown gray, our hearts are equally ardent. Although in life we have not often shared a coverlet, in death we will share a grave."

Ye Qun presented a verse to Lin Biao in response:

"I shall never forget your teaching and your kindness, and hereafter I will assuredly follow you to the Yellow Springs!"

If you were to visit the spot now, you would only see a large wooden tablet marking the crash site and a row of small grave markers atop the grave.

But let them rail at New China from their grave! Let them go down to the Yellow Springs to dream their dreams of restoration! China and the world belong to the people!

(Excerpted from "An Account of the September 13 Incident," from SHIDAI DE BAOGAO No 4, 1980; heading supplied by the editor.)

3. Analysis of the Reasons for the Crash

At 2:30 on 13 September 1971, a Trident jet carrying Lin Biao as he defected to the Soviet Union crashed in Yide'ermoge County, near Wendu'ergan in Mongolia. The nine persons aboard were killed in the black night in the wilds. They were: Lin Biao, his wife Ye Qun, his son Lin Liguo, Lin Biao's sworn follower former head of the Air Force Party Office Liu Peifeng, Lin Biao's driver, the pilot, a mechanic, a flight engineer and a special mechanic.

When did Lin Biao's plane crash? Because the nine people who could have given a authoritative answer to this question are dead and dismembered, our only course is to rely on others' investigations of the site and analyses of the circumstances.

According to investigations, the airplane was running short of fuel and crashed in an unsuccessful attempt at a forced landing. The reasons for arriving at this judgement are:

1. On the evening of the 12th, Lin Liguo and Liu Peifeng flew in Lin Biao's plane from Beijing West airport to the Shanhaiguan airport. At 12:32 am on the 13th, the airplane took off from the Shanhaiguan airport carrying Lin Biao, Ye Qun and the others. After it took off, the aircraft first flew west with the evil aim of disguising the passengers' intent to defect and giving the false impression that the plane was heading toward the western part of Nei Monggol, after which it abruptly turned north toward Irkutsk and the Soviet Union, crashing en route in Mongolia.

When the airplane took off from Bejing it had only 15 tons of fuel. Because of the Lin Biao gang's hasty escape, there was not time to refuel the aircraft at Shanhaiguan Airport. It took somewhat longer than half an hour to fly from Beijing to Shanhaiguan and consumed about 3 tons of fuel. After it took off from Shanhaiguan, the aircraft flew almost 2 hours and used up 10 tons of fuel. Accordingly, the aircraft tried to make a forced landing near Wendu'erhan in Mongolia with only two tons of fuel remaining.

2. The location of the crash was a level area between two hills. The ground was a mixture of sand, rocks and mud, with grass about a meter tall. This was the best location for a forced landing that could be found at the time.

3. The aircraft's landing gear had not been lowered. None of the bodies of the nine persons on board, who were thrown out during the crash, had on shoes or a wristwatch. Because in a forced landing an airplane always is subject to violent vibration, the passengers must take off any hard objects so as to avoid being hurt by them during the violent vibration. These facts show that a number of preparations had been made for the crash landing.

4. At the site of the crash there was a furrow several meters long produced by the right wing of the plane scraping against the ground. This indicates that the plane lost its equilibrium when it landed, resulting in a fire and explosion. The reasons that the aircraft failed in its forced landing was apparently that there were no lights and that the crew was seriously deficient, lacking the copilot and the navigator, among others. Under these circumstances it is difficult for an aircraft to make a successful forced landing.

5. Six model 59 pistols and an assault rifle were found at the crash site. But investigation of the airplane fuselage and the bodies showed no signs of gunfire, indicating that there was no struggle abroad the aircraft before the crash.

The Lin Biao gang have already sunk out of sight in Chinese history like a wrecked ship. The black night of a foreign land drew the final curtain over the ugly antics of this gang. Their stage was shifted from the vast land of China to the lonely and desolate Mongolian wilderness and only the withering grasses could tell the true story of their fall to earth; but for historians the answer to the riddle can only be inferred from circumstantial evidence.

PARTY AND STATE

'ON PROTRACTED WAR' SAID TO HOLD LESSONS FOR MODERNIZATION

Beijing ZHONGGUO QINGNIAN in Chinese No 13, 1981 pp 3-4

[Article by Qi Zhenhai [7871 2182 3189]: "Scientifically Analyze the Glorious Examples of China's State of Affairs—Study of 'On Protracted War'"]

[Text] "On Protracted War' by Comrade Mao Zedong is an important work on Marxist military theory, as well as being an important piece of Marxist philosophy. It offers us a glorious example of the use of materialist dialectics to scientifically analyze the national conditions of China and Japan, but especially of China, during the war years. Review of this glorious work, "On Protracted War," and study of the philosophical thought of Comrade Mao Zedong have tremendous theoretical and practical value in regards to our correctly recognizing the present day state of affairs in China and traveling a Chinese style road to modernization.

1

The 1930's was a crucial period of life and death for the Chinese people. After Japanese imperialism had swallowed up the three provinces in China's Northeast and part of northern China as well, on 7 July 1937 it abruptly attacked the military garrison at Lugou Bridge in the Beijing vicinity as a prelude to an all out invasion of China with the preposterous intention of subjugating her in one fell swoop. The Chinese people who knew well the calamity of war and who struggled to preserve the nation all thirsted for victory. But could the war be won? Could it be won quickly? This was a tremendous problem that numerous people at that time wanted to solve, but which could not be solved quickly. Prior to the war of resistance against Japan the Japanese collaborationist faction represented by Wang Jingwei promulgated the idea that "Chinese weapons are not as good as theirs. A war would be lost"; during the war, in order to make excuses for their surrender to Japan, they further said that "to fight on is certain death." The faction allied with England and America represented by Chiang Kaishek was forced to resist Japan, but on the other hand they planned to compromise with and to surrender to Japan and on the other hand they fantasized that they could rely on the help of England and America to quickly defeat Japan without exerting great effort.

This situation was reflected within the party. After the United Front in resistance to Japan made up of the Nationalist [KMT] and the Communist parties was established, part of our party members developed a tendency toward rightist opportunism. They overestimated the strength of the KMT and forgot its reactionary and decadent side. They imagined that we could rely on KMT troops to achieve a quick victory and opposed the principle of the Eighth Route Army and the New Fourth Army carrying out independent guerilla warfare. Some comrades had a tendency to belittle the enemy, believing that the Japanese could not withstand an attack. They failed to see the bitter and protracted nature of the war of resistance to Japan.

In order to clarify the confused thinking both inside and outside of the party, to let all the people of the nation correctly understand the laws determining the development of the war of resistance to Japan and to firmly instill confidence in our victory in the war, from 26 May to 3 June of 1938 Comrade Mao Zedong wrote this important piece, "On Protracted War."

2

Detailed analysis of concrete conditions is the living soul of Marxism. In analyzing the national conditions of China and Japan Comrade Mao Zedong consistently manifested this scientific spirit.

Comrade Mao Zedong first analyzed in detail the general characteristics of the war of resistance to Japan. He pointed out: "The war between China and Japan is not just any war, it is specifically a war of life and death between semi-colonial and semi-feudal China and imperialist Japan, fought in the 1930's. Herein lies the basis of the whole problem." Beginning with these general characteristics, Comrade Mao Zedong separately analyzed the natural characteristics of the two sides. He generally indicated: "Japan's advantage lies in her great capacity of wage war, and her disadvantages lie in the reactionary and barbarous nature of her war, in the inadequacy of her manpower and material resources and in her meager international support." "China's disadvantage lies in her military weakness, and her advantages lie in the progressive and just character of her war, her great size and her abundant international support." It is just these characteristics that have determined and are determining all the political policies and military strategies and tactics of the two sides, and that have determined and are determining the protracted character of the war and that the final victory will go to China and not to Japan. "If anyone forgets these characteristics in studying the Sino-Japanese war, he will surely go wrong."

Both those who saw certain defeat and those who advocated quick victory made just this mistake when they examined the Sino-Japanese war. The defeatists placed too much emphasis on the contradiction between strength and weakness, exaggerating it into being the basis of the entire problem and overlooking other contradictions. They were onesided in their attention to the single comparison of strength and weakness; and they were subjective in taking their onesidedness to be the whole. Those who called for quick victory acted in just the opposite fashion. They entirely forgot about the contradiction between weakness and strength and remembered only the other contradictions; or they exaggerated China's advantages beyond any sense of reality, or took the weakness and strength displayed at one place at one moment in time as representative of overall strength and weakness. Their view was partially blocked, yet they assumed that they could see everything. The common mistake of both the defeatists and those looking for quick victory lie in the fact that they saw only one or a small number of the total contradictions and took them to be all or the most important of the contradictions. This kind of subjectivity and onesidedness is a tendency in problems of war toward idealism and mechanicalism and is the epistomological source of all mistaken notions. Therefore Comrade Mao Zedong said: "Only by opposing idealistic and mechanicalistic tendencies in problems of war and by adopting an objective and comprehensive viewpoint in examining them can we arrive at correct conclusions about these problems."

The state of affairs of a nation (political, economic, military, etc.) are determined by objectively existing factors. Seeing only factors such as that the enemy is strong and we are weak and that China is large while Japan is small we still could not draw an accurate conclusion and argue down the defeatists, because history has examples of small but strong nations destroying large but weak ones. Because of this, it was necessary to examine the Sino-Japanese war in light of a set of specific historical conditions. Comrade Mao Zedong indicated: Japan is carrying out an unjust war which is reactionary and barbarous in the extreme. Our war of resistance to Japan is a just people's war carried out under the direction of the Chinese Communist Party. The retrogressive and barbarous nature of Japan's aggressive war will inevitably arouse class antagonisms in Japan and antagonism between Japan and most other countries and peoples of the world, causing her to lose support. These are the primary reasons for the inevitable defeat of Japanese imperialism. To this we must add the fact that Japan is a small country, deficient in land, resources, manpower and soldiers, while China is a large country with vast territory, rich resources, a large population and many soldiers. So along with the comparison of weakness and strength we must compare a small, retrogressive nation with meager support to a large, progressive nation with abundant support. This is the reason that China cannot be destroyed. "Although the comparison between strength and weakness means that Japan can overrun China to a certain extent and for a certain period, that China cannot avoid suffering a period of hardship, and that the war of resistance will be a protracted war and not decided quickly; still the comparison of a small, retrogressive nation with meager support with that of a large, progressive nation with abundant support means that Japan cannot overrun China forever, but will inevitably meet with ultimate defeat and that China will not be subjugated, but will inevitably achieve final victory."

After Comrade Mao Zedong had objectively and completely analyzed the connections between the basic factors comprising the national conditions of China and Japan, he proceeded to use the concepts he had developed to analyze the struggle between the enemy and ourselves. He indicated: In the course of the war the enemy's shortcomings can be aggravated and his strong points reduced through our efforts; contrarily, our own shortcomings can be overcome and our strong points increased through out efforts. Only in this way can the strengths of the two sides shift so that the advantage lies with us and not with the enemy. "When a new stage is reached, a tremendous change will occur in the levels of strength and weakness and the situation of superiority and inferiority which will result in the enemy's defeat and our victory." The defeatists, being confused by the superficial appearances of a single moment in time, failed to see that the results of the contradictory struggle between the two sides had, under specific conditions, to undergo a qualitative leap;, and those looking for a quick victory then failed to understand that in their changing things must pass through a process of quantitative change leading to qualitative change. Because of this they embraced a gambling mentality and abandoned any thought of a long, bitter struggle with the enemy.

Based on the foundation of an exhaustively detailed analysis of the national conditions of both sides, of the contradictory struggle between them and of the mutual transformations inevitable under specific conditions, Comrade Mao Zedong used the basic principles of the dialectical materialist method to scientifically forecast the entire process of development of the war of resistance to Japan; it had to pass through the three stages of the enemy's strategic offensive and our strategic defense, strategic stalemate, and strategic counteroffensive. Later, the historical course of the war of resistance to Japan was to completely fulfill the scientific forecast of Comrade Mao Zedong.

3

The scientific analysis of national conditions is not only a necessary prerequisite for correctly directing a war, it is also a necessary prerequisite for correctly directing economic construction. In a certain sense, economic construction is even more complicated than military struggle. Its scope of involvement is very broad, and it is always difficult in a short period of time to determine the correctness of principles and policy. It calls for us to use the dialectical materialist method to seriously analyze and recognize our national state of affairs and to establish correct principles and policies based on our nation's realities.

In the history of mankind, similar phenomena have often appeared at different times. Just as Marx said: "History is replete with startlingly similar circumstances." A mistaken tendency similar to that of those who called for quick victory in the early years of the war of resistance to Japan exists in the guiding ideology of our socialist economic construction. Since the founding of the nation, we have stumbled more than once in the course of our economic construction. The basic reason lie in our lack of a clear understanding of our national conditions and of the fact that we must make a formidable effort over a long period of time if we want to build our large nation which is relatively backward in terms of production into a strong, socialist nation. Because of this, in our guiding ideology we have always been anxious for quick results, and we have committed the "leftist" error embodied in the doctrine of rapid achievement. In economic construction the mistaken "leftist" tendency of this doctrine, in terms of epistomological source, has characteristics similar to those of the doctrine of quick victory in the early years of the war of resistance to Japan. They both use idealist and mechanicalist theory in place of using the dialectical materialist method to make a complete and objective analysis of the national state of affairs. Those who call for rapid achievement exaggerate the capacity of subjective initiative, relying on subjective willpower to get things done. They forget China's basic national conditions of having 1 billion people, 800,000,000 peasants and a very thin economic base. Such conditions firmly determine the lengthy and arduous nature of our nation's socialist conditions. Only by proceeding gradually and orderly with measured strength can we be sure of our national economic construction. Otherwise we will fail in our haste. We have already suffered much because of this. It is a painful lesson we should have learned.

At present, a small number of people, seeing that our socialist construction has suffered setbacks and run into difficulties, have become discouraged and have lost confidence. They believe it to be impossible for a nation backward in production such as China to realize modernization. They are pessimistic. This is a manifestation of a lack of understanding of the national situation of China today. These comrades see only the difficulties we face. They exaggerate the contradiction between our starting point and our distant goal, and view it as the whole problem, neglecting the most basic advantageous element which is the superiority of the socialist system. They only see, or they exaggerate out of all proportion, the mistakes made and the setbacks encountered in the process of our national construction. They fail to see that after the people summarize their experiences and absorb the lessons of the past they become more intelligent and wiser and are able to reduce future mistakes and setbacks. They overlook the possibility that under specific conditions contradictions change. In epistemological terms this is another tendency toward idealism and mechanicalism. From this it can be seen that only by eliminating idealism and mechanicalism and upholding materialism and the dialectical method can we correctly understand our national situation and establish correct principles and policies which will give us full confidence in our modernization construction and lead us to adopt stable procedures. This is just the realization we should come to in our study of the work "On Protracted War."

SOCIALIST SOCIETY'S PRESENT STAGE EXAMINED

Shanghai WEN HUI BAO in Chinese 20 Aug 81 p 3

[Article by Duan Ruofei [3008 5387 7236]: "The Triumph and Development of Scientific Socialism in China--Understanding From a Study of the Resolutions on Some Historical Problems of the Party Since the Founding of the State"]

[Text] The resolutions of the Sixth Plenary Session of the 11th Party Central Committee pointed out: "Our country has already established a socialist system and entered into a socialist society. Any viewpoint that denies this basic fact is erroneous."

Observation and study of the actual conditions of our society according to the scientific socialist theory of Marxism shows that the present stage of our country is truly a socialist society; the changes since the Third Plenary Session of the 11th Party Central Committee represent the development of scientific socialism in China.

Production Relations of Socialism in Our Country Are Based on Socialized Productive Forces

The main argument of sceptical attitudes toward the socialist nature of present day Chinese society is that we have not yet built the socialized productive forces of a socialist society. Whether we have built the socialized productive forces of a socialist society is indeed a basic prerequisite to determining whether ours is a socialist society.

What,then, are socialized productive forces as seen from the theory of scientific socialism? According to the discussion by Marx and Engles, they are the socialization of the means, process and finished products of production. In other words, the means of production are those commonly used by a large number (as Marx and Engels said, hundreds of thousands) of people; the process of production is carried out by division of labor and cooperation among hundreds of thousands of people; and the end products of production are the products of the collective labor of hundreds of thouands of people. In terms of its economic form, socialism is the production relation that mutually suits socialized productive forces. The production relations of socialism are built on the basis of such forces.

In that case, at the present stage does China have socialized productive forces that can build socialist production relations as mentioned by Marx and Engles?

As a whole, the productive forces in our country at the present stage are in a stratified state. However, in the stratified productive forces, socialized productive forces have already reached a certain level. The socialized state of productive forces can be investigated in different aspects. The following figures and materials reflect in different aspects the general state of socialized productive forces in our country at present.

The number of industrial enterprises grew from 170,000 to 348,000 between 1957 and 1978. (In 1978 our country had 500,000 forging facilities, of which 3 were of the more than 10,000-metric-ton liquid press forge type. There was a total of 21 in foreign countries. We had nearly 2.3 million pieces of metal-cutting machine tools, ranking third in the world. Between 1957 and 1978 steel output increased from 5.35 million to 31.78 million metric tons. The ratio of industrial output value to total agricultural output value increased from about 56 to about 72 percent. Electricity is already widely used. (In the 19th century, steam was widely used for motive power among socialized productive forces.) Industries have already been established for machinery-making, automobiles, ship-building aircraft, electronics, petrochemicals, plastics, chemical fibers, and synthetic rubber. Some departments have started to use electronic calculators, automatic controls, atomic power, lasers and other contemporary and sophisticated products of science and technology. Machinery, electricity and chemical fertilizers are partially in use in agriculture. In 1978, the total area in the country under mechanized farming had reached 40 percent, and that with electric pumping 55 percent. An independent and complete national economic system led by socialized productive forces has been initially formed.

These statistics and types of material are far from complete and accurate, but from them one can see that our country truly has socialized productive forces on a considerable scale. According to the scientific socialist theory of Marx and Engels, socialist production relations can be built on the basis of such productive forces. It is precisely because of this that ours is a socialist society with the significance of scientific socialism, unusual stability and strong vitality. It is groundless to assert that we have no socialized productive forces such as those on which Marx and Engels said socialist production relations can be built. Arguments that socialist production relations can be built only as long as there are certain political conditions (certainly this does not mean not wanting political conditions or that political conditions are unimportant), regardless of the state of the productive forces, are not scientific explanations of Marxism.

How To Treat the State of Coexistence of Pluralistic Economic Forms in Our Country

When we say that our country truly has the socialized economic forces to build socialist production relations we are not implying that all of our productive forces have reached the level of socialization. On the contrary, we have not forgotten that compared to the developed countries in the world, the level of productive forces in our country as a whole is lower. The level of development of productive forces within the entire nation is very imbalanced. The coexistence of simple handicraft tools with large modernized machinery and automatically controlled machinery systems means that a stratified state of productive forces has been formed.

It is precisely this kind of situation that has determined the coexistence of pluralistic forms of systems of ownership at the present stage in our country. But in any case, our socialized productive forces in the production of the whole country are already in a position of control; great socialized production is dominant in the economic lifelines of the whole country. Consequently, our socialist system of ownership (including distribution according to work, which is the realization of the socialist system of ownership) enjoys a dominant position and absolute superiority. Also, "this is a light that illuminates all things. All other colors are concealed in it, which alters their characteristics." (Selected Works of Marx and Engels, Vol 2, p 109) Under the strong light of the socialist system of ownership, all other forms of ownership have changed their colors.

In that case, is this society led by the socialist system of ownership and with the coexistence of pluralistic economic forms by nature a socialist society? Or is a society considered socialist only if the entire society completely and purely achieves socialist production relations?

We can make a historical comparison.

Take mid-19th century France as an example. Because capitalist economic relations had long occupied a leading position, the nature of French society at that time was already capitalist. This point is explicitly affirmed in countless references in the writings of Marx and Engels and has been openly recognized by people then and since. Yet in the economic relations of France at that time, capitalism was far from complete and pure and did not have an absolute superiority; the proportion of individual and feudal production relations was still considerable. France at that time deserved to be called a capitalist society. Why cannot China be called a socialist society when its socialist economic relations are in the lead and have absolute superiority?

Actually, everything follows the historical process of birth and development. Social formation is no exception. It is inevitable that a socialist society goes through the course of development from being "incomplete and impure" to "more complete and pure." Today's socialist society in China is still in its childhood, but already it is one that has its own character and the ability to regulate itself. We cannot deny its nature because it is "incomplete and impure," just as we cannot deny a child being a person because he still does not possess all the characteristics and abilities of an adult.

What should be pointed out here is that the course of development of a socialist society from being "incomplete and impure" to "more complete and pure" is a development "based on itself" and not the "period of transition." Regarding the characteristics of the period of transition from capitalism to socialism, Lenin pointed out: "This period of transition must concurrently have the characteristics or features of the economic structures of these two societies. This period of transition must be a period of struggle between a dying capitalism and a growing communism. In other words, it is a period of struggle between capitalism which is defeated but not yet eliminated and socialism which is already born but still very weak." (Selected Works of Lenin, Vol 4, p 84) However, our country's present situation is one in which the socialist economy plays a leading role and enjoys absolute superiority. Other economic forms are small in number and play a subordinate role. This basically cannot be mentioned in the same breath with the period of decisive struggle when socialism and capitalism were in a state of "who will triumph over whom." In the mid-1950's our country victoriously realized the change from the new democracy to socialism. In the present stage, confusing the two intrinsically different historical periods might lead to erroneous application of the categories in the transition period in a socialist society, such as the struggle between two classes and two paths being the main contradiction in the society, and the continued use of "class struggle as a guideline" which would lead to "leftist" mistakes. This is not only a logical deduction but also a truth which we unmistakingly understand and which the lessons of history have taught us.

The theory of scientific socialism also tells us that a socialist society is the first or lower stage of communism. In the present stage of our country's historical development it is still a newly born and completely new social formation. Of course, as Engels said, "The so-called 'socialist society' is not something immutable. Like any other social system, we should regard it as a society that is constantly changing and reforming." (Complete Works of Marx and Engels, Vol 37, p 443) However, social revolution as well as social change and reform are after all categories that are different in principle and must not be confused. The former is realized through intense class antagonism and conflict; the latter is carried out through the leadership of the socialist system itself, step by step, and in an orderly way. As a socialist society, we cannot and should not take part in that kind of "continuous revolution" of "one class overthrowing another." (Of course, in no way does this mean that our revolutionary task is complete or that we do not need to carry out our work in a revolutionary spirit. This must not be misunderstood.) The so-called "theory of continuing the revolution under the dictatorship of the proletariat" and the viewpoint of using a new form to defend this theory (renamed the so-called "continuous revolution under the conditions of socialism") is also a viewpoint denying that the present stage of our country is a socialist society. We must criticize this kind of erroneous point of view.

In any case, we believe that our country's history has already entered a socialist society which is built on the basis of socialized productive forces and is led by the socialist system of ownership with the coexistence of superior pluralistic economic forms. The establishment of the socialist system of ownership is the most profound and greatest social transformation in the history of our country and is the basis of all progress and development in the future. Under the guidance of the lines of the Third Plenary Session of the 11th Party Central Committee, the practice of our country's socialism has attained further development. Any theory that takes this or that form to deny that our country's history has entered a socialist society does not accord with the real conditions in our country at the present stage.

PARTY AND STATE

ARTICLE PRESENTS CURRENT VIEW ON CLASS STRUGGLE

Beijing BAN YUE TAN[SEMI-MONTHLY TALKS] in Chinese, No 14, 25 Jul 81 p 6-7

[Article by Yan Jing [3601 5464]: "Why is it Said That 'The Exploiting Class no longer Exists as a Class'?"]

[Text] In the proces of studying the "Resolution on Certain Questions in the History of our Party Since the Founding of the People's Republic of China" some comrades have asked why it is said that after the socialist transformation of China the exploiting class will no longer exist as a class. My understanding of this problem is as follows:

Marxism believes that classes are individual social groups which are joined by specific production relationships and which exist on different economic levels. Lenin said, "The so-called classes are groups that because they occupy different positions in a fixed socio-economic structure then have certain groups which are then capable of possessing the labors of certain other groups." It is commonly said that there are two conditions necessary for the formation of an exploiting class: the first is exploitation, which means to use one's means of production to carry out economic exploitation of workers who have lost or have a shortage of the means of productions.and thus use the fruits of their labors for self-enrichment; second is for the exploiters to form a social group with common interests. The exploiting classss in history such as the slaveholder class, the landlord class and the bourgeousie are groups of such exploiters.

After the founding of the new Chinese state, in 1956 under Party leadership the socialist transformation of the private ownership system of the means of production was basically accomplished. This basically eliminated the system of exploitation and basically eliminated the economic foundation of the existence of all exploiting classes as such.

In the old China there were such different exploiting classes as the bureaucrat capitalist class, feudal landlord class, the rich peasant class and the national capitalist class. In the first three years after the founding of the state we first confiscated bureaucrat capital and changed bureaucrat-capital enterprises into socialist state enterprises.

At the same time, we completed a land reform which encompassed almost the entire nation. We confiscated the land belonging to the landlords and the excess land owned by rich peasants and distributed it among the farmers of the nation. This effectivelly destroyed the economic foundation which the bureaucrat capitalist class, the feudal landlord class and the rich peasant class depended upon. In the aftermath of the Three Great Transformations we implemented a series of state capitalism arrangements in all classes from the highest to the lowest and then finally completed the socialist transformation of capitalist industry and commerce, enabling the means of production owned by national bourgeoisie to revert to state ownership. Although those people who had owned industrial and commercial enterprises still collected their "dividends," they nonetheless lost their authority in and control over the means of production. They could no longer employ the status of capitalist to exert authority in enterprises but rather had the status of enterprise workers. Concurrently, with the victorious implementation of the socialist transformation of agriculture the production condition for rich peasants (small scale family farming economy) also was destroyed. Subsequently, correct party policies transformed the great majority of members of the exploiting classes into self-sufficient workers.

There is a saying that goes, "If the skin is lost what does the hair adhere to?" The "skin" that the exploiting classes relied upon to exploit others and to form a social class was none other than the private ownership of the means of production. After the private ownership of the means of production was transformed into a public ownership system the "skin" of the exploiting class then disintegrated and the class existence of the exploiting class then ended.

After implementing the socialist transformation we carried out a basic implementation of the public ownership of the means of production and began to carry out the principle of to each according to his labors, so that the workers, peasants, intellectuals and other patriots all became masters of society. Although they had mutual differences and contradictions of various types they were not of an adversary nature and there was no fundamental clash of interests. Moreover, these contradictions could all be solved through the continual development of socialism. Under conditions such as these it was no longer possible for one class to exploit another class.

Since the exploiting class no longer exists as a class in China, class struggle therefore is a major contradiction in China. Of course, because of internal factors and foreign influences class struggle will continue to exist for a long time within a certain scope. If we manage things badly and make some serious mistakes it is them possible that under certain conditions class struggle will become quite acute. In society there still exists both remnant and newborn elements who look upon socialism with hatred and there might also be exploiters carrying out exploitation in secret. While participating in political, economic, intellectual and social activities they can carry out destructive acts and so we must struggle against them. Nonetheless, these elements who are enemies of socialism have already lost their various economic and political foundations of existence and economically and politically can no longer exist legally as a class. Because of this, we must "both oppose the viewpoint of broadening class struggle and oppose the viewpoint that the need for class struggle has already disappeared."

PARTY AND STATE

IMPORTANCE OF CRITICISM, SELF-CRITICISM DISCUSSED

Guangzhou NANFANG RIBAO in Chinese 3 Sep 81 p 1

[Article by staff commentator: "Promote Criticism and Self-Criticism"]

[Text] Today, the party organizations of the various levels in our province are in the process of intensively studying the "Resolution on a Number of the Party's Historical Issues since the Founding of the Nation" and conscientiously implementing the spirit of the Sixth Plenary Session. These constitute one of the central tasks of the party. Recently, the Central Ministry of Propaganda and the propaganda department of the provincial party committee successively held forums on the ideological front, proposed strengthening the party's leadership of ideological work and changing the slack and weak situation, and promoted criticism and self-criticism to overcome all kinds of erroneous tendencies. It is an extremely important issue which calls for our serious attention.

Criticism and self-criticism are the motive force of the progress of all tasks, the weapon of the Communist Party members in self-reform, and the symbol of our party's prosperity and development. Our need of criticism and self-criticism is like our need of air and water. We must use the weapon of criticism and self-criticism to constantly cleanse the dust from ourselves and preserve forever our revolutionary vitality.

The Sixth Plenary Session set the example of criticism and self-criticism for the entire party, firmly and courageously conducted criticisms and self-criticisms on the party's important historical issues since the founding of the nation, and summarized matter-of-factly the basic experiences and lessons. Ours is indeed a great party; it is indeed a party armed with Marxism-Leninism and Mao Zedong. To study and implement the spirit of the Sixth Plenary Session, we must properly develop the superior tradition of criticism and self-criticism, reinforce the party's unity and increase its fighting power.

Judging from the condition of the ideological work in our province, we find that there are the following attitudes toward criticism and self-criticism: One is welcoming criticisms, humbly heeding the critical opinions and conscientiously making self-criticisms. This attitude naturally deserves emulation, but unfortunately the number of comrades taking this attitude is not large. Another is being afraid to criticize. Slack and weak, the leaders with this attitude fail to express a clear stand on fundamental issues and distinguish the right and wrong. This condition is relatively widespread. The third is rejecting criticisms, especially criticisms published in newspapers. The moment criticism is encountered, those taking this attitude call it "punishment" and "hitting with a club." This condition indicates that, as a result of the serious destruction suffered by the party's superior tradition during the 10-year internal disorder, the trend of criticism and self-criticism in the party and the cadre ranks has not been properly restored and developed. It is a momentous issue requiring serious attention on all fronts as well as solution on the ideological front.

To promote criticism and self-criticism, we must learn to use the weapon of criticism and self-criticism, overcome all kinds of erroneous ideological tendencies, rectify the defects and mistakes in work, and correctly handle the contradictions within the people. We must firmly implement the party's policy of "a hundred flowers blossoming; a hundred schools of thought contending," while launching correct criticisms and self-criticisms. We cannot depart from criticism and self-criticism when upholding the "double hundred" policy. Then, what is the criterion to determine the right and wrong in ideology and work? It is the spirit of the Sixth Plenary Session, the basic conclusion of the "Resolution on a Number of the Party's Historical Issues since the Founding of the Nation," and the four basic principles.

In terms of today, while we must continue to purge the influence of the leftwing error, we must also combat the tendency of bourgeois liberalism. These two tasks are indivisible and mutually promotive. The former remains an important task, absolutely not to be underestimated or slackened. The latter is an ideological trend in society, and its core is to break away from the party's leadership and the socialist path. In regard to such bourgeois liberal tendency, we must criticize it solemnly and forcefully. Some party members actually propose that they may compete against the Party Central Committee, contradict the party, and ignore the party's call or its discipline. Others promote anarchism and ultra-egoism and spread comments against the four basic principles. Is it conceivable that they can be tolerated? The special policies and flexible measures followed by Guangdong, being more open to the outside, are completely necessary, and the results are good. We must continue to purge the remnant poison of the leftwing ideology, further strengthen external economic activities, and properly handle the construction of the special area. However, we must also realize, at the same time, that the bourgeois ideological influence from the outside has corrupted some party members and cadres. The situation should arouse our vigilance. In regard to the unhealthy trends in the party and in the economic realm, especially in the external economic activities, we must conscientiously launch criticisms and self-criticisms. Under the influence of the leftwing ideology, some comrades, even today, are doubtful, or even resentful, of the party's lines and policies since the Third Plenary Session. For this situation, we must, by means of conscientiously launching criticisms and self-criticisms, enable them to improve their ideological awareness and consciously implement the Party Central Committee's policies. In regard to the slack and weak conditions of the leaders on the ideological front, we must also conscientiously launch criticisms and self-criticisms, in order to strengthen the party's leadership, giving it both the courage and the skill to lead.

When launching criticisms and self-criticisms, we must learn our party's correct historical experiences and assimilate new ones. We must give attention to the method and the result. Like the Third and the Sixth Plenary Sessions, we must uphold the scientific attitude of seeking the truth from the facts, the policy of "learning from past mistakes to avoid future ones and curing the illness to save the patient," and the method of "unity--criticism--unity," and avoid movements, sieges and aggravation. While solemnly and conscientiously launching criticisms, we must aim at helping those criticized; while promoting self-criticism, we must refrain from forcing others to examine themselves. Only thus will we truly attain the goal of enlightening thinking, rallying the comrades and improving the work. One important point is to start from the desire to unite and, by means of criticisms and self-criticisms and on the foundation of the four basic principles, reach a new unity.

The Sixth Plenary Session asks the entire party to unify thinking, strengthen unity, enhance revolutionary vigor and properly handle production. When studying the documents of the Sixth Plenary Session and the recent important instructions of the Party Central Committee, we must consciously link our studies with reality, summarize the experiences and launch criticisms and self-criticisms, thereby making the party's leadership of ideological work firm and strong, the spiritual outlook of all party members and the broad cadres more vigorous, and the work on the ideological and other fronts of our province more lively, and effectively promoting the development of the four modernization construction.

'BA YI RADIO' ON DENG'S CONTINUING ATTACKS ON HUA

OW291251 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 28 Sep 81

[Text] The question of Comrade Hua Guofeng was dealt with by the party long ago. And the 6th plenary session of the party's 11th Central Committee adopted a special resolution on this matter. To continue to attack Comrade Hua Guofeng in various ways on various occasions now is in fact to promote an unprincipled struggle in the party in a disguised form. Particularly Comrade Deng Xiaoping, as the actual leader of the party, government and army, is still criticizing, even exaggerating, Comrade Hua Guofeng's mistakes over and over again. This does not help the unity of the party, government and army at all. Moreover, it makes people wonder if the spearhead isn't pointed elsewhere.

We are not saying that Comrade Hua Guofeng made no mistakes. There were mistakes, even serious ones. However, the main responsibility for several mistakes, on which Comrade Deng Xiaoping places particular emphasis, should not be borne by Comrade Hua Guofeng.

First of all let's consider the issue of the whole country learning from Dazhai. Although Comrade Hua Guofeng presided over two national conferences on learning from Dazhai, it was Comrade Mao Zedong who first started it. Other central leaders, too, should share the responsibility. Take Comrade Deng Xiaoping, for example. He was appointed vice premier in 1974. On 2 October the same year, when receiving overseas Chinese at the Great Hall of the People, he said: Some say that our population is too big and increasing too fast and that our grain production cannot keep pace. They are wrong. So long as we adhere to the line of learning from Dazhai in agriculture, even if our population grows several hundred million more, we still will have enough food, (?including meat and fish). If one-third or one-fourth of the communes in the country learn from Dazhai, China will become the world's biggest granary.

Next let's consider the issue of the personality cult. After the gang of four was overthrown, Marshal Ye [Ye Shuai 0673 1596] said at a working conference of the party Central Committee: "Chairman Mao said that it was necessary to give publicity to Comrade Hua Guofeng. Now, to repudiate the gang of four and stabilize the situation of the whole country, it is necessary to establish Chairman Hua's prestige." In his letter to Comrade Hua Guofeng asking for a job, Deng Xiaoping also made several references to "the wise leader Chairman Hua." On the issue of giving publicity to Comrade Hua Guofeng, everyone spoke along the same line within the party Central Committee at that time.

The issue of the "two whatever's" should also be looked at objectively and in a historical perspective. The slogan itself was wrong. However, then the gang of four had only just been overthrown, and blind faith in Comrade Mao Zedong remained quite strong. Many cadres and people still blindly worshiped him. The remaining forces of the gang of four were still very strong. It was then unthinkable to make such decisions as those made by the 3d and 6th plenary sessions of the party's 11th Central Committee. Furthermore, even the 6th plenary session had great reservations in reaching a conclusion on the nature of Comrade Mao Zedong's mistakes. Therefore, we say that the purpose in continuing to magnify and wrangle about the mistakes Comrade Hua Guofeng made while in charge of the work of the party Central Committee even after a conclusion was reached by the 6th plenary session is obviously not just to attack Comrade Hua Guofeng himself, but to prepare public opinion for the removal of all party, government and army cadres, who were not attacked during the Cultural Revolution and who held important positions when Comrade Hua Guofeng was in power, and for the disposal of all PLA cadres who took part in the "three support's and two military's" tasks and PLA cadres who have connections with those former PLA leaders found guilty and punished in the past few years, before the PLA formally restores the military ranks.

'BA YI RADIO' SCORES DENG XIAOPING'S RULE

OW010641 (Clandestine) Ba Yi Radio in Mandarin to China 1400 GMT 30 Sep 81

[Text] On the occasion of the 32d anniversary of the founding of our country, we extend our warm festive greetings to the workers, peasants, cadres, commanders and fighters who are working in their respective fields.

On 1 October--32 years ago--a new country free of exploitation and oppression was founded on Chinese soil. That new country proclaimed the end of the enslavement of the Chinese people by old and new colonialists, especially U.S. imperialists, which had lasted for more than 100 years. Millions of commanders and fighters of our army shed their blood and sacrificed their lives for that day.

In the 32 years since the founding of the country our people have travelled a difficult, dangerous and torturous road. In the first 10 years our country scored splendid successes on all fronts. Those successes could be attributed to many causes, but they could not be separated from our vigorous efforts to oppose bureaucratism and extensively promote democracy. Regrettably, the correct policy and successful experience established and accumulated in the first decade of our country was not followed and applied in later days. But more importantly, Comrade Mao Zedong started to enforce the system of excessive centralism and exercised autocratic rule in the name of democratic centralism. He also branded those who opposed bureaucratism as rightists. As a result, the democratic atmosphere became thinner and bureaucratism became more serious. At the end feudal, fascist autocracy ruled the whole party and country, the people suffered from the catastrophe and socialist construction encountered a serious setback.

Since the smashing of the gang of four, no attempt has been made to learn from past mistakes and completely eliminate the remaining influence of bureaucratism. As a result, our country again suffered huge economic losses and paid a tremendous price. Graver still, key leaders of our party and state, especially Comrade Deng Xiaoping, instead of objectively examining the mistakes in line and policy, continue to use the most disgusting practice of the feudal autocratic period and shift the entire responsibility onto Mao Zedong, the gang of four and Comrade Hua Guofeng.

Anyone with some common knowledge of politics knows that the economy will not develop and society will not progress without a sound political system and a correct political line. In the history of China and the world, no politically corrupt country has ever enjoyed economic prosperity.

Although in appearance there is a division of power into three [San Quan Fen Li--0005 2938 0433 4539] at present, the great power of the party, government and army is actually controlled by one person. Although democratic centralism in essence is a pooling of correct views, the criteria of correctness is now decided by one leader. Thus, the majority is now subordinate to the minority and the whole party is subordinate to one person in the party Central Committee. This is like the past when an emperor called a meeting of his officials and made the decision himself at the end of the meeting, saying: "Your views accord with mine." As the numerous serious mistakes committed by our party in the past were the result of such practice by Comrade Mao Zedong, so are the serious mistakes of today in domestic and foreign affairs the result of such practice by Deng Xiaoping, who inherited it from Mao Zedong.

Comrades, the revolutionary predecessors of our party and army founded new China after decades of struggle. The mission for our generation is to establish a prosperous and strong socialist motherland. To fulfill this mission we should foster the revolutionary spirit of our predecessors and wage an uncompromising struggle against bureaucratic and autocratic style.

'HEBEI RIBAO' URGES PROMOTION OF PROVINCIAL WORK

HK010434 Shijiazhuang HEBEI RIBAO in Chinese 1 Sep 81 p 1

[Editorial: "Strengthen Unity, Enhance Revolutionary Vigor, Strive To Do a Good Job of Work in Hebei"]

[Text] In the past 2 years since the publication of the "Resolution on Certain Questions in the History of the Party Since the Founding of the PRC," and with the deep concerns and specific assistance of the party Central Committee, the urban and rural areas throughout Hebei Province have seriously conveyed and implemented the "Resolution." The cadres and masses have been vigorously educated and enlightened, their ideology has been enhanced, and their understanding has unified to a greater extent. The people's mental outlook and attitude toward work have been undergoing profound changes. In order to master to a greater extent the spiritual essence of the "Resolution" and consequently employ it to guide and improve our work in various aspects, we must give play to our party's fine style of integrating theory with practice and link the spirit of the "Resolution" with the actual condition of the localities and the local units. Implementation means integrating the spirit of the "Resolution" with actual practice and solving major problems like a man aiming arrows at his target andnot merely expressing support. In criticizing the wrong style of study of separating theory and practice, Comrade Mao Zedong pointed out: Some comrades only praise the beautiful arrows in their hands, but they are reluctant to shoot them. In studying and implementing the "Resolution," we must abandon and correct this unsavory style of study.

What are the problems that we must solve at present in order to work in close connection with our province's actual condition? The major one is to take the "Resolution" as the weapon, emancipate our minds, continue to criticize leftism, turn chaos into order, strengthen unity and use all this as a basis to construct socialist material and spiritual civilization. This may also be rendered as: unify ideology, strengthen unity, enhance revolutionary vigor and promote production. This is a significant turn in the work of Hebei Province. We have already wasted a few years' precious time since the 3d plenary session of the 11th CCP Central Committee, and we should take the sixth plenary session as a new starting point to rouse ourselves and try hard to catch up. We must effect improvements in various kinds of work and bring changes to the appearance of various aspects.

Continue To Turn Chaos Into Order, Strengthen Revolutionary Unity

The 6th plenary session of the 11th CCP Central Committee went down in history with the achievement in the historical mission of turning chaos into order in the party's guiding ideology and gained the warm support of the broad masses and cadres inside and outside Hebei Province.

In light of the province's situation, we are confronted with the tough task of continuing to turn chaos into order both in our specific work and in our guiding ideology. This is mainly the consequence of historical factors. Our province has lagged behind other provinces and municipalities in turning chaos into order, implementing the policies, readjusting the leadership groups, implementing the party's economic policies, promoting industrial and agricultural production and in other kinds of work because the former responsible person of the provincial CCP Committee who had been practicing, for a long period of time, a series of ultraleftist things, did not become aware of or correct his mistakes after the third plenary session and even boycotted the line, principles and policies formulated since the third plenary session. In addition to this, for a long time we did not understand the seriousness of his mistakes nor did we vigorously criticize and promptly correct them.

However, regarding these problems, we should neither oversimplify them nor worry too much about them. If we oversimplify these problems and cannot realize the scope, the duration and the vicious consequences brought about by leftist influences in our province, our efforts in criticizing leftist errors and turning chaos into order will definitely be weakened. However, on the other hand, we should also see that with the encouragement of the "Resolution" adopted at the sixth plenary session and with the strong desire of the cadres and the masses in turning chaos into order, the explicit principles and policies to solve the problems, the concern and direct assistance of the CCP Central Committee and the unswerving determination of the party committees at all levels, we can resolutely and in a planned way accomplish these tough tasks. We have no reason to worry or to have our confidence shaken.

Regarding the handling of leftover historical problems. The implementation of the policy toward cadres and the redressing of all unjust, false and wrong cases, we should properly deal with them after we have distinguished between right and wrong. Comrade Mao Zedong said: "...In all historical stages of a human society, there are always cases of handling errors in such a way. The number of such cases is particularly great in a class society, and such cases are also unavoidable in a socialist society. They are unavoidable whether in a period of leadership under the correct line or in a period of leadership under the erroneous line. However, there is a difference. In the period under the leadership of the correct line, those cases which have been erroneously dealt with will be reexamined and redressed and these people involved will be given apologies in order to reassure them and make them feel easy. However, these things cannot be done in a period under the leadership of the wrong line. Only those people who represent the correct line can correct the mistakes at the right time and by means of the method of democratic centralism." Therefore, it is necessary to correct our mistakes in dealing with the comrades who have been framed, overcriticized, too severely struggled against, and whose crimes have been wrongly determined whether during or after the "Great Cultural Revolution" or during the movement of cleaning things up after the smashing of the gang of four. People will have to correct mistakes whether they do it now or later.

Even if certain comrades do not correct their mistakes, other comrades will do it for them. In short, it is advantageous to correct the mistakes as early and as quickly as possible. Comrades who have wrongly attacked others must enhance their initiative and awareness and seriously sum up experiences in order to obtain the understanding of the other comrades. On the other hand, comrades who have been framed but then rehabilitated should not keep picking on those who made mistakes, should not put forth unreasonably high demands or be swayed by personal feelings. Now that the "Resolution" has been published and the important question of right and wrong in the party's history has been clarified, people are aware of the historical factors accounting for criticism against each other in the past. There is no need to be particular about one's personal feelings since distrinction between right and wrong has been clarified and everyone is sharp-eyed and clearheaded. We can ask ourselves: others have wrongly criticized me, but have I ever wrongly criticized others? It seems no one can say for sure that he has not wrongly criticized others. Our mental outlook will be improved after considering this question. Once there is a solution to this problem, everything will be easily solved. Therefore, it is necessary to educate our cadres in the idea that all people, whether they have wrongly criticized others or have been wrongly criticized themselves, must enhance their mental outlook, must possess the proletarian realm of thought, proletarian work style and a proletarian breadth of vision. Most of our cadres have been small producers in the past, and despite the number of years since they joined the revolution, they still have the same problem. Their thoughts are not as noble, their proletarian vision is not as broad, and their proletarian work style is not as fine as they should be. Therefore, in the meantime while we are doing a good job of implementing the policies, we must promote ideological work and reeducate the cadres in the proletarian work style. Thus, we can on the one hand solve the problem and on the other hand enable the broad masses of cadres to enhance their ideological state.

Readjusting the leadership groups at all levels is an important aspect of turning chaos into order and eradicating the negative consequences of the "Great Cultural Revolution" and is also a must for building the four modernizations. Thus, we should grasp well and do a good job of it. As far as readjusting the leadership groups is concerned, we should not strive to maintain the status quo in order to avoid disturbances. Similarly, it is also wrong to treat too seriously those comrades who have made mistakes, without carrying out a comprehensive historical analysis. We must adopt a stern attitude and appropriate approaches. We must differentiate various situations and adopt different methods to solve the problems. Some comrades have committed mistakes during the "Great Cultural Revolution" have supported the former principal responsible person of the provincial CCP committe have not thoroughly understood the line and principles of the third plenary session, resulting in discrepancy in personal feelings. These people should sum up past experiences, overcome their own mistakes through education and in actual practice and resolutely support the line, principles and policies formulated since the third plenary session. They should put down their ideological burdens and enhance their revolutionary vigor in order to grasp their work well with a positive attitude. They should not be overcome with regret or be haunted by lingering fear. They should be bold enough to say and uphold what they should say and uphold. We can transfer some of these people retaining their original posts, to different units or areas and let them work for the revolution in different areas. This will benefit both the revolution and the comrades themselves. Regarding the small number of those "three kinds of person" who are still holding leadership posts, we must work in accordance with the policies and regulations to get rid of these people in the leadership groups at all levels. However, these "three kinds of people" will not be handled according to criminal procedures if they have not committed any crime. With regard to those comrades who have been recklessly promoted during the "Great Cultural Revolution," and who have made certain mistakes and who are not well-qualified, or who have gained the support of the masses, they may be transferred to the lower levels to obtain additional education. This method reflects concern and care for these cadres. Although reckless promotions do not always cause great problems, it is advantageous for those who face difficulties in their present job to go down to the lower levels to train themselves. Everyone will be understanding receptive if we do a good job of differentiating the various situations and of clearly stating the reasons. We must still promote more cadres who posses both ability and political integrity and those in the prime of their lives to leadership posts at all levels and actively and in a scheduled way build a team of young, revolutionary, learned and professional cadres. The above-mentioned tasks in readjusting the leadership groups are interrelated. So long as we seriously follow the mass line, we can definitely do a good job of it.

Currently, the major problem that hampers our development is the unsatisfactory situation of unity of the party organizations. Misunderstandings still exist among the cadres and in the policy toward cadres upheld for a long period of time by the former principal responsible person of the provincial CCP committee of ganging up with his supporters and estranging himself from his detractors in order to strike blows at the leading cadres (mainly the veteran cadres), and his faults in denying his errors and refusing to make self-criticism. This situation has already caused great losses to our cause and we must put an end to it. Now that the "Resolution" adopted at the sixth plenary session has provided us with a political basis for unifying our understanding and strengthening unity, and that the CCP Central Committee has actively helped enhance our confidence in promoting unity and eliminating misunderstandings, we should achieve new unity and get rid of all leftover historical misunderstandings. Confronted with the historical mission of building material and spiritual civilization, we must proceed in our work from uniting all the cadres and the masses and lay stress on the party's interests to abandon all personal feelings, eradicate factionalism, enhance our party spirit, be united as one to look ahead and do a good job of work in the province. This complies with what we always say--give consideration to the overall situation. We will never succeed in giving consideration to the overall situation if we are always entwined with the past and always looking back. "Unity of the party and its unity with the people serve as the fundamental guarantee for carrying out socialist modernization and winning a new victory. So long as the whole party is closely united as one and is simultaneously closely united with the masses, the general trend of development will still be increasing prosperity day by day, despite the fact that our party and the socialist cause under the leadership of the party are bound to encounter various difficulties." We can never forget about these sentences published on the "Revolution."

Restore the Party's Fine Work Style, Build Socialist Spiritual Civilization

What is the approach for building spiritual civilization? The most important work at present is to strengthen party leadership over the ideological fronts, overcome the general situation of being lax and feeble, continue to criticize leftist mistakes in the guiding ideology and criticize the trend of bourgeois liberalization. We have already scored great achievements since the third plenary session in rectifying party work style, social mood and social order. However, the situation has not been completely improved. In an early period of time, social order was in a chaotic situation in many places in the province, the people were unhappy and several serious murder cases took place. Since the conclusion of the sixth plenary session, a small number of people have started to fabricate rumors to libel and to create disturbances. However, some of our party members only shut their eyes to these things and adopt an indifferent attitude which we cannot tolerate. All this shows that our party work style is seriously corrupt and that our ideological work is extremely lax and feeble. In light of this, the pressing task now is to solve the problem of being lax and feeble, uphold the four basic principles and maintain political unanimity with the CCP Central Committee.

The most effective method to overcome the state of being lax and feeble is to restore and develop the party's fine traditions and work style and take criticism and self-criticism as the weapon. Criticism and self-criticism is one of the party's three great work styles and is the symbol which differentiates our party from other political parties. Talking about restoring the party's fine work styles, many comrades only remember the work style of seeking truth from facts and forget about the work style of working in close connection with the masses and unfolding criticism and self-criticism. The three work styles of the party are interrelated; seeking truth from facts will be empty if the other two do not exist. Seeking truth from facts will only mean daydreaming if we do not work in connection with the masses. We will not be able to tell right from wrong if there is no criticism and self-criticism. Then how can we talk about seeking truth from facts? Therefore, the three great work styles are inseparable. The objective for unfolding criticism and self-criticism is to uphold the principle of seeking truth from facts. Comrade Mao Zedong always stressed: criticism should be correct but not distorted, and self-criticism should be conscientiously but not perfunctorily launched. We should work in accordance with what Comrade Mao Zedong said. Due to cruel struggles and merciless blows started by the Lin Biao and Jiang Ding counterrevolutionary cliques during the 10 years of upheaval, many cadres and people are still worrying and have a lingering fear. They are afraid of criticism and self-criticism and many of them associate criticisms with sticks. Such a feeling is understandable; however, we should not put an end to criticism and self-criticism because of this. Our party has gained both positive and negative experiences in dealing with this issue in the past decades. On the one hand, negative experiences tell us that we can never again promote indiscriminate and exaggerated struggles and criticisms as during the "Great Cultural Revolution." On the other hand, positive experiences give rise to the party's three great work styles amid long-term struggles. In our party's history, the successful convening of both the Zunyi conference and the "seventh party congress"was the consequence of criticism and self-criticism. Our party has carried out several criticisms and self-criticisms since the smashing of the gang of four. In a certain sense, the sixth plenary session was the greatest criticism and self-criticism ever launched since the founding of the country, and the "Resolution" itself was the most profound self-criticism. So long as we seriously sum up historical experiences and correctly launch criticism and self-criticism, our party will definitely prosper and flourish.

Working in close connection with the masses is in fact one of the party's three great work styles. However, it is regrettable that many comrades have already forgotten about it and some veteran comrades have already abandoned it. One of the reasons accounting for the leftist or rightist errors in our work on many occasion is that we have not done a good job of following the mass line. Many things seem very difficult to handle. But in fact, they can be easily solved so long as we follow the mass line sufficiently. Generally speaking, the majority of cadres are relatively more correct than before. We advocate following the genuine but not the sham mass line. The so-called genuine mass line means relying on the majority of the masses. Whether in implementing the policies, rectifying the work of the leadership groups, handling the "three kinds of people," popularizing the production responsibility systems or carrying out democratic elections, we must rely on the majority of the masses. The "Resolution" adopted at the sixth plenary session serves as evidence of following the mass line since it was written after repeated amendments in accordance with the masses' opinions. In short, we must push forward education in the three great work styles within the party, enabling them to strike root in the hearts of the people and the party in a few years' time. With regard to this problem, we must not merely shout slogans but must initiate actions and work in a practical way in order to score achievements.

Promoting the ideology and work style of our cadres is an important aspect of building spiritual civilization. At present, three major problems exist in the cadres' work: First, transferring and making use of the masses' properties to repair houses; second, getting things done for children and relatives through the back door; third, giving banquets and presents and accepting bribes. In addition to this, some cadres have a lax attitude and are irresponsible in their work, always engaging in personal matters. The masses are very discontented with this, and we must seriously solve these problems. In the article "The Role of the Chinese Communist Party in the National War," Comrade Mao Zedong proposed five methods to care for and protect the cadres, and it merits being studied by the broad masses of cadres. We should care for and protect the cadres, but how? If we do not criticize the errors of the cadres for the sake of caring for and protecting them, then we are in fact doing harm to them and hampering their development in the future. When dealing with cadres who have made mistakes, we must, on the one hand, carry out criticism, and on the other, must not promote exaggerated struggles or stick labels on others, but uphold the principle of "learning from past mistakes to avoid future ones, and curing the sickness to save the patient." However, the problem now is that the cadres are not bold enough to make criticisms whenever mistakes are found. We must promptly correct this kind of unhealthy mood. To promote the work style of cadres, we must particularly stress telling the truth. It is necessary to tell the truth both to the superiors and to the masses, and to resolutely exterminate all lies, exaggerations and empty words. We must also encourage the fine work style of riding bicycles more instead of driving vehicles, going deep into the basic levels and carrying out investigations and research work. Anyone who has been acting as a county CCP committee secretary should visit all production teams in that particular county in 2 years' time, and should be familiar with the location of all the gullies and the channels. Only by knowing how things stand can the leaders exert correct leadership.

We must primarily build spiritual civilization in the urban areas, which are the political and cultural centers. Successful building of spiritual civilization in the urban areas can push forward building of spiritual civilization in the rural areas. It is correct for the urban areas to stress grasping production, but they must simultaneously grasp well building of spiritual civilization, rectify well production order and learning order and social order, promote party work style and social mood and do a good job of public health. We must continuously and irresistibly grasp building spiritual civilization, putting it on the same level with production.

Successful building of spiritual civilization will speed up building of material civilization. Turning spiritual things into material things is the dialectics of things.

Work Efficiently, Enable the Economy To Develop at a Certain Speed

Certain foundations have been laid for development of agriculture, industry and transportation and communications, trade and finance and other fronts in the province since the founding of the state, and the objective conditions have also been satisfactory. However, the achievements we have made are far from eeting the demands of the CCP Central Committee and the people's expectations, and we are lagging behind other provinces and municipalities because leftist mistakes and their influences have not been completely eradicated. In addition, we have not adequately emancipated our minds or advanced with big strides, because we have been hampered by a large number of historical questions and have not been able to concentrate leadership and energy on promoting economic construction or shifting our work focus onto economic construction in accordance with the demands of the third plenary session. In order to do a good job of readjusting the national economy, it is necessary to solve, both in understanding and in actual practice, the following major problems:

1. The economy must develop at a speed which can be attained by means of strenuous efforts. Our comrades only have a one-sided knowledge of balance and readjustment and do not understand what is meant by maintaining a certain speed in readjustment. There are advances and retreats and even new projects in the course of readjustment. We just currently stress the idea of maintaining a certain speed in economic development. If we cannot keep a certain high speed, we will not be able to meet the growing demands of the masses in their daily life. The masses have become richer over the past 2 years and they will be better off this year due to a bumper agricultural harvest. First, if industry, in particular light industry, does not develop at a certain speed, the masses' demands will never be satisfied. Second, financial revenue will be increased if the economy develops steadily; otherwise, it will decrease. Third, without a certain economic growth rate, the enthusiasm of the cadres and the workers will not be aroused. This involves the problem of morale. Unreasonably high or low quotas will dampen the enthusiasm of the masses. The old saying of "the bolder the people in an area, the greater the production" has also been proved wrong in actual practice. But on the other hand, the masses' morale will also be dampened if production is kept to a low level regardless of the capacity. For instance, we are only asked to walk 50 miles a day when actually we can walk 100 miles. When the alarm clock rings in the morning, we say, let us sleep for a while longer since we only have to walk 50 miles after all. In this way, our morale is dampened. Fourth, unreasonably low production quotas do not encourage the people to improve business management, learn management skills or obtain advanced management experience. Moreover, they hinder us from encouraging our broad masses of cadres to improve business management and master advanced science and technology. Fifth, a slow rate of development is bound to affect our antihegemonist struggle in the international situation. The poor and backward situation in our country is disadvantageous to enlightening the people of the Third World and to returning Taiwan to the motherland. In short, the question of the rate of economic development is not only an economic problem but is also a political one. With regard to the problem of the rate of economic development, we must bear the past experiences in mind and uphold seeking truth from facts. We must not encourage high quotas which can never be

attained despite strenuous efforts or promote blind and large-scale capital construction. In other words, we must not encouage high quotas or waste money. Under this premise and with strenuous efforts, it is entirely possible to maintain a certain economic growth rate. We should not feel shameful if we have made much effort and production still lags behind because of poor objective conditions. However, we should take the responsibility if we fail to fulfill production quotas not because of objective conditions but because we have not worked hard enough.

2. It is necessary to explicitly stipulate the objective of production. The objective of socialist production is to incessantly meet the growing demands of the people's material and culture lives. One of the greatest principles guiding our economic work is to consider the interests of the 1 billion people. There will be no prospects in our economic work without considering the interests of the 1 billion people. We must often remember the needs of the masses and give consideration to the needs of the 800 million peasants. For instance, in promoting development of electricity, we must give consideration to meeting the masses' demands in production and daily life. However, ideological problems and problems of work style now exist among those in charge of development of electricity who always neglect the peasants. Take the food industry as another example. It is necessary to consider the masses' health. Some foods are more nutritious and are good for our health. For example, sick people and pregnant women must eat finer dried noodles in order to recover rapidly. What should we do when we know the peasants are well off? We must first encourage consumption; second, encourage them to raise funds to run joint enterprises; third, organize the masses to voluntarily promote public facilities; and fourth, encourage savings. In order to encourage consumption in the urban and rural areas, we must develop production and produce new products. Talking about the proportion of heavy and light industries, it is not always correct to maintain a higher proportion of light industrial development; perhaps we should put it in this way: Production of the means of production must accord with production of the means of subsistence; and it is not always true to say that a higher proportion of light industry over heavy industry means better development. Metallurgical and engineering industries must study the problem of the objective of production and give consideration to the needs of the masses. We do not have abundant production of iron and steel. However, the amount of accumulation is remarkable. The reason for this is that the orientation of production is incorrect. The steel ingots are usually stored in the warehouses after being produced, and production quotas are said to have been fulfilled. Our first requirement in initiating scheduled work is to work in accordance with the masses' needs and meet their growing demands in their material and cultural lives. In planning work in the future, we must work in accordance with the people's needs and give consideration to the "six great categories." The "six categories" are: daily necessities manufacturing industry; textile industry; foodstuffs industry; peasants' means of production, tractors and small farming machines; construction materials and service trades including tourism, guesthouses, barber and repair services. In the course of readjusting the national economy, if we fix our investment orientation and work focus in accordance with the proportions of agriculture, light industry and heavy industry and do a good job of promoting the above-mentioned six categories which are closely related to the people's livelihood, we will be able to achieve a certain speed of development in the course of readjustment and change our backward appearance relatively quickly.

3. We must popularize and push forward the economic responsibility system. The implementation of the agricultural production responsibility system in the previous

2 years has proved that the responsibility system is on the one hand, a good method to integrate rights, obligations and interests and on the other hand, an effective means to motivate the masses' enthusiasm in production and improve the economic effect. Our province has been a bit slow in initiating the agricultural production responsibility system and has not been doing a good job of it. Thus, leaders at all levels must still vigorously push forward the responsibility system of linking remuneration to output. We must continue to criticize leftism and find a solution to the problem of the two trends of letting matters drag on and refusing to do anything about them. Certainly, we must let the cadres and members of the commune choose their own form of responsibility system and should not force them to accept a particular form. We must not encourage doing things in a rigid way regardless of the specific conditions. Every sector and trade must learn the experience of pushing forward the agricultural production responsibility system. All departments including industry, communications and transportation, finance and trade and scientific research units must formulate responsibility systems at all levels from political to economic ones. Cadres of prefectural CCP committees, county CCP committees and party and government organs at all levels must promote responsibility systems in the future. Our experiment in expanding the self-management of industrial enterprises in the previous 2 years is in fact a starting point in reforming business management. However, it is necessary to promote the responsibility system for a long time to come, whether in the 1980's or in the 1990's. The responsibility system sets up criteria for examination which enables us to avoid egalitarianism. As early as at the end of the October Revolution, Lenin put forward the proposal on practicing the responsibility sytem. Our experience in promoting the responsibility system has proved that this idea of Lenin is correct and we must still enrich and develop this idea by making use of our actual practice. Certainly, we are not solely stressing material benefits but must also do ideological and political work well in pushing forward the responsibility system. We must unify and integrate the sense of political responsibility and the economic responsibility system. We must become good workers responsible for management of the socialist businesses, working for both the state and the people and possessing a high sense of political responsibility.

4. We must organize well and lead well socialist modernization, conscientiously sum up experiences and learn to work in accordance with the economic laws. Promoting socialist construction for a period of 30 years, we have achieved successes but have also suffered setbacks and failures. Thus, it is necessary to correctly sum up our experiences in order to avoid blindness. For instance, one of the problems which needs to be looked into is how to give play to our province's superiority. It is suitable to grow cotton in our province, which is an old cotton-producing area, and our peasants are experienced in growing cotton. Our historical cotton-producing area had reached an area of 17 million mu and our cotton production tops other areas in the country. However, our cotton production decreased due to leftist influences during the "Great Cultural Revolution." Although production has risen again in the past 2 years, it is still far from reaching our historical record. We must readjust the overall arrangement of crops, appropriately cultivate more cotton and strive to increase our cotton production to 10 million dan in a few years' time. Once cotton production is increased, there will be raw materials for developing the light and textile industries, the peasants will enjoy more economic benefits, and the cottonseed cake can also be applied as fertilizers to promote the per unit areas yield of grain. Take water conservancy as another example; our province has spent quite a lot of money on water conservancy projects and the effects are

worth summing up. Certain capital construction projects such as water conservancy ones must be semi-compulsory. We will not be able to promote building of the country if we do not pursue labor accumulation.

5. Various departments related to economic construction must incessantly look into the new situation and solve new problems. For instance, we all generally feel that there is insufficient capital for investment, fixing our eyes always on the state's investment. There is in fact a convention. Why can we not be more far-sighted and adopt the method of attracting outside capital (including capital from foreign countries and provinces?) For instance, some people do not know what to do with native products such as honey, walnut, peanuts and sesame which have been produced in excess of quotas and have not been selling well in the local markets. Why do they not try the method of exporting them to other places and processing them? We can export the dried persimmons and jujubes to the southern part in exchange for bananas and tangerines. The method of exporting goods to other places can help avoid panic purchasing and poor sales. It is in fact a good method to protect and stimulate production of native products, and we must not lower the prices of these products capriciously. In addition, we can also develop processing of foodstuffs which can both meet the masses' need and provide more opportunities for sales and increase revenue. As a matter of fact, some agricultural products procuring departments are running at a loss. It is undoubtedly the methods they practice at present that cause losses. Why can they not change and try out some new methods? We do not have to lose money but can gain profits if we process the agricultural products we have procured and carry out advanced processing of them in the big municipalities and then export a certain portion and leave a certain portion for use as raw materials for the industries. This is the orientation and principle of procurement work. One of the reasons accounting for the backward situation of our province's agricultural production is that the area of vegetation is small in the province and the ecological situation is poor. Many deserted hillsides and beaches in our province have not been afforested. As a result of this, all the hillsides and beaches remain deserted and subject to erosion as neither the collective nor the masses have been engaged in afforestation. Why can we not let the commune members mobilize the masses to promote afforestation? The masses in Shahe County were very glad to hear that the county CCP committee was going to distribute deserted beaches to them and declared that the policy would remain unchanged for 3 to 5 years. In fact, they should emancipate their minds more and declare that the policy will remain unchanged for 20 years. Thus, the masses will have the confidence to plant trees there. What we are short of presently are trees and pastures. Thus, we must encourage afforestation in order to benefit the ecological balance and agricultural harvests. All this shows that it is necessary to learn and study the economic laws and learn how to motivate the enthusiasm of the masses in production. Leaders at all levels must be determined to learn economics, management, and techniques and become experts.

Our party in Hebei Province has glorious revolutionary traditions and has made significant contributions in the period of the revolutionary war and socialist construction. In the long course of actual struggle,s our province has some 2.5 million party members and some 700,000 cadres not engaged in production. They have become more intelligent and stronger after undergoing training and tests and having accumulated both positive and negative experiences. We will win a new victory so long as all our party comrades have the same ideology, advance at an identical pace and have high morale to fully motivate the enthusiasm of the 50 million people in the province. All our party comrades, in particular, the leading comrades at all levels, must understand the situation, enhance revolutionary vigor, play exemplary roles, efficiently do a good job of various tasks and write the history of our own deeds which bear no insults to our party and the people. Let us closely unite around the CCP Central Committee to strive for a prosperous future and live up to the expectations of the CCP Central Committee and the masses in the province with unswerving determination and the heroic spirit of arriving at the Great Wall and the Nantianmen before calling outselves true men.

ROLE OF 19TH CENTURY FIGURE ZUO ZONGTANG REEVALUATED

Beijing BEIJING WANBAO in Chinese 18 Aug 81 p 3

[Article by Yang Dongliang [2799 2639 2733]: "Zuo Zongtang Should Not Be Totally Repudiated"]

[Text] Since the founding of the state, no one with any knowledge of modern history has failed to view Zuo Zongtant [1563 1350 2768] as an "executioner." In the past 2 years or so, some comrades have written articles trying to ascertain his patriotic thought, but the discussion is still limited to a few historians.

Speaking calmly, Zuo Zongtang's attitude toward resisting external humiliation was explicit, firm and consistent in an age when our national suffering was extremely serious. Already in the period of the Opium War he admired patriots like Lin Zexu [2651 0463 1776] and Wei Yuan [7614 3293], and declared that "making peace with the barbarians and being self-complacent was not a good long-term plan because wolves cannot be tamed." Confronted with British and French aggression during the Second Opium War, he proposed "to use one brigade to defend Tianjin and then fight to the death." At the outbreak of the Sino-French War, Zuo was again a firm member of the war faction, but he finally died of illness on the Fuzhou front. On his deathbed he still regretted that in his life he had not "extended our punitive expeditions and spread the might of the country." Particularly worthy of praise was his removal of all obstacles and difficulties and his "assumption of the formidable and barren frontier as one's own task." At the end of the 1870's he sent his forces to recover Xinjinag which had been lost for 14 years and thus preserved a large piece of beloved territory for the motherland, performing meritorious service for the Chinese nation.

The war to recover Xinjinag started in July 1876. At that time the situation was critical. Supported by Great Britain and Tsarist Russia in the late 1860's Yakub Beg set up the so-called "Zhe-de-sha-er Khanate" in Xinjiang, plotting to separate Xinjiang from our country. With inherent greed, Tsarist Russia also took advantage of our misfortune and sent troops to occupy the Ili area in July 1871. At this time of the worsening of the national crisis, Zuo Zongtang, who originally planned to retire to his home village, at once indicated that he found it "hard to suddenly lose determination and must fight these barbarians." In 1876, after secret planning, he commanded the attack at the age of 65. With the warm support of all the nationalities in Xinjiang, the Qing forces scored victory after victory and the news of victory kept pouring in. Yakub Beg had no way out and killed himself by poison in Korla. After southern Xinjiang was recovered, Tsarist Russia still wanted to remain in Ili. At the end of May 1880, the old and ailing Zuo Zongtang went through a severely hot summer, travelled with his own coffin and attacked from Jiuquan, swearing that he would fight Tsarist Russia to the death. His love for his country, enthusiasm and devotion moved people. After his death, someone wrote in a eulogy: "Never uttering a single word about making peace, Zuo Wenxiang is the only one in a thousand years." This was not unfounded.

Indeed, the suppression of peasant rebellions was the most inglorious chapter in Zuo Zongtang's life, and there is no need for reticence about this. But never do merit and crime overshadow each other, and it is difficult for historical figures to detach themselves from the life of their times and the class they come from. It can be said that exemplary figures in history who had been part of the feudal ruling class viewed rebellious peasants with an almost unanimous attitude. Even the national heroes who had won universal praise, Yue Fei [1471 7378] and Lin Zexu, were no exceptions. In my opinion, Zuo Zongtang should not be totally repudiated.

SOCIAL SCIENCE WRITERS URGED TO AVOID STILTED STYLE

Beijing BEIJING WANBAO in Chinese 13 Aug 81 p 3

[Article by Li Shulei [2621 2579 4320]: "Oppose the 'Eight-Legged' Style of Writing Articles"]

[Text] In social science articles in our country today there is generally a style of writing structured primarily as follows: part one, part two, part three, arguments, evidence, and conclusion. The language is also more or less the same, dull and uninteresting, mediocre and unsurprising. Even the article titles are stereotyped in the same pattern: "A Discussion on..." or "A Preliminary Discussion on...." This kind of essay looks exactly like a dried up face without the slightest trace of color and is terrifying. Other than those who must read such essays because of their specialized fields, few readers are willing to read them from beginning to end. We might well call this unpleasant style of writing "the eight-legged essays of science."

Some people say that this is science and that this kind of language is scientific. True, scientific language requires a high degree of accuracy, but accuracy is not the antithesis of vividness. "Das Kapital" by Marx is highly scientific, and even an enemy of Marxism cannot fail to recognize that it has indisputable power of logic. But "Das Kapital" does not have the style of the eight-legged essay. What it has includes new and original narration, analogies of form and humor. On one hand the readers are convinced by its discussion and on the other hand they give an understanding smile to the accuracy and wit of the language. The reasoning of Engel's "Anti-Duhring" was also contained in its lively and humorous writing style. Rousseau's "Emile: Or, On Education" is a work of significant value in the history of educational thought. Its style of writing flows like a murmuring stream which speaks with absorbing interest. It is as if the author is chatting with the reader, enabling people to enjoy receiving his ideas. This is truly what people have praised as "a style for everyone."

Science does not exist for articles. On the contrary, articles exist because of science. The aim of a scientific article is to exchange ideas and disseminate truth. Not only must it have a scientific nature but also liveliness, so that people will want to read it. It should be expressed in a form that is fresh and rich in creativity, or else its substance will be stifled by a form that is old. The creation of lively scientific language should be treated as part of scientific creativity. Science workers should give full play to their talents and create a scientific writing style that does not follow only one pattern but one that is rich and varied.

COMPLAINT ON HOUSING DIFFICULTY DISPUTED

Guangzhou NANFANG RIBAO in Chinese 1 Sep 81 p 4

[Article: "Report on a Letter of Criticism"]

[Text] Editor: Recently, the Zhaoqing Municipal Housing Management Company made a written report to the leaders concerned of the Zhaoqing municipal party committee on the long unsolved difficulties of Luo Shuhe [5012 2885 0735], a reader of this paper, who complained to this paper of his long residence in a "pigeonhole," and a copy of the report was sent to this paper as an answer. This "answer" not only lied about the conditions and ignored the people's difficulties, but censured the reader for making criticisms and reporting the situation with such statements as "such reporting was improper, and detrimental to the performance of daily work by the leadership and the organ," and asked the reader's unit to conduct an "education." To clarify the situation, our reporter made an investigation. We are now publishing the reader's "letter," the "answer" and the "investigation report."

Reader's Letter

I am a resident of No 22, Lane 3, Hongqi 1st Road, Zhaoqing city. For more than 10 years, the 9 members of my family have been living in a narrow and damp "pigeonhole."

This tiny residence contains an area of only 16.4 square meters, averaging less than 2 square meters per person. My wife and I live in a room of less than 7 square meters which contains 2 beds forming the letter "T." My 3d daughter, already 23 years old, sleeps in a plank bed at the foot of our bed, and she has to crawl over our bed to reach it. My 11-year old daughter still sleeps in the same bed with us. Three beds are set up every night in the little hall, one each for my mother and son and the third shared by my two daughters.

Without a kitchen in our tiny residence, we had to build a stove outside the door to cook. Like waterlogged beancakes, the floor laid with broken bricks oozes water. The tile roof is completely dilapidated, leaking water everywhere when it rains, just like a water melon shed.

To solve our housing problem, we went to the housing management unit many times, but to no avail. When I went and asked the Eastern District housing management station to repair the house and increase its height and area, they said: "The maintenance expense of the housing management station is limited to 500 yuan, and larger amounts have to be approved by the bureau." When we went to the municipal housing management bureau for help, the answer was: "Housing difficulties are handled by the housing management stations of the districts." In 1977, the responsible person of the Eastern District housing management station informed me: "In regard to your difficulties, we are most sympathetic. If you will only pay all your back rents, the problem can be solved." Thereupon, I sold our two parturient sows and paid all the back rents through the years. It has been 3 years, and my housing problem remains unsolved. In recent years, the Zhaoqing municipal housing management bureau built a group of new residences. Some people have moved time and again, adding flowers to the brocade, while my family is still in the "pigeonhole."

Luo Shuhe
Zhaoqing city

Answer of the Housing Management Unit

Upon investigating the housing difficulties reported to NANFANG RIBAO by Luo Shuhe, a worker of the Second Municipal Machine Tool Plant, we report the situation as follows:

In his letter, Luo Shuhe said that there are nine in his family. Upon investigation and verification, his family has only seven members, husband and wife and five children. Instead of 16.4 square meters as reported by him, the area of his residence, measured on site, consists of 30.1 square meters, averaging 4.3 square meters per person for the 7 members of his family, which is larger than the average area of urban residences. The house has a kitchen, though he stated that there is no kitchen and a stove had to be built outside the door to cook. The floor, laid with whole or half pieces of brick and ladder bricks, is rather damp, but it is not "laid with broken bricks, oozing water like waterlogged beancakes." The tile roof is in fairly good condition, except the water trough in the rear of the house which leaks, but it is not like what he described--"the tile roof is completely dilapidated, leaking water everywhere when it rains, just like a water melon shed." We wonder what he is up to!

Luo Shuhe said: "To solve our housing problem, we went to the housing management unit many times, but to no avail." Actually, we suggested 3 years ago that we would repair the leaks and replace the wooden boards at the entrance with bricks. However, he demanded that it be entirely dismantled and the height increased. Recently, we repeated our suggestion again, but he refused to give in. We are unable, at this time, to satisfy such excessive demands.

In view of the above, such reporting by Luo Shuhe was improper, and detrimental to the performance of daily work by the leadership and the organ. Besides reporting the truth to the higher level, we will contact the Second Machine Tool Plant to have him educated.

Zhaoqing Municipal Housing Management
Company

Investigation Report

In regard to the housing difficulties as reported by Luo Shuhe in his letter, upon investigation, we find the circumstances basically true.

There were nine members in his family. (His mother died 1 month before his letter). Now there are eight, not seven, as stated by the Zhaoqing Municipal Housing Management Company. The whole family is squeezed into a shack. According to our actual measurement, the total area is 25.7 square meters. Besides the area taken up by the sewer, walkway and stove, the actual use area is only 18.3 square meters, averaging 2.3 square meters per person. In a small room of 7.4 square meters partitioned off with rotten wooden boards, there are 2 "T" beds for the couple and 3 daughters. A wardrobe and a sewing machine are in front of the large bed, and one has to walk sideways to get through. Many miscellaneous articles are piled in the little hall, where temporary beds are set up every night for three children.

There is a water trough at the east wall of the Luo house. When it rains, the water from the four houses nearby flows through the trough to the ground surface of Luo Shuhe's house before draining into the sewer. To keep the water out of the house, Luo Shuhe built a small retaining wall alongside the wooden boards. The floor of the house is very damp. We found the walls very wet when we were there. Luo Shuhe built a stove with bricks in the hallway inside the house. It has no chimney. When cooking, black smoke fills the house. A fire was being built when we visited and, the moment we sat down, we found the smoke suffocating.

According to Luo Shuhe's letter, some people in Zhaoqing city moved to new residences time and again in recent years, adding flowers to the brocade. We found the situation to be true. The former housing management bureau chief, for instance, originally lived in a single-family house of three rooms and one hall with an enclosing wall, which was pretty good. However, when the city built a better equipped new dormitory at Baoyuetai last year, he moved there, with the five members of the family occupying a residence of four rooms and one hall, covering an area of 97 square meters. One comrade of the housing management unit, with six members in the family, originally a house with three rooms and one hall, with a kitchen. Last year, the housing management unit helped him build another floor to his house, adding a balcony and an extra room.

Luo Shuhe's report to the leading organs and the party on his housing difficulties and his hopes for solution are entirely legitimate and reasonable. However, instead of rendering help, the Zhaoqing Municipal Housing Management Company found his report "detrimental to the performance of daily work by the leadership and the organ" and asked his unit to "give him an education." We visited the Second Machine Tool Plant where he works. The cadres and staff and workers of the plant were very sympathetic to him and extremely dissatisfied with the attitude of the Municipal Housing Management Company. They said that the plant originally had the responsibility to solve the housing problems of the staff and workers, but it happened that the plant was in the midst of conversion and the difficulties were many; therefore, they were unable to help for the time being. They hoped that the municipal housing management unit would help solve his housing difficulties.

JILIN AGRICULTURAL STUDY GROUP VISITS JAPAN

Beijing BAN YUE TAN [SEMI-MONTHLY TALKS] in Chinese, no 14, 25 Jul 81 p 24

[Article by Zhang Kaixin [1728 7030 2946]: "Wang Enmao [3769 1869 5399] Visits Japan"]

[Text] In October of last year Comrade Wang Enmao, the First Secretary of the Jilin Province Central Committee of the Chinese Communist Party, led the Jilin Provincial Agricultural Study Group on a trip to Japan. His demeanor of strong self-discipline, hard work and simplicity left people with a profound impression.

Although he is nearly 70 years of age Comrade Wang Enmao throughout the visit sincerely made investigations, asked detailed questions and made copious notes. In order that he might fully understand production conditions in Japanese agricultural life he not only exerted himself in the daytime activities but also used the evening hours to visit peasant family homes.

During the visit, Wang Enmao repeatedly told the delegation that China still has economic problems so that they should practice economy in any way possible in order to reduce expenditure of foreign currency. While traveling in Hokkaido one meal eaten by the delegation exhausted that day's food expenses. Comrade Wang Enmao had heard that noodles were the least expensive food so he suggested that they start eating more noodles. The members of the delegation knew that he was from Jiangxi and preferred to eat rice so they wanted him to continue to eat rice. He laughed and said, "For these many years I've been all over China and have become accustomed to eating anything." He set an example by ordering noodles more often and the food expenses were accordingly reduced. As a result of this, while the delegation was in Japan it used only one-third of the funds allocated for food. On on this item alone they saved the country over 410,000 Japanese yen.

In order to reduce expenses Wang Enmao and the comrades of the delegation rode together on busses, frequently used subways and trains and when there were no seats available they all rode standing up.

The original budget for the Jilin Provincial Agricultural Delegation was 12.3 million Japanese yen but they used only 2.78 million Japanese yen, a mere fraction of the original allocation.

Nonetheless, the investigation was conducted entirely to everyone's satisfaction. An article in issue number 12 of the official publication of the Japanese ZHONGGUO GUIHUANZHE YOUHAOHUI--THE CHINA RETURNEES FRIENDSHIP ASSOCIATION praised Wang Enmao and his delegation saying, "The delegation's attitude of enthusiastic study and manner of sincerity and simplicity made a lasting impression on the various reception units and on people from all levels of Japanese life."

BRIEFS

CHENGDU CADRE MEETING--According to a CHENGDU RIBAO report, the Chengdu Municipal CCP Committee held a cadre meeting on 11 September to arrange work to rectify social order. The meeting was presided over by Liu Jingzhou, secretary of the municipal CCP committee, and Mi Jianshu, first secretary of the municipal CCP committee, made a report on the municipality's situation. The meeting demanded that social order be improved in Chengdu within 2 years and that the following problems be solved: 1) Unify understanding and attach importance to social order; 2) assign tasks to districts, counties, streets and communes and brigades in the rural areas; 3) resolutely strike blows at criminals; 4) be strict with the management of social order; 5) strengthen party leadership over legal work. All leaders must personally grasp legal work and do a good job of rectifying social order. [HK281222 Chengdu Sichuan Provincial Service in Mandarin 2300 GMT 12 Sep 81]

BRIEFS

LU XUN CENTENNIAL MEETING--Beijing, 23 Sep (XINHUA)--The Central Committee and the Beijing municipal committee of the China Association for Promoting Democracy held a report meeting on 21 September to mark Lu Xun's centennial. Zhou Jianren, chairman, and Ye Shengtao, Xu Boxin and Lei Jieqiong, vice chairmen, of the Central Committee of the association for promoting democracy, were present at the meeting. Addressing the meeting, Lei Jieqiong said that emulation of Lu Xun today is of profound and realistic significance for combating lax and weak leadership and the bourgeois liberalization trend on the ideological front. Ma Liangchun, director of the modern literature research room of the Literature Institute of the Chinese Academy of Social Sciences, made a report entitled "Lu Xun, a Great Thinker" during the meeting. [Beijing XINHUA Domestic Service in Chinese 1302 GMT 23 Sep 81 OW]

SOCIAL SCIENCE POSTGRADUATES--Beijing, 21 Sep (XINHUA)--A ceremony was held here today to mark the commencement of 438 students who have finished 3 years of postgraduate studies at the Chinese Academy of Social Sciences. They are among the 11,000 who have finished postgraduate studies this year. This is five times the 1980 figure and is close to the total number of postgraduates in the last 30 years. The 102 fields of postgraduate study included law, economics, history, philosophy, literature, journalism and religion. Topics included the banking system of the United States, Soviet industry and planning, maritime law, transformation of the Chinese industrial system, cooperation in agriculture, industry and commerce. Postgraduate studies were stopped during the Cultural Revolution. [Beijing XINHUA in English 0825 GMT 21 Sep 81 OW]

'TA KUNG PAO' ON U.S. ARMS SALES TO TAIWAN

HK190742 Hong Kong TA KUNG PAO in Chinese 19 Sep 81 pp 1, 2

[Article by Chang Yi-chun [4545 0044 0689]: "What Is the U.S. Intention in Selling Arms to Taiwan?"]

[Text] Last month, U.S. Congressman Zablocki and Senator Green successively went to Taiwan to express "assurances about the enforcement of the Taiwan Relations Act," as they planned to sell the FX fighter planes and other weapons to Taiwan. As chairman of the House Foreign Affairs Committee Zablocki was especially open and outrageous in his performance in Taiwan. He never stopped using such appellations as "Republic of China," "president" and "president of the yuan." He claimed that "the PRC has no veto power concerning our (U.S.) talks, relations and trade with the Republic of China." He acted as if the three principles on the establishment of diplomatic relations between China and the United States had never existed, as if the relations between China and the United States had never been normalized, and as if the United States was just a big international boss who could call the tune and make every decision about the internal affairs of the 1 billion Chinese people.

It was reported that recently the United States has frequently been sending out feelers through the news media and other channels to find out Chinese reaction to the U.S. plan to sell arms to Taiwan. In fact, such feelers are superfluous. China takes an unusually clear-cut and resolute stand: There is only one China in the whole world--the People's Republic of China. Taiwan is a province of China. The business between the people on both sides of the strait can be taken care of by the Chinese themselves, and China does not allow crude intervention by any power. It is a prerequisite that all countries which have diplomatic relations with China respect this stand. The United States recognized China's stand in line with the three principles on the establishment of diplomatic relations. Only then were the relations between the two countries normalized. Certain Washington politicians have made a point of wrecking this basis of normalization of relations, clinging to the so-called "Taiwan Relations Act" and clamoring all the time for the sale of new arms to the local regime of Taiwan.

To find a market for these new weapons, they let their imagination run wild. They think that while selling arms to Taiwan, they can sell the same to mainland China, striking a balance and keeping both sides pleased and leaving everyone satisfied. Is it that China needs U.S. arms so badly? After all, why is the attraction of U.S. arms to strong as to make China forget its own territorial sovereignty?

They also think that what China wants to ask of the United States today exceeds what the latter wants to ask of China and that China can do nothing even if the United States plays some tricks. Such narrow-minded pragmatist thinking could not be more wrong. What has China to ask of the United States? Before the normalization of relations between the two countries and even at a time of strained relations when China was subjected to embargo, encirclement and threat, did China not stand towering where it was, growing ever stronger?

Facts in the past 30-plus years show that new China alone has been threatened by others, but it has never been a threat to any other country. Even enlightened people of the United States have also in recent years come to realize the point that only a strong China can help stabilize the situation in Asia and maintain world peace. In the past, the state of abnormal relations between China and the United States was obviously harmful to the United States in every way and did it no good. The two countries later normalized their relations, and, in line with the wishes of the people of the two countries, both sides have had exchanges in many fields, to their mutual benefit. Thus, everyone feels that the relations between China and the United States are to be appreciated. Judging from changes in the current international situation and in light of strategic needs, both sides should only further strengthen their friendly cooperation and should not let their relations be soured. Some wise fools in the United States have befriended Soviet hegemonists. They want to play the "China game." They even want to play the "Taiwan game" with China. China is not a 3-year-old child. How can it be deceived in this way? If people think that China would sacrifice its principles to U.S. strategic needs, they are entirely wrong.

When commenting on U.S. diplomacy, world public opinion often points out its internal differences of opinions, its disorderly ways of doing things and the contradiction between its words and deeds. The United States says it will forcefully check Soviet expansion abroad, but it often acts in exactly the opposite way. For example, in order to oppose the Soviet invasion in Afghanistan, it only restricted grain exports to the Soviet Union. However, even this minor measure was very quickly canceled. Take another example. To carry out its "strategic cooperation" with Israel the United States has not hesitated to set itself against most of the Arab countries, thus in every respect giving the Soviet Union an opportunity that can be exploited to its advantage. Just as its launching of aggressive wars in Korea and Vietnam, by fostering a Zionist Israel, the United States antagonizes enemies everywhere, drains its national strength, all of which was a gross mistake from the start. Now the Soviet Union is becoming stronger and expanding everywhere, so that new conditions have emerged in the international situation, but the United States has not wholly changed its way of doing things. The improvement of Sino-American relations can be regarded as suiting the new situation, but the United States has again slovely left such an ugly tail as "Taiwan Relations Act."

Viewed from the point of view of international law, using a domestic law like the "Taiwan Relations Act" to pound at the international agreement on establishment of Sino-American diplomatic relations is both preposterous and illegal. Since the United States has acknowledged that the PRC is the only legal government representing China, but at the same time it supports the local regime in Taiwan with arms, what standard of internatonal conduct is this? In the past Harry Truman sent the 7th Fleet to protect Taiwan and regarded Taiwan as an "unsinkable U.S. aircraft carrier." It is possible that this mentality has been making mischief in the minds of some U.S. politicians up to this moment. If it should happen that another country comes from afar and turns Hawaii into its "unsinkable aircraft carrier," will the U.S. Government and the public tolerate such an action? If Taiwan is the U.S. "unsinkable aircraft carrier," who is to be the object of its bombings?

Some people in the United States are providing various explanations for its reluctance to give up this "unsinkable aircraft carrier." Certain people say that the United States pay attention to public opinion and quite a few "public opinion polls" show that there are still some American people who do not agree with "abandoning" Taiwan, which is why it is necessary to cook up a "Taiwan Relations Act." However, 1 billion Chinese people, including the people of Taiwan, stand for the early reunification of China. We should like to ask, the public opinion of which side is in the majority? Certain other people say that the arms proposed for sale to Taiwan are defensive ones, which means that they will not be used to attack the Chinese mainland. It is not that China is afraid of the use of this little bit of arms and ammunition. The Chinese people put to route several million troops of Chiang Kai-shek, which were armed with U.S. equipment. What do they care about this little bit of arms and ammunition? The question lies in the fact that the United States is deviating from the principles of establishing Sino-American relations, resuscitating in a disguised way the "mutal defense treaty" between the United States and Chiang Kai-shek and supporting the local Taiwan regime with arms. Even if this is so, who is Taiwan guarding itself against if it needs the defensive weapons? Is it guarding against the Soviet Union or Japan? The Soviet Union has deployed a million troops along the Chinese border. It is first of all the Chinese mainland that has a defensive need. Is not this "defense" of yours aimed at sabotaging our defense?

Still other people say that it is imperative for U.S. monopoly capital to support Taiwan in order to maintain its investment in Taiwan. Even viewed from the interests of these U.S. investors, this kind of colonialist "reason" is also untenable. China indicated long ago that after Taiwan's return to the motherland, several matters would remain unchanged, including foreign investment. Is it not too great a risk not to depend on a country with 1 billion people but to place all the stakes on a local regime? In Shakespeare's the "Merchant of Venice" they only heeded immediate huge profits with the result that they lost their last stakes. It is believed that the astute U.S. investors will not go so far as to want to be modern "merchants of Venice."

In the final analysis, the U.S. determination to implement to so-called "Taiwan Relations Act" and to sell arms and ammunition to Taiwan is nothing but failing to awaken from an old dream to practice "two China's" and to prevent the reunification of China.

The reunification of China is a mighty torrent formed by the situation and the will of the people, which no one can resist. Subjectively speaking, people naturally hope that the friendly relations between China and the United States will be more consolidated and develop with each passing day. But the relations are bilateral, and China can do nothing if the U.S. side wants to get entangled in the Taiwan issue so that the relations between both sides retrogress. Nevertheless, it can be asserted categorically that the United States will be the first to suffer a loss in such a case.

'WEN WEI PO' ON CHINA'S MILITARY EXERCISE

HK280557 Hong Kong WEN WEI PO in Chinese 28 Sep 81 p 1

[Article by Kuan Chien-tzu [9461 6015 1311]: "The Military Exercise Is Aimed at the North, Not at the East"]

[Text] China carried out a large-scale military exercise recently in the north.

It was reported as being held "recently," but when was it exactly? According to foreign reporters, it was about 2 or 3 weeks ago, almost simultaneous with the USSR's military exercise near the Polish border.

As to "where" it was carried out, also according to foreign sources, it was somewhere near Zhangjiakou, about 90 miles northwest of Beijing.

The time and the place, especially the place, of this military exercise are very important. Zhangjiakou, which is 90 miles northwest of Beijing, was selected for this exercise. This means that the exercise was aimed at resisting the aggressors from the north and defending the capital of our great motherland.

As for the time, which was almost the same as that of the Soviet's maneuver, it was quite possibly a coincidence. This is because it would not be possible to prepare, in only a few days or a short time, for such a large-scale military exercise with 100,000 to 200,000 soldiers participating, and in which all arms of the services coordinated in military operations and took concerted actions. In other words, it would take a rather long time for the preparation, possibly 1 year or so, or at least, half a year. Besides, some preliminary exercises were also necessary. So, at the commencement of planning such a military exercise, it would have been hard to predict that the USSR would hold an exercise near the Polish border.

However, in spite of that, to carry out a grand military exercise 90 miles northwest of Beijing, especially a combat exercise with live ammunition, means the aim was clearly to fight aggressors and its resolution is also obvious.

Its significance and nature is the same as that in the launching of three manmade satellites with a rocket recently. That is, to defend the motherland and to repulse aggressors.

This is, however, entirely different from the purpose of the arms expansion and war preparations by Taiwan's KMT authorities.

The purpose of "work behind the enemy's lines on the mainland" done by Bai Wanxiang, their "specialist in mainland work," was to "advance separately and attack concentratedly," and then "regain the mainland." To sum up, it took Beijing as its target and the CCP as its enemy.

After Bai Wanxiang, there is a Zhou Yinglong [Chou Ying-lung]. This is not the historical figure Zhou Yinglong who struck Yan Song, but director of the association of cultural work of the KMT Central Committee. Though "cultural" in name, it is "military" in reality. For example, he said: "What is our common target in Taiwan, Penghu, Jinmen and Mazu, the bases for regaining the mainland?" "It is to build Taiwan and to regain the mainland."

"He [quotation marks as published] pointed out, the late President Chiang and former U.S. Secretary of State Dulles issued a joint statement which said: The motive for the ROC to regain the mainland is just to practice the three people's principles, and armed force alone should not be used to achieve this. President Chiang stressed the importance to 30 percent military force and 70 percent political work, and 30 percent direct operations and 70 percent indirect political line activities. We must follow President Chiang's teachings and realize the great goal of regaining and building the country."

As I remember, the joint statement of Dulles and Chiang Kai-shek was issued in 1958. The KMT has always borne it in mind. However, the "teachings" that should be "followed" are not only those of the "revered Chiang," but also of the "revered Dulles," because, they were in a joint statement by both Chiang and Dulles. Although, in Chinese translation, Dulles has a surname of "Du," he does not belong to China. He was the secretary of state in the United States. A KMT paper in Hong Kong once said, all foreign things are evil things. Therefore, I am not quite clear whether it is just or wrong to "regain the mainland" using the "30 percent military action" referred to in that joint statement.

Now every military action taken by the CCP aims at the struggle against hegemonism and foreign aggression; on the other hand, every action taken by the KMT aims at home, getting ready to fight a battle on the mainland.

It is better to go back to following this advice: "We are all Chinese. And the best of the 36 strategems is making peace."

'WEN WEI PO' URGES TAIWAN REUNIFICATION

HK040539 Hong Kong WEN WEI PO in Chinese 4 Oct 81 p 1

[Newsletter by Li Tzu-sung: "Listen With Joy to Beijing Proposals; More Straight Talk for Taipei"]

[Text] On the eve of National Day, Beijing once again showed its friendship for Taipei. Chairman Ye issued a statement and put forth a nine-point proposal. He proposed that the Kuomintang and the Chinese Communist Party hold talks on a reciprocal basis and carry out their third cooperation, to accomplish the great task of reunification. I listen with joy to such proposals and write this article to support the statement and once again offer my earnest advice to Taipei. [Editor's note: The author of this article published an article on 29 September entitled "My Earnest Advice for the Kuomintang in Taiwan"]

The Kuomintang and the Chinese Communist Party cooperated and split twice in the past. The first cooperation promoted the smooth progress of the north expedition and the second ensured the final victory of the anti-Japanese war. The splits on the two occasions harmed our country and were an invitation to foreign invaders. Cooperation was beneficial to our country, whereas splits harmed our nation. Are not all these still fresh in our minds?

When a large enemy force of a powerful neighboring country in the north is bearing down upon the border, if the Kuomintang and the Chinese Communist Party fail to abandon their former hatred and to foster cordial relations and cooperate again, they will not go against the old sayings "when brothers are at odds, outsiders will take advantage to insult the family," but also fail to realize the desire of millions upon millions of our compatriots who earnestly hope that China will be peacefully reunited and that the Chinese nation will prosper. The leaders of the Chinese Communist Party realize the importance of this matter and have time and again proposed peace talks and the practice of the "three communications." It was a pity that their proposals were rejected by the Kuomintang authorities. The proposals raised by Chairman Ye this time are more specific and explicit and imbued with a spirit of broadmindedness and lenience. Therefore, once the proposals were raised, they were welcomed by people from various quarters.

The Chinese Communist Party will trade members of the Kuomintang on an equal footing and maintain the status quo of Taiwan. Once the nation is unified, Taiwan will be allowed to establish a special administrative zone which enjoys a high degree of autonomy and keeps its armed forces. Taiwan's economic system, way of life and economic relations with foreign countries will remain unchanged. The central government will not interfere in Taiwan's local affairs. People from the Taiwan authorities and people whose ancestral home is Taiwan may hold leading posts in the central government. All this is evidently different from the way the Kuomintang treated the communists when the two parties carried out their second cooperation.

Therefore, there is no reason for the Kuomintang to refuse to conscientiously consider and positively respond to the nine-point proposal for the benefit of the public and individuals as well as the party and the nation.

However, to our regret, the Kuomintang authorities rashly rejected the proposals without serious consideration. When dealing with this matter, why were they swayed by personal feelings?

Leaders of the Kuomintang might probably think that peace talks will "make them suffer." At present, the Kuomintang leaders can still take advantage of the turbulent international situation to survive. Why should they accept the peace talk proposals? They also think that with the help of foreign forces, they can wait for an opportunity to launch a "counterattack" and "recover the mainland," so why should they take part in peace talks. All these are actually unrealistic notions. The present situation will never permit some people to turn Taiwan into an "unsinkable aircraft carrier." In the meantime, do we believe that the historical event "the Huihe nationality helped the Tang dynasty without taking its own interests into account" will reoccur today, 1,000 years after the event?

Once foreign forces invade China, they will attack both the mainland and Taiwan. The broad masses of people in the mainland can resist the invaders everywhere. Taiwan is isolated and located in the sea. Can it defend itself by entirely relying on its own efforts? If Taiwan is unfortunately occupied by the enemy, the leaders of the Kuomintang will not have any "retreat" and will eventually become criminals in history who ruin the territory of the motherland.

If the Taiwan authorities truly accept the peace talk proposals and promote the reunification, defense and foreign affairs will be planned by the central government as a whole. The Kuomintang leaders working in the central government can also take part in formulating the plans. Under such circumstances, foreign careerists will not be able to meddle in Taiwan's internal affairs. It will be difficult for the "Taiwan independence" elements to carry out their activities. Natural resources such as oil, coal and other minerals which Taiwan needs for its own construction will be supplied by the mainland. There is no need for Taiwan to seek help from distant foreign countries. If Taiwan has any financial difficulties, it will also be subsizied by the central government. As a result of this, Taiwan will truly have hopes and bright prospects. Otherwise, it will always seek help from foreign countries and be slavishly dependent on and controlled by others. There will be no end of trouble for the future.

"Blood is thicker than water." We are all flesh and blood and the descendants of the yellow emperor. Why should we not end our enstrangement and help each other to overcome difficulties? Did the leaders of the Kuomintang not say: "The problems of the Chinese should be solved by the Chinese themselves?" Why should they not put the problems on the conference table? The Kuomintang leaders also said that the mainland should learn from Taiwan in "economic affairs." Why should they oppose the "three communications?" If they oppose exchange, how is it possible for the mainland to "learn from Taiwan?"

The Kuomintang leaders only say that the three people's principles are good and communism is bad. However, Dr Sun Yat-sen favored communism and refuted anticommunist speeches and views. If the Kuomintang intends to evaluate the advantages and disadvantages of certain doctrines on the conference table, I believe that they will be allowed to do so. However, we should neither distort the three people's principles nor vilify communism. The theory of colonialist economy should never be regarded as the content of the three people's principles. This is a matter which merits the attention of those who support the three people's principles. Truth becomes clearer through debate. Why should we not sit together and calmly present the facts and reason things out?

The Kuomintang leaders should patiently listen to Chairman Ye's invaluable advice. He said: I hope that the Kuomintang will abandon former hatred and work hand in hand with us to jointly accomplish the great task of reunification and realize the plan of vigorously promoting the prosperity of the Chinese nation. To bring honor to our ancestors and happiness to our future generations, I believe that if Mr Chiang Ching-kuo is willing to reconsider Chairman Ye's speech and cherish the memory of the 1911 revolution led by Mr Sun Yat-sen and the merits and achievements of our martyrs, he will eventually realize the importance of the matter and courageously join the great task of realizing reunification.

I predict that the day will soon come when we can listen again to the songs sung during the anti-Japanese war:

"The Kuomintang and the communist party are fighting on the same front to contribute all their efforts...."

Let us sing for the unity of the whole people and the reunifciation of the entire nation, and contribute all our efforts!

'WEN WEI PO' PRAISES COMPATRIOTS' EFFORTS ON REUNIFICATION

HK040702 Hong Kong WEN WEI PO in Chinese 4 Oct 81 p 2

[Editorial: "Make Contributions to the Peaceful Reunification--Beijing Highly Praises Contributions Made by Hong Kong Macao Compatriots"]

[Text] After Chairman Ye Jianying put forth the nine-point proposal concerning the return of Taiwan to the motherland, at the National Day reception held in Beijing, Premier Zhao Zhiyang again called on the Taiwan authorities to value the national interest above everything else and carry out the third cooperation between the Kuomintang and the communist party.

Beijing has placed great hopes on the efforts exerted by Hong Kong and Macao compatriots in the reunification of our country. When proposing a toast at the reception, Zhao Zhiyang highly praised the contributions made by Hong Kong and Macao compatriots and overseas Chinese to the nation over the past half century. He said: "This year we shall mark the 70th anniversary of the 1911 revolution. Our compatriots in Hong Kong and Macao and overseas Chinese made contributions to the 1911 revolution. Over the past 70 years they have also made contributions to the revolutionary cause of the Chinese people, to the founding of the People's Republic of China and to the socialist construction of the motherland. I wish to express our sincere thanks to them for all this."

During the 1911 revolution, the strikes held in Guangdong Province and Hong Kong, the war of resistance against Japan, the founding of new China and various periods of socialist construction, compatriots in Hong Kong and Macao and overseas Chinese held high the banner of patriotism and did some beneficial work for the vigorous promotion of the prosperity of the Chinese nation and the progress of hisotry. Over a long time in the past, Hong Kong was a place where people with lofty ideals and ardent young people carried out various patriotic activities.

Sun Yat-sen, Soong Ching Ling and Zhou Enali pursued patriotic activities in Hong Kong in their early years. In the 1980's, Hong Kong compatriots are shouldering the great historical task of the return of Taiwan to the motherland. Hong Kong will play the role of a bridge which links the mainland with China. So long as Hong Kong compatriots and overseas Chinese work with one heart and one mind and do more work to promote the peace talks between the Kuomintang and the communist party and their third cooperation, they will write a new and patriotic page in the history of the reunification of the motherland.

At present, Hong Kong has established frequent economic, cultural and sports relations with Taiwan and with the mainland. A great number of Hong Kong compatriots have friends and relatives living in the mainland and Taiwan. Although it is difficult for Taiwan compatriots to get visas to visit the mainland for the time being, it is convenient for them to come to Hong Kong. Family letters between people in the mainland and Taiwan can be transferred by their friends and relatives in Hong Kong. Unofficial entrepot trade between Taiwan and the mainland has increased year by year. In this respect, Hong Kong has played a part of transfer post.

Beijing hopes that Taiwan will return to the motherland so as to accomplish the great task of reunification. This is a firm and unremitting policy. While talking with foreign guests, Deng Xiaoping pointed out: Beijing does not expect that after hearing Ye Jianying's nine-point proposals, the Taiwan authorities will immediately express their desire for peace talks. Before the peace talks, Beijing will exercise patience and let people of all walks of life in Taiwan understand the mainland more thoroughly. In so doing, the two sides will clear up their misunderstanding and doubts.

Taiwan and the mainland have been separated for 32 years because of hostility. We are all Chinese. Why should we not be tolerant and understand each other and remove our previous misunderstandings and misgivings? Hong Kong compatriots should do their best to do more work beneficial to peaceful reunification, promote understanding between the two sides and create the friendly and relaxed atmosphere needed on the eve of the peace talks between the Kuomintang and the communist party. They can also make contributions to enhancing national feelings on both sides of the straits and promoting the "three communications."

The Soviet Union has deployed more than a million troops in the north, and Vietnam, the small hegemonist, is coveting the Xisha and Nansha islands of China. If the Kuomintang and the communist party split, foreign enemies take advantage of this weak point. As long as they work hand in hand, the country will prosper and be strong enough to curb the ambition of the hegemonists. Therefore, the efforts of the Hong Kong compatriots in the task of peaceful reunification will be beneficial not only to our country and nation, but also to peace and stability in the Far East and to industry and commerce in Hong Kong itself.

'WEN WEI PO' ON TAIWAN'S REUNIFICATIONS

HK270315 Hong Kong WEN WEI PO in Chinese 27 Sep 81 p 1

[Article by Kuan Chien-tzu: "Does the World See and Hear? The Chinese See and Hear!"]

[Text] It is interesting that the Taiwan authorities attach importance to "what the world sees and hears," and are mortally afraid of "confusing public opinion."

Sun Yun-hsuan, president of Taiwan's executive branch, stated his view in this respect: "The Chinese Communist Party has tried, by hook or by crook, on several occasions to implement the policy of the united front toward us. Its aim is nothing more than confusing public opinion and sabotaging the unity of our compatriots both at home and abroad."

When answering questions raised by correspondents, Liu Ta-jen, "spokesman of the Taiwan Foreign Ministry," said: The purpose of the Chinese Communist Party in commemorating the 1911 revolution "is to scheme against us and confuse foreign personages."

Not long ago, Taiwan officials such as Sung Chu-yu and Pai Wan-hsiang also sang the same tune.

Their sterotyped expressions are nothing but "world opinion" and "foreign personages." However, they forget that the Chinese see and hear.

I cannot but ask: Why are you so afraid of "world opinion" but so indifferent to public opinion at home? Why do you only concern yourselves with what foreigners see and hear, but turn a deaf ear to what the Chinese see and hear? Actually, we can exist without foreigners, but we cannot live without our compatriots.

Have the Taiwan authorities established so many "international relations?" No, not at all. What is really meant by "public opinion" or linked to their existence is probably no more than the United States, because it has formulated the "Taiwan relations act." This "Taiwan relations act" was unilaterally worked out by the United States and imposed on China's territory--Taiwan. This is a favor bestowed on the Kuomintang, which means that the United States and Taiwan are still emotionally attached to each other. Their present deal includes selling some weapons, doing some business and private intercourse and so forth.

When Reagan came to power, he made a big fuss about the "Taiwan relations act" and chanted it again and again. The Kuomintang was particularly happy about this and placed "great hope" in the Reagan Administration. As a result, the 12th congress of the Kuomintang heaped abuse on the "three communications" and scolded "peace talks and cooperation between the Kuomintang and the Chinese Communist Party." In so doing, the Kuomintang has tried to "favorably affect" U.S. "public opinion" so that the "Americans can know what's what" and rest assured.

The reason why the Kuomintang has repeatedly accused the Chinese Communist Party of "confusing world opinion" is to assure the Americans that it will not waver. Therefore, it has to assert its sincerity.

Actually, the Chinese Communist Party has only raised the proposal of peace talks and has never said that the Kuomintang has accepted the proposal or that there is any intercourse between the two sides. The Chinese Communist Party is always open and aboveboard in its words and deeds. Why should the Kuomintang be so surprised or alarmed?

However, we have paid attention to a matter that the Taiwan authorities have not yet commented on, "joint leadership." We have not heard any vicious slander in "President Sun's speech" and Liu Ta-jen's statement issued yesterday. What they have done in this respect so far is in accord with what the Chinese see and hear. A few days ago, we offered a piece of advice to the Taiwan authorities, asking them to wait for overall plans worked out by Beijing. This is in the interest of the Taiwan authorities. According to reports issued by foreign news agencies in Beijing yesterday, diplomats in the Chinese capital have been informed that Beijing will make an important announcement on 9 October. Diplomatic sources guess that the announcement must be connected with the overall plans for "peace talks and cooperation between the Kuomintang and the Chinese Communist Party." This matter is closely connected with the opinion of 1 billion Chinese in the mainland and Taiwan and millions of overseas Chinese abroad. The Taiwan authorities should on no account regard this matter as unimportant.

Before Beijing makes this important announcement, if the Taiwan authorities intend to cater to the opinion of the Americans by uttering refutations or asserting their sincerity, they are allowed to sing the old tunes such as "using the three people's principles to unify China" or "exposing the communist peaceful offensive and united front plot" to "make up the number" or fob the Americans off. We have got used to hearing this old tune and will not blame you for it.

GUANGDONG CRACKS TAIWAN SPECIAL AGENT CASES

HK200237 Hong Kong WEN WEI PO in Chinese 20 Sep 81 p 1

[Report: "Guangzhou Cracks Many Taiwan Special Agent Cases"]

[Text] Guangzhou, 19 Sep--Public security organs in Guangdong Province have recently cracked many Kuomintang special agent cases, and a number of special agents sent by the secret service and spies recruited in China have been caught one after another and dealt with according to law.

To sabotage the four modernizations in Mainland China and obstruct the great cause of reunification of Taiwan and the motherland, the Taiwan Kuomintang Secret Service has continued this year to send spies to the mainland through various channels and by every means to carry out various kinds of sabotage activities. Instigated and lured by the Kuomintang Secret Service, Lin Guochuan (his ancestral home is Chaoyang) recruited Lin Shuli, Huang Xiongxi and Chen Zhenlong into the spy organization. They time and again sent intelligence, written in invisible ink, to the secret service and accepted funds for carrying out their activities. Lin Guochuan was appointed head of the transport corps and a deputy to the "Kuomintang 12th congress." Last last March, he tried to escape to Hong Kong and then go over to Taiwan. His criminal case was investigated and verified by Chaoyang public security bureau and he was arrested and dealt with according to law in early April.

The Kuomintang Secret Service has also resorted to coercion and blandishment to recruit people who escaped to Hong Kong and Macao into the spy organizations, and has even released criminals in Taiwan and sent them to the mainland. Zhang Lan, a spy sent to China, was formerly imprisoned in Taiwan for robbery and larceny. When he was serving the sentence, he was recruited by the Kuomintang Secret Service into the spy organization. After training, he slipped into Hong Kong from Taiwan under the escort of a spy in mid-June. Disguising himself as a Hong Kong compatriot, he slipped into Guangzhou, Hunan and other places to establish relations with other people by means of giving dinners and sending expensive gifts. In so doing, he tried to hold his ground, lie low for a long time, expand his spy organizations, collect intelligence and establish armed guerrilla bases. Early April, after careful investigations, the public security bureau of Guangzhou Municipality arrested him according to law.

Awed by the power of the people's democratic dictatorship and influenced by the policy of the people's government, some spies have surrendered of their own accord.

Ye Zuoshuang, a former member of Shanghu Commune of Lufeng County, escaped to Hong Kong in January last year. After joining the Kuomintang Secret Service, he mingled with illegal immigrants to be repatriated to China by the British authorities in Hong Kong and was sent back to his ancestral home. He repeatedly sent intelligence on the mainland's political and military affairs to the secret service. In early July, he surrendered himself to the public security organ of Lufeng County of his own accord, and was dealt with leniently by the government.

'WEN WEI PO' CARRIES SPECIAL FEATURE TO KMT

HK290940 Hong Kong WEN WEI PO in Chinese 29 Sep 81 p 1

[Special Feature by Li Tzu-sung [2621 1311 6139]: "Sincere, Straight Talk to the Kuomintang in Taiwan"]

[Text] It will be the 70th anniversary of the 1911 revolution 10 days from now. People at home and abroad, on the mainland and in Taiwan, will all hold ceremonies to solemnly mark the occasion. This shows that Dr Sun Yat-sen's merits in leading the 1911 revolution are universally revered. All compatriots and overseas Chinese--descendants of Huang Di--echo each other and share the same desire. This promises unity and prosperity. Being a veteran journalist and a member of the Kuomintang Revolutionary Committee, [Editor: The author is a member of the Central Committee of the Kuomintang Revolutionary Committee and a member of the national CPPCC.] I would like to take this opportunity to offer a sincere, straight talk to the KMT in Taiwan on the question of peaceful reunification.

Peaceful reunification is indeed a major task today. It is the trend of the times and the desire of the people. No one can stop it and no once can go against it. Therefore, when the Taiwan authorities persist in rejecting peaceful reunification, repeating the "three no's," they in fact are thrown off balance and are unable to hold their own. Some public figures are singing all by themselves the song of "unifying China with the three people's principles." They little imagine that this has given them away. Since the KMT rightists who have been in power until now, they have never practiced the three people's principles either on the mainland or in Taiwan. [Sentenced as received] Since they have been in Taiwan, they have been relying upon foreign strength to maintain a separatist rule. This goes diametrically against nationalism. The Taiwan authorities are boasting that they have done a good job in economy because they have put the three people's principles into effect. Nevertheless, the economy in Hong Kong and Singapore is not bad either. May we ask what kind of principles have been practiced there? I am afraid no answer can be given by them.

On the other hand, the CCP on the mainland has indeed "struggled to thoroughly realize the three people's principles." Dr Sun Yat-sen's great ideals have all been realized. Although a detour to a certain extent has been traversed in the course of building socialism, a foundation has been built for construction, and the four modernizations are underway. The prestige of China is ever increasing. This is recognized by the whole world.

If KMT public figures think that they can stop the criticism and comments of millions of people and achieve the effects of a "psychological war" by paying lip service to the three people's principles and by abusing communism, they are indeed blind to the situation and are employing poor tactics!

Here I venture to offer them a suggestion. The best thing for the KMT to do is to unify its will and actions on the basis of the three people's principles in order to realize Premier Sun's aspirations and to realize his hope of striving for peaceful reunification expressed when he went to Beijing.

It is strange that for decades the KMT rulers have been publishing big volumes of "The Collected Works of Premier Sun Yat-sen," "The Collected Works of Sun Yat-sen" and "The Collected Works of the National Father" as well as works on Sun Yat-sen's principles. A commemoration week has also been held year after year and the "premier's will" has been repeated thousands of times. We can understand a person by reading his books. Superficially, they are indeed extremely diligent and respectful! But in fact, an entirely different result has turned out. Are they not attentive in reading these books so that what they have read disappears like water flowing down a duck's back? Or are they unable to profit from what they have read because they have read something which they do not agree?

Dr Sun Yat-sen once solemnly stated: The KMT should not oppose the CCP and should not oppose communism. He said, "Because many comrades oppose the CCP, they have gone so far as to say that communism is different from the three people's principles and that it is enough to practice the three people's principles in China and communism is intolerable." He frankly held, "the principle of the people's livelihood is communism and is socialism." "...Communism and the principle of the people's livelihood do not conflict at all and they are compatible at that." He went on to ask, "Since communism is compatible with the principle of the people's livelihood. why do KMT members oppose the CCP?" The aforesaid quotations can be found in "The Second Talk on the Principle of the People's Livelihood." KMT members should always keep them in mind.

However, though the speaker talked with great earnest, the audience paid little attention. The KMT rightists had never listened to Premier Sun's admonitions and obstinately opposed the CCP and communism. Today, they brazenly demanded that the CCP abolish communism. Can such KMT members be considered as apostles of Premier Sun and apostles of the three people's principles?

Not long after Dr Sun Yat-sen passed away, the KMT issued the "Declaration on Accepting the Premier's Will," expressing: We are ready to struggle for national equality and the independence of the country in order to realize the premier's aspirations. We are also ready to integrate sincerely with comrades who accept the premier's principles and policies and make common efforts in revolutionary construction. When their words were still ringing in people's ears and in the course of the northern expedition, the KMT no longer wanted any "sincere integration" but went so far as to spare none of its good friends fighting on the same front--the CCP!

The responsibility of the split between the KMT and the CCP on two occasions did not lie with the CCP but with the KMT. In the past, they made pledges before the premier's portrait but late they went back on their words. They are indeed inconsistent!

Facts have proved that KMT-CCP cooperation is in the interest of the nation whereas a split is harmful to it. Today, the Soviet Union has deployed a million troops along our border and confrontation between the two sides of the Taiwan strait still remains. If this goes on, the security of the country is endangered and the construction of the country is greatly hampered. How can we then resist foreign aggression and make our country prosper together?! This is the reason why a CCP leader hopes that peaceful reunification can be realized at an early date. He expressed that the two parties could lead together. His sincerity in discussing national issues and his open-mindedness are similar to Dr Sun Yat-sen's manner and aspiration.

In those days, Dr Sun Yat-sen proposed convening a national assembly in order to abolish the unequal treaties and to promote peaceful reunification. If KMT public figures sincerely and seriously review the premier's will, they will wake up to reality and will put the national cause before other things and have the people's desire in mind.

Let bygones be bygones and act more wisely in the future. It is not yet too late for Mr Chiang Ching-kuo to make a change. It seems that conditions for a third KMT-CCP cooperation and peaceful reunification will soon ripen!

Do not let such a golden opportunity slip by!

REPORTAGE ON CHEN WEN-CHEN'S DEATH

'XINHUA' Cites 'UPI'

OW261300 Beijing XINHUA in English 1238 GMT 26 Sep 81

[Text] Beijing, 26 September (XINHUA)--The death of Chen Wen-chen, professor of Carnegie-Mellon University, in Taiwan was found to be a homicide, according to UPI report quoting findings by a U.S. forensic pathologist and a professor after a trip to Taiwan recently.

Speaking to reporters on the Carnegie-Mellon University campus Thursday just hours after arriving back in Pittsburgh from a trip to Taipei, Allegheny County Commissioner Cyril Wecht, a former county coroner and current county democratic party chairman, said, "I can say without any equivocation whatsoever that I have no doubt that this was not a suicide."

Morris Degroot, Chen's colleague in the university's statistics department who went to Taipei with Wecht, said to reporters that "no one we talked to believed Chen committed suicide. No one offered a plausible explanation for an accidental death.... It is our belief that Dr Chen's death was murder."

Present at the press conference was President Richard Cyert of Carnegie-Mellon University who arranged for the university to finance the trip.

Wecht performed a second autopsy on Chen's body while in Taiwan. He said he believed the body landed too close to the base of the library building for it to have been suicide. Chen did not have the kind of injuries on his hands, feet, arms, legs and head usually suffered by people who jump from high places, he added.

Chen "could have been held in a lateral position and dropped" to the ground, he said.

Wecht said his findings on the physical evidence did not vary from anything found by the Taiwanese coroner who performed the first autopsy. However, he said, their conclusions were not the same.

Degroot said he found on the trip nothing to dispel his belief that "some parts of the (Taiwanese) Government might be involved in his (Chen's) death."

Taiwan Compatriots Express 'Indignation'

OW300055 Beijing XINHUA Domestic Service in Chinese 1434 GMT 29 Sep 81

[Text] Beijing, 29 Sep (XINHUA)--All members attending the preparatory committee meeting of the National Taiwan Compatriots Association expressed extreme indignation over the Taiwan authorities' still trying to conceal the truth about the Chen Wen-cheng case. They also expressed deep sympathy with and sent best regards to innocent victim Chen Wen-cheng's family and voiced resolute support of the Taiwan compatriots residing in the United States, in their just action protesting the Taiwan authorities' secret agents carrying out persecution activities on U.S. campuses.

All members of the preparatory committee for the National Taiwan Compatriots Association strongly demanded that the Taiwan authorities make a responsible explanation of Chen Wen-cheng's death as soon as possible and that they resolutely guard against the occurence of similar incidents and ensure the democratic rights and safety of those Taiwan compatriots who have returned to Taiwan to visit their relatives.

YE JIANYING STATEMENT ON REUNIFICATION SUPPORTED

Trade Union Leaders

OW021534 Beijing XINHUA in English 1523 GMT 2 Oct 81

[Text] Beijing, 2 October (XINHUA)--Leaders of the all-China Federation of Trade Unions expressed their support of Chairman Ye Jianying's nine-point statement on the peaceful return of Taiwan to the motherland and pledged to mobilize the workers throughout the country to unite for the reunification. The support was voiced at a meeting now in session of the federation's executive committee.

Zhu Xuefan, vice-president of the federation said Chairman Ye had officially proposed that the Chinese Communist Party and the Kuomintang should cooperate for the third time to realize the reunification of the motherland.

"This is very reasonable," he said, "cooperation between the Kuomintang and the communist party was initiated by Dr Sun Yat-sen." He hoped men of insight among the Taiwan authorities and also Chiang Ching-kuo will positively respond and do their share in accomplishing the great cause of reunification of the motherland.

Wang Chonglun, a national model worker and also vice-president of the federation said Chairman Ye's statement has voiced the workers' innermost feelings.

"We hope the workers and staffs in Taiwan will respond positively so as to contribute to the reunification of the motherland," he said, "we welcome the workers in Taiwan to come to the mainland for sightseeing or to visit their relatives. We also welcome them to make proposals and suggestions regarding the affairs of the state through various channels and in various ways."

Lu Wen, president of the national committee of the postal and telecommunications workers' trade union, said, "relatives separated by Taiwan straits have missed each other for several decades." He said there should be an end to the mail embargo between Taiwan and the mainland. He said the postal and telecommunications workers on the mainland are longing to send family letters to the people of various nationalities in Taiwan.

Taiwan Compatriots

OW010545 Beijing XINHUA Domestic Service in Chinese 1637 GMT 30 Sep 81

[Text] Beijing, 30 Sep (XINHUA)--Today, immediately after hearing the broadcast of the statement made by Ye Jianying, chairman of the NPC Standing Committee, in an interview with XINHUA, members of the preparatory committee for the National Taiwan Compatriot Friendship Association gathered for a discussion of the statement, vying to voice their wholehearted support for the policy as further explained by Chairman Ye concerning the return of Taiwan to the motherland for the realization of China's peaceful reunification. They pledged to hold the banner of patriotism high and to contribute their share to the great cause of reunifying the motherland.

Lin Liyun, member of the NPC Standing Committee and chairman of the preparatory committee for the National Taiwan Compatriot Friendship Association, said: Chairman Ye's statement fully shows the sincerity of the CCP and the government of the motherland in solving the Taiwan issue peacefully and their full respect for the wishes of compatriots of all nationalities in Taiwan. Deeply inspired, we Taiwanese compatriots living in the motherland are determined to unite with people of all nationalities and of all cricles in Taiwan and strive to end the unfortunate separation of the Chinese nation as soon as possible and to realize Taiwan's return to the motherland at an early date.

Lin Chaoquan [2651 2600 2938], vice chairman of the preparatory committee for the National Taiwan Compatriot Friendship Association and a veteran Taiwanese athlete who is now 75 years old, said: It has been more than 30 years since I left Taiwan. I miss my relatives, friends and colleagues in Taiwan day and night. I believe that Chairman Ye's statement will surely play an immense role in promoting the early realization of the exchange of mail, trade and air and shipping services, as well as academic, cultural and sports exchanges between the two sides of the Taiwan straits. I constantly look forward to seeing my colleagues in Taiwan's sports circles exchange visits with athletes in the motherland and my relatives and friends come to visit their kinsfolk and friends here.

Lin Shengzhong [2651 4141 0022], member of the National Committee of the CPPCC and who came from the United States to settle in the motherland in 1972, said: Because of the long separation, quite a number of Taiwan compatriots lack understanding of the situation here and some of them even have doubts about the policy of the government of the motherland. I am convinced that after hearing Chairman Ye's further explanation of the fair and reasonable policy, Taiwan compatriots living both on the island and abroad are bound to discard their doubts and boldly devote as much effort as they can to the great cause of reunifying the motherland.

Also speaking at the discussion meeting were Dong Ke [5516 0344], vice chairman of the Preparatory Committee; Ye Renshou, Feng Yanhuo and Jiang Shuisheng, deputies to the NPC; Xu Zhaolin, member of the National Committee of the CPPCC; and Liu Min [0491 2494, member of the National Youth Federation.

Former KMT General Zheng Dongguo

OW032115 Beijing XINHUA Domestic Service in Chinese 0227 GMT 3 Oct 81

[Text] Beijing, 3 Oct (XINHUA)--In an interview with a XINHUA reporter, Zheng Dongguo, former KMT ranking general, standing committee member of the National CPPCC Committee and vice chairman of the Central Committee of the KMT Revolutionary Committee, said: The policy concerning the return of Taiwan to the motherland as elaborated by Chairman Ye is fair and reasonable and shows the utmost tolerance and patience. I hope that the Taiwan authorities will cast off previous ill feelings and lose no time in responding to the call for the sake of the interests of the Chinese nation and the early reunion of long separated relatives.

Zheng Dongguo said: I still have some former colleagues and old friends in Taiwan. They also have deep love for their nation. Because of historical reasons, they cannot make efforts for the development of the nation. They have been separated from their relatives residing on the mainland for 32 years. They painfully yearn to meet their relatives again. Many of them have already died still holding grudges and were buried in a strange land. Now the CCP is open and aboveboard and sincerely proposes cooperation with the KMT for the third time, I hope my former colleagues and old friends in Taiwan will actively respond to the call and make contributions to the great cause of the motherland's reunification.

Former KMT General Lam Sum Lee

OW041546 Beijing XINHUA in English 1520 GMT 4 Oct 81

[Text] Beijing, 4 October (XINHUA)--Former Kuomintang Lieutenant General Lam Sum Lee said here today that the policy concerning the peaceful return of Taiwan to the motherland expounded by Chairman Ye Jianying is very concrete and touching and it will produce a great impact.

He made this comment at a meeting this afternoon with Ping Jiesan and Li Gui, deputy heads of the united front work department of the Chinese Communist Party Central Committee.

Lam Sum Lee said negotiations between the Kuomintang and the Communist Party for cooperation accord with the will of the people and the general trend of history. "It will be wise for the Kuomintang authorities to sum up historical experiences and cooperate with the Communist Party for a third time," he said.

After the meeting Ping Jiesan and Li Gui hosted a dinner for Lam Sum Lee and his wife Mary Kuo Lee.

The couple arrived here 2 October from Washington to take part in the commemorative activities for the 70th anniversary of the 1911 Revolution.

Former KMT Governor

OW030142 Beijing XINHUA Domestic Service in Chinese 1228 GMT 2 Oct 81

[Text] Beijing, 2 Oct (XINHUA)--Dong Qiwu, former governor of the Kuomintang's [KMT] Suiyuan Province who once led his troops in an uprising with Sun Lanfen and later accepted the offer for a peaceful reorganization, expressed his opinion to a XINHUA reporter on Chairman Ye Jianying's statement with regard to Taiwan's return to the embrace of the motherland and the realization of peaceful reunification. He hoped that the Taiwan authorities would lose no time in responding to Chairman Ye's statement and joins their efforts in accomplishing the great cause for the reunification of the motherland.

Dressed in olive green military uniform, Dong Qiwu received the XINHUA reporter in his study. Although he is over 80, he remains very healthy. With Chairman Ye's statement in his hand, he said: "Chairman Ye's statement represents the common aspirations of the people of all nationalities in the country including the Taiwan compatriots and overseas Chinese. I believe that the Taiwan authorities' understanding that the return of Taiwan to the motherland is an evitable historical trend accords with the will of the people."

Mentioning Huang Zhicheng who crossed over to the mainland with his plane not long ago, Dong Qiwu said: Huang Zhicheng's patriotic action is not an isolated incident. It represents the aspirations of the people on both sides of the Taiwan strait.

He said meaningfully: One's life is limited by time, while history is not. I hope that the Taiwan authorities will give this matter careful consideration and act wisely and patriotically.

Former KMT Officers

OW022026 Beijing XINHUA Domestic Service in Chinese 1224 GMT 2 Oct 81

[Text] Beijing, 2 Oct (XINHUA)--Former Kuomintang navy and air force personnel who defected to the communist side and are currently holding leading posts in the PLA navy and air force units held discussion meetings or issued statements warmly supporting Chairman Ye Jianying's statement further explaining the principle and policy concerning Taiwan's return to the motherland and the realization of China's peaceful reunification. They hoped their former colleagues now in Taiwan will jointly struggle for the accomplishment of the great cause of the motherland's reunification.

At these discussion meetings, Wu Dingguo, former executive committee member of the Kuomintang military vessel "Chongqing"; Chen Qichuan, former sailor of the Kuomintang naval vessel "Lingfu"; and others said that Chairman Ye's statement fully reflects the desire and fundamental interests of the Chinese people of all nationalities, including our compatriots in Taiwan, and has amply demonstrated the Chinese Communist Party's sincerity in wanting to reunify the motherland. The nine-point proposal is a policy which sets store by the overall national interests and complies with the common aspiration of the people. They hoped that the Taiwan authorities will also comply with the popular feeling and respond actively to the proposal.

Den Zhaoxiang, NPC deputy, deputy commander of the PLA Navy North China Sea Fleet and former captain of the Kuomintang navy cruiser "Chongqing," said that the nine-point proposal presented by Chairman Ye Jianying to the Taiwan authorities is quite fair and reasonable. The Taiwan authorities should comply with the popular feeling by making a positive response. He told his old friends and former colleagues in Taiwan that Chairman Ye has proposed: "After the country is reunited, Taiwan can enjoy a high degree of autonomy as a special administrative region and retain its armed forces." After the realization of the great cause of the motherland's reunification, I hope my former colleagues and old friends currently working in Taiwan's navy will make a joint contribution to building a powerful navy for the motherland. I miss my former acquaintance in Taiwan very much and hope we can work hand in hand in jointly struggling for the realization of the great cause of the reunification of the motherland.

Chinese Residents of Japan

OW011306 Beijing XINHUA in English 1248 GMT 1 Oct 81

[Text] Tokyo, 30 September (XINHUA)--Huang Wen-Chin, vice-chairman of the Tokyo Association of Chinese Residents, told XINHUA that Chairman of the Standing Committee of the Chinese National People's Congress Ye Jianying's elaboration on the policy concerning the return of Taiwan to the motherland for the realization of China's peaceful reunification would win popular support, and would be welcomed by the overseas Chinese including the compatriots in Taiwan.

At a banquet given today by Chinese residents in Yokohama to celebrate China's National Day, he stressed that the Kuomintang of China should respond to the proposal and hold negotiations as soon as possible with the Communist Party of China. It is the Chinese people's common desire to realize cooperation between the two parties, he added.

He said "it is of greater significance that Ye Jianying's statement was made on the eve of the 70th anniversary of [the] 1911 Revolution. During his lifetime, Dr Sun Yat-sen hoped to turn China into a united and strong country. Today's proposal is precisely to realise cooperation between the Chinese Communist Party and Kuomintang as advocated by Dr Sun Yat-sen."

Tan Jinji, honorary chairman of the Yokohama Association of Chinese Residents, said with deep emotion, "Chairman Ye's statement conforms completely to the interest of the Chinese nation. It should be materialized. Since the two parties cooperated twice in the past to save the nation, then why is it not possible for them to cooperate for a third time?"

When a Chinese girl sang the song "people of Taiwan, our own brothers," an enthusiastic applause burst out at the dinner party.

The 73-year old Chinese resident Xie Tian told the correspondent with tears, "The overseas Chinese have long expected a day to see the motherland's reunification."

Chinese Residents of Thailand

OW031230 Beijing XINHUA in English 1211 GMT 3 Oct 81

[Text] Bangkok, 3 October (XINHUA)--The statement on the return of Taiwan to the motherland for the realization of China's peaceful reunification, made by Ye Jianying, chairman of the standing committee of the Chinese National People's Congress, on 30 September was appraised by the Thai people of Chinese origin and Chinese residents in Thailand.

Amporn Bulpakdi, president of the Thai-Chinese Chamber of Commerce, said that the principle on the reunification of China proposed by Ye Jianying is fair and reasonable and is in accord with the desire of all the Chinese people and Chinese residents abroad. "We hope that the Kuomintang of China and the Communist Party of China make a common effort for success," he added.

Kiatti Wattanavekin, vice-president of the chamber, said: "Taiwan has been Chinese territory since ancient times and the compatriots on both sides of the Taiwan straits hope to reunify as quickly as possible. For the benefit of the well-being of the Chinese people and the prosperity of the country, the Kuomintang and the Communist Party should cooperate for the third time. It is high time now," he added.

He expressed willingness to do whatever we could for the reunion of the Chinese people on both sides of the straits.

Termsak Tangjattanapon, managing director of the Phaw Leng Association of Siam (Thailand), said: "What Beijing has done is right and it is well done." "The reunification of China," he said, "is a historical trend. The Taiwan authorities should conform to and respect this fact and consider in real earnest the proposal raised by the communist side and make the correct choice without hesitation."

Chin Sophonpanich, chairman of Bangkok Bank, said: "All Chinese people hope for the reunification of their country. Although there are still difficulties at the present stage, the two parties could move step by step towards this end and try to enter into negotiation between them in a steady way. Prior to the reunification, actions may be taken in accordance with Chairman Ye Jianying's proposal, namely, making arrangements to facilitate the exchange of mails, trade, air and shipping services."

Noted Thai newsman C. Y. Woo said: "Beijing has presented the nine-point proposal after taking into consideration the existing reality of Taiwan. The Taiwan authorities should take the overall interests of China into account and accept Beijing's proposal. This is not merely a matter of one party or one faction but an issue of China as a whole." "If the Taiwan authorities consider it a propaganda," he continued, "they may turn to the talks first to see whether the mainland has the sincerity and should not reject off hand the proposal for a third-time cooperation between the Communist Party and the Kuomintang."

A Taiwan compatriot residing in Thailand, aged nearly 70, told XINHUA his hope to see the country's reunification during his remaining years. Another Taiwan compatriot, who would not disclose his identity, also expressed his hope that the Kuomintang authorities will forget previous ill will and put national interests above everything else and make positive response to the proposal of the mainland."

PARTY AND STATE

CONSTITUTIONAL PROTECTION OF CITIZENS' RIGHTS ADVOCATED

Shanghai SHEHUI KEXUE [JOURNAL OF SOCIAL SCIENCES] in Chinese No 3, 1981 p 109-110

[Article by Cheng Jiyong [4453 6549 7167], Institute of Legal Research, Shanghai Academy of Social Sciences: "The Constitution Should Effectively Guarantee the Democratic Rights of Citizens"]

[Text] Effectively protecting the democratic rights of citizens is an important point that should be considered in our constitutional revision. Our state system of people's democratic dictatorship (namely, the dictatorship of the proletariat) is meant to guarantee those people who make up the overwhelming majority of the population the full enjoyment of their own democratic rights and legitimate interests, and thereby to exercise dictatorship over the tiny minority who endanger the interests of the overwhelming majority. The constitution should provide the most fundamental rights and duties of all citizens. Once firmly established in the Constitution, these fundamental rights and duties receive the protection of the Constitution and can no longer be encroached upon; any violation would be regarded as an unconstitutional infringement and should be handled through specific legal procedures. Therefore, in order to make the constitutional provision of the citizens' fundamental rights and duties more scientific, I hereby make the following proposal as to revision:

First of all, constitutional considerations must eliminate the influence that "leftist" ideas have exerted on current articles of the Constitution, and must restore and uphold the correct and effective articles originally provided in our first Constitution. Fully protecting the citizens' democratic rights, which is an important aspect of the country's democratization, has traversed a tortuous process in our country. The promulgation and coming into effect of the 1954 Constitution consolidated various political, economic, and cultural achievements won by our party in leading the people of the whole country to overthrow the three big mountains; the citizens' fundamental democratic rights received unprecedented protection. After the Constitution was promulgated, our state also put into effect "Arrest and Detention Regulations of the People's Republic of China" and similar laws in order to protect the citizens' democratic rights, and these were forcefully carried out. But after the socialist transformation was basically completed, because of the influence of "leftist" ideas the concrete protection of certain of the citizens' democratic rights for a long time had no relevant laws to follow--or failed to follow them even when such laws existed; furthermore, certain necessary systems and institutions were gradually discarded.

For instance, the supervisory commission, lawyer systems, and organs of judicial administration were all discarded or merged. During the 10 years of turmoil, the Lin Biao and Jiang Qing counterrevolutionary cliques became absolutely lawless, and the democratic rights and legitimate interests of the masses of the people were crudely trampled upon. At that time, the so-called "four greats" failed to play the role of protecting the people's democratic rights, but instead they hampered the people's attempts to exercise their own normal democratic rights. They took extreme democratization and anarchism as "mass democracy," and caused serious damage to our socialist democracy. In the fact of such painful historical lessons, the Third Plenary Session of the Party Central Committee decided to energetically develop socialist democracy and a socialist legal system, pay attention to solving the question of the people's democratic rights, and adopt a series of important measures; it did a great deal of work in order to revive the fine tradition of stressing democratic rights and put emphasis on the legal protection of democratic rights. It eliminated the "four greats" from the Constitution, promulgated some important laws, such as the "Local Organic Law," "Electoral Law," "Criminal Law," and "Law of Criminal Procedure," and revised the "Arrest and Detention Regulations of the People's Republic of China" and other important laws, promulgated them, and put them into effect. In addition, some necessary institutions and systems were restored. Along with the strengthening and perfecting of socialist democracy and the legal system, the people will enjoy even broader democratic rights, and our socialist democracy and legal system will thus once more have returned to a healthy course of development. Consequently, the constitutional revision this time must cleanse away "leftist" ideas and influence, revive the fine tradition of stressing the citizens' democratic rights, and reflect the new development of socialist democracy and the legal system.

Secondly, when the Constitution is revised, I suggest that the third chapter of the current Constitution on "The Fundamental Rights and Duties of Citizens" be moved ahead of the chapter on "The Structure of the State" in order to elevate the constitutional status of citizens' fundamental rights and duties. A socialist state is one wherein the people are masters. The work of all state organs proceeds from the people's interests, and the people's democratic rights and legitimate interests should be respected. The people's right to be masters of their own house and the various democratic rights should especially have a prominent place in the Constitution; this is determined by the nature of a socialist state. This would also better demonstrate the socialist nature of our state. According to available statistics, among the modern constitutions promulgated or revised in the 1960's and 1970's by countries of the world, more than half of them place the provisions on citizens' rights and duties ahead of the structure of the state. This illustrates that stressing citizens' rights and duties is an important question with which the people are generally concerned. Our 1954 Constitution had certain important provisions, such as the principles that "citizens are all equal before the law," that "people suffering loss of their rights as citizens by reason of infringement by persons working for organs of the state have the right to compensation," and that "it is the duty of citizens to pay taxes according to the law." Such correct and effective provisions should be revived. Also, with respect to the gradual expansion of citizens' democratic rights and freedoms and the provision of material guarantees by the state, relevant provisions of the 1954 Constitution should also be revived. In Article 87 of the

1954 Constitution, after the freedoms of speech, the press, assembly, association, procession, and demonstration were provided, it was added that "by providing the necessary material facilities, the state guarantees to citizens the enjoyment of these freedoms." This was the socialist character of our Constitution.

In order to effectively protect citizens' democratic rights, we must also consider adding articles concerning unconstitutional infringement of rights and also provide specific legislation and principles on legal procedures. Because of the 10 years of turmoil and the remnant poison and influence of absolute lawlessness, according to statistics provided by the procuratorial departments alone, the country's procuratorial organs at various levels between January 1979 and June 1980 handled a total of more than 10,000 cases of illegal detention, illegal search, forced confession under duress, retaliation and framing, withholding of criminal evidence, sabotaging of elections, infringement upon the freedoms of correspondence, and other such cases of infringement upon citizens' rights of the person and democratic rights (as cited in BEIJING FAZHENGXUEYUAN XUEBAO [JOURNAL OF BEIJING INSTITUTE OF LAW AND POLITICS] No 3, 1980, p 32). In our country, conduct which infringes upon citizens' fundamental rights is serious, illegal conduct and, in more serious cases, should be regarded as unconstitutional, criminal conduct infringing upon such rights; it must be subject to serious punishment by law. Therefore, as we consider and study how to gradually expand the power of the masses of the people in running the state and managing economic enterprises and other enterprises, in order to really have the work and activity of state organs at various levels placed under the supervision of the masses, we must at the same time effectively protect the citizens' democratic rights. For instance, democratic management of entrepreneurial units and public institutions, as related to the nature, composition, power, and duration of staff and workers congresses and commune members' congresses, etc, should be provided in the Constitution in principle. There should also be new provisions on such principles as those concerning the system of how principal responsible persons of state organs should personally receive the masses and meet the masses on fixed intervals, as well as those concerning how people's deputies should maintain liaison with their electors and their original electoral units. As for how to effectively protect the citizens' individual rights, apart from the restoration of the provision on the right of compensation, clear provisions of principle must be made with regard to the citizens' rights to appeal, expose, etc. At present, exposure and appeal by citizens directed against lawless and derelict working personnel of the state are generally left to the organs of the systems to which they themselves belong, as far as having them investigated and handled. In no small number of cases, this must be done with the advance knowledge of or intervention by the involved persons themselves. In our people's courts today there are no organs devoted especially to the handling of administrative litigation. Therefore it is difficult for them to exercise judicial supervision over improper administrative measures meted out by relevant organs, entrepereneurial units, and public institutions. As a result, not a few cases of infringement of citizens' democratic rights have developed into serious cases because of a lack of timely handling. For this reason, in order to effectively protect the citizens' democratic rights the Constitution may consider providing organs and legal procedures for handling administrative disputes, dredging the channels of communication, and strengthening supervision. At present, our civil laws and laws of civil procedure have not yet been promulgated. In such civil laws and laws of civil procedure there must be legal provisions dealing with the rights and responsibilities of social organizations qualified as subjects of civil rights and duties, or namely, legal persons; important principles in this regard should first be provided in the Constitution before they can become the basis for general legislation. Consequently, when the Constitution is revised, its content needs to be strengthened in this regard as well.

In order to effectively protect the citizens' democratic rights, there must be pertinent procedures for legal control over, and handling of, persons who conduct illegal sabotage of democratic rights, on the pretext of exercising them, and certain activities of those who care only about themselves but not about the general situation. For instance, the contents of such principles having to do with protecting the citizens' correct exercise of their democratic rights as those on advance mediation of workers' strikes and students' strikes, advance approval of processions and demonstrations, prohibition of the activities of illegal organizations and the publication of illegal journals, etc, should first be provided in the Constitution before they can become the basis for general legislation.

PROPER HANDLING OF MISTAKES, SETBACKS PROPOSED

Chengdu SICHUAN RIBAO in Chinese 13 Aug 81 p 3

[Article by Huai Jie [2037 2638]: "How Should We Regard Our Mistakes and Setbacks?"]

[Text] Since the founding of the nation under the leadership of Marxism-Leninism and Mao Zedong Thought, our party has lead all the nationalities throughout the country to carry our socialist revolution and socialist construction and to achieve great successes. However, we have also made mistakes, we have even committed grave errors. How should we regard these mistakes and setbacks?

The Resolution on Certain Questions in the History of Our Party Since the Founding of the PRC which was passed by the Sixth Plenary Session points out that the successes that we have achieved since the founding of the nation are primary, it would be a serious mistake to overlook or deny them, nor is it permitted to overlook or conceal mistakes. This in itself is erroneous and may lead to even more and even greater mistakes. The Resolution calls on us to adopt the basic standpoint of dialectal materialism, "to hold firmly to the truth and correct one's mistakes."

Marxist materialist dialectics tells us that the development of any given thing advances spirally, not in a straight line. The development of society is no exception. Among all the exploiting classes that have played a progressive role in the history of mankind, there are none that have not strengthened their domination only after committing countless historical mistakes and have even gone so far as to repeat these mistakes. In leading the struggle of the new democratic revolution, our party experienced two major defeats in 1927 and 1934, but after drawing a lesson from the experience we were then able to go on to achieve the victory of the revolution of 1949. Socialism is a brand-new and dynamic social system in the history of mankind. The general tendency of socialism is advancement and ascendancy. During advancement however, temporary digressions or complications may occur. This conforms to the objective laws of the development of things and as such, is not worth puzzling over. When discussing the setbacks and mistakes made in establishing the Soviet system, Lenin once said: "We haven't forgotten for a minute that our past and present have certainly included many setbacks and errors. While founding a new type of national system that has never before existed, a new cause in the history of the world, how is it possible not to have setbacks and errors! We must unflinchingly correct these setbacks and errors and improve our method of applying Soviet principles to actual conditions. (Our methds are still far from being perfect.) ("Selected Works of Lenin" v.4 p.568) In our poor and less developed country with such vast territory and large population, there are no ready-made paths for us to follow in carrying out socialist construction. Since we must feel our own way, it is therefore even more difficult to avoid making mistakes. In the past 32 years we have committed the political mistake of enlarging the scope of class struggle and in economic construction we have made the mistake of advancing impatiently and impetuously. The reasons for this are many sided, the principle reason being our lack of experience. As things are constantly evolving, new conditions and new problems occur repeatedly. In addition, revealing the basic essence of things is always one process, people's knowledge of things and the accumulation of experience also consists of one process, subsequently it is always difficulty for people to avoid making various mistakes during this process. Even after our experience has increased quite a bit, it is still hard to completely avoid mistakes. Nevertheless, with the experience of the successes and failures of the past 32 years behind us, we will be wiser in the future, commit fewer errors and prevent grave errors from reoccuring.

There are those who think that the errors that occur in the process of socialist construction are produced by the system of socialism itself. This viewpoint is mistaken. On the contrary, the mistakes that we have committed are caused precisely because some of our understanding runs counter to the objective laws of the socialist system. For example, once the socialist transformation of private ownership of the means of production has been completed and the exploiting class has been eliminated as a class and class struggle exists only within a defined sphere, the objective laws of socialism require that the people place the focus of work on developing the productive forces of society. This is necessary for solving the contradiction between the ever-growing materialist needs of the people and an underdeveloped system of social production. However, because we haven't become fully cognizant of this point, we have violated this requirement which is put before the people by the objective laws of socialism, we have engaged in class struggle which lead to the "great cultural revolution" and created long-term internal unrest. All of this has impeded giving full scope to the superiority of the socialist system. The problem of economic construction is another example: The basic economic laws of socialism and the laws that develop in a planned and proportionate way require that the people start from actual conditions and pay attention to overall balance. We have violated this requirement, we have blindly sought excessive haste, high quotas and large gains, we have advanced recklessly on several occasions causing tremendous losses. It is clear that the mistakes we made in guiding ideology have little relation to the system of socialism therefore it is simply not possible to put the blame on the socialist system per se. The primary root of our mistakes lies in the socialist system, just as the mistkaes of capitalist nations have their root in the capitalist system, thus it is preposterous to reject the thesis of the superiority of the socialist system. In fact, the mistakes we've made in our guiding ideology since the Third Plenary Session of the 11th Party Central Committee have essentially been corrected by relying on the strength inherent in the socialist system. This clearly demonstrates the great superiority of the socialist system which is established on the basis of public ownership of the means of production, this superiority includes the ability to depend on the strength of its own system to overcome shortcomings and to correct mistakes. The capitalist system, on the other hand, is quite different. As the contradiction between production relations and production forces of the capitalist system becomes increasingly acute, the bourgeoisie ruling class is not only unable to correct the pre-existing mistakes, they will also inevitably commit even more and even greater mistakes thereby forcing the oppressed class into violent resistance which will lead to the destruction of the capitalist system. In comparison with the capitalist system, the system of the socialism has tremendous superiority and

and vitality, this is quite evident. It is just because of this superiority that we have achieved great successes in the past 32 years, in spite of the fact that we have committed serious errors. Following the correction of past mistakes and following the development of our cause, the superiority of the socialist system must be given an increasingly greater role to play in the future.

In the cause of socialist construction, it is difficult to completely avoid mistakes and setbacks, however, they can be rectified and surmounted. This is an important viewpoint for the correct recognition of the mistakes and setbacks that have occurred in our undertaking. With this viewpoint we can consciously and confidently proceed to correct our mistakes, surmount our setbacks and unflinchingly struggle to make our nation a modern and powerful socialist country.

PARTY AND STATE

IMPORTANCE OF FOUR BASIC PRINCIPLES DISCUSSED

Beijing BAN YUE TAN [SEMI-MONTHLY TALKS] in Chinese No 14, 25 Jul 81 pp 3-5

[Article by Dai Zhou [2071 5297]: "Foundation of Unity; Guarantee of Victory --on Upholding the Four Basic Principles"]

[Text] The 6th Plenary Session of the 11th Party Central Committee, which was of a momentous historical significance, again stressed the importance of upholding the four basic principles. It pointed out: "The four basic principles are the common political foundation for the unity of the entire party and of the people of all nationalities in the country, and the fundamental guarantee for the smooth progress of the socialist modernization." In fact, our fundamental purpose in summarizing the historical experience of the 32 years since the founding of the nation is to further concentrate, on the foundation of the four basic principles, the will and strength of the entire party, entire army and all nationalities in the country on the great goal of building a modern socialist power.

Why is the issue of upholding the four basic principles raised to such a height?

As we all know, upholding the socialist path, upholding the people's democratic dictatorship, i.e., the proletarian dictatorship, upholding the leadership of the Communist Party, and upholding Marxism-Lenins and Mao Zedong Thought have always been our party's fundamental policy. A proletarian political party since its creation, ours is a political party seeking the interest and liberation and the happiness of the greatest majority; from its creation, it clearly stipulated that Marxism-Leninism is its guiding ideology; from its creation, it clearly stipulated that Marxism-Leninism is its guiding ideology; from its creation, it unequivocally declared that it would realize socialism and a communist society in China. After 60 years of arduous struggle, we, in a country with one quarter of the world population, created the socialist system and accomplished the most profound and greatest social reform.

In the 30 plus years since the founding of the nation, by relying on the four basic principles, we have overcome all kinds of external provocations and pressures and internal disturbances and sabotage by hostile forces, organized various kinds of social life around the people's interest, systematically launched the national economic construction and made brilliant achievements.

As proved by large numbers of irrefutable facts, the four basic principles serve as our sharp weapon against all kinds of erroneous ideological trends, the talisman for our revolutionary victory and the hope for the development of the Chinese nation. On the land of China, the superiority of the socialist system has manifested its forceful vitality; the people's democratic dictatorship has demonstrated its great power; the leadership of the Communist Party is growing ever stronger; Marxism-Leninism and Mao Zedong Thought are radiating an ever more magnificent brilliance. The four basic principles are the essence of our country. They determine the nature of our society, the system of our state, the leadership position of our party and the guiding ideology of our revolution and construction. Therefore, they are linked with the success or failure of the party's cause, the fate of the state and the nation, and the realization of the four modernizations.

The four basic principles are the starting point of all our party's practical actions and the basis for all its lines and policies. That the line determined by the 3d Plenary Session of the 11th Party Central Committee to emancipate thinking, use our brains, seek the truth from the facts, and unite as one and look forward, and the series of policies adopted since the plenary session were accurate was because they conformed to the 4 basic principles and were the concrete application and vivid manifestations of the 4 basic principles in the new era, closely linking the fundamental truths of Marxism-Leninism and Mao Zedong Thought with the practical conditions at the present stage.

On the issue of upholding the four basic principles, two erroneous understandings should be corrected.

One is that some people are accustomed to regarding the party's lines and policies since the Third Plenary Session from a "leftwing" standard, feeling that stressing the four basic principles is for the purpose of rectifying the "deviations" of the Third Plenary Session. Actually, the Third Plenary Session summarized the positive and negative experiences, brought order out of chaos in the lines, and returned the party's lines and policies to the correct track of Marxism-Leninism and to the four basic principles long upheld by us, thereby linking even closer with the people's interest and becoming even more united with the masses. Take rural areas for instance: The party led the peasants to undertake the land reform, eliminate the exploiting system, launch the cooperative movement and create the socialist system or public ownership of the means of production. These were the main symbols of our adherence to the socialist path. Subsequently, the "leftwing" ideological trend of the "larger" and "more public," the better emerged, and egalitarianism spread unchecked, causing the maladjustment of productive relations and productive forces and resulting in grave consequences. Such mistakes themselves were deviations from scientific socialism. After the Third Plenary Session, while upholding the socialist system of public ownership of the means of production, the party, in its rural policy, adopted a series of appropriate measures in accordance with the level of China's agricultural productive forces and that of management, such as creating all kinds of production responsibility systems, opening up market tradeing, restoring and expanding the private plots of commune members, encouraging household sidelines, production, etc. All these were compatible with socialist principles and with Marxism-Leninism and Mao Zedong Thought and were supported and welcomed by the broad urban and rural masses. As a result of practice, the socialist agriculture has developed and the peasants have become more devoted to the party and socialism. In what way, then have we deviated from the socialist direction?

The other erroneous understanding is to regard the four basic principles from a rightwing standard, feeling that stressing them will block the development of democracy and the emancipation of thinking. Those with this misunderstanding confuse the socialist democracy and ideological emancipation advocated by the Third Plenary Session with bourgeois liberalization. Some even regard the four basic principles as "clubs," "formulas," and "whips" and threaten to "break through" them. Such ideological mistakes are apparent. Obviously, upholding the four basic principles is precisely for the purpose of guaranteeing a greater development of the socialist democracy and the correct direction of ideological emancipation. The experience of history has taught us: Whenever our country deviated from the four basic principles,the cause of the party and the people suffered setbacks, or even serious disasters; whenever we upheld the four basic principles, the cause of the party and the people prospered and developed. Today, if we depart from the four basic principles, our endeavor to build a modern, highly democratic and highly civilized socialist power will fail.

In early 1979, an erroneous ideological trend distorting the spirit of the Third Plenary Session and negating and resisting the 4 basic principles emerged in society, and there were those in our party who, due to their mental ossification, showed sympathy and supported it to various degrees. In March that year, Comrade Deng Xiaoping, on behalf of the Party Central Committee, solemnly reiterated the four basic principles. The Central Work Conference last December advocated the positive and active, bold and just, and persuasive propagation of the four basic principles and urged a forceful struggle against the seriously erroneous ideas opposed to them. This time, the Party Central Committee included upholding the four basic principles in the "Resolution on certain questions in the history of our party since the founding of the People's Republic of China." That the Party Central Committee reiterated the four basic principles and stressed them repeatedly is because they are the foundation of the unity of the entire party and entire people and the guarantee of the victory of the socialist cause. Each and every party member, each and every comrade, must remain unswerving and steadfast on this momentous issue.

PARTY AND STATE

SIXTH PLENUM HISTORICAL RESOLUTION STUDIED

Beijing BAN YUE TAN [SEMIMONTHLY TALKS] in Chinese No 13, 10 Jul 81 pp 3-9, 26

[Article by the Editorial Department of BAN YUE TAN: "The General Content and Far-Reaching Significance of the 'Resolution'"]

[Text] The "Resolution Concerning Certain Historical Questions of the Party Since the Founding of the People's Republic" adopted by the Sixth Plenum of the 11th CCP Central Committee is an important document of far-reaching significance. The "resolution" contains principally: 1) a correct summation of the important historical events, especially the "Great Cultural Revolution," of the party in the 32 years since the founding of the people's republic and a scientific analysis of the subjective and social causes of its mistakes; 2) a realistic evaluation of the historical position of Comrade Mao Zedong, the great leader and teacher, in the Chinese revolution and a full exposition of the significance of Mao Zedong Thought as the guiding ideology of our party; and 3) an affirmation of the correct line to build step by step a strong socialist state compatible with the conditions of our country and a clear delineation of the direction in which to continue our country's socialist enterprise and the work of the party. The "resolution" no doubt will have a great bearing on the unity of the ideological cognition of the whole party, the entire armed forces and all the nationalities of the whole country as well as on the struggle to achieve with one heart and one mind the new historical task. This correct summation of the historical experience of our party, like our correct summation of the party's historical experience which led the democratic revolution to a great victory, will lead our socialist construction to a great new victory.

Part I. A Review of the History of the 28 Years Prior to the Founding of the People's Republic

This part contains a review of the 28-year history prior to the founding of the people's republic and the meaning of the victory of the revolution.

1. The 1911 revolution led by Sun Yat-sen overthrew the imperial Qing Dynasty but did not change the semicolonial and semifeudalist nature of Chinese society. All the other parties and factions were unable to find a way out for the country and the nation. The Chinese Communist Party, which alone was able to point out the way for China to advance, became an unprecedented leading force in the Chinese revolution.

2. The victory of the Chinese revolution was achieved under the guidance of Marxism-Leninism. Applying the fundamental principles of Marxism-Leninism creatively by combining them with the reality of the Chinese revolution, the party ushered in the great Mao Zedong Thought and discovered the correct road to achieve victory for the revolution. This is a great contribution to the development of Marxism-Leninism.

3. The party experienced four revolutionary stages in the 28 years prior to the founding of the people's republic. It was Comrade Mao Zedong and the party Central Committee he headed that saved the Chinese revolution each time it faced a life-and-death crisis and it was the party Central Committee he headed that led the people of the whole country to complete victory in the new democratic revolution.

4. The history of these 28 years speaks eloquently for one estabished truth. That is, if Comrade Mao Zedong had not been around to save the Chinese revolution from its many crises and if the party Central Committee he headed had not provided the whole party and the whole country with a firm, correct direction, our party and the people of the whole country would have had to grope in darkness much longer. Like the Chinese Communist Party, which the people of all nationalities recognize as the core of leadership, Comrade Mao Zedong is generally recognized as a great leader of both the party and the people, and the Mao Zedong Through which emerged out of collective struggle is generally recognized as the guiding ideology of the party. This is but the inevitable outcome of the 28-year history prior to the founding of the people's republic.

Part II. A Basic Evaluation of the 32-Year History Since the Founding of the People's Republic

This part contains a basic evaluation of the 32-year history since the founding of the people's republic and points the way to recognize our achievements and mistakes.

1. The "resolution" analyzes the spectacular achievements of these 32 years. They fall in 10 different areas. The greatest achievement is the establishment of the socialist system, which is the most far-reaching and greatest social change in the history of our country and will be the basis of our country's advance and development.

2. Achievements and mistakes must be approached correctly. Our achievements are the most outstanding and basic in these 32 years. It is a big mistake to overlook and deny our achievements and successful experience. However, there were many mistakes in actual work because our party did not have enough experience in leading the socialist enterprises, and the party leadership made some subjectivist mistakes in analyzing the situation and assessing the conditions of the country. Instead of overlooking mistakes and covering up mistakes which should have been discouraged, our position should be to "uphold the truth and amend mistakes." The same position helped us out of danger and turned defeats into victories in the past and it will no doubt lead us to even greater victories from now on.

Part III. 7 Years of Basic Completion of Socialist Transformation

This part covers the period between October 1949 and 1956 when we switched from new democracy to socialism and basically completed the socialist transformation.

1. The socialist transformation of our country was inevitable and the "three big transformations" were the dictates of history. Now there are people who question or even repudiate the socialist transformation. That is a big mistake.

2. The general line for the transition period proposed by our party and the guiding principles and basic policies it formulated were correct and creatively opened a road leading to a socialist transformation compatible with the unique conditions of China. The victory it won was simply dazzling.

3. The historical implication of the party's "Eighth Congress" is that the line, principles and policies laid down by the "Eighth Congress" in 1956 pointed out the correct direction for party building and the development of socialist enterprises during the new era. The "Eighth Congress" pointed out that after the socialist system is established, the major contradiction within the country would be that between the need of people for speedy economic and cultural development and the inability of the economy and culture to satisfy the needs of the people rather than that between the working class and the capitalist class. This scientific assessment offers meaningful guidance for our revolution and construction today.

Part IV. 10 Years of All-Out Socialist Construction

This part covers a period of 10 years between 1956 and 1966 when our country embarked on all-out large-scale socialist construction and scored tremendous accomplishments. This represents the main thrust of the work of the party. The party also sustained some setbacks during these 10 years due to serious mistakes in its guiding principles.

1. In this 10-year period the party scored tremendous accomplishments in various areas as it led the people of the whole country to embark on all-out socialist construction. At the same time, the party acquired valuable experience in leading socialist construction. The material and technological base and the core of personnel now engaged in modernization construction were built and trained in this period.

2. In this period of 10 years, faulty guiding principles in party work led to many leftist errors, resulting in serious losses to the state and the people. But the party was alert enough to sum up the lessons it derived from experience and corrected the mistakes. Consequently, the national economy bounced back and grew between 1962 and 1966.

3. All the successes in this 10-year period were achieved under the collective leadership of the party Central Committee headed by Comrade Mao Zedong. The collective leadership of the party Central Committee was also responsible for the mistakes made during this period. Although Comrade Mao Zedong was mainly responsible, he could not be held responsible for all the mistakes. At this juncture, Comrade Mao Zedong's errors in the theory and practice of class struggle in a

socialist society had become more serious and his personal arbitrary workstyle was threatening the party's democratic centralism and drifting toward a personality cult. The party Central Committee did not act in time to correct these mistakes. This led to the outbreak of the "Great Cultural Revolution."

Part V. The 10 Years of the "Great Cultural Revolution"

This part presents an analysis of Comrade Mao Zedong's arguments for launching the "Great Cultural Revolution" and his mistakes, a review of the course of the "Great Cultural Revolution," and an analysis of the causes of the "Great Cultural Revolution."

1. The "Great Cultural Revolution" was erroneous in theory and practice. Its theory was "continuing revolution under the dictatorship of the proletariat." The trouble is that its assessment of the conditions of the country, analysis of the nature of the "struggle" and method of resolving the problems were all wrong. It was a departure from the orbit of Marxism-Leninism-Mao Zedong Thought, incompatible with both Marxism and reality. Launched erroneously by the leadership and made use of by the counterrevolutionary cliques, the "Great Cultural Revolution" brought about disastrous internal turmoil to the party, the state and the people of all nationalities.

2. There are two points to bear in mind in evaluating the role of Comrade Mao Zedong in this particular period: 1) Comrade Mao Zedong's serious mistakes must be clearly distinguished from the counterrevolutionary conspiracy of Lin Biao, Jiang Qing and their cliques; and 2) in spite of the serious mistakes affecting the whole situation made by Comrade Mao Zedong, he did certain good and correct things both domestically and internationally and we should not repudiate all he did just because of those serious mistakes.

3. Due to the joint struggle put up by the whole party and the cadre masses during this 10-year period, we were able to mitigate to a certain extent the damage done by the "Great Cultural Revolution." Even though our enterprises were severely damaged by the counterrevolutionary clique of Lin Biao and Jiang Qing, we finally subdued them, and the nature of the party, the people's political authority, the people's army and society as a whole remained intact.

4. In ascertaining the causes of the "Great Cultural Revolution," we have to cover the responsibility borne by Comrade Mao Zedong as well as the complex sociohistorical factors. Only by analyzing these factors scientifically can we draw a lesson and prevent the repetition of such serious mistakes.

Part VI. A Historical Turning Point

This part describes the emergence of a new period of historical development after the overthrow of the Jiang Qing counterrevolutionary clique.

1. The "resolution" affirms the contribution of Comrade Hua Guofeng in the struggle which overthrew the Jiang Qing counterrevolutionary clique and the valuable work he did afterward. It also points out his leftist errors in the political and economic areas, his effort to carry on and reluctance to correct an erroneous

policy based on "two blind faiths," and his encouragement and acceptance of his own personality cult as he defended the old personality cult. All these indicate clearly that it was impossible to correct the leftist errors within the party and revive its best traditions under his leadership.

2. The Third Plenum of the party Central Committee was a very significant turning point in the history of our party. It brought to an end a period of indecision in party work after October 1976 and launched an all-out effort to correct the leftist errors during and before the "Great Cultural Revolution." In leading actual work, it instituted a series of significant changes which represented the revival and establishment of a correct direction based on Marxism. As the scientific principles of Mao Zedong Thought and the correct policy of the party began to revive and develop under brand new conditions after the Third Plenum, all the work of the party and the state advanced by leaps and bounds and our country took a turn for the better economically and politically.

Part VII. The Position of Comrade Mao Zedong in History and Mao Zedong Thought

This part contains a primary key question which the "resolution" seeks to answer.

1. The great achievements of Comrade Mao Zedong. Comrade Mao Zedong was a great Marxist, a great proletarian revolutionary, strategist and theoretician. His great historic achievements are immortal. In spite of the serious mistakes he made during the "Great Cultural Revolution," taking his life as a whole, his contributions to the Chinese revolution far exceed his mistakes. His achievements are primary while his mistakes are secondary.

2. The content of Mao Zedong Thought. Mao Zedong Thought is the product of the combination of the universal principles of Marxism-Leninism and the concrete reality of the Chinese revolution, the summation of the correct theory of the Chinese revolution and experience, and the crystallization of the collective wisdom of the Chinese Communist Party. The creative theory of Mao Zedong Thought has enriched and developed Marxism-Leninism in the following areas: 1) The theory of the new democratic revolution includes principally the "three magic weapons," occupation of villages to encircle cities and then the winning of a nationwide victory. 2) The theory of the socialist revolution and socialist construction includes mainly the "three great transformations," strict distinction and correct handling of the two different kinds of contradictions under the socialist system, and the road toward industrialization of China. 3) The theory of building the revolutionary army and military strategy are Comrade Mao Zedong's unique contribution to Marxist-Leninist military theory. 4) The theory of party building. In addition, Comrade Mao Zedong advanced many lasting and meaningful observations and policies on revolutionary strategy and tactics, political ideological work, education in communist morality, culture, the nationalities and foreign relations.

Comrade Mao Zedong also applied dialectical materialism and historical materialism to all the work of the proletarian party and brought into being a genuinely Chinese Communist position, viewpoint and method. These may be summed up in three basic concepts: seeking truth from facts, following the mass line and acting on our own initiative independently.

3. Mao Zedong Thought is a valuable intellectual treasure of our party and will guide our actions for a long time to come.

4. We must overcome two incorrect approaches to Mao Zedong Thought. One of these is to deny its scientific value and its usefulness as a guide to our enterprises just because Comrade Mao Zedong made mistakes in his latter years. The other is a dogmatic approach which upholds whatever Comrade Mao Zedong said as immutable truth or even refuses to admit realistically the mistakes he made in his latter years and defends these mistakes in new practices. Both these approaches fail to make a distinction between the Mao Zedong Thought which became scientific principles through years of historical tests and the mistakes he made in his latter years. The distinction is very important.

Part VIII. Unite and Struggle for the Construction of a Strong Modernized Socialist State

This part presents a basic summation of the historical experience of our party in the 32 years after the founding of the people's republic and points out the objectives of struggle for our party in a new historical period.

1. The objectives of struggle for our party in this new historical period are to build up our country into a highly democratic and cultured strong socialist state with modern agriculture, modern industry, modern national defense and modern science and technology. Furthermore, we have to bring about the return of Taiwan to the fatherland so as to achieve the task of national unification. Our main purpose in summing up the historical experience of the 32 years after the founding of the people's republic is to uphold the four basic principles as a foundation from which to focus the attention and energy of the whole party, the entire army and all the nationalities of the whole country on this gigantic objective of building a strong modernized socialist state.

2. It is important and necessary to uphold the four basic principles because they are the political foundation to rally the whole party and all the nationalities of the whole country and also the basic guarantee of unobstructed progress of the socialist modernizations. All opinions and actions deviating from the four basic principles are wrong and all opinions and actions which repudiate and undermine the four basic principles are not permissible.

3. "Only socialism can save China." This is the most basic historical experience of the 32 years since the founding of the people's republic. Our country has already established the socialist system and entered the socialist society. Any viewpoint which repudiates this basic fact is wrong. We must struggle resolutely against all activities which undermine socialism.

4. A new China cannot exist without the Chinese Communist Party. Similarly, a modernized socialist China cannot exist without the Chinese Communist Party. Any opinion or action aimed at weakening, breaking away from or undermining the leadership of the party is absolutely impermissible.

5. Our party has established step by step a correct road of socialist modernization compatible with the conditions of our country. This road will be enriched

and developed continually in actual practice. Its main points are the experience in 10 different areas which must be earnestly studied and understood.

6. We are determined to correct the erroneous slogan used in the "Great Cultural Revolution" calling for "continuing revolution under the dictatorship of the proletariat" by which one class overthrows another class. This does not mean that the revolutionary tasks are accomplished, that revolutionary struggles in various areas are no longer needed. The development of socialism into communism is a great revolution unprecedented in the history of mankind. Our present struggle to build a modernized socialist state is a stage in this great revolution. We must maintain the lofty revolutionary ideal and ardent revolutionary resolve to accomplish the great socialist revolution and construction.

7. The great achievements made for the people by our party in the past 60 years. Having been through 32 years of successes and failures, repeated assessments of correctness and errors, especially the deliberations and summations of the last few years, our party has increased immensely its understanding of socialist revolution and construction. It has the courage to face up to and correct its own mistakes and is determined and capable of preventing the repetition of those mistakes of the past. We are firmly convinced that the future of socialism and of hundreds of millions of people of the whole country is great. As long as we strengthen the unity of the party and that of the party and the people under the great banner of Marxism-Leninism-Mao Zedong Thought, we can unquestionably build our country step by step into a modernized, highly democratic, highly cultured strong socialist state!

PARTY AND STATE

PARTY SCHOOL CADRES STUDY RESOLUTION

Nanjing XINHUA RIBAO in Chinese 24 Jul 81 p 1

[Article by staff commentator: On the Resolution's Scientific Appraisal of Comrade Mao Zedong and Mao Zedong Thought]

[Text] The Provincial Party Committee School completed its third cadres study session a few days ago. In studying the resolution, the students concluded that its appraisal of Comrade Mao Zedong and Mao Zedong Thought was based on facts, appropriate and convincing.

All thought that the resolution had appraised highly the tremendous historical contribution of Comrade Mao Zedong, that it had reaffirmed Comrade Mao as a great leader and teacher of the Chinese people, had reaffirmed the historical role played by Mao Zedong Thought as the guiding thought of the Party, and that it was a scientific summation based on historical facts. The students in this study class were mostly cadres who took part in the Sino-Japanese War and the War of Liberation. From actual experience, they have been intimately and profoundly impressed by Comrade Mao Zedong, who, at the critical moment of the Chinese Revolution had saved the revolution, and formulated correct policies and theories, correct war strategies and tactics in uniting the people and vanquishing the enemies. They said that the name of Comrade Mao Zedong is closely tied to the history of the Chinese Revolution, the development of the Party, the shaking off of the feudal yoke, and the liberation of the Chinese people. Without Comrade Mao Zedong and his comrades-in-arms, without Mao Zedong Thought, China would not have become what she is today.

All concluded that while the resolution reaffirmed the gigantic accomplishments of Comrade Mao Zedong, it had also pointed out, according to facts, the mistakes he made in his later years, with right clearly distinguished from wrong, achievements clearly distinguished from shortcomings, and which should be regarded as primary and which secondary. On the one hand, such an appraisal marked a clear demarcation line from deification of the leader and dogmatic treatment of Mao Zedong Thought. On the other hand, it drew a clear demarcation line from degradation of the leader and nihilistic treatment of Maz Zedong Thought. It is a just appraisal conforming to the feelings of the Party and the people. Not long ago in the past, there were all types of discussions in society on the subject of appraising Comrade Mao Zedong and Mao Zedong Thought, and there was no ideological uniformity within the Party. This puzzled and even worried some old cadres. The resolution made a just and comprehensive appraisal of this important issue and set their hearts at ease. Some comrades say, "The conclusion drawn from the resolution has taken a load off our minds."

Why is it said that "The mistakes of Comrade Mao Zedong were, afterall, the mistakes of a great proletarian revolutionary?" Through studying the resolution, their understanding is: first, mistakes made by a great revolutionary will not affect his overall splendid revolutionary accomplishements, just like small blemishes on a piece of jade cannot tarnish its overall lustre. Second, due to the fact that all great revolutionaries are in the forefront of the tide of time, the mistakes they make are closely related to historical conditions of the time and thereby should not be summed up as an issue of subjective factors.

To appraise in all fairness Comrade Mao Zedong and Mao Zedong Thought is for the sake of implementing more effectively the basic principles of Marxism-Leninism and Mao Zedong Thought. All remarked that when they return to take up their work posts after the study session, they would integrate the practicality of modernized construction, continue to study Marxism-Leninism, Mao Zedong Thought, study the new situation, resolve new problems, and to do better work on all phases.

YOUNGER CADRES CHOSEN FOR TOP MEDICAL POSITIONS

Guangzhou NANFANG RIBAO in Chinese 24 Aug 81 p 2

[Article by Staff Correspondent Yang Beilin [2799 0554 2651]: "Selecting the Young and Middle-aged Core To Be Leaders"]

[Text] Mobilizing and relying on the masses to recommend and select talented people, Sanshui County People's Hospital has chosen 28 middle-aged and young medical personnel to assume leading posts in the hospital and technical offices. Thus, the leading group is beginning to become younger, more knowledgeable, and more specialized, furthering the development of medical treatment, prevention and scientific research.

Sanshui County People's Hospital is a general hospital. Following the Third Plenary Session of the CCP and during the process of implementing the policy towards intellectuals, the hospital made an analysis of the composition of the leading group: Of the four hospital directors and deputy directors, only one hospital deputy director has specialized medical knowledge and he was old and infirm, the rest were basically non-professionals. Among the cadres of the subsections and sections (divisions), the technologically skilled core of young people was quite small. In order to change this situation, the hospital's party branch adopted the open-door method for selecting capable personnel: the relevant policies, qualifications and requirements for the selection of profesiional cadres were turned over to the masses to give them the chance to discuss and evaluate them. The people then recommended the best qualified persons, the ones who had both ability and political integrity. The party branch, in keeping with the views of the masses, decisively put forward a list of names based on their joint assessment and everyday knowledge of the cadres. They then submitted the list to a higher authority to review the appointments. For example, there is the case of the physician Huang Zurong [7806 4371 2837], a medical college graduate, who for over 10 years has consistently devoted himself to the clinical practice of internal medicine. His ideas are progressive and he has had the honor of being admitted to the party. In his professional life he has studied intensively and has had the most extensive experience in internal medicine of all the doctors in the hospital. There is also the case of the physician Lin Zhibai [2651 4249 4101], a 1960's medical college graduate who has been practicing clinical surgery for many years. He is able to perform extremely difficult major operations and is known as the "knife" of the hospital and furthermore, he has definite organizational ability. Based on the recommendations of the majority of people in the hospital, they were appointed deputy directors of the hospital by the higher level organizational unit.

After these young and middle-aged professionals assumed their posts, they gave full play to their professional skills and brought about a change in the hospital's image. After the deputy directors Huang Zurong and Lin Zhibai took up their posts, they did a fact-finding study on the professional status of each office in the hospital and in just over 6 months presented, in order of priority, more than 10 proposals that reflected their findings. In order to raise the level of technological skill among the medical personnel of the hospital, they formulated plans for each category of medical personnel to do some brushing up and engage in advanced studies, to actively conduct academic lectures on various special topics, and, in time, to sum up the advanced experiences of medical practice. In their clinical practice they developed their own expertise and methodically organized the medical staff to save the lives of some critically ill patients. In march of this year, after the young nurse Qian Qunhao [6929 5028 1170] was selected as assistant head nurse in the department of internal medicine, they helped the old head nurse organize all the nurses in the department to carry out technical training activities which lead to a noticeable improvement in the quality of nursing.

At the same time that the hospital was training and selecting young and middle-aged cadres, attention was also given to carrying out correct ideological work regarding the senior cadres, and appropriate arrangements were made for the retirement of one deputy director of the hospital and for another's retirement due to illness. The best care possible was provided for the other elderly and frail doctors and nurses. Moreover, the young cadres respected the senior cadres, and it became common practice to seek advice from the senior cadres. In this way the senior cadres were made to feel at ease in assisting and supporting the new cadres in carrying out their duties.

Health Institute Promotes Professionalism

The leading group of the 18 room Commune Health Institute in Lian County has been re-organized and during the first 10 days of this month, all the professional hospital directorships were assumed without exception by the medically skilled core, graduates of medical school. Those non-professional leading cadres who were not fit to continue working at the hospital were relocated and suitable arrangements were made.

During the decade of internal unrest there existed a group consisting for the most part of elderly and weak non-professional cadres who had no understanding of skilled medical practice. Their existence was due to the erroneous "leftist" influence and disruption. They were sent to the 18 room Commune Health Institute in Lian County to hold the leading positions. The general educational level of this group of comrades was fairly low. Even though some had the best of intentions, they did not understand medical technology so they had difficulty in performing their duties and failed to inspire the enthusiasm of the medical and nursing staff. The quality of medical treatment and nursing declined in many hospitals.

Following the Third Plenary Session of the CCP, the County Department of Public Health, with the support of the County CCP Committee, gradually proceeded to re-organize the leading groups in each commune health institute throughout the county. Cadres who still had the ability to work were reassigned work according to their abilities, while elderly and sick cadres were retired. In the meantime, a medically skilled core made up of 24 people with specialized medical training, a clear understanding of policy and organizational ability, were selected to fill the posts of hospital director and deputy director in each commune health institute. This, in turn, enabled the leading groups in commune health institutes throughout the county to take on a younger, more knowledgeable, and more specialized look, and promoted the development of medical and public health activities. Once the professionals were made hospital directors at the Dongpo commune hospital, they quickly corrected the phenomena of medical malpractice and of poor quality medical care that had occurred in the past. Ordinary surgical operations can now be carried out smoothly and the control of administering drugs has also noticeably improved. It has been praised by the higher level public health department as the most advanced public health unit in the county.

PARTY AND STATE

TIANJIN PROMOTES YOUNG, MIDDLE-AGED CADRES

Tianjin TIANJIN RIBAO in Chinese 26 Jul 81 p 1

[Article by staff commentator]

[Text] While advances have been made in the task of selecting and promoting competent young cadres is being launched, yet, when compared with the need of the situation, a stronger emphasis and greater speed are called for. This point was made emphatically in the staff meeting of the Tianjin personnel departments held a few days ago.

Since the Third Plenary Session of the 11th Central Committee, the departments, commissions and staff offices of the city committee and municipality, and various wards, counties and bureas have selected and promoted 140 young and middle-aged cadres for leading posts; according to statistics of the 538 companies and large factories of the 46 bureaus in the city, 445 young cadres under 50 years of age have been promoted. Despite such accomplishments in the task of promoting competent cadres in their prime to take up leading positions in the Party, the aging situation on the leadership level is still grave: the average age of cadres leaders in wards and bureaus and those on equivalent levels is 58. The average age of cadres responsible for Party administrative duties is 62.5; 70 percent of these are above 56, and only 11 percent are under 50; and 14.6 percent of the cadres are basically unable to handle normal work. These phenomena point out clearly that the task of promoting competent young and middle-aged cadres for leading posts is not going quickly, but rather slowly.

The reason for this tardiness is still due to the influence of "leftist" thinking. Feudalistic concepts and metaphysical outlooks such as "determining rank according to seniority" and "demanding perfection in men" are the obstructing ideological forces in the task of promoting competent young and middle-aged cadres at present. The organizational departments and personnel bureaus of the Party committee of all levels should widen their fields of vision and look upon the promoting of young and middle-aged cadres as a pressing strategic task, not only to be grasped firmly, but with speed, so as to further unify ideologies and substantially strengthen leadership, uncover talent from all sources, grasp firmly the training and promoting as quickly as possible of those young and middle-aged cadres with political integrity and ability to leading positions so as to keep our cadres young, knowledgeable and professional. Otherwise, we will harm this tremendous undertaking.

The meeting pointed out that in order to maintain youth, knowledge and professionalism amidst our cadres, the management of services concerning veteran cadres such as leaves of absence and retirement must be handled efficiently. Veteran cadres have dedicated themselves to the great cause of the Party and the people for decades, made valuable tributes, and accumulated rich experiences. They are precious assets to our Party and our country. We should enthusiastically create conditions which will provide them with longevity, good health and contentment in their later years. Men must grow old, retire or take leave. We should make better arrangements for these veteran cadres. Failing to do it well will result in a loss of support from the people, in addition to being unreasonable. We should respect the aged, honor the wise, and create a good atmosphere.

The meeting pointed out that the personnel departments should endeavor to do a good job of the allocation and deployment of cadres during the period of readjustment. Our city is an old industrial city, which calls for a full-fledged development of the light and textile industries. Hence, personnel departments at all levels should inspect and study conscientiously, so as to perform tasks such as transferring, adjusting, arranging placements and making up deficiencies from surpluses among the cadres with foresight, good planning and sound organization. At the same time, we should concentrate on consolidating and strengthening the cadre forces in commerce, service trades, and all units of collective leadership.

The meeting lay special emphasis on the self-construction of the personnel departments. The personnel departments should take the lead in reviving and advocating the fine Party tradition and work style, and consciously resist unhealthy tendencies such as forming small coteries, entering by the back door, favoritism, and bribery; uphold steadfastly the mass point of view, be warm and sincere to the masses and cadres, serious in work and in words, so as to make the cadres at large willing to confide in them, and willing to make suggestions when such occasions arise. Cadres of personnel affairs should become "the bosom friend of the cadres," and the personnel departments should become "the home of the cadres."

Deputy Secretary of the city committee and Deputy Mayor Wu Zhen [0702 2182], standing committee member of the city committee and head of the Organizational Department Li Yanwu [2621 4282 0710] attended the meeting and gave speeches.

Close to two hundred cadres from various wards, counties, bureaus, institutes and colleges, staff members from the personnel departments of units stationed in Tianjin, members of the city committee and staff offices in charge of personnel administration attended the meeting.

VIEWS ON QUESTIONS OF HISTORY OF MARXIST PHILOSOPHY EXPRESSED

Guangzhou NANFANG RIBAO in Chinese 31 Aug 81 p 3

[Article signed Wen Ze [5113 3419]: "Contending Views on Questions Concerning the History of Philosophy"]

[Text] In philosophical circles there are now contending views on questions concerning the history of Marxist philosophy; the following briefly lists some of these important questions:

The Target of Our Studies

One opinion regards the target of our studies of the history of Marxist philosophy as the history of the formation and development of Marxist philosophy and its inherent law. This would include the study of the writings and the philosophical views of Marxists since the beginning of Marxism, it would clarify what led to their development, relate them to certain historical conditions, arrive at a balanced assessment and seek to find the laws of their development.

Some comrades are of the opinion that the study of the history of Marxist philosophy must not only consider and reflect the ideological achievements of the classical writers, but at the same time must also consider and reflect the contributions of other marxists to Marxist philosophy. It should not matter whether the men were from socialist or capitalist countries, whether they were leading personalities of the party or specialists in the field of Marxist philosophy, as long as they have made some contribution to Marxist philosophy, they should be included in the study.

The Question of Categorization

One opinion believes that the periodization of the history of Marxist philosophy should take the following three main points as its basis: 1. Economic development, for instance Leninism denoting the period of development from capitalism to imperialism. 2. The condition of political, revolutionary development. 3. The revolutionary practice of our revolutionary teacher.

Another opinion believes that the guideline must be the development of theory. A time without any development of theory is not to be marked off as a separate period, otherwise there might be confusion with the history of the international communist movement.

The Question of the Point of Departure

One opinion believes that man is the point of departure for Marxist philosophy. The question of the nature of man is the logical starting point for historical materialism and the premise for the formation of a materialist conception of history.

One opinion believes that the point of departure for Marxist philosophy should be economic relations. Marx distinguished the productive activities of man from man's life activities and regarded productive activities as the most basic of human activities. From man's social relations he singled out production relations and economic relations and took them to be the factors that determine man's nature.

One opinion believes that practice should be the point of departure for Marxist philosophy, because practice is the essential and natural element of man. The establishment of a practical outlook helps men achieve scientific explanations to their questions. Practice is a bridge that brings together the subject and the object. The establishment of a practical outlook will combine three views into one perfect united entity: the view on nature, the viewpoint on perception and the historical viewpoint.

One opinion believes that the point of departure for Marxist philosophy should be work, because work indicates clearly the relationship of man to nature and man to man. Marx and Engels emphasized that the relationship of man to nature is the premise for the materialist conception of history, and also pointed out that "the unity of man and nature," which is the essence of work, determines not only the development of the production force, but at the same time also the relationship of man to man, that is the production relations.

One opinion believes that the point of departure for Marxist philosophy should be the primary status of matter with consciousness in a secondary position, social existence in a primary position and social consciousness in a secondary position. They believe that Marx and Engels only after using the basic viewpoints of materialism in their observation of social life and discovering the decisive role of the economic factors in the development process of society, came to a scientific assessment of the nature of man and thus laid the foundation for the materialist conception of history.

The Position of Mao Zedong's Philosophical Thoughts Within the History of Marxist Philosophy

Everybody is agreed that Mao Zedong's philosophical thoughts occupy an important position in the history of Marxist philosophy. What are Mao Zedong's philosophical thoughts? There are differences of opinion on this question. One opinion believes that Mao Zedong's philosophical thoughts are a product of the integration of the universal principles of Marxist philosophy with the concrete practices of the Chinese revolution, that they are a sinocized philosophy of Marxism. Another opinion believes that the important features of Mao Zedong's philosophical thoughts are the emphasis on the dynamic role of practice, as well as the emphasis on the dynamic role of perception and the concrete historical unity of theory and practice.

SOCIOLOGICAL, EDUCATION AND CULTURE

RECRUITMENT BROCHURE LISTS UNIVERSITY, COLLEGE COURSES

Fuzhou FUJIAN RIBAO in Chinese 21 Jul 81 p 3

[Text] Science and Engineering Group (including Agriculture, Forestry, Water Conservancy, Medicine, Physical Education)

Key Institutes of Higher Learning and the First Batch of Recruiting Schools:

China University of Science and Technology (Hefei)

Department of Mathematics, Department of Physics, Department of Modern Chemistry, Department of Modern Physics, Department of Modern Mechanics, Department of Radio Electronics, Department of Terrestrial and Space Science, Department of Biology, Department of Precision Machinery.

National Defense Science and Technology University (Changsha)

Department of Applied Mechanics, Department of Applied Physics, Department of Automatic Control, Department of Electronic Technology, Department of Materials and Fuel, Department of Computers, Department of Systems Engineering and Mathematics, Department of Precision Machinery.

Qinghua University (Beijing)

Department of Architecture, Department of Civil and Environmental Engineering, Department of Hydraulic Engineering, Department of Mechanical Engineering, Department of Precision Instruments, Department of Thermal Energy Engineering, Department of Automobile Engineering, Department of Electrical Engineering, Department of Radio Electronics, Department of Computer Engineering and Science, Department of Automation, Department of Chemistry and Chemical Engineering, Department of Engineering Mechanics, Department of Applied Mathematics, Department of Economic Management Engineering, Modern Physics, Solid Physics and Materials Science, Reactors.

Zhejiang University (Hangzhou)

Department of Mathematics, Department of Physics, Department of Chemistry, Department of Mechanics, Department of Geology, Electrical Engineering, Industrial Electronics Technology, Industrial Automatic Control, Electrical Systems and Automation, Chemical Engineering, Petrochemical Engineering, High Polymer

Chemical Engineering, Chemical Industry Automation, Chemical Industry Machinery, Architecture, Construction Structural Engineering, Hydraulic Structure, Precision Mechanical Engineering, Hydraulic Transmission and Control, Radio Technology, Electronic Physical Technology, Semiconductors, Optical Instruments, Laser Technology, Photographic Instruments and Engineering, Inorganic Materials Science and Engineering, Low-Temperature Engineering, Surveying Testing Technology and Automation Instruments, Computers, Computer Software.

Tongji University (Shanghai)

Architecture Structural Engineering (a 5-year course), Architecture Structural Engineering (a 4-year course), Management Engineering (a 5-year course), Architecture, City Planning, Engineering Geology, Underground Construction Engineering, Surveying, Highway Engineering, Bridge Engineering, Engineering Machinery (a 5-year course), Machine Building Technological Equipment and Automation (a 5-year course), Industrial Automation (a 5-year course), Electronic Instrument and Surveying Technology (a 5-year course), Computer Engineering (a 5-year course), Water Supply and Drainage Engineering, Construction Materials Engineering (a 5-year course).

Tianjin University

Timing Instruments, Optical Instruments, Precision Instruments, Computers, Radio Technology, Electronic Instruments and Surveying Technology, Machine-Making Technological Equipment and Automation, Welding, Metallography and Heat Treatment, Casting, Industrial Automation, Industrial Automation Instruments and Meters, Electrical Systems and Automation, Construction Structure, Architecture, Harbor Engineering, Shipping Engineering, Water Conservancy and Hydroelectric Projects Construction, Basic Organic Chemical Engineering, Intermediates and Dyestuff, Chemical Industry Machinery, Chemical Catalysis, Chemical Engineering, Internal Combustion Engine, Engineering Thermal Physics, Applied Mechanics, Applied Mathematics, Applied Physics, Scientific and Technological Foreign Languages (recruit applicants from the science and engineering group who score best in English), Capital Construction Management Engineering.

Xian Jiaotong University

Computer Mathematics, Solid Mechanics, Machine-Making Technology and Automation, Metal Materials, Welding, Forging, Casting, Hydraulic Transmission and Control, Thermal Energy Engineering, Thermal Power for Generating Plants, Aerodynamic Engineering, Compressor and Refrigeration, Internal Combustion Engines, High-Voltage Technology, Electrical Systems and Automation, Electrical Technology, Electrical Insulation Technology, Computers, Specialization in Semiconduction Physics and Devices, Computer Software; Electron Beam, Ion Beam and Electric Vacuum Technology; Radio Technology, Industrial Automation, Radio Components and Materials, Biomedical Electronic Engineering, Management Engineering.

South China Engineering College (Guangzhou)

Machine-Making Technological Equipment and Automation, Casting, Forging, Welding, Metallography and Heat Treatment, Automobiles, Automatic Control, Computers, Architecture, Construction Structure Engineering, Construction of Water

Conservancy and Electric Generating Projects, Shipping Engineering, Internal Combustion Engines for Ships, Electrification and Automation of Ships and Shipyards, Radio Technology, Electric Vacuum Technology, Electrical Machinery, Electrical Systems and Automation, Industrial Automation, Semiconduction Physics and Devices, Chemical Industry Machinery, High Polymer Materials Processing Machinery, Chemical Industry Automation Instruments and Meters, Corrosion and Prevention, Rubber Products, High Polymer Chemical Engineering, Basic Organic Chemical Engineering, Inorganic Chemical Engineering, Inorganic Nonmetal Materials, Gelation Materials, Pulp and Paper Making, Sugar Refining, Chemical Fibers, Chemical Engineering, Chemistry, Applied Mathematics.

Nanjing Engineering College

Architecture, Machine-Making Technological Equipment and Automation, Casting, Machinery for Radios, Metal Materials, Electrical Systems and Automation, Generating Plant Thermal Energy, Engineering Thermal Physics, Electrical Technology, Radio Technology, Electronic Instruments and Surveying Technology, Computer Science and Engineering, Microwave Technology, Marine Acoustics, Construction Structural Engineering, Highway Engineering, Construction Materials Engineering, Electric Vacuum Technology, Laser Beam, Semiconduction Physics and Devices, Industrial Automation, Applied Mathematics.

Central China Engineering College (Wuhan)

Applied Mathematics, Solid Mechanics, Generating Plant Thermal Energy, Refrigeration and Low Temperature Technology, Engineering Thermal Physics, Hydroelectric Power Station Automation, Hydraulic Power Machinery, Radio Technology, Computers, Computer Software, Materials Management Engineering.

Dalian Engineering College

Department of Applied Mathematics, Department of Applied Physics, Engineering Mechanics Department, Department of Chemical Machinery, Department of Chemical Engineering, Department of Hydraulic Engineering, Department of Mechanical Engineering and Metal Materials, Department of Shipbuilding Engineering, Department of Electronic Engineering, Department of Computer Science and Engineering.

Hefei Industrial University

Precision Metrological Instruments, Vacuum Technology and Equipment, Machine-Making Technology and Equipment, Forging Pressing Technology and Equipment, Casting Technology and Equipment, Mechanical Equipment (a 5-year course), Metal Materials and Heat Treatment, Industrial Automation, Power Plant and Electrical Systems, Electrical Machinery, Computers and Their Use, Radio Technology, Industrial and Civilian Construction, Architecture, Farmland Water Conservancy Engineering, Water Conservancy and Hydroelectric Project Construction, High Polymer Chemical Engineering, Inorganic Chemical Engineering, Powder Metallurgical Materials, Geological Survey and Prospecting of Minerals, Geophysical Prospecting of Minerals, Hydrological Geological Engineering, Geology, Applied Physics.

Northeast Heavy Machinery College (Qiqihar)

Steel Rolling Machinery, Smelting Equipment, Hydraulic Transmission and Control, Electrification and Automation of Industrial Enterprises, Computers and Their Use.

Beijing Aeronautical Engineering College

Aeronautical Materials Science and Engineering, Aeronautical Radio Engineering, Aeronautical Automatic Control, Aeronautical Hydraulic Control Engineering, Jet Propulsion, Aircraft Design, Aeronautical Engineering Mechanics, Computer Science and Engineering, Aeronautical Manufacture Engineering and Production Automation, Aeronautical Welding.

Northwest Industrial University (Xian)

Forging Press Engineering Specialization, Casting Engineering, Welding Engineering, Nonmetal Materials Science and Engineering, Aerodynamics, Aircraft Structure and Strength, Computers, Aeronautical Firepower Control, Aviation Radio Technology, Computer Software, Rocket Motors, Launcher Automatic Control (Guided Missiles), Aircraft Automatic Control (Airplanes), Aviation Machinery Manufacture Engineering, Applied Mathematics, General Mechanics.

Nanjing Aeronautical Engineering College

Department of Aircraft, Department of Aircraft Motors, Aviation Automatic Control, Department of Electronic Engineering and Computers, Department of Aeronautical Manufacture Engineering, Department of Aerodynamics.

Northwest Telecommunications Engineering College (Xian)

Department of Information Engineering, Department of Electronic Engineering, Department of Computers, Department of Electronic Machinery, Department of Technical Physics.

Chengdu Telecommunications Engineering College

Radio Technology, Magnetic Field Engineering, Electronic Materials, Solid Devices, Radio Machinery Equipment, Radio Equipment Structural Designing, Laser Beam Technology, Physics, Chemistry, Electronic Engineering, Computer Engineering, Computer Science.

Beijing Industrial College

Department of Launcher Engineering, Department of Automatic Control, Department of Vehicular Engineering, Department of Engineering Optics, Department of Electronic Engineering, Department of Chemical Engineering, Department of Mechanical Engineering, Department of Engineering Mechanics, Department of Computer Science and Engineering, Department of Industrial Management Engineering, Division of Basic Sciences.

East China Engineering College (Nanjing)

Automated Machinery, Solid Jet Motors, Aerodynamics, Applied Chemistry, Environmental Engineering, Radar Signals Processing, Electronic Technology, Mechanical Technology Equipment and Automation, Metal Materials and Heat Treatment, Automatic Control.

Shanghai Jiaotong University

Shipping Engineering, Ship Power Mechanical Equipment, Refrigeration Engineering, Automatic Control, Computer Science Technology, Electrical Engineering, Electronic Engineering, Materials Science and Engineering, Metal Materials Engineering, Mechanical Engineering, Precision Instruments, Biological and Medical Instruments, Engineering Mechanics, Applied Chemistry, Applied Mathematics.

Harbin Shipping Engineering College

Ship Power Engineering, Naval Vessels Nuclear Power Installation, Automatic Control, Computer Science Technology, Mechanical Engineering.

Harbin Industrial University

Precision Instruments Manufacture Technology, Industrial Automation Instruments and Meters, Thermal Energy Engineering, Hydraulic Pressure Technology, Computer Science (Systems Engineering), Information Engineering, Micromotor, Industrial Electrical Automation, Electrical Appliances, Electrification Engineering, Precision Machinery Designing, Machine Manufacture Technology and Automation, Casting, Forging Press, Welding.

Beijing Steel College

Metallurgical Hot Work and Thermal Energy Utilization, Casting, Metallurgical Machinery, Industrial Automation, Metal Physics, Metallurgical Physical Chemistry.

Northeast Engineering College (Shenyang)

Department of Mechanical Engineering, Department of Automatic Control, Department of Mining, Department of Thermal Energy Engineering, Department of Steel Metallurgy, Department of Nonferrous Metal Metallurgy, Department of Metal Materials, Department of Physics, Department of Management Engineering.

Central South College of Mining and Metallurgy (Changsha)

Mineral Surveying and Prospecting, Mining Prospecting Engineering, Nonferrous Metal Metallurgy, Metal Materials, Metal Materials Powder Metallurgy Specialization, Metal Pressure Processing, Metal Physics, Mechanical Physics, Industrial Automation, Computer Science, Chemistry, Management Engineering.

East China Water Conservancy College (Nanjing)

Water Conservancy Hydroelectric Projects Construction, Hydroelectric Power Plant Station, Harbor and Navigation Channels Engineering, Farmland Water Conservancy Engineering, Engineering Geology and Hydrological Geology, Hydraulic Structure Mechanics, Land Hydrology, Water Conservancy Project Automation, Computer Application.

Wuhan Water Conservancy and Electric Power College

River Mechanics and River Dredging Engineering, Power Plant Construction Structure Engineering, Water Conservancy and Hydroelectric Project Construction, Power Plant Metals, Hydroelectric Power Plant Station, Power Plant Chemistry, Power Plant Hot-Work Survey and Automation.

East China Petroleum College (Shandong, Dongying)

Petroleum Geological Prospecting, Petroleum Geophysical Prospecting, Petroleum Field Geophysics, Petroleum Drilling Engineering, Petroleum Exploration Engineering, Petroleum Field Machinery, Oil Refining Chemical Engineering Machinery, Petroleum and Natural Gas Storage and Shipment, Basic Organic Chemical Industry, Petroleum Refining, Automation of Petroleum Production and Processing, Petroindustry Management Engineering.

East China Chemical Engineering College (Shanghai)

Applied Mathematics, Chemophysics, Chemistry, Intermediates and Dyestuffs, Chemical Pharmacy, Sensitized Materials, Biochemical Engineering, Biochemistry, Chemical Engineering, Inorganic Chemical Engineering, Coal Chemical Engineering, Basic Organic Chemical Engineering, High Polymer Chemical Engineering, Compound Materials, Inorganic Materials Science and Engineering, Environmental Engineering, Corrosion and Prevention, Chemical Engineering Machinery, Fluids, Mechanization and Automation Instruments and Meters.

Beijing Chemical Engineering College

Chemical Engineering, High Polymer Chemical Engineering, High Polymer Materials Engineering, Chemical Corrosion and Prevention, Plastics Machinery, Rubber Machinery, Chemical Industry Automation and Instruments.

China Mining College (Xuzhou)

Mine Survey, Coal Mining Machinery Designing, Coal Mining Machinery Manufacture and Repair, Metal Materials and Heat Treatment, Electrification and Automation of Coal Mines.

Dalian Ocean Shipping College

Ocean Vessel Navigation, Ship Radio Communications, Engine Control (a 5-year course), Ship Electrical Work, Ship Automation, Computers, Ship Radio Technology.

Southwest Jiaotong University (Emei Xian, Sichuan)

Railroad Engineering, Railroad Engineering Geology, Railroad Bridges, Tunnels and Underground Railroads, Industrial and Civilian Construction, Internal Combustion Locomotives, Rolling Stock, Derricks and Transport Equipment, Engineering Machinery, Machine-Making Technology and Equipment, Locomotive Diesel Engines, Metal Materials and Heat Treatment, Electric Locomotives, Railroad Electrification, Automatic Control, Computer Technology, Railroad Transportation.

Beijing Post and Telecommunications College

Telecommunications Engineering, Radio Engineering, Computers and Communications Post and Telecommunications Machinery, Post and Telecommunications Management Engineering.

Northwest Light Industry College (Xianyang, Shaanxi)

Pulp and Paper Making, Leather, Silicate (Ceramics), Silicate (Glass), Light Industry Automation.

East China Textile Engineering College (Shanghai)

Textile Engineering, Knitting, Textile Materials, Textile Industry Management Engineering, Machine-Making Technology and Equipment, Industrial Electrification and Automation, Chemical Industry Automation and Instruments, Chemical Fibers, Dyeing and Sorting Engineering, Environmental Improvement Engineering.

Chongqing Construction Engineering College

Architecture, Industrial and Civilian Construction, Construction Economics and Management, Heating and Ventilation, Water Supply and Drainage Engineering, City Gas Supply Engineering, Concrete and Construction Products, Construction Electrification Automation.

Wuhan Geological College

Geology, Stratigraphic Palaeontology, Rock Mineralogy, Mineral Prospecting Geochemistry, Mineral Deposit Geology, Coal Field Geology, Petroleum and Natural Gas Geology, Rock Mineral Analysis, Hydrological Geology, Engineering Geology, Geophysical Prospecting, Petroleum and Natural Gas Geophysical Prospecting, Drilling Engineering, Prospecting Machinery, Prospecting Tunneling Engineering, Geological Mechanics.

Changchun Geological College

Geological Mineral Survey, Geology, Hydrological Geology, Engineering Geology, Applied Geophysics, Geological Instruments, Mineral Prospecting Geochemistry, Rock Mineral Analysis.

Jilin Industrial University (Changchun)

Tractors, Automobiles, Automobile Transportation Engineering, Fluid Transmission and Control, Industrial Electric Power Automation, Electronic Instruments and Testing Technology, Welding Specialization, Machine-Making Management Engineering.

Zhenjiang Farm Machinery College

Farm Machinery, Tractors, Automobile Internal Combustion Engine, Hydropower Machinery, Machine-Making Technological Equipment and Automation, Casting Technological Equipment, Metal Materials and Heat Treatment, Department of Agricultural Mechanization, Department of Electrical Engineering.

Beijing Agricultural Mechanization College

Tractors, Internal Combustion Engines, Agricultural Machinery Designing and Manufacture, Farmland Water Conservancy Engineering, Hydropower Machinery.

Wuhan Surveying and Mapping College

Engineering Surveying, Aerial Photographic Surveying, Geodesy (Earthquake class), Map Making, Optical Surveying and Mapping Instruments, Electronic Surveying and Mapping Instruments, Computer Technology.

Shanghai First Medical College

Medical Science (a 6-year course), Medical Engineering (a 6-year course), Basic Medicine (a 6-year course), Hygiene (a 6-year course), Pharmacology (a 5-year course), Pharmaceutical Chemistry (a 5-year course), Pharmacodynamics (a 5-year course).

Beijing Agricultural University

Field Crop Genetics and Breeding, Plant Pathology, Farm Insects, Animal Husbandry, Veterinary Science, Agricultural Economy, Agricultural Meteorology.

Nanjing Agricultural College

Genetics and Breeding, Agrology and Agrochemistry, Veterinary Science, Vegetable Farming, Agricultural Economy.

South China Agricultural College (Guangzhou)

Agronomy, Crop Genetics and Breeding, Agricultural Economy Management, Agrology and Agrochemistry, Farm Insects, Plant Pathology, Fruit Trees, Vegetable Farming, Sericulture, Animal Husbandry, Veterinary Science, Fowl Raising and Treatment and Prevention of Fowl Diseases, Forestry, Agricultural Mechanization, Farm Implements Designing and Manufacture.

Shandong Oceanography College (Qingdao)

Physical Oceanography, Marine Meteorology, Marine Physics, Marine Chemistry, Marine Animals, Marine Plants, Marine Geology, Geophysics, Marine Products Processing, Marine Fishing, Applied Mathematics.

Nanjing Meteorological College

Weather Dynamics, Meteorology, Atmospheric Survey, Atmospheric Physics, Agricultural Meteorology.

East China Teachers University (Shanghai)

Mathematics, Physics (a 5-year course), Radio Physics (a 5-year course), Computer Science, Chemistry (a 5-year course), Biology, Geography, Psychology, Physical Education (apply for matriculation as in any other department), School Education, Philosophy, Library Science.

Beijing Teachers University

Department of Psychology, Department of Mathematics, Department of Physics, Department of Chemistry, Department of Biology, Department of Geography.

Fujian Teachers University

Mathematics, Physics, Chemistry, Biology, Geography, Physical Education (apply for matriculation as in any other department).

Chinese People's Liberation Army Engineering College (Zhengzhou, Henan)

Department of Applied Mathematics, Department of Computer Engineering, Department of Radio Communications, Department of Digital Communication Engineering.

Chinese People's Liberation Army Communications Engineering College (Nanjing)

Wire Communications, Radio Communications, Microwave Radiation Communications, Computers.

First Military Medical University (Guangzhou)

Department of Military Medicine (a 5-year course).

Second Military Medical University (Shanghai)

Military Medicine Specialized Course, Department of Oceanic Medicine.

Chinese People's Liberation Army Logistics Engineering College (Chongqing)

Barracks Construction, Underground Construction, Oil Storage and Shipment, Oil Use.

Naval Engineering College (Wuhan)

Naval Vessel Internal Combustion Engine Electrical Fields [7193-7022, possible misprint for 7193-1034], Naval Vessel Demagnetization, Naval Vessel Electrical Equipment Engineering, Mine Sweeping and Antisubmarine Weaponry Engineering, Computers.

Beijing Physical Culture College

Department of Physical Education, Department of Athletics, Department of Basic Theories.

Sichuan University (Chengdu)

Physics, Nuclear Physics, Radiative Chemistry, Chemistry.

Zhongshan University (Guangzhou)

Mathematics, Mechanics, Computer Mathematics, Radio Physics, Chemistry, Zoology, Botany, Natural Geography, Economic Geography, Meteorology, Geology, Physics.

Wuhan University

Physics, Radio Electronics, Chemistry, Cytological Biology, Microbiology.

Fudan University (Shanghai)

Applied Mathematics, Radio Electronics, Physics, Department of Computer Science, Department of Chemistry.

Nanjing University

Computer Mathematics, Computer Software, Physics, Chemistry, Synthetic High Polymer Materials, Structural Geology and Geophysics, Radiative Mineral Geology, Meteorology (weather dynamics).

Xiamen University

Mathematics, Theory of Control, Computer Mathematics, Department of Physics, Physical Chemistry, Chemistry, Biochemistry, Biology, Marine Biology.

Shandong University (Jinan)

Mathematics, Scientific and Technological Intelligence, Physics, Radio Electronics, Technological Optics, Chemistry.

Beijing University

Department of Mathematics, Department of Mechanics, Department of Physics, Atmospheric Physics, Meteorology, Nuclear Physics, Radiative Chemistry, Department of Chemistry, Department of Biology, Natural Geography, Economic Geography, Geomorphology and Quarternary Period Study, Library Science.

China People's University (Beijing)

Economic Information Management.

Nankai University (Tianjin)

Physics, Chemistry, Plant Physiology.

Jilin University (Changchun)

Computer Mathematics, Physics, Radio Electronics.

Central Nationalities College (Beijing)

Mathematics, Physics.

Ordinary Universities and Colleges:

Chinan University (Guangzhou)

Medicine (a 6-year course), Mathematics, Computer Science, Physics, Chemistry, Modern Biology.

Central South Nationalities College (Wuhan)

Mathematics.

Hangzhou University

Oceanic Geology and Geomorphology, Meteorology.

Shanghai Mechanical Engineering College

Optical Instruments, Precision Measuring Instruments, Precision Mechanical Technology and Equipment, Refrigeration Equipment and Low-Temperature Technology, Heat Transmission and Hydrodynamics, Heat Conversion Engineering, Industrial Automation Instruments and Meters, Computer Application, Systems Engineering, Applied Mathematics, Applied Physics.

Shenyang Mechanical and Electrical Engineering College

Machine-Making Technology and Equipment, Hydraulic Transmission and Control, Welding Technology and Equipment, Electrical Engines, Electrical Appliances, Industrial Electrical Appliances Automation, Electronic Instruments and Surveying Technology, Semiconduction Devices, Computer and Its Use.

Guilin Electronic Industrial College

Department of Electronic Machinery, Department of Radio Engineering, Department of Computers.

Xian Metallurgical and Construction College

Industrial and Civilian Construction, Architecture, Programmed Transportation Designing, Industrial Enterprise Automation, Mechanical Engineering, Mining Engineering, Ore Dressing, Nonferrous Metals Smelting, Refractory Materials, Heat Supply and Ventilation, Water Supply and Drainage, Environmental Protection.

Maanshan Steel College

Metallurgical Analytical Chemistry, Coking Chemistry, Metallurgical Machinery, Industrial Automation, Metal Materials and Heat Treatment.

Jiangxi Metallurgical College (Ganzhou)

Mining Engineering, Ore Dressing, Mechanical Engineering, Industrial Automation, Nonferrous Metals Metallurgy.

Shanghai Electric Power Specialization School

Power Plant Thermal Energy Engineering, Thermal Power Plant Automation, Power Plants and Power Systems.

Jianghan Petroleum College (Jianglingxian, Hubei)

Petroleum Geological Prospecting, Petroleum Geophysical Prospecting, Petroleum Field, Geophysics, Petroleum Geophysical Instruments, Petroleum Drilling Engineering, Petroleum Extraction Engineering, Petroleum Field Machinery.

Nanjing Chemical Engineering College

Inorganic Chemical Engineering, Basic Organic Chemical Engineering, High Polymer Chemical Engineering, Chemical Corrosion and Prevention, Chemical Engineering Machinery, Chemical Industry Automation.

Nanjing Chemical Industrial Motive Power Specialization School

Chemical Industry Electrification, Chemical Industry Thermal Energy Engineering, Chemical Engineering Instruments and Meters.

Huainan Coal College

Coalfield Geology and Prospecting, Underground Mining, Coal Mine Shafts, Coal Mine Mechanization, Coal Electrification Automation, Coal Mining Machinery Manufacture and Repair.

Shanghai Ocean Shipping College

Ocean Vessel Navigation, Turbine Management (a 5-year course), Ship Electrification Automation, Computer Technology, Harbor Machinery Designing and Manufacture, Waterway Transportation Management Engineering, Waterway Transportation Economics.

Wuhan Waterway Transportation Engineering College

Ship Designing and Building, Shipbuilding Technology and Equipment, Ship Mechanics, Ship Internal Combustion Engine, Ship Power Installation, Shipbuilding Technological Equipment Automation, Metal Materials and Heat Treatment, Welding, Harbor Machinery Designing and Manufacture, Ships and Harbor Electrification, Computer Application Technology.

Xian Highway College

Automobile Utilization Engineering, Automobile Utilization Engineering Specialization, Transport Designing Specialization, Machine-Making Technological Equipment and Automation, Metal Hot-Working Technology, Traffic Automatic Control, Highway Transportation Management, Highway Transportation Finance and Accounting, Road Construction Machinery, Industrial and Civilian Construction, Engineering Mechanics.

Nanjing Navigation Engineering Specialization School

Harbor Hydraulic Structures, Navigation Channels Maintenance Engineering, Industrial and Civilian Construction, Engineering Machinery.

Jimei Ocean Navigation Specialization School

Ship Piloting, Ship Turbines, Ship Electrical Work.

East China Jiaotong University (Nanchang)

Industrial and Civilian Construction, Electric Locomotives, Machine-Making Technology and Equipment.

Changsha Railroad College

Railroad Transportation, Computers (software), Automatic Control, Railroad Engineering, Industrial and Civilian Construction, Internal Combustion Locomotives, Machine-Making Technology and Equipment, Railroad Engineering Machinery, Railroad Cars.

Dalian Railroad College

Machine-Making Technology and Equipment, Welding Technology and Equipment, Casting Technology and Equipment, Forging Press Technology and Equipment, Metal Materials and Heat Treatment, Internal Combustion Locomotives, Railroad Cars, Industrial Electricity Automation.

Nanjing Post and Telecommunication College

Telecommunications Engineering, Radio Engineering.

Wuxi Light Industry College

Light Industry Machinery Manufacture and Equipment, Light Industry Automation Specialization, Light Industry Synthetic Fermentation Technology, Sugar Refining Technology, Grain Processing and Machinery, Fat Processing Engineering.

Tianjin Light Industry College

Pulp and Paper Making, Plastics Shaping Processing, Salt Refining, Salt Industry Chemistry, Salt Refining Machinery.

Jingdezheng Ceramics College

Ceramic Manufacture, Ceramic Machinery.

Shanghai Construction Materials Industrial Specialization School

Inorganic Materials Engineering (glass), Gelatinous Materials and Products, Construction Material Machinery, Construction Materials Industry Automation.

Chengdu Geological College

Geology, Geological Mineral Survey, Rock Mineral Analysis, Hydrological Geology, Engineering Geology, Petroleum Geology, Geophysical Prospecting, Petroleum Physical Prospecting, Petroleum Physical Prospecting Specialization Class, Terrestrial Centrospheric Probing Class (earthquake class), Radiative Minerals Geology, Radiative Physical Prospecting.

Anhui Engineering College (Hefei)

Tractors, Automobiles, Agricultural Machinery, Casting Technology and Equipment, Metal Materials and Heat Treatment, Machine-Making Technology and Equipment, Internal Combustion Engine, Industrial Electricity Automation.

Wuhan Grain Industry College

Department of Grain Processing Engineering, Department of Fat Engineering.

Zhejiang Engineering College (Quxian)

Pesticides Manufacture and Application.

Anhui Agricultural College (Suxian)

Machine Processing of Tea.

Shandong Engineering College (Jinan)

Electricity Relay Protection and Automation, Welding Technology and Equipment.

Huaqiao University (Quanzhou)

Applied Mathematics, Computer Software, Physics, Chemistry, Industrial Civilian Construction, Machine-Making Technological Equipment and Automation, Chemical Engineering.

Fuzchou University

Applied Mathematics, Computer Mathematics, Computer Software, Computer Technology, Physics, Radio Technology, Physical Chemistry, Analytical Chemistry, Inorganic Chemical Engineering, Basic Organic Chemical Engineering, Chemical Engineering Machinery, Industrial Electricity Automation, Power Plants and Electric Power Systems, Electrical Machinery and Electrical Appliances, Machine-Making Technological Equipment and Automation, Casting, Metal Materials and Heat Treatment, Industrial and Civilian Construction, Water Conservancy and Hydroelectric Projects Construction, Roads and Bridges, Regional Geological Survey and Mineral Investigation, Mining Engineering, Light Industry Machinery, Food Technology.

Fujian Construction Engineering Specialization School

Industrial and Civilian Construction.

Zhongshan Medical College (Guangzhou)

Medical Science (a 6-year course).

Wuhan Medical College

Medical Science (a 5-year course) Hygiene (a 5-year course), Environmental Medicine (a 5-year course), Pediatrics (a 5-year course).

Shanghai Railroad Medical College

Medical Treatments (a 5-year course).

Nantong Medical College

Sea Navigation Medical Science (a 5-year course).

Nanjing Pharmaceutical College

Pharmaceutics, Materia Medica Analysis Specialization, Traditional Chinese Medicine, Chemistry, Pharmacy.

Fujian Medical University

Medical Treatment (a 5-year course).

Fujian Traditional Chinese Medicine College

Traditional Chinese Medical Treatment (a 5-year course), Osteological Surgery (a 5-year course).

Shanghai Second Medical College

Pediatrics (a 5-year course), Oral Surgery (a 5-year course).

Northeast Forestry College (Harbin)

Wild Animals, Felling and Transportation of Timber, Forestry Economy, Application and Repair of Forestry Machinery, Carpentry, Machine Designing and Manufacture.

Nanjing Forestry Products Industrial College

Synthetic boards, Forestry Machinery Designing and Manufacture, Forestry Machinery Application and Repair, Mechanization of Felling and Transportation of Timber, Forestry Chemical Industrial Pulp and Paper Making Unit, Forest Diseases and Insect Pests Prevention and Treatment, Forestry, Parks.

Chengdu Meteorological College

Meteorology, Meteorological Survey Technology, Meteorological Communications, Meteorological Radar.

South China Tropical Crops College (Hainan Island)

Tropical Crops Cultivation, Tropical Crop Produce Processing, Tropical Plants Protection, Tropical Horticulture, Tropical Crop Mechanization.

Jiangsu Agricultural College

Mechanical and Electrical Irrigation.

Fujian Agricultural College (Sanming)

Agronomy, Plant Protection, Fruit Trees, Tea, Animal Husbandry, Agricultural Machinery, Vegetables, Pedological Agrochemistry, Agricultural Economic Management.

Fujian Forestry College (Nanping)

Forestry, Economic Forest, Forest Protection Specialization, Felling and Transportation, Machine Processing of Lumber, Forest Products Chemical Industry, Pulp and Paper Making Specialization.

Xiamen Marine Products College (Jimeizheng)

Fishing Vessel Motors, Refrigeration Technology, Sea Water Breeding.

Suzhou Railroad Teachers College

Mathematics.

Fuzhou Teachers College Specialization Class

Geography (recruitment focused in Fuzhou, Jianyang, Ningde and Putian).

Fuqing Teachers Specialization School

Mathematics, Physics, Chemistry, Physical Culture (recruitment focused in Putian and Jinjiang).

Jinjiang Area Teachers College Specialization Class

Mathematics.

Longqi Area Teachers College Specialization Class

Physics, Chemistry, Mathematics.

Longyan Teachers College Specialization Class

Physics, Chemistry, Mathematics.

Sanming Area Teachers College Specialization Class

Physics, Chemistry, Mathematics, Physical Culture (recruitment focused in Sanming, Longqi and Longyan).

Nanping Teachers Specialization School

Physics, Chemistry, Mathematics.

Ningde Teachers Specialization School

Mathematics, Biology (recruitment focused in Ningde, Sanming and Jianyang), Physical Culture (recruitment focused in Ningde and Jianyang).

Anhui Finance and Commerce College (Bengbu)

Cotton Processing and Inspection.

Tianjin Commercial College

Refrigeration.

Hangzhou Commercial College

Meat and Food Sanitation, Commercial Electronic Technology.

Navy First Surface Vessel School (Luda Municipality)

Surface Vessels Department Chiefs, Sea Lane Survey.

Navy Higher Electronic Engineering Specialization School (Taiyuan, Shanxi)

Radio Communication Engineering (a 4-year course), Naval Vessel Radar Engineering (a 4-year course).

Navy Medical School (Nanjing)

Military Medicine Class.

Nanchang Army School

Military Command (already recruited).

The Liberation Army Physical Culture College (Guangzhou)

Military Command Specialization (already recruited).

The Chinese People's Liberation Army Antiaircraft Artillery School (Zhengzhou)

Military Command Specialization (already recruited).

Shanghai Physical Culture College

Fujian Physical Culture College (Jimei Municipality)

Department of Physical Culture, Department of Athletics.

Literature and History Group

Key Institutes of Higher Learning and the First Group of Recruiting Schools:

Sichuan University (Chengdu)

History, Japanese Language.

Zhongshan University (Guangzhou)

History, Archaeology, Philosophy, Economics, Jurisprudence, Chinese Language and Literature.

Wuhan University

Law, French Language.

Fudan University (Shanghai)

Journalism, History, Philosophy, Political Economy, Political Science, World Economy.

Nanjing University

Chinese Language and Literature, Philosophy, Economic Management.

Xiamen University

Chinese Language and Literature, English, Japanese, French, History, Archaeology, Political Economy, Statistics, Accounting, Public Finance, Banking, Foreign Trade (the same qualifications as those applying for specialization in English), Business Administration, Philosophy, Jurisprudence.

Shandong University (Jinan)

Philosophy, Economic Management, Scientific Socialism, Chinese Language and Literature, History, World History.

Beijing University

Chinese Literature, Chinese Language, Classical Literature, World History, Political Economy, International Politics, Law, Economic Law, Burmese Language and Literature (a 5-year course recruiting from English language candidates), English Language and Literature, French Language and Literature (test in French or English).

China People's University (Beijing)

Philosophy, Political Economy, History of International Communist Movement, History of the Chinese Communist Party, Industrial Economic Management, Agricultural Economic Management, Commercial Economy, National Economic Planning, Statistics, Finance and Banking, Financial Accounting, Journalism, Archive Science.

Nankai University (Tianjin)

Chinese Language and Literature, World History.

Jilin University (Changchun)

Political Economy.

Central Nationalities College (Beijing)

Philosophy, Political Economy, History, Chinese Language and Literature.

East China Teachers University (Shanghai)

School Education, Philosophy, Economics, Political Education, Chinese Language and Literature, History, Library Science.

Beijing Teachers University

Department of Chinese, Department of History, Department of Philosophy, Department of Political Economy, School Education (candidates for natural sciences are acceptable), Preschool Education.

Fujian Teachers University

Political Education, Chinese Language and Literature, History, Music (already recruited), Fine Arts (already recruited).

Beijing Foreign Trade College

Foreign Trade English, Customs Administration (the same qualifications as candidates for foreign languages).

The Chinese People's Liberation Army Nanjing Foreign Language College

English.

Southwest Politics and Law College (Chongqing)

Law, Criminal Investigation.

International Relations College (Beijing)

English, Japanese (to be selected from among the applicants for the English language).

Applicants for the above two categories of specialization who speak the Minnan [southern Fujian] dialect will be given preference.

Beijing Foreign Languages College

French.

General Universities and Colleges:

Jinan University (Guangzhou)

Journalism, Chinese Language and Literature, History, Industrial Economy, Commercial Economy, Political Economy, Accounting, International Banking.

Central South Nationalities College (Wuhan)

Political Science, Chinese.

Hangzhou University

German.

Shanghai Mechanical Engineering College

Scientific and Technical English, Scientific and Technical German.

Shanghai Ocean Shipping College

Water Transportation Finance and Accounting, Oceangoing Shipping Operations (the same qualifications as required of applicants for the English language).

Changsha Railroad College

English.

Jingdezheng Ceramics College

Ceramic Arts Designing (already recruited), Ceramic Arts Carving (already recruited).

Shanghai Construction Materials Industrial Specialization School

Construction Industry Finance and Accounting.

Hebei Geological College (Xuanhuaxian)

Geological Planning Statistics, Geological Finance and Accounting.

Fuzhou University

English Language College Specialization (a 2-year course).

Suzhou Railroad Teachers College

Chinese.

Fujian Teachers College

English Language, Japanese Language.

Fuzhou Teachers College Specialization Class

English, Chinese, History (recruitment focused in Fuzhou, Jianyang, Ningde and Putian).

Jimei Teachers Specialization School

English, Chinese, Fine Arts (already recruited, recruitment focused in Xiamen, Sanming, Jinjiang, Longqi and Longyan), Music Specialization (already recruited, recruitment focused in Xiamen, Jinjiang and Longqi).

Fuqing Teachers Specialization School

English, Chinese.

Jinjiang Area Teachers College Specialization Class

English, Chinese, History (recruitment focused in Jinjiang, Longqi and Longyan), Political Education (recruitment focused in Jinjiang, Longqi and Longyan).

Longqi Area Teachers College Specialization Class

English, Chinese.

Longyan Area Teachers College Specialization Class

English, Chinese.

Sanming Area Teachers College Specialization Class

English, Chinese.

Nanping Teachers Specialization School

English, Chinese, Political Education (recruitment focused in Jianyang, Sanming and Ningde).

Ningde Teachers Specialization School

English, Chinese.

Shanghai Foreign Trade College

Foreign Trade (the same qualifications as required of applicants for foreign languages), Foreign Trade English.

Shanghai Finance and Economics College

Accounting, Public Finance, Capital Construction Financing and Credit, Political Economy, International Banking, Banking, Industrial Economy, Commercial Economy, Statistics.

Jiangxi Finance and Economics College (Nanchang)

Public Finance, Capital Construction Financial Credit, Industrial Finance and Accounting, Business Finance and Accounting, Agricultural Finance.

Hubei Finance and Economics College (Wuhan)

Public Finance, Capital Construction Financial Credit, Finance and Accounting.

Anhui Finance and Trade College (Bengbu)

Industrial Finance and Accounting, Business Economy, Business Finance and Accounting, Planning Statistics.

Hangzhou Commercial College

Business Administration, Business Finance and Accounting, Commercial Planning Statistics.

Nanjing Grain and Economics College

Planning Statistics, Finance and Accounting.

Navy Higher Electronics Engineering Specialization School (Taiyuan, Shanxi)

English (a 4-year course).

East China Politics and Law College (Shanghai)

Law.

Shanghai Foreign Languages College

English, Japanese, Spanish.

Fujian Art School College Specialization Class (Fuzhou)

Play Writing (recruited ahead of schedule).

Notes:

1. Any course of study not designated as a department is a specialization course.

2. Each of the colleges, universities and specialization units is assigned a code number. All applicants for matriculation must fill out the applications according to the code numbers of the college, university and specialization unit as published in the "Student Recruiting Newsletter."

PARTY AND STATE

BLIND ALLEGIANCE TO MARXISM-LENINISM DECRIED

Hong Kong CHENG MING [CONTENDING] in Chinese No 47, 1 Sep 81 p 49-53

[Article by Wen Hui [3306 8748]: "Marxism-Leninism Under Challenge--Four Criticisms of the 'Four Insistences'; On 'Upholding Marxism-Leninism and Mao Zedong Thought'; The fourth of the 'Four Insistences' is 'Upholding Marxism-Leninism and Mao Zedong Thought;' A Grave Crisis of Faith Has Arisen in Marxism; Which Is It To Be, Party Leadership or Marxism-Leninism?"]

[Text] As a matter of fact, from the standpoint of the Chinese communists, the most fundamental and most important thing has to be to uphold the scientific ideology of Marxism. This is because the scientific ideology of Marxism includes socialism, people's democracy, the functions of the party and whatever these things entail. At present, the highest decision-makers of the CCP especially emphasize "upholding the leadership of the party," identifying this one "upholding" as the core of the "four insistences." However, should party leadership deviate from the scientific ideology of Marxism, would this kind of "leadership" have to be "upheld"? Someone may say; "Our party is a Marxist-Leninist party," in which case one may ask, whether this "Marxist-Leninist" party has ever been "not so Marxist-Leninist" during half of the past 60 years? After the overthrow of the "gang of four" and before the Third Plenary Session, have there not occurred instances when the scientific ideology of Marxism-Leninism was very markedly not upheld? The answer to these questions can only be, yes. In that case, doesn't upholding the scientific ideology of Marxism have priority over the other "upholdings" and over the "upholding of the party leadership," and should it not be upheld first of all and with special emphasis?

Some Important Reasons for the Crisis of Faith in Marxism-Leninism

The serious questions are, first, that a crisis of faith in Marxism has arisen in China, and second, that many self-affirmed believers in Marxism-Leninism in powerful positions will still to this day in some questions firmly uphold non-Marxist viewpoints and methods.

In present-day China, there are many who basically never believed in Marxism-Leninism and there are also many who have turned from believers in Marxism-Leninism into non-believers. Why should a crisis of faith in Marxism-Leninism have arisen? There are several reasons. First, some theses of Marxism-Leninism have already become outdated (to be discussed later in more detail). Second, for many new questions and new conditions that have arisen in modern and contemporary times, there are no explanations in the writings of Marx and Lenin (to be discussed later, here only briefly noted). Third, China made a bad job of socialism during the last 30 years and the people blame Marxism-Leninism for it. Four, Mao Zedong and his men gave out their left-deviationist mistakes and their left-deviationist line as true Marxism-Leninism, while it was actually false Marxism-Leninism. The people who had believed in the false and had taken it for true, later recognized the false goods and now don't want to believe even in the genuine. Five, some corrupt party members and cadres have frequently taken advantage of their powerful positions and under the guise of phony theories frightened people, gave people harsh dressingdowns, "rectified" people, thereby arousing much animosity so that people now don't want to have anything to do with those men and their Marxism. Indications of this crisis of faith have not been eliminated even after the Third and the Sixth Plenary Session.

Indications That the Crisis of Faith has not yet been Eliminated

During the time from the Third to the Sixth Plenary Session, the CCP has expended great energy on bringing order out of chaos and has accomplished achievements in its economic readjustment. However, the leftist poison is far from being eliminated. Some people believe that they do every movement on the political stage in Marxist-Leninist style, but in fact they are very deficient. For instance, on socialist democracy, which Marxism regards as highly important, they talk a lot and do little, even sometimes proceed in exactly the opposite direction. Democracy means that the minority must obey the majority, but these people always want the broad masses (esteemed by Mao as "the true heroes") to obey their commands and their will, that is, of the self-styled Marxists. The least that democracy demands is freedom of speech, but they will not give the people true freedom of speech, even academic freedom is not tolerated. Those in high positions have the freedom to utilize the newspapers as their big stick against writers of liberated ideologies, but the common people have no freedom to fight back against these big stick tactics. The article by the special correspondent of the JIEFANGFUN BAO [PLA NEWSPAPER], which criticizes the article by Bai Hua [4101 2901], aroused public indignation, but in what newspaper could an article be published that expressed this public indignation? From Beijing to the various localities there are 20 provincial and municipal newspapers that reprint articles from the PLA newspaper, where has there ever been a newspaper that would print an article which directly criticizes anything in the PLA paper? Some argue that since the Chinese have suffered the feudal poisoning so profoundly, democracy must be introduced along the conventional ways, it cannot be rushed. There is some truth in this, but why can't certain highly placed Chinese communists take the lead in advance of the masses, "be the first in line" to demonstrate democratic conduct and "set the tune with one beat of the gong"? We hear them vociferously emphasizing that the four principles must be observed and that Marxism-Leninism must be firmly upheld, but they either are completely ignorant of, or have completely forgotten the socialist democratic doctrines of Marx and Engels. Marx and Engels said in 1848: "The first step in the workers' revolution is to raise the proletariat to become the ruling class and to strive for democracy."[1] This sentence fully demonstrates the importance that Marx and Engels attributed to democracy. It may be explained as: the first step of the workers' revolution is to establish a democratic regime of the proletariat.

The Chinese revolution has gained its victory already over 30 years ago, but how much democracy have the proletariat and the entire people gained? Can this kind of a country be truly regarded as a socialist country? Since socialist democracy has not truly been realized, it is difficult to eliminate bureaucracy and a work style of prerogatives and privileges. This is the reason for great dissatisfaction among the masses. It is an important factor in the crisis of confidence in the CCP and one of the reasons for the crisis of faith in Marxism that China now experiences.

The Crisis of Faith in Marxism-Leninism is a World Problem

Some say the crisis of faith in Marxism is not only being experienced in China, but is a worldwide phenomenon. That is a fact. I have had contact with some French writers and correspondents who in the late sixties, influenced by the "Cultural Revolution" and the "Red Guard" movement, had become ardent devotees of Marxism-Leninism and Mao Zedong Thought. In France they joined "rebellious" movements, including street demonstrations, occupation of schools, etc, but now they not only do not believe anymore in Marxism-Leninism and Mao Zedong Thought, but did not even give their votes in the French general elections to the French communist party which pursues a policy of Eurocommunism. In a scholarly report on his experiences in Japan, Yu Guangyuan [0060 0342 6678] said the Japanese workers do not yearn for socialism like 20 years ago, because they have seen nothing good come from socialism. There was a time in the fifties when many people pinned their hopes on China, but later when seeing how slow China's livelihood remained one of bitter hardships, China had no more attraction for them.

The reasons why the crisis of faith in Marxism has become a kind of worldwide epidemic are basically the same as the reasons we mentioned earlier for the crisis in China. Once, the red star shone so brightly on top of the Kremlin and gave infinite lustre to Marxism. After socialism suffered its serious setbacks in the Soviet Union, the hopes from all corners of the world flowed in one hot current toward Zhongnan Lake [seat of government] in Beijing. However, when China staged the "Cultural Revolution" and revealed the serious defects of an overweening, "Marxist" CCP and an overweening over "socialist" China, the rivers and rivulets of hot current cooled off and the crisis of faith in Marxism-Leninism deepened considerably.

At present, the CCP energetically advocates the "four insistences" and advocates to "firmly uphold Marxism-Leninism and Mao Zedong Thought" in order to overcome the crisis of confidence and the crisis of faith, and to have the whole party and the whole people unite and advance under the guidance of the party and under the banner of Marxism-Leninism and Mao Zedong Thought. But is this an easy thing to accomplish? Let us here first discuss "upholding Marxism-Leninism."

How Do We Today Look Upon the Tenets of Marxism?

Lenin's Overstatement Regarding the Omnipotence of Marxism

Lenin gave some clear explanations of the concepts and substance of Marxism. He said: "Marxism is the system of Marx's viewpoints and doctrines. Marx is the inheritor and talented perfector of three ideological trends in the three most advanced countries of the 19th century. These three ideological trends are: the classical philosophy of Germany, the English classical school of political economics and French socialism, a combination of French revolutionary doctrines in general. Marx's viewpoints were extremely thoroughgoing and tightly knit, which even his enemies acknowledge. The sum total of these viewpoints form modern materialism and modern scientific socialism and constitute the theoretical guiding principles for the labor movements in all civilized countries of the world."[2] According to Lenin's analysis, Marxism has three components: one is the dialectic materialism and historical materialism, one is political economics and one is socialism.[3] Lenin condensed the high value that he attributed to Marxism into one short sentence: "The doctrines of Marxism are omnipotent because they are correct."[4]

Lenin made a fairly penetrating analysis of Marxism, but his formulation of its omnipotence is not very accurate.

Certain Political-Economic Viewpoints of Marxism No More Fit Today's Conditions

Are Marx's doctrines really "omnipotent"?

The philosophical principles in Marxism leave little room for argument. The priorities given to materialism, practice, the unity of opposites, the developmental viewpoints, historical materialism, etc, we must admit, are universal truths, applicable everywhere and fitting all localities. To call them "omnipotent" is not saying too much. However, those parts of Marxism that deal with political economics and socialism are not that kind of a panacea. Marx wrote "Das Kapital" in the 19th century. It analyzes 19th century capitalism. The views expressed in this book are of great usefulness regarding all capitalist production relations. However, to deal only with the value of labor, surplus value, and the laws of profit averaging at the time when capitalism developed, toward the end of the 19th century, is obviously not enough. That means that it is not enough to use only "Das Kapital" to explain modern capitalism.

To give an example, the direct production concept of the past basically comprises manual workers with the addition of technical personnel directly engaged in production in enterprises. However, following the development of science and technology, the technical and scientific level of the tools of production rose very rapidly, machines widely replaced men, even robots become more and more common, and the concept of the direct production force has already undergone a great change. That means the scientific and technological development greatly accelerated the development of the social production force and greatly influenced the economic formation of society. The economic crises of capitalism also gave rise to new and different forms. If one were to cling doggedly to "Das Kapital" in an examination of the changes of capitalism, it would be impossible to understand all these questions.

Let met cite another example. Marx set forth his thesis of the ever increasing impoverishment of the proletariat on the basis of the conditions of the working class in the 19th century, which obviously does not fit conditions in the 20th century and particularly not the conditions of today. In the "Communist Manifesto" Marx and Engels said in 1848: "The modern laborer, on the contrary, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence on his own class. The laborer becomes a pauper, and pauperism develops more rapidly than population and wealth."[5] In 1865 Marx said: "The general trend of capitalism production does not tend to raise the average wage level, but tends to lower that level."[6] When discussing the process of capital accumulation, Marx says in his "Das Kapital": "In this transformation process of plundering and monopolizing, the whole interest capitalist tycoons continuously decrease, while the degree of impoverishment, oppression, enslavement, deterioration and exploitation steadily deepens."[7] However, what are the actual conditions? The livelihood of the workers is by no means rapidly deteriorating, especially after the war, the actual wages of workers in most countries of Europe and America have increased. Taking the manufacturing industries as example and comparing 1970 with 1949, the increases in America and England were 48.8 and 46.1 percent, respectively. In France, Japan and West Germany the increases were as high as 120 to 289 percent. After 1970, wages of workers in the manufacturing industries of these countries have continued to go up. It is a ridiculous attitude, and not at all seeking truth from facts, if some people "defend Marxism" by "proving" with methods that come close to sophism that the "impoverishment" is one of the universal truths.

Some Marxist Theories on Socialist Revolution Have Their Practical Limitations

Marx's doctrines on socialism are more brilliant than anything in the socialism of his time. He directly took over the positive elements in the utopian socialism of Saint-Simon, Fourier and Owen, but as pupil surpassed his masters. Fourier once published an advertisement calling on rich people to support with their contributions the happier new communities that he was organizing. He waited respectfully day and night but to the end of his days never saw any kind and benevolent elders. Marx was quite different from these utopian thinkers; he fundamentally remolded socialism and laid his theoretical foundation on the law of social development. However, even so, Marx's socialist doctrines are also not unassailable.

It is a well-known fact that Marx and Engels predicted that the revolution, which they had envisioned, would first break out in countries with advanced production forces and well-developed capitalism (as e.g., England, France and Germany), but in the end it was successful first in Russia, a country with rather backward production forces and not very well developed capitalism. China before its revolutionary victory was an even poorer and more backward country in a semifeudal, semicolonial state. This historical development shows that certain Marxist theories on socialism had their limitations of space and time.

Some Marxist Ideas on Socialist Economic Forms are Not Feasible in Actual Practice

To cite another example: The basic features of the economic formation in the socialism envisaged by Marx were that on the foundation of a socialized production, there would be common and joint work by the whole society, common property; distribution would be direct and there would be no need for commodity exchanges, therefore also no need for money and also no markets. Later social practice has shown that all this is not feasible. The communist chief of Cambodia, Pol Pot, once carried out this kind of socialism. The result was that he created a complete chaos in every phase of the Cambodian economy, and its political and military affairs. If people accuse Pol Pot of suffering the disease of extreme "leftism" he could very well defend himself by asserting that he followed the doctrines of Marx. Even though this was a blind and indiscriminate application, it was a manifestation of "leftism." This leftism is a divorcing of oneself from the realities, divorcing oneself from time and space and the set conditions. There is bound to be a difference between Marx's understanding of socialism 100 years ago and the practice of socialism in our days.

Many Marxist Theories Meet New Challenges in the Present World

The fact is very clear that Marxism is one field of scholarship. "Learning has no limits," and scholarship also has no limits, which means it has to be continuously supplemented, revised and developed. At Tokyo University there are two courses of economic theories, course No 1 and course No 2. The one called economic theories No 1 deals with Marxist economics, and the course economic theories No 2 deals with modern economics. Both are required courses. It is said that 15 years ago, Marxist economics was in dominant position in Japanese universities, but that it was later displaced by modern economics. Why could this situation arise? Probably because the economic doctrines of Marxism cannot explain certain important economic questions in the present society. Actually, quite a number of questions require authoritative answers, for instance, what after all is the developmental law of capitalism? What are the future prospects of the capitalism world? What new changes have occurred in the economic contradictions and economic crises in the capitalist countries? What forms and patterns should labor movements in those countries adopt? What will be the future prospects of socialism? ... To this date, there has been not one Marxist theoretician to write a substantial and convincing book that would reply to these questions. We may therefore say that Marxism is directly facing the challenge of new historical developments, new conditions and new problems.

How Do We Look Today at Leninism?

During the more than 100 years from Marx and Engels to our days, Lenin has been an outstanding theoretician in the development of Marxism. He revised and supplemented the Marxian thesis that the revolution will gain its first victory in a country of well-developed capitalism and other theses,[8] and he analyzed the characteristic traits of the post-Marx capitalism world.[9] However, Leninism, which Stalin called "Marxism of the imperialist and proletarian revolutionary period," is also not absolute truth, just as Marxism. Lenin's views and actions regarding some important problems have been erroneous.

Lenin's Theory on the Definite Impoverishment of Capitalist Workers Was Onesided

On the question of the impoverishment of capitalist workers, touched upon earlier, Lenin held a onesided view. In an article written in 1922, "The Impoverishment of the Capitalist Society," he said: "The wealth of the capitalist society is growing at an incredible speed, but the masses of workers are getting poorer day by day."[11] He explained this, based on German data: "The workers are definitely being impoverished, they are simply getting poorer and poorer, their livelihood is deteriorating, their food is bad and not enough, they crowd into cellars and attics."[12] Lenin's "definite impoverishment" was aimed against the statement of "no impoverisnment" made by "certain opportunists." However, the historical facts later made it clear that on this question it was not Lenin, but the "certain opportunists" who were right. There are still today some people in Chinese academic circles who defend Lenin's "absolute impoverishment, "some also saying that Lenin at that time spoke of "the conditions of livelihood of German workers at a certain period of time; Lenin did not refer comprehensively to the conditions of workers in various countries at that time." This is certainly not an attitude of seeking truth from facts. After he had set forth the view of the workers' impoverishment in his "Impoverishment of the Capitalist Society," he again said "Take some data from Germany as example," so how can one say that Lenin was only speaking of conditions in Germany? Actually, from the title of the article alone we can see that Lenin intended to deal with this problem as being of a universal nature.

Lenin's Theory and Policy of "War Communism" Had Dire Consequences for the Soviet Union

This is one example. Another example that can be cited from the Lenin era is the "War Communism." Beginning in 1917, Russia gradually instituted "War Communism." Lenin and the Russian communists (Bolshevik) believed that instituting "War Communism" would be a direct transition to communism. "War Communism" consisted mainly of the following: requisitioning of surplus grain, the peasants having to sell to the state all agricultural, animal husbandry and agricultural by-products, no equivalent material to be received in return; all state enterprises instituted a system of highly centralized administration with one-man leadership, all domestic and foreign trade was nationalized, commodity trade and market economy was abolished, most manufactured goods were accounted in kind, distribution to consumers was also in kind, cash wages were almost totally abolished. Lenin said: "We firmly believed at that time that the peasants will provide us with all the grain we needed, according to the system of collecting their surplus grain. We would then have been able to distribute this grain to the workers in the various factories, and that we could institute a communist production and distribution."[13] The result of the "War Communism" was an economic, political and social crisis that grew worse day by day. In the great starvation of February 1921, millions starved to death. Lenin recounted the conditions of that time with grief and remorse: "In 1921, after we pulled through, and victoriously pulled through, the most serious stage of our civil war, we met with the great, and in my opinion most serious, internal political crisis of Soviet Russia. This crisis entailed not only dissatisfaction among a large section of the peasantry, but also dissatisfaction of the workers. At that time, the mood of the broad masses of the peasantry was, not consciously but instinctively, against us. This happened the first itme in the history of Soviet Russia, and I hope it will be the last time. What had brought about this special condition, which of course was also most unhappy for us? The reason was that we advanced too far in our economic assault. We did not ensure a sufficient base for ourselves. The masses felt that it was beyond our strength to make the direct transition to a form of pure socialism and a pure socialist distribution. If we would not have been able to effect a retreat, but merely carried out some easy tasks, we would have been in danger of utter destruction."[14]

Lenin admitted fully that the "War Communism" was a failure, a mistaken "frontal attack." In the spring of 1921, the "new economic policy" was instituted and the Russian economy gradually recovered. It is a pity that there are always people, be it in the Soviet Union (where it was Stalin) or in China, who stand facts on their head and who would sing the praises of the "War Communism" as a glorious chapter of Leninism. What China did in the "Great Leap Forward" and the "Cultural Revolution" is very similar to the "War Communism," and what Pol Pot did in Cambodia can even more be said to be a true replica of the Russian "War Communism." We realize from these facts that the CCP and other communist parties that call themselves Marxist have not learned a lesson from the mistakes committed in those years by Lenin and the Russian communists (Bolshevik).

The Formulation "Firmly Uphold Marxism" Deserves Further Exploration

If we now discuss the question of firmly upholding Marxism-Leninism, we believe it will be easy to come to a conclusion.

What Things in Marxism Are We To "Firmly Uphold?"

If we take "uphold Marxism-Leninism" to mean that we are to uphold every idea of Marx and Lenin, that would be not different from saying that we are to blindly adhere to Marxism-Leninism, that we are to indiscriminately copy everything of Marx and Lenin, without giving any considerations to time, space, conditions and concrete circumstances. "Upholding" in this way will of necessity have us commit the mistake of doctrinairism. Has the CCP not quite a few lessons in this respect to absorb?

If we take "uphold Marxism-Leninism" to mean to adhere to the basic principles of Marxism-Leninism, the question is, what are the basic principles of Marxism-Leninism? Can this question be clarified in a short time? At present, Chinese theoreticians argue that question back and forth. Even if this question is cleared up, must we not also further study whether it is all of the Marxist-Leninist basic principles that are to be firmly upheld?

The Doctrines of Marxism-Leninism Are Products of History

In my opinion, the doctrines of Marx and Engels, the same as those of Sun Yatsen and Confucius, are all products of history. At certain historical periods there may appear various kinds of ideologies suited to that period. Among these, there are of course distinctive ideas and doctrines. We can state with confidence that as long as there are internal contradictions in the capitalist society and as long as socialism retains vitality, Marxism will not vanish from the world. The cloud of Marxism that hovers over Europe and America since the late fifties and especially since the early sixties is not getting more solitary and lacking company, but rather attracts more and more attention. "Enthusiasm for Marxism" appeared in West Germany, France, Italy, America and England, and engendered quite a number of Marxist schools of thought. In Germany, 400 different publications on Marx and Engels were published in the last few years.

In the academic circles of the more than 4,000 American universities, there are now 10,000 teachers who proudly embrace Marxism. Openly published Marxist newspapers, periodicals and books increase from day to day. This shows the great vitality of Marxism. Who will not puruse this "strange shadow" at the present stage of history?

The Relativity of Truth Determines That We Cannot Blindly 'Uphold' Marxism-Leninism

However, Marxism is certainly not absolute truth, it has to undergo the test of practice. Many of its concrete conclusions bear the limitation of time, space and historical conditions. In the past, Newton's doctrines in physics were considered as without error and as absolute truth without any points of doubt. But later it was discovered that Newton's physics could basically be applied only with low speed movements, and not in the area of high speed movements, for instance speeds close to the speed of light; it was therefore replaced by the theory of relativity. If even truth like Newton's physics, for a long time hailed as arrived at by accurate science and furthermore proved by longterm scientific practice, is found to have such limitations and to be of such relative nature, then we should not be surprised if dealing with the borderlines of truths arrived at in the social sciences these are found to include some relative and even erroneous elements. Lenin said: "All borderlines of truth in scientific principles are relative, they may broaden as knowledge increases or at other times restrict."[15] "Every truth if ... applied outside the sphere where it actually is to be applied can be made into a complete absurdity and moreover under these circumstances will of necessity turn into a complete absurdity."[16] Engels has said similar things, namely that what today is recognized as knowledge compatible with truth has inherently hidden in it erroneous aspects which may become apparent in future. Their statements agree with the objective realities.

All-inclusive "Upholding" of Marxism-Leninism Leads to Errors in Practice and Doctrinairism

We can therefore affirm with certainty that it would be a mistake if we would take the statements of Marx, Engels and Lenin word for word as truths, in the same way as if we would take Mao Zedong's statements word for word as truths. This is one thing, and another thing is that some views of Marx and Engels can possibly be truth today, but tomorrow possibly be found to be untrue or contain elements of error. If we then demand the "firm upholding of Marxism," should we not first clarify which principles are to be upheld now and which not? Truth is always concrete, so that we need a concrete analysis, concrete appraisal and concrete tests. If we do not distinguish which are by now outdated, which are correct and which are erroneous, but try to uphold each and every one of the principles, the result can only be an ideological confusion and moreover lead to errors in practice.

No Indiscriminate Labelling as Criminals and Big Stick Treatment for Those Who Probe Into the "Four Insistences"

Make no mistake, Marxism is a branch of science; science and scholorship must constantly be replenished and developed. But is it not also necessary to probe and investigate which aspects must be replenished, which aspects must be developed and which universal truths must be linked with actual practice, lest we commit the mistake of doctrinairism? All these questions have not yet been solved by Chinese theoreticians; probing into these questions is either going on or not yet taken in hand. Is it therefore not inappropriate to put forward an all-inclusive and rigid "firmly uphold Marxism" under these circumstances? If doubts are raised in these matters, is it not going too far to apply the big stick treatment and name-calling, such as "you oppose the 'four insistences'," "rightist deviationist, reactionary!" Mao Zedong once said: "You can't compel people to believe in Marxism."[17] If people who disbelieve Marxism are not to be labelled criminals, why should people be labelled criminals if they raise questions as to what is to be upheld? (End of first section; we shall publish in our next issue the second section on upholding Marxism, Leninism and particularly Mao Zedong Thought)

HUNAN STUDENT REPRESENTATIVE ARRESTED, SENTENCED

Hong Kong CHISHI NIENTAI in Chinese No 9, Sep 81 pp 100-101

[Article by Shan Zhi [1472 0037]: "The Arrest of Tao Sen [7118 2773], general representative of Hunan students"]

[Text] The situation concerning the student movement at Hunan Teachers College was reported in CHISHI NIENTAI in December of last year. This article provides mainly a brief review and summing up of this movement.

This movement first started when Liang Heng [2733 1854] of the Chinese Department at Hunan Teachers College gave a speech in his department at 3 pm on 19 September 1980 recommending himself as a people's deputy, and ended at 4 pm on 19 June 1981 when college authorities announced 1981 Document No 4 (On Dismissal of Tao Sen From His Student Status) to all students of the college; altogether, it lasted 9 whole months. At 9 pm on 19 [June], after college authorities promulgated the document, a public security organ secretly sentenced Tao Sen to 3 years of education through labor and immediate dispatch to a labor reform farm under guard. This event was the concrete indicator of the conclusion of this movement.

On the basis of the development and evolution of the situation, the movement may be divided into three stages. In the first stage, from 19 September 1980 to the evening of 9 October 1980, the students went to the provincial party committee for the first time to present a petition. The second stage, from 9 October 1980 to the forenoon of 16 October 1980, consisted of their struggle in the form of a fast. In the third stage, from 16 October 1980 to the afternoon of 19 June 1981, Tao Sen was secretly arrested after the whole college had undergone political study.

The First Stage: Petition Presented to Provincial Party Committee

In the first stage: The cause of the students' democratic movement that shocked overseas circles may be viewed from three aspects.

1. The aspect of the political and legal institutions of the state. The promulgation of "The Organic Law of the Local People's Congresses and Local People's Governments of the People's Republic of China" and "The Electoral Law for the National People's Congress and Local People's Congresses of the People's

Republic of China" by the Second Session of the political life of the people of the whole country. After the two laws came into effect on 1 January 1980, various localities in the country began direct election activities at varying paces. Hunan Teachers College started its election in the middle of September.

2. The aspect of the electors. Hunan Teachers College is in the 76th electoral district, in the western district of Changsha Municipality; its electors are mostly college students. Before they entered college, they were engaged in professions at various levels; e.g., as peasants, workers, soldiers, teachers, and cadres. Hence they had a clearer perception of the political and economic situation in Chinese society, and they had accumulated and suppressed strong dissatisfaction with the bureaucratism and privileged strata that had resulted from the appointment system and lifelong tenure system. Because they entertained an idealistic and romantic trust in these new laws, and also because the deputy candidate's explosive speech had provoked them, the enthusiasm in their minds, which longed to change the existing situation and establish a new order of life, quickly erupted.

3. The aspect of the cadres. Irrespective of the subjective intent on the part of the leaders at the highest level, because the two laws had come into effect and elections were already getting started, the cadres currently in office found themselves encountering a brand new issue. The longstanding "unified leadership" and the "appointment system" and "lifelong tenure system" in existence made such concepts as "legal system" and "democracy" completely foreign to the party cadres--so much so that members of the college election leading group told the students: "The Electoral Law will become effective only through our interpretation." They also unscrupulously increased the quota of deputy candidates. Naturally, the fact that for years the relationship between the party and the masses had been remote and tense, and that party cadres had taken no responsibility for the masses under their jurisdiction and looked down upon them (the leader of the college election leading group, college Vice President Su Ming [5685 2494], openly declared that he despised the student deputies), constituted one of the causes that prompted the movement to quickly rush into hightide this time.

In view of all of the foregoing--because of the implementation of the two laws which provided the possibility for this movement, because of the electors' longstanding feelings of dissatisfaction and, in addition, because of the existence of the college election leading group which hindered the exercise of democratic rights by the electors, and for many similar reasons--the student movement at Hunan Teachers College, with Liang Heng's first public speech in which he declared his "disbelief in Marxism-Leninism" as its overture, thus began vigorously.

The Second Stage: Struggle in the Form of Fast

In the second stage: Students entered the electoral movement one after another with a positive attitude in this stage; they openly expressed their personal views on various questions. This situation undoubtedly constituted an encouragement to their attempt to eliminate the longstanding suppression and their inferiority complex and also made them feel that they were erecting a positive self-image for themselves (e.g., through the poems and songs and the wall posters they put up at the time). But the "victory" of their second presentation of a petition on 9 October (the students called it a "victory," although the meaning of such a "victory" was rather vague and almost childish) brought the students into a state of blind optimism; this resulted in their failing to study strategy and put them in a defensive position later on. In the end, the students became divided internally, and the entire movement thus found it impossible to develop any further.

There were two reasons for the rise of this situation: 1. Insufficient theoretical preparations. Because the people's thinking had remained in a closed state over the years and, in addition, the movement had exploded quite suddenly, the participants in the movement lacked a clear understanding of the nature and meaning of the movement itself. They joined it merely because of their emotional resentment toward bureaucratic privilege. (This was specifically reflected in the questions asked of the candidates and in the slogans they shouted.) 2. Improper methods. After they presented their petition to the provincial party committee for the first time, the students regarded themselves as having won a "victory." This "victory" merely meant that the two demands made by the students were satisfied that evening: a) the demand that the provincial party committee regard the students' procession as legitimate; and b) the demand that the provincial party committee send out an investigation team. Actually, these two demands were entirely superfluous, because the Constitution already has explicit provisions on processions and, besides, the provincial party committee could very well do things perfunctorily by sending out a completely meaningless investigation team. Subsequent developments proved this point. In the end, the problems were not solved at all, and the students had to present a petition once again, thereby forcing themselves into a passive position.

Ordinarily, election is a right conferred upon a citizen by law; if anyone hinders a citizen in his exercise of this right, the latter should immediately appeal to the law and let the law adjudicate the case. In the case of these students going to the Hunan Provincial Party Committee to present their petition, the result, at most, was to cause the provincial party committee to dismiss Su Ming, the leader of the college election leading group, from office. Had the students brought an indictment and the case had been sent to court for trial (the people's procuratorate of the western district had already agreed to handle the matter at the time), then the significance of this student movement would have been distinctly different. Looking back, this has also had to do with the electors' own lack of any perception of the legal system. Naturally, they can hardly be blamed for this; for years the party and government were not separate, and the party committee often interfered with judicial administration. Everybody was under the control of the party committee of the unit to which he belonged, and matters big and small were all handled by the party organization. This made it natural that few people could believe they should be protected by the law.

The Third Stage: Students Divided; College Authorities Counterattack

In the third stage: Because of the internal division among the students after the fast (mainly because most students did not agree that Tao Sen and others should have gone to the capital to make accusations), the enthusiasm of many of them began to subside and the movement thus gradually calmed down. Just as Tao

Sen and others were maneuvering in Beijing, the Standing Committee of the National People's Congress dispatched a three-man investigation team to conduct an investigation at Hunan Teachers College. Immediately after [the investigation], which lasted half a month, the election office of the National People's Congress handed down Document No 60, a document of eight articles whose main content was the proposition of how to deal with the errors in the work of the college election leading group. The second article criticized Vice President Su Ming by name and pointed out that it was his rude attitude that had provoked a radicalization of the contradictions. The last article of the document especially stressed that leaders at various levels should not attack or retaliate against the students. This document, however, came from a government department. Therefore, even though the college authorities made a public written self-examination, at a meeting of the party committee they still refused to acquiesce, saying: "This is not the voice of the Party Central Committee."

In 1981, after Document No 2 had been handed down by the Party Central Committee, the college authorities began to launch an overall attack against the students. They decided to suspend classes throughout the college for 3 days in order to conduct a study class in which on the one hand they let all students indicate their attitude on the "four adherences," and, on the other hand, they began to carry out public criticism with respect to the expressions and conduct of Liang Heng and Tao Sen. During those 3 days of political study, the results expected by the college authorities were not achieved. On the afternoon of the last day, on the contrary, a big-character wall poster was put up at the college; its contents satirized the clumsiness of the performance of the college authorities and sang the praises of the student movement. This big-character wall poster really stimulated the people's hearts at the time and attracted the attention of the vast ranks of teachers, students, staff, and workers. After taking a picture of this big-character wall poster, the college authorities tore it down and immediately launched an investigation by taking this as a counterrevolutionary incident. From then on, the students no longer raised their voices. The college authorities used all the methods employed in China's political movements of the past and did a great deal to create disunity and demoralization [among the students]. In the end, they succeeded in turning part of the students around to attack those students who had cooperated with one another. Finally, the college authorities exercised their power to take away Tao Sen's status as a student; thereafter, a public security organ secretly sentenced him to 3 years of forced education through labor. This was something not provided for in the Law on Criminal Procedure. In the case of Liang Heng, because he had already secured a visa to emigrate to the United States, the measure was limited to launching a vehement attack on his ideas in the province's institutions of higher learning.

Results and Effects

To sum up, this student movement in Hunan came to a close with the painful defeat of the students themselves. But the positive meaning which this movement imparted to the people's political life was perhaps beyond the calculation of the bureaucrats. Although all the participants in this movement quieted down, they have by no means lost heart. This restrospective article is itself a proof of this. Objectively summing up this movement, we can derive from it the following points:

1. The younger generation of China's intellectuals may become the vanguard of social reform once again, although they themselves are not yet quite mature.

2. The law, under the rule of bureaucrats and the privileged, is to a considerable extent false and deceptive.

3. Order maintained through violence and terror has made people even more indifferent toward politics and social life, and the relationship between the party and the masses has become even more tense.

4. In a certain given period (such as from the beginning of the election to the time prior to the dispatch of the Central Committee's Document No 2), because of the need of the highest level to carry out a power struggle and, in addition, because of certain appropriate means that the people can use, it is possible to get rid of some very bad bureaucrats and thereby ameliorate the people's situation to a certain degree.

THAILAND'S PREM VIEWS KAMPUCHEAN ISSUE

OW080738 Beijing XINHUA in English 0717 GMT 8 Oct 81

[Text] Washington, 7 Oct (XINHUA)--Prime Minister of Thailand Prem Tinsulanon said here today that the Soviet-backed Vietnamese aggression in Kampuchea continues to pose a tremendous challenge to Thailand's and ASEAN's efforts to restore peace and stability to the region.

Speaking at the National Press Club, the prime minister said although Thailand is not a party to the conflict in Kampuchea, it nevertheless has a strong desire to see it brought to an end, for humanitarian reasons as well as for the stability and prosperity of Southeast Asia as a whole. However, he noted, an early end to the fighting in that country is not likely until a political solution can be found on the basis of the declaration of the international conference on Kampuchea and other relevant United Nations General Assembly resolutions.

Prem Tinsulanon went on to say the UN conference held in New York last July was a particularly important development. More encouraging still was the successful meeting in early September of three Kampuchean nationalist groups resisting Vietnamese aggression. Out of that meeting came a declaration of their collective intent to work together to free their country from foreign domination and to restore their people's right to self-determination. This is a vital task which deserves the strong support of the world community, he added.

He welcomed the United States' close working relations with ASEAN in the search for a just and durable solution to the Kampuchean problem.

The prime minister said as a "front-line" state in the struggle against the Soviet-backed Vietnamese aggression in Kampuchea, Thailand will likewise continue to bear the responsibility for its own defense. Its ultimate success will also depend, however, on the support, both material and moral, of those countries with which Thailand shares a common interest in peace and stability.

On his talks with U.S. President Reagan and senior officials of the administration yesterday, the prime minister said these talks have reaffirmed his belief that relations between the United States and Thailand, "which have enjoyed already a long history of both cooperation and friendship, have never been closer than at the present time."

Prem Tinsulanon arrived here Monday for a working visit after attending UN General Assembly and is scheduled to leave tomorrow.

'XINHUA' CITES THAI PREMIER PREM'S UN ADDRESS

OW060244 Beijing XINHUA in English 0214 GMT 6 Oct 81

[Text] United Nations, 5 Oct (XINHUA)--Prem Tinsulanon, prime minister of Thailand, this afternoon reiterated that the withdrawal of all foreign forces from Kampuchea, the restoration of its independence, sovereignty and territorial integrity and the commitment by all states to non-involvement in the internal affairs of Kampuchea are the principal components to any just and lasting solution to the Kampuchean problem.

The Thai prime minister was speaking at the 36th session of the General Assembly. He said that the situation in Kampuchea "continues to be of serious concern not only to Thailand, which is in the front-line, but also to the international community."

He stated that Thailand "is indeed gratified" at the outcome of the international conference on Kampuchea convened in July this year. The conference reaffirmed the fundamental principles, provided a reasonable framework for the comprehensive political settlement and outlined some modalities for achieving a just and durable solution of the Kampuchean problem, he observed.

Thailand hoped that the General Assembly this year would endorse the results of the conference and would proceed to build on the reasonable foundation, he declared.

Referring to the Indo-Chinese refugee problem, the Thai prime minister said there are half a million Indo-Chinese displaced persons from Kampuchea, Laos and Vietnam in the holding centers in Thailand and in encampments along the Thai-Kampuchean border. "This human tragedy has caused much human suffering and created both internal and external problems for Thailand as well," he said.

The ultimate solution of the problem "depends on a comprehensive political settlement particularly of the Kampuchean conflict," he stressed.

In Afghanistan, he continued, the situation directly involved a major power on account of its armed intervention and occupation of that country, which had in turn resulted in increasing tension and rivalry.

He declared that Thailand's position is to support wholeheartedly the right of the Afghan people to determine their own future free from external interference and coercion. "Thailand joins in urging the complete withdrawal of foreign forces from Afghanistan, as well as in making the call for respect of the sovereignty, independence, territorial integrity and nonaligned status of Afghanistan by all concerned," he stated.

BRITISH LABOR PARTY CONFERENCE ENDS AMID STRIFE

OW030920 Beijing XINHUA in English 0738 GMT 3 Oct 81

[Text] Brighton, England, 2 Oct (XINHUA)--Britain's Labour Party today ended an annual conference which saw a new round of bitter internal strife.

In spite of their failure to wrest more power at the top of the party, the so-called left wing still claimed "successes" in making the conference adopt a number of policy decisions in their favour.

The conference voted in favour of an "unambiguous commitment to unilateral nuclear disarmament." It voted against Britain's withdrawal from NATO.

The unilateralist resolution passed at the conference also advocates "unconditional opposition to the replacement of Polaris by Trident or any other system, and to the deployment of cruise missiles, the neutron bomb and all other nuclear weapons in or by Britain" and demands the closure of all nuclear bases in Britain as its "direct contribution to the creation of a European nuclear weapon free zone."

The conference repeated last year's resolution that the next Labour government should pull Britain out of the European Economic Community. Moving a step further than that, it turned down the call for a referendum to let the British people decide whether to come out or stay in the EEC.

On economic affairs, the conference approved an "alternative strategy" in sharp contrast to the monetarist economic policy of the conservative government.

The conference strengthened party leader Michael Foot's authority 11 months after his election to the post. Gladdened by this result, he appealed for party unity and a spirit of tolerance.

Deputy Leader Denis Healey retained his post by narrowly defeating his left-wing challenger, Anthony Benn. This was followed by another victory for the right wing who ousted five left-wing members from the National Executive Committee. The balance of power was thus altered between the two factions in this most important policy-making body of the party outside parliament.

But left-wing leader Anthony Benn refused to admit his defeat. "This is only the beginning, not the end," he told his supporters.

It remains to be seen whether Michael Foot can succeed in repairing the damage caused by the internal wrangling since the last general election and bringing the warring left and right factions together before the next general election in 1984.

YUGOSLAV PARTY VIEWS 'GRAVE' ECONOMIC SITUATION

OW011212 Beijing XINHUA in English 1201 GMT 1 Oct 81

[Text] Belgrade, 30 Sep (XINHUA)--The Central Committee of the League of Communists of Yugoslavia (LCY) held its 21st session today to discuss the internal economic situation and decided to hold the 12th LCY congress next June.

Dobroslav Culafic, secretary of the LCY Central Committee, spoke at the session on the present economic situation and task in Yugoslavia. Yugoslavia, he said, was facing a very grave economic situation and it was imperative to make every effort to overcome the present difficulty by relying on its own strength. The daily growing deficit in international payments and the piling debts to foreign countries have become an obstacle in the way of further development of the productive forces and improvement of the standard of living. The important and pressing task at present was to halt further deterioration of the economic situation and get rid of the danger of losing the ability to make repayment.

Culafic stressed that the only way to develop social economy was to stabilize the economy and there was no other choice. For this purpose, it was imperative to re-examine investments in all domains, reduce consumption and slow down the rise in living standards, economise in every way, oppose extravagance, and cut down overlapping administrative organizations. Culafic criticised squandering of social assets by giving banquets and making tours abroad on all kinds of pretexts.

He pointed out that the difficulty had not come from self-management, but the failure to carry out self-management well.

A number of proposals were raised at the session to cope with the present difficulty and unhealthy tendencies were criticised.

The session approved changes in some leading members of the LCY presidency.

BRIEFS

SINGAPORE ENVOY TO THAILAND MET--Beijing, 30 Sep (XINHUA)--Liao Chengzhi, vice-chairman of the Standing Committee of the National People's Congress, met at the Great Hall of the People this evening with Owyang Chi, Singapore ambassador to Thailand, and his family members. Owyang Chi, 84, arrived in Beijing 28 September on his third visit to China at the invitation of the Chinese People's Association for Friendship with Foreign Countries. The Singapore guests were entertained at banquets 28 September and yesterday given by Wang Bingnan, president of the host association, and Han Nianling, vice-minister of foreign affairs. [Text] [OW301521 Beijing XINHUA in English 1515 GMT 30 Sep 81]

RECEPTION FOR JAPANESE BUDDHISTS--Beijing, 7 Oct (XINHUA)--The Buddhist Association of China gave a reception here this evening in honor of a delegation from Japan-China Friendship Yuko headquarters with Jitsuo Fujii as its advisor and Kakujun Inaoka as its leader. Zhao Puchu, president of the host association, Jitsuo Fujii and Kakujun Inaoka made speeches at the reception. They wished that the friendship between the Buddhists and other peoples of the two countries would be strengthened daily and developed. [Text] [OW071409 Beijing XINHUA in English 1612 GMT 6 Oct 81]

JAPAN INCREASES AID TO EGYPT--Tokyo, 8 Oct (XINHUA)--The Japanese Government has reiterated that it would continue extending positive cooperation to Egypt's nation-building program. It also declared that its aid to Egypt would increase. A decision to this effect was taken by the Japanese cabinet after reviewing the Middle East situation following the death of president Anwar al-Sadat. The Japanese Foreign Ministry held that "Egypt's stability is an essential factor for ensuring Middle East security. It is the key to Japan's Middle East policy." It has decided that the loan in cardinal numbers to be provided to Egypt would increase to 45,000 million yen annually as of next fiscal year. In the fiscal years from 1973 to 1980 Japan's total loans to Egypt came to 148,500 million yen with the 1980 loan reaching 37,500 million yen. Under the Foreign Ministry's policy, Egypt will be the recipient of the biggest loan from Japan outside of Asia. [Text] [OW081230 Beijing XINHUA in English 1217 GMT 8 Oct 81]

FOREIGN BUDDHISTS WORSHIP IN XIZANG--Lhasa, 7 Oct (XINHUA)--Over 800 Indians and Nepalese have paid homage to the Buddha at Kangrinboge of the Gandiise range and Mapam Lake in the Burang County, Tibet, since the beginning of this year. Among the worshippers were 18 Indians, including congress members, ministers, professors of Buddhism and journalists. Kangrinboge of the Gandiise range and Mapam Lake are regarded as "magic mountain and lake" by Tibetan Lamaists and Buddhists in India and Nepal. It is said that the brother of Sakyamuni, founder of Buddhism, preached Sutras in this "magic mountain" and bathed in this "magic lake." Many devoters in the past travelled long distances for 1 or 2 years to reach Burang County. Some died on the way. With the constant development of relations between China and Nepal and improved relations between China and India more worshippers are coming. A worship reception office was set up in Ngari Prefecture in September. [Text] [OW070728 Beijing XINHUA in English 0720 GMT 7 Oct 81]

PEN CENTER PRESIDENT TO ZURICH--Paris, 30 Sep (XINHUA)--Ba Jin, head of the Chinese Pen Centre delegation to the 45th international Pen conference, left here today for Zurich, Switzerland, while the other members of the delegation were flying back home. During the session held in Lyon, Ba Jin met and discussed with Pen Centre leaders of France, the United States, Poland, Japan, Britain, and other countries on the efforts to increase cultural contacts and interflow. After the conference, Ba Jin and other delegation members paid a call on the aged French writer, Vercors (pseudonym of Jean Bruller), and Irene Lipkowski, leader of a French women organization. Five of Ba Jin's works have been translated into French, including "Family," "Cold Night" and "The Garden of Repose." [Text] [OW301540 Beijing XINHUA in English 1528 GMT 30 Sep 81]

FORMER BELGIAN MINISTER ON NATO'S DEFENSE--Brussels, 5 Oct (XINHUA)--It would be dangerous to allow the power gap detrimental to Europe to widen while Moscow does not slow down the pace of arms race it has been pursuing for many years, wrote former Belgian Prime Minister Leo Tindemans in the latest issue of Belgian military weekly VOX. Tidemans, who is also the president of the European Popular Party, noted in the article that the 220 SS-20 missiles deployed by the Soviet Union have seriously impaired Europe's defence. Under such conditions, he continued, the installation of the Pershing II missile and the cruise missile decided by NATO members is "of great importance to the credibility of the West's defence system in Europe." If the plan was not implemented, Europe would be threatened by nuclear blackmail every day, he declared. On the neutron bomb, Tindemans pointed out that in view of Soviet superiority over NATO in the number of tanks, "neutron bombs, as a theatre defensive weapon to check tank attacks, will become a typical weapon in Europe's defence." "As history has taught us again and again, imbalance of power encourages aggression and imperialism would only stop where it meets resistance," he affirmed. [Text] [OW060722 Beijing XINHUA in English 0711 GMT 6 Oct 81]

USSR'S CONTROL OVER DRA--Tokyo, 26 Sep (XINHUA)--The Soviet military interventionists are practising a neo-colonialist policy in Afghanistan by intensifying their economic plunder of and control over Afghanistan, SANKEI SHIMBUN reported today. Since the Soviet occupation troops entered Afghanistan, the Soviet Union has ceased to pay Afghanistan for its supply of natural gas because it insisted that the Afghan Government should continue this supply as part of payment for its debt to the Soviet Union. It was said that the Afghan debt including the cost of maintaining the occupation army totalled U.S.$3,000 million. As a result, the fertilizer and power plants in northern Afghanistan now have to use coal in place of gas. The Soviet Union has also turned Afghanistan into its favourable market. Under the trade protocol signed this year, the two countries are required to exchange an equal amount of their home-made cement despite the fact that Soviet-made cement is inferior in quality while Afghan cement is up to the world standard and sold at a good price in the Asian market. All highways in Afghanistan are under the Soviet military control. New highways under construction in that country are running toward the Soviet border. By building a new highway network in Afghanistan, the Soviet Union aims to raise the stategic position of the area and turn it into a stronghold for the Soviet thrusts to the Indian Ocean. PARTY AND STATE

ANNIVERSARY OF 1911 REVOLUTION LED BY SUN YAT-SEN COMMEMORATED

Beijing RENMIN RIBAO in Chinese 17 Sep 81 p 5

[Article by Dai Yi [2071 6654] and Li Wenhai [2621 2429 3189]: "A Review of Patriotism During the 1911 Revolution Period"]

[Text] During the 1911 revolution period, the patriotic spirit displayed by the Chinese people played a tremendous role in boosting their morale, in transforming the Chinese society and in pushing the wheel of history forward.

Carry on Historical Patriotic Tradition

At the beginning of the 20th century, China sank further into the semi-colonial status. In the face of armed aggression mounted by many imperialist powers against China, the increasingly decadent rule of the Manchu government placed the Chinese nation in critical danger of annihilation. In an effort to save the country from this danger of annihilation, many dedicated citizens devoted their energy to groping in a dark tunnel until they finally took the road of the revolution. In this connection, our great democratic revolutionary Sun Yat-sen said: After the Boxer movement failed, "the situation in our country became so critical and ominous that some dedicated citizens vied to do something to save the nation; and this was the seed of the revolutionary storm." ("Where There Is a Will, There Is Success")

At the crucial moment of the revolution, under the impact of patriotism, millions upon millions of people went to the battlefield, joined the struggle and laid down their lives heroically. The inaugural editorial of TWENTIETH CENTURY CHINA spoke highly of our motherland, saying: "China is the world's oldest civilization. Located in the world's largest continent, China is Asia's biggest country with a lovely history that spans several 1,000 years and lovely classic books recording events of the last 3,000 years. China where our 400 million compatriots live consists of 20 provinces crisscrossed by 5 mountain ranges and 4 beautiful rivers. Throughout the vast country, they can speak the same lovely tongue and communicate with the same lovely written language. China! China! We will worship and adore you and wish you well! We also want to loudly acclaim in the face of the entire nation: Long live China!" However, at that time, our lovely motherland fell prey to the imperialists. Endless wars tore the country apart, caused sufferings and misery everywhere, and made life more difficult than ever. By then, the people faced an impending danger of national annihilation. To the revolutionary group of that time, our motherland was both majestic weak, both rich and poor, both beautiful and shabby. This striking contrast made people realize even more that it was tragic, shameful and infuriating to see a country fall and die; and to feel even more that heroic struggle to save their country and people in defiance of death should be respected, admired and eulogized. The most celebrated propaganda publications at that time were REVOLUTIONARY ARMY which bitterly and indignantly warned thepeople of the impending threat to carve up our country; WARNING BELL which sorrowfully reported disasters and misfortune that hit our country and people; RECOLLECTION which angrily accused the imperialists of committing all sorts of crimes of aggression. All this deeply touched the hearts of the people, inspiring their patriotic zeal and boosting their revolutionary morale. At the beginning of the 20th century, the surge of the patriotic tide further awakened the masses causing the antiimperialist and antifeudal democratic revolution to take root in the hearts of the people, and to be understood, accepted and supported by them.

Although the various revolutionary groups which were organized during the period of the 1911 revolution had definite differences and even some differences in principle in their political views and platforms, it can be said that patriotism was their common idological base. This patriotic spirit was clearly reflected in their declarations, charters, oaths, and even in the names of organizations. The purpose of the earliest revolutionary organization, the Xingzhong Hul, was to "revitalize China to save its people from a castatrophe and to protect its entity from falling apart." As the situation developed, the subsequent revolutionary organizations became richer and clearer in the goals of their struggle, political programs, organizational discipline and strategic concepts. But they consistently cherished the basic idea of delivering the motherland and revitalizing the Chinese nation. Organs of some revolutionary organizations even went so far as to declare: "We can take pride in calling patriotism our common doctrine." (Declaration of TWENTIETH CENTURY CHINA)

The patriotic spirit drove the revolutionary people to take action to fulfill various missions regardless of sacrifices. Before plunging into the sea and drowning himself, Chen Tianhua [7115 1131 5478], in his "letter of determination to die," earnestly urged his comrades never to forget to "revive their nation." He said that he hoped that his death would arouse others "to bear their lovely country in mind, to study hard, and to save their motherland." Before trying to assassinate the five cabinet ministers about to go abroad, Wu Yue [0702 2887] wrote a farewell letter to his wife asking her to constantly raise her "patriotic spirit." Before the Huanghuagang uprising, Lin Juemin [2651 6030 3046] and Fang Shengdong [2455 5116 3159] wrote letters to their respective parents and wives proudly and affectionately telling their beloved ones that their willingness to die for the just cause stemmed from the belief that "their action may have an immediate impact on the destiny of their motherland and may bring perpetual happiness to the nation." To them, patriotism was not an abstract slogan but a spiritual force of the highest order which can inspire the people to give up their lives for a cause.

Integration of Patriotism and Revolutionary Democracy

The patriotism of the period of the 1911 revolution had a new content and characteristic, that is, it combined with revolutionary democracy, and became an ideological weapon to overthrow the feudal monarchy.

Our country's several thousand year history produced many national heroes who made outstanding contributions to their motherland. In their times, however, patriotism was always closely associated with loyalty to the emperor. There was no way to draw a line between the two things. They often pledged their loyalty to certain emperors or kingdoms of certain royal families. On the narrow base of conducting a life-and-death struggle for them, they performed earthshaking undertakings. In modern history, during the Opium War, the Chinese-French war, the Sino-Japanese War of 1894-5 and the Boxer movement, the Chinese people joined many generals and soldiers of the Qing Dynasty in fighting heroically against the armed aggression of the imperialist powers, made heroic sacrifices, and displayed a noble patriotic spirit. During these bloody battles against the imperialists, most of them still considered themselves faithful subjects of the Aixin Goro dynasty, fighting to preserve the kingdom of the great Qing Dynasty. During the 1911 revolution, the Chinese people learned from practice that patriotism absolutely had nothing in common with the sense of loyalty to emperors. In order to truly love their country, to avoid the tragedy of national destruction and to develop and revitalize their nation, they had to first overthrow the Manchu government. In this connection, Sun Yat-sen said: "We all understand that the Manchu government is corrupt and hopeless. Unless autocracy is overthrown and its system is thoroughly reformed, our motherland cannot be saved." ("Documents on the Revolution Before the Founding of the Republic of China")

During the last decade of the 19th century, the basic belief of the progressive school of thought in China was that the only way to save the nation was to patch up and reform the decadent Qing government. During the first decade of the 20th century, the basic belief of the progressive school of Chinese thought was that the only way to save the nation was to wage a revolution to overthrow the rule of the Qing Dynasty. In other words, the concept of patriotism underwent a basic change in a short period of time, effecting a total break with the tradition of loyalty to emperors.

There were two main reasons why the bourgeois revolutionaries united patriotism and the struggle to overthrow the feudal autocracy:

First, the decadent Manchu government was the principal factor that led the nation to the abyss of poverty and backwardness and sped up its decline. The Manchu government still stubbornly rejected any reform despite the fact that the national, social and political crises had reached very serious proportions. This led the people to see clearly that there was no way to repair the dilapidated apparatus of the Manchu government, that it could not be saved, and that its continued existence would be the greatest calamity for the country and the people. "The Manchu government is actually the biggest obstacle to the enriching and strengthening of China." (Wu Yue's "Proposals") The people had no alternative but to overthrow this reactionary feudal political regime in order to clear the way for the realization of wealth and power.

Second, what was more important was that the Manchu government virtually had become "a foreign court." In exchange for support for its rule from the imperialists, the Manchu government was willing to take orders from them, and to submissively give up national interests, and "bribing them with land property and cash.

in order to curry favor with them, it was willing to sacrifice countless people's lives, to give up countless rights, to cede immeasurable tracts of land and to squander enormous amounts of money. If you review its political policy, there isn't one that doesn't play into the hands of foreigners and send us to our doom." (Han Ju's [3352 7457] "Construction of a New Government") In order to achieve independence, freedom and wealth and power for the nation and the people, it was essential to break with this traitorous regime.

The revolutionaries emphasized that it was necessary to distinguish the country and nation from the monarch and royal family--"If we do not want to see our country falling apart, we should distinguish between the imperial court and the country." (Shen Xiangyun's [3088 5046 0061] "Letter to Zhang Zhidong [1728 0037 3159]") Since a country is not private property of the monarch, the downfall of a dynasty does not mean the destruction of a country and a people. While praising the descendants of the Song and Ming dynasties for displaying their national righteousness so as to inspire the current struggle, the revolutionaries at that time pointed out that their blind loyalty to a single royal house should not be followed. "The descendants of the deceased Song and Ming dynasties always praised emperors Zhu and Zhao as representatives of their country. Today, it seems ridiculous because they could not tell the nation from a royal family." ("Mental State of Nationalism" by Zhu Zhixin [2612 1013 0207]) Although the proponents of the constitutional monarch chanted the hymns in praise of the endeavor to love the nation and preserve the race, they spared no effort to defend the decadent rule of the Manchu government and to stubbornly oppose the revolution. What they did was "harmful to the country instead of benefiting it."

When patriotism and revolutionary democracy converged, it immediately formed an ideological foundation in preparation for the ultimate overthrow of the more than 2,000-year-old feudal monarchy.

Merge of Patriotism and Concept of Learning From Foreigners

Another special feature of patriotism during the 1911 revolution was a call for learning from the foreign countries. At that time, the revolutionaries were full of confidence in the victory of the revolution and the future of their motherland. They believed that as long as their countrymen kept up their efforts to learn from foreign countries, they could certainly catch up with and overtake these countries.

China is a country known for its long history. For a long time, it had taken its place in the front rank of the world and was celebrated for its splendid civilization. But lately, it stagnated and lagged behind other countries, and fell victim to aggression by many imperialist powers. Using the theory of "natural selection" to explain the contemporary Chinese history, the bourgeois revolutionaries said: The current era was one marked by rapid advance. The world as a whole was in a period of acute competition. In an environment of "natural selection" and "survival of the fittest," only by constantly strengthening ourselves and continuing to make progress could we survive. Otherwise, others would be butcherknives and our nation would become a piece of meat or fish and our nation could not possibly escape destruction. Although this theory failed to explain the nature of imperialist aggression in a scientific way, it was instrumental in awakening the Chinese people at that time to the impending danger of national disaster. The revolutionaries said: "Weakness will court humiliation." If our people were awakening and the country making progress, the vicious imperialists would feel reluctant to embark on any adventure against us. For this reason, in an effort to save our country from destruction, our primary task should be to mobilize the people to transform our society and to achieve self-renewal. "We should also remind the people that citizens make up a nation, and therefore should assume responsibility for its survival." (Inaugural Editorial of YUNNAN JOURNAL)

The revolutionaries pointed out: The key to the goal of self-strengthening lies in our efforts to learn from foreign countries and to search for truth of national salvation. First, we must study Western politics, and introduce the bourgeois political, legal and educational systems to China. Sun Yat-sen said: "The aim of studying foreign revolutionary politics and establishing the democratic institution is to absorb what is superior to us. This is why we should put into practice the lofty political philosophies and the latest political concepts of foreign countries in China." ("The Principle of the People's Rights") Second, we must study science and technology, open factories, develop mineral resources, build railways, open shipping lines and raise the level of productive forces. "Western science is superior to us. As a result of advances in science, man can perform miracles that rival the work of God." ("The Principle of Nationalism")

However, diehard feudal conservatives indiscriminately rejected and disdained foreign things. Clinging fiercely to what they called "national heritage," "they scoffed at and condemned those for urging to learn from foreigners." The revolutionaries retorted: "If we want to resist foreigners, we must first study their strengthsn." (WARNING BELL) "Why should we reject things that prove superior to us? Can we resist them if we fail to study their advantages? (RECOLLECTION) They maintained that at that time, no one should be ashamed to learn from others. To the contrary, everyone should be ashamed if he fails to learn from them.

At the same time, in criticizing the slave mentality characterized by blindly worshiping, fearing and fawning on foreigners, the revolutionaries pointed out: Some people worshiped foreigners "as God, serve them as their godfathers. 'They had extreme fear of the foreigners' that whenever they met a foreigner they called him a foreign mandarin and master. In this way, they voluntarily sank their status of hosts to that of the subservient. This mentality of worshiping foreigners resulted from a series of our defeats at their hands, leading us to attach too much importance to foreigners. Actually, a foreigner is also only a person, not a monster with three heads and six arms. How could anyone say that no one could beat him?" ("RECOLLECTION") Xenophobia and slave mentality has nothing in common with the patriotic spirit and therefore should be rejected. To do away with the xenophobia and slave mentality, we must strengthen the sense of national dignity and self-confidence. At that time, the progressive representatives of the Chinese national bourgeoisie believed that the Qing Dynasty was certain to be overthrown, and the revolution would certainly be victorious. Sun Yat-sen maintained: China could certainly achieve a great leap forward in the political, economic and cultural fields, "catch up with" the capitalist powers, and make necessary contributions to all mankind.

Although Sun Yat-sen and his comrades in arms could not live to see the realization of this ideal, their heroic struggle and tremendous achievements have proved instrumental in clearing the way for this purpose.

REASONS FOR FAILURE OF 1898 REFORM MOVEMENT REVIEWED

Beijing RENMIN RIBAO in Chinese 15 Sep 81 p 5

[Article by Ma Hongliang [7456 3163 2651]: "The 1898 Reform Movement"]

[Text] The 1898 Reform Movement was led by a reformist group of the Chinese bourgeoisie at the end of 19th century. Its goal was to save the country from impending peril and then make it strong. It is so called because of its climax in 1898.

This patriotic political movement took place at the end of 19th century, when contradictions between the feudal elements and the broad masses of people, and particularly between imperialism and the Chinese nation, were sharper then ever. In 1895, the Qing government was defeated by Japanese militarism and the partition of China by the powers appeared to be imminent. It was a time when "all 400 million people were shedding tears, because the Divine Land was nowhere to be found." Kang Youwei [1660 2589 3634], then in Beijing, rallied around himself some 1,300 provincial graduates from various provinces and submitted a joint petition to Emperor Guang Xi to oppose the "Shimonoseki Treaty" and to put forward three proposals, namely, refusal to sign the treaty, removal of the capital for continued resistance, and a reform to revitalize China. This petition is called the "presentation of a memorial by riders of public carts" in history. These patriots' memorial to the throne failed to get through the gate of the Forbidden City guarded by the diehards; but the mobilization of more than 1,000 provincial graduates to submit the petition in disregard of their future career and the safety of their families and themselves, and in defiance of the government's prohibition of "scholars' intervention in politics" sounded the warning of the impending national crisis and raised the outcry for national salvation. This was indeed an unprecedented event.

"The state was shattered and the powers were about to join in the scramble; people with national interests at heart wanted the country to be revitalized." ("Collected Poems and Articles of Kang Youwei," p 193) To turn the tide and to learn the way of revitalization, Kang Youwei formed "Learn To Be Strong" societies in Beijing and Shanghai, and published WANGUO GONGBAO [INTERNATIONAL BULLETIN] and ZHONGWEI JIWEN [NEWS AT HOME AND ABROAD] in Beijing and QIANGXUE BAO [LEARN TO BE STRONG JOURNAL] in Shanghai, and whipped up the reform movement under the slogan "Reform To Become Strong." Liang Qichao [2733 0795 6389], Tan Sitong [6223 0843 0681], Tang Cai Chang [0781 2088 1603], Yan Fu [0917 1788] and others also published SHIWU BAO [CONTEMPORARY AFFAIRS], XIANGXUE BAO [HUNAN JOURNAL] and GUOWEN BAO [NATIONAL NEWS] in Shanghai, Changsha and Tianjin. All these journals made a deep impression on thinkers throughout the country, and the bourgeois reformist group headed by Kang Youwei gradually became a political force. These reformists gained the support of Weng Tonghe [5040 0681 7901], Emperor Guang Xu's tutor and concurrently president of the Board of Revenue; and Chen Baozhen [7115 1405 4631], governor of Hunan. On the basis of resisting aggression and carrying out reforms, and in the struggle against capitulationism, national betrayal and conservation in the empress dowager's faction, they gradually joined forces in the hope that through political and economic reforms from top to bottom they could develop capitalism in China and thus attain the goal of national salvation.

In the winter of 1897, Germany dispatched battleships to forcibly occupy Gaozhou Bay, while tsarist Russian aggressor troops took over Lushunkou and Dalien Bay by force. The partition of China appeared to be imminent. In January 1898, Kang Youwei submitted his "Memorial on policy Concerning the General Situation" in which he sharply pointed out the situation then confronting China: "The independence of a nation depends on its readiness to change, while not changing means doom; thorough change means strength, while minor changes still spell doom." He also proposed these concrete reform measures: 1) all ministers pledging to carry out the reform; 2) setting up a "petition center" to encourage free expression of views; and 3) establishing a "bureau of institutions" with 12 affiliated departments handling matters concerning law, finance, education, agriculture, industry, commerce, railways, posts, mining, travel, army and navy respectively, and carrying out the reform measures; and 4) setting up a "bureau of civil affairs" for every circuit to promote local autonomy. In April, Kang Youwei and his associates founded the "Protect the Country" Society in Beijing. The inaugural meeting of the society was held at the Guangdong Guild building, and Kang Youwei was elected to address the meeting. He recounted the series of national disasters suffered since the Opium War and pointed out that within 2 months [since the occupation of Gaozhou Bay by Germany], "there had been 20 incidents in which China had forfeited sovereign rights and surrendered territory." He shouted: "Everybody will be responsible for the national peril, but everybody has also the right to save the state!" He added: "If our 400 million people will arise, the foreigners will not dare to look down on us."

Emperor Guang Xu, whose original name was Aixijueluo Zaitan [1947 5647 6030 5012 6528 8407], did not want to become the monarch of a subjugated nation and was eager for the reform. Therefore, he readily accepted the reformists' proposals and on 11 June, despite overwhelming opposition, resolutely issued an edict concerning "the formulation of a definite state policy", proclaimed a series of reforms, and appointed the reformists to implement the new policies. In the economic sphere, a bureau of agriculture, industry and commerce was established to encourage land reclamation and private enterprise, and to reward inventions and new discoveries. Anyone who could invent or discover any method to promote production would be rewarded with either an office or certain patent rights. A general bureau was formed for railway construction and mining, and the former courier stations were replaced by an extensive postal service throughout the country. There was also reform of public finance and the compilation of state budgets. The special privileges granted by the state for the Bannermen were abolished, although provisions were made for them to make their own living. In the cultural and educational spheres, the civil service examination system was reformed with the abolition of the stereotyped "eight-legged" essay writing and the use of practical forms. A modern school system was established, including the founding of the Metropolitan College, the establishment of the Book Translation Bureau for the translation of new foreign books, the establishment of publishing houses and academic societies, and the sending of people abroad for study and travel. In the political sphere, sinecure posts and overlapping organizations which were always left idle were abolished. Officials of all ranks as well as the people were permitted to petition the throne, and official hindrance was strictly forbidden. In the military sphere, irregular forces were disbanded and a training program was adopted for the army and the navy. This new program remained in force until 21 September and was referred to as "The 100 Days Reform" because of its existence for exactly 103 days.

Only 4 days after the proclamation of the "formulation of a definite state policy," the empress dowager began to clip Emperor Guang Xu's wings with a reshuffle of personnel. Weng Tonghe of the emperor's faction was dismissed and Ronglu of the empress dowager's faction was appointed viceroy of Jili Province, to be in command of the Beiyang (Northern) Army, composed of the Kansu Corps under Tong Fuxiang [5119 4395 4382], the Wuyi Corps under Nie Shicheng [5119 1102 2052] and the modern trained corps under Yuan Shikai [5913 0013 0418]. Ronglu was then the "all-powerful commander in chief and prime minister and no one dared to face up to him." On 20 June, however, Yang Shenxiu [2799 3234 0218] and Song Bolu [1345 0130 7627], censors of the emperor's faction, impeached Xu Yingkuo [6079 2019 7503], president of the Board of Rites, for "being conservative and stubborn in resisting the new policies" in a counterattack. Then on 8 July censor Wen Ti [2429 1229] again accused Kang Youwei of "ganging up with some officials to seize the control of state policies." On 4 September, two presidents of the Board of Rites, Huaitabu [2037 1044 1580] and Xu Yingkui, were dismissed for obstructing under secretary Wang Zhao [3769 3564] from approaching the throne and violating the imperial edict which encouraged people to express their opinions. On the following day, Emperor Guang Xu conferred on Tang Sitong, Yang Rui [2799 6904], Liu Guangdi [0491 0342 0966] and Lin Xu [2651 2485] the rank of Grade 4 officials with the duty of implementing the new policies. They were then called the "Four Secretaries of the Grand Council." The empress dowager's faction was also secretly preparing for a counterattack. This was not only a power struggle within the ruling class of the Qing Dynasty, but also a contest between innovation and conservatism or between progressives and reactionaries. Grand Secretary Xu Tong [1776 2717] said: "We would rather see the state perish than to have its laws changed." Tang Sitong said: "China cannot become strong again until the feud between the two factions ends in a bloodbath." These remarks aptly summed up the essence of the struggle between the new and old factions.

Under strong pressure from the feudal diehards, Emperor Guang Xu and the reformists tried to enlist the assistance of Yuan Shikai to restrain the empress dowager's faction. However, Yuan Shikai turned around and secretly reported everything to Ronglu. On 21 September, the empress dowager began a palace coup and Emperor Guang Xu was imprisoned in Yingtai, while Kang Youwei and Liang Qichao fled to Japan. On 28 September, at 1600 hours, Tan Sitong, Yang Rui, Lin Xu, Yang Shenxiu, Liu Guangdi and Kang Guangren, all six of them, were beheaded at Chaishikou in Beijing. They are known as the "Six Gentlemen of the 1898 Reform Movement" in history.

Thus the 1898 Reform Movement was finally strangled by the feudal diehard forces. The main cause of its failure was that the newly emerging Chinese bourgeoisie could not become an independent political force, while around the emperor the forces were not strong enough to resist the empress dowager's faction. Because of the limitations of the age and the classes, the reformists could not possibly realize the nature of imperialism and feudalism and were widely separated from the broad masses. Hence their tragic failure.

MOTIVES, EFFECTS OF WESTERNIZATION MOVEMENT REEXAMINED

Beijing RENMIN RIBAO in Chinese 8 Sep 81 p 5

[Article by Qiao Huantian [0829 6703 3944]: "The Westernization Movement"]

[Text] From the 1860's to the 1890's, some of those adaptable feudal statesmen in the Qing Government imported advanced guns, machinery, and science and technology from capitalist countries of the West in order to "inject some tonic" into that tottering regime: this was what people called the Westernization movement. Those who engaged in such activities were called Westernizers. Yi Shu, Zeng Guofan, Zuo Zongtong, Li Hongzhang, and Zhang Zhidong were representative personalities of this faction.

The rise of the Westernization movement was by no means accidental. Its causes were diverse. In the first place, at the beginning of the 1860's, a peasant revolution was spreading like a raging fire and had become the Qing government's "serious internal trouble." Those like Zeng, Li, and others who were charged with the direct responsibility of "exterminating the long-haired rebels" were of the opinion that unless foreign guns were utilized, this "internal worry" could not be relieved. Secondly, after sustaining the blows of the two Opium Wars, part of the ruling class felt deeply that foreign capitalism was seriously threatening the Qing government's existence in military, economic, and ideological areas, and they maintained that "whether the foreigners are for us or against us is invariably dependent on whether we in China are strong or weak enough." Hence, people like Zeng, Zuo, and Li proposed to take advantage of the opportunity of "exterminating the long-haired rebels" and to a seriously study and acquire various manufactured machines and practical strength available overseas," "as the foreigners are glad to show off what they are good at." Furthermore, the idea of people like Lin Zexu, Wei Yuan, and others to "learn from the barbarians" their superior techniques in order to "control the barbarians" also caused the Westernization movement to erupt. Zuo Zongtong was one who clearly suggested that his resorting to "Westernization" was specifically to put into practice Wei Yuan's idea of "learning from their superior techniques in order to control them."

The actual situation at the time was such that the Qing government was suffering defeats both internally and externally and, through such internal and external warfare, it was directly experiencing the harsh effects of the Western countries' fine instruments, strong ships, and powerful guns. Thus it was natural that this Westernization movement was to begin with the military aspect. The period from the

1860's to the middle of the 1870's constituted the first stage of the Westernization movement. During this period the Westernizers, while purchasing guns from foreign countries, at the same time created a number of military industries in Anhui, Jiangsu, Fujian, Zhidi, Hubei, Sichuan, Gansu, and other provinces. The most famous of these were the Anqing Munitions Factory, Jiangnan Manufacturing Main Office, Jinling Machinery Plant, Fuzhou Shipyard, Tianjin Machinery Plant, and Hubei Gun Factory. These military industries' production funds were allocated by the state treasury, and the guns, ammunition, and vessels produced were distributed by the government for use by the troops. The cost of these products was never accounted for, nor did they participate in any market exchange in the form of commodities.

Along with the rise of these military industries, the Westernizers imitated England, France, and other countries in "opening up coal mines, building railroads, and developing commerce." This was the second stage of the Westernization movement--that is, when railroads, shipping, the telegraph, mining, metallurgical refining, textiles, and establishments and undertakings of the like were copied. From the 1870's to the 1890's, the Westernizers created altogether over 20 civilian enterprises. The most important among them were the Shanghai Merchants Steamship Company, the Kaiping Bureau of Mines, Taiwan Jilong Coal Mine, Tianjin Telegraph Office, Tianjin-Shanhaiguan Railroad, Lanzhou Wool Bureau, Shanghai Bureau of Machinemade Cloth, Hubei Iron Administration, Hubai Textile Bureau, Guizhou Iron Works, Heilongjiang Mohe Gold Mine, etc. These enterprises respectively adopted the methods of official management, commercial management under official supervision, and joint official-commercial management. As for their machinery, it was acquired the same way the military industries and departments had done, by purchase from England, France, Germany, the United States, and Japan. Some "foreign technicians" also were employed.

Along with the establishment of these civilian enterprises, the Westernizers at the same time shifted the focus of such military industries from land to the construction of modern naval defenses. By the middle of the 1870's, the Taiping Army and the Nian Army, and similar peasant uprisings had been suppressed, and contradictions between the Qing government and foreign capitalism became sharper. In view of experiences like the Tianjin religious incident, Tsarist Russia's occupation of Yili, and Japan's dispatch of troops to Taiwan, etc., the Westernizers proposed to "purchase iron vessels, torpedoes, and all useful munitions quickly" in order to reinforce the defense of strategic points along the coast. Hence, in 1875 the Qing government granted its approval to allocate 4 million taels in customs duties and lijin taxes each year to build within 10 years the three naval units of the Southern Sea, the Northern Sea, and the Guangdong Sea. By 1884, all three units had become sizable, but during the Sino-French conflict the Fujian naval unit was totally annihilated right away, and the Southern Sea unit also suffered great losses. In 1885, the Naval Office was established to take charge of all matters concerning naval defense. In 1888, Li Hongzhang expanded the Northern Sea naval unit into the Northern Fleet and also built the Lushun wharf and Weihaiwei harbor; it became the largest naval unit of the time. However, because naval funds were mostly shifted by Empress Cixi to the building of Yiheyuan, it was not until the Sino-Japanese War of 1894 that any more vessels added.

In addition, in order to train solid, useful technical personnel, the Westernizers from 1862 on undertook at various points to establish the Capital Language Institute, the Shanghai Foreign Language Institute, the Guangzhou Language Institute, the Fuzhou

Shipbuilding School, the Tianjin Naval Academy, the Tianjin Military Academy, the Guangdong Naval Academy, the Hubei Self-Strengthening School, and others--totaling more than 20 modern schools. The curricular arrangements for these schools went radically against the normal tradition of several thousand years in China, with foreign languages and modern science and technology replacing Confucian learning as the main subjects. Apart from these schools run by the provinces, the Westernizers also sent more than 200 students in different groups to certain countries in Europe and America between 1872 and 1886. After these students completed their studies and returned home, they were mostly assigned as core forces to enterprises such as telegraph, shipbuilding, manufacturing, and others. People like Zhan Tianyou, and Yan Fu thus became the most outstanding among those who were known to all. All this also became the content of the Westernization movement.

The Westernization movement came to a close along with the annihilation of the Northern Fleet during the 1894 Sino-Japanese War and the loss of influence of Li Hongzhang and others in that year. There were many causes for its failure, but the most fundamental reason was that, in a situation in which the feudal production relations in the entire society underwent no change, all plans to develop modern industries were like building a tower on sand. They could scarcely succeed.

'BA YI RADIO' ON PROMOTION OF YOUNGER CADRES

OW050243 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 4 Oct 81

[Text] The 6th plenary session of the 11th CCP Central Committee emphatically pointed out that promoting more young and middle-aged cadres to leading posts at all levels is a pressing strategic task; that it is imperative to resolutely abolish the lifelong tenure of cadres, a system that is definitely harmful; that cadres getting on in years must step down and that cadres who combine ability and political integrity and who are in the prime of life should be promoted to leading posts.

However, due to opposition by that top authority at the central level, the extremely important task of reducing the cadres' average age cannot be accomplished to this day.

Moreover, conditions are not lacking for solving the age problem of cadres quickly. As we all know, young and middle-aged cadres account for more than 60 percent of our country's 20 million cadres. About 4 to 5 million specialized and technical cadres have been trained since liberation. We have plenty of qualified people.

As pointed out by Comrade Hu Yaobang, cadres in their forties and fifties are a valuable asset of the country. Promoting them to leading posts at various levels will be in the interests of the state and the people. First, they are in the prime of life and can work untiringly for 15 or 16 hours each day. Second, they were generally educated before the "cultural revolution" and are better equipped with scientific and technical knowledge. Third, being middle-aged, they have accumulated rich experience in political life. They have shared weal and woe and been through thick and thin together with the masses in the most difficult period in our history. They have seen with their own eyes the great losses to the country and the sufferings of the people caused by arbitrary individual rule, bad work style and wrong ways of leadership. Therefore, they will not repeat historical mistakes. In short, only those cadres in their forties and fifties can lead our country out of the blind alley and onto the correct road of national construction.

However, due to all kinds of obstacles, only a very small number of cadres in their forties and fifties have been promoted to leading posts. According to State Council statistics, on the average only one young or middle-aged cadre has been promoted into the leading body in each of the enterprises and establishments directly under the State Council in the past few years. The number of young and middle-aged cadres assigned to state organs at the central level and leading bodies at the provincial and municipal level is even smaller. Absolutely no young or middle-aged cadres have been promoted to leading posts in higher leading organs such as the Political Bureau or Military Commission of the Party Central Committee. Most of the members of the Political Bureau and Military Commission are advanced in years. For example, Ye Jianying is 83 years old; Comrade Deng Xiaoping is 77; Comrades Li Xiannian and Chen Yun are 76; Peng Zhen, Nie Rongzhen and Huang Kecheng are about 80. In Comrade Deng Xiaoping's words, Hu Yaobang and Zhao Ziyang are cadres in the prime of life. In fact, they are both over 60. Other leaders are approaching 70.

Since the 6th plenary session put forth the task of reducing the average age of cadres, an example should have been set in promoting young and middle-aged cadres to leading posts at the central level. However, not only has this failed to happen, but on Comrade Deng Xiaoping's instruction, 77-year-old Yang Shangkun has been appointed secretary general of the Military Commission.

Unless cadres in the prime of life are widely promoted to leading posts, it is impossible to solve the problem of reducing the average age of leading cadres, and it is impossible to consolidate the leading bodies at the central and local levels. In short, the earlier old cadres in their seventies and eighties step down and cadres in their forties and fifties are promoted to first-line leading posts, the greater will be the benefit to the country and people.

CARE FOR RETIRED CADRES EMPHASIZED

Fuzhou FUJIAN RIBAO in Chinese 6 Aug 81 p 2

[Commentary: "Succeed in the Task of Organizing and Caring For Retired Cadres"]

[Text] The present group of reports introduces the deeds of some retired cadres who continue to serve the party, work for the people and contribute to the construction of the four modernizations. Their awareness in insisting on revolution is highly commendable. They should be held in esteem, loved and praised.

There are some 40,000 retired cadres in our province. With the passage of time, the number of retired cadres will be increasing year by year. Those retired cadres are mostly old comrades who have worked and labored for decades. They possess special knowledge and rich working experience. Having undergone party education for longer period of time, they have a high level of political consciousness and socialist enthusiasm. Many of them can still engage in works beneficial to the party and the people. Therefore, how to succeed in caring for retired cadres has become an important task for the party and the government. Party committees and government at every level should put this task on the agenda, establish and improve necessary agencies to care for retired cadres, organize support and help them to solve concrete problems such as reading documents, placement for their children, medical care and easing their economic hardships so as to ensure that politically they receive full attention and in real life they are thoughtfully provided for. Agencies for the retired cadres must actively organize them for political, cultural and scientific studies, sponsor literary, recreational and travelling activities, frequently talk with them, encourage them to care for each other, help each other and make them happy and enjoy a meaningful life in their later years. It is also necessary to listen to their opinions and organize them for some social work according to their special abilities so that they can continue making contributions to the construction of the four modernizations. It must be understood that success in caring for the retired cadres is important in carrying out the task of "three in one" for adjusting leadership and for realizing step by step "three modernizations" of cadres.

Man does get old. This is an irresistable law of nature. Retirement of old cadres is stipulated by state law and should be complied with. However, to be a member of the communist party and a revolutionary, be it on the job or in retirement, one must not forget the oath taken upon entering the party and the intention of serving the people. Retiring from work without retiring from revolutionary conviction, he must continue to work for the people. This is the earnest hope the party invests in retired comrades.

THRIFTY LIFE STYLE PRAISED

Chengdu SICHUAN RIBAO in Chinese 24 Aug 81 p 3

[Commentary by Deng Dun [6772 4163]: "Speaking About Lin Zexu on Official Tour of Duty"]

[Text] Commissioner Lin Zexu upon leaving Beijing for Canton to prohibit opium purposely drafted a proclamation to be heralded along the way: "This office is on official tour of duty as commissioner which is different from ministerial high offices. The burden of reception incurred on local postal stations is acknowledged and great appreciation is due to them. At overnight stops, family-style food is sufficient, no need to prepare a whole banquet. Do not prepare special delicacies so that unnecessary expenses can be saved. This is not meant to be ceremonious... These words will be backed by law. Abide by them without transgression." It was so meticulously stipulated and the language was so sincere. Moreover, "words will be backed by law." It was not mere euphemisum; historical evidence proved that Lin Zexu was not just spouting hot air. He really merits our respect.

This was about a feudal personality connected with a feudal event. It is well known that Lin Zexu defended but the interest of his social class. Nevertheless, his style on official tour of duty makes some of our comrades pale in comparison. For some comrades to go on "official tour of duty," (or called "inspection," or "examination of work") before his departure, "advance" personnel already left for the location. Upon his arrival, it goes without saying that a "full banquet" was served. Even if one was concerned with the authority of "regulations," he would merely say "don't do it again." No one backed his words with law or took a drastic action to "boycott banquet."

"Thrift makes success, extravagance leads to ruin" sums up the experience from centuries of history. We the proletariat and the communist relied on the tradition of strenuous revolutionary struggle to score one victory after another before the regime was established. So should we hold on to it now that the regime is established. Here I am reminded of an anecdote of Peng Dehuai on official tour of duty.

During the Korean War, once Marshall Peng went on to inspect a certain troop of the volunteer army. An administrator of the troop told the cook to prepare eight dishes. At meal time, Marshall Peng, looking at the table, immediately called the guard to summon the administrator and asked him softly:

"For whom are these sumptuous dishes prepared?"

"For leading cadres and those from the ministry."

"Can three people consume all this food? If you have a party at home, you would be calculating carefully. My meal allowance can only pay for two dishes. Who is going to pay for the rest? To exceed the ration system is not right. We must treat national resources with the same care as we treat our own."

In comparison, can those who are extravagant at the state's expense and squander people's hard labor remain unaffected? It is the time now for them to wake up and seriously implement the "regulations."

STUDY 'RESOLUTION' FOR SAKE OF GOOD WORKSTYLE

Nanjing XINHUA RIBAO in Chinese 22 Aug 81 p 2

[Article by Kang Di [1660 6611], Secretary for Standing Committee, Commission for Inspection of Party Discipline, [Jiangsu] Provincial Party Committee: "Study the 'Resolution,' Unify Our Thinking, Establish Good Party Workstyle"]

[Text] Today, people often ask this type of question: Why hasn't our party workstyle yet taken a fundamental turn for the better, even though it is showing considerable progress? Why do devious workstyles still seriously prevail in some localities and units? This merits profound reflection. The reasons why devious workstyles still exist can only be multifarious. Viewed from our work, at least the following three aspects are involved: First, our ideological perception is not yet sufficiently consistent as to the serious and harmful nature of such devious workstyle. Second, we have not yet exerted sufficient efforts to put forth positive struggles against such devious workstyles within the party, and we have not been able to fully make use of the powerful weapon of criticism and self-criticism in constantly cleansing the dust from ourselves. And third, our reward and punishment measures have not been distinctive enough; we have not applied discipline strictly enough.

We must unify our perception of the establishment of good party workstyle and our rectification of devious workstyle through study of the "Resolution." In this regard, there is quite a lot of muddled or even very erroneous thinking among some of our party members and even certain party organizations today. Some are satisfied merely with the correctness of the line, principles, and policies of our party but overlook the assuring role of our party workstyle in realizing the party's line, principles, and policies, thinking that it is of no importance whether or not they grasp our party workstyle. On the question of grasping our party workstyle, they may sometimes pay lipservice, but deep in their minds they think otherwise, and insofar as devious workstyles are concerned, they simply open one eye and close one eye and let [devious workstyles] spread on their own. Some put the grasping of the construction of our party workstyle in opposition to the grasping of our economic construction, in the belief that grasping party workstyle would affect the enthusiasm of the cadres and hamper the development of production and the livening of the economy. Thus they not only fail to grasp such devious workstyles but, on the contrary, even condone and shield them and allow certain people to take advantage of the convenience in their work and strike up relationships together to seek private gain, thereby giving an unrestricted "green light" to such devious practices as free entertainment and the presentation of gifts and such illegal conduct as giving or accepting bribes and blackmail and extortion. Others openly promote and support the practice of resorting to devious measures, show their enthusiasm for working on "the science of striking up desirable relationships" and for establishing "households of good relations," and take free entertainment and the presentation of gifts or even the carrying out of bribes as ways to run things and to solve problems, in the belief that unless this is done, no practical problems will be solved. [Such persons] allege that "since a commodity economy still prevails, free entertainment and presentations of gifts are inevitable"; that "if one's free entertainment and presentations of gifts are limited, the development of his business is likely to be limited as well, whereas if one's free entertainment and presentations of gifts are generous, the development of his business is also likely to be profuse"; and that "when one spends a little money for the sake of making a lot of money, what he loses is far less than what he gains." Such erroneous talk and practice on their part confuse the different characters of the socialist commodity economy and the capitalist commodity economy, mix the goals and means of socialist competition and capitalist competition in the same vein, and equate the style of socialist management with that of capitalist management. As a matter of fact, many devious practices have developed and spread far and wide precisely under the erroneous ideological guidance of certain leading organs and leading cadres. If we should ask whence the obstacles to the rectification of such devious practices come, they mainly come from this factor. If the erroneous thinking of these comrades is not corrected, it will be hard for the devious practices of the localities, departments, and units under their leadership to be corrected. Therefore, unification of our perception is of primary importance. Studying the "Resolution" enables us to understand this historical experience from the several decades of our party's fighting process: When our party workstyle is good, our party leadership is strengthened; when our party workstyle is not good, our party leadership is weakened. This is because the party's line, principles, and policies are realized by means of our party members and party cadres exerting their leadership over the masses, and because the masses also base their treatment and their understanding of our party through the good or bad workstyle of our party members and party cadres who carry out the party's policies and the good or bad workstyle of our party's leading organs. Consequently, the workstyle of a party, especially the workstyle of a party in power, is a major question that is tied to the realization of the party's leadership or even to the party's life and death. We must never treat it lightly.

We must use the powerful weapon of criticism and self-criticism to launch positive struggles against all erroneous ideas and behavior that violate the "guiding principles" and the state's policies and edicts, rules and regulations, and against all devious practices. Criticism and self-criticism constitute one of our party's three major workstyles. Relatively older comrades are all aware that our party members and cadres have all grown up by continuously carrying out criticism and self-criticism in the past. But today some comrades neither wish to resort to self-criticism nor dare to launch criticism against others. This is because some of them are "officials" and therefore are proud of the contributions they have made. They think they are smart and hence are not subject to criticism. There are also some who happen to be too selfish. Today they worry about not being able to strike up a good relationship with this person; tomorrow they are afraid of attack and retaliation; the day after tomorrow they are afraid of offending people; and the day after that they worry about not being able to acquire a certain advantage. Thus they are swayed by considerations of gain and loss and by all kinds of worries, and hence they dare not struggle against incorrect thinking and conduct. There are also comrades who confuse correct criticism with swinging the stick, and who start to jump very high as soon as they face criticism, saying that "the stick is being swung again." In the case of certain leading cadres, in particular, they fail to demonstrate a clear-cut attitude when confronted with the question of right and wrong; they dare not support what is good nor criticize what is bad; they refuse to control what they should control and handle what they should handle; and they waver and remain vague on everything. Thus, in some localities and units no resistance or crackdown is offered with respect to devious trends, nor exaltation with respect to legitimate practices. Comrade Hu Yaobang profoundly pointed out in his "1 July" speech: "Communists should take a clear-cut stand on questions of principle and should uphold truth. Every party member should uphold the party spirit and be unequivocal in his position on questions of right and wrong which involve the interests of the party and the people, and should show clearly what he is for and what he is against. The rotten and vulgar practice of trying to be on good terms with everybody at the expense of principle is incompatible with the proletarian character of our party." "As long as we fully revive and carry forward this fine tradition of criticism and self-criticism, the organic body of our party will undoubtedly continue to show inexhaustible vitality and will never show signs of decay."

We must resolutely run things according to the "Guiding Principles for Inner-Party Political Life" and strictly enforce party discipline. Today, some comrades look but see nothing and listen but hear nothing about devious practices; they refuse to criticize them and refuse to struggle against them. Some comrades offer favoritism as a shield to those who resort to devious practices, plead their cases in their behalf in order to turn major cases into minor ones and minor ones into nothing, and even openly hold out against dealing with them. There also are comrades who are deterred by the power and position they face and thereby fail to deal fairly with things. Of course, dealing with those who resort to devious practices is the same as dealing with others who make mistakes: The party's principle in this regard is always to "learn from past mistakes to avoid future ones and cure the illness to save the patient's by stressing education as the principal measure and by taking punishment as an auxiliary measure without relishing penalties. Meting out necessary disciplinary punishment to someone has the goal of educating the person who has made the mistake as well as other comrades. But in reality, if discipline becomes lax, it automatically creates a condoning effect. The discipline-inspection organs at various levels are the functional departments by which party committees grasp party workstyle and party discipline. Such organs must pay attention at all times to political and ideological unity within the party and spend their main energy heightening the fighting stamina of party organizations and maintaining party leadership and party prestige. They must take the carrying out of struggle against devious practices as one of their important tasks. With respect to devious practices and cases of violations of discipline, they must investigate and deal with each case they discover and also investigate and deal with as many cases as they discover. They must mobilize and support party members and cadres and the masses in their struggle against devious practices. The more important the cadre whose conduct violates the law or discipline at the expense of the promulgations of the party and the state, the more courageously the higher level party committee must exert itself in criticizing him, stopping him, and meting our disciplinary punishment to him. In the case of those who commit offenses with clear knowledge and who refuse to change their ways even after repeated education, it must increase the punishment, up to expulsion from party membership. Those who commit corruption by accepting bribes or who encroach upon state or collective property by [using] the convenience of their office must all return or repay what they take. All those who hinder the examination of devious practices and disciplinary questions, whether they are individuals or organizations, should be punished according to party discipline.

I think that if we can carry out the above three measures, the devious practices which prevail at present are bound to be corrected, and our fine party workstyle is bound to be revived and carried forward.

PENG DEHUAI'S 'FEAR' EXPLAINED, APPLAUDED

Beijing RENMIN RIBAO in Chinese 8 Sep 81 p 8

[Comment by Zhang Yuwen [1728 5124 3306]: "What Was the 'Great General Peng' Afraid Of?]

[Text] In an article describing Comrade Peng Dehuai talking to his subordinates, Ba Jin said he "talked to them like a senior person to his children." When he saw [the article], Commander in Chief Peng felt very uneasy and wrote a special letter to Ba Jin. In the letter he said: "The phrase 'talked to them like a senior person to his children' may be changed to 'talked to them as if he was addressing members of a harmonious family.' I hope very much to see such a change; would this be permissible? Secondly, I am a very small man. Describing me in too big [terms] makes me somewhat afraid!"

Everyone knows that Comrade Peng Dehuai, who was praised by Chairman Mao as the "Great General Peng," was a selfless and dauntless communist warrior of great fortitude. He dared to "cross his sword atop his horse" before a powerful enemy on the one hand, while on the other hand he was not afraid of mountainous pressure from within the party. Yet, he was "somewhat afraid" of praise. Why is "praise" so fearsome? Is this not worthy of our deep reflection?

"Priase" may be of two kinds: one is inflated by "trumpeters," while the other results from good men seeking truth from facts from the bottom of their hearts. Intentionally exaggerated praise is actually "buttering-up," a sugar-coated bullet; its harm hardly needs to be explained. Then, would praise which is the result of seeking truth from facts be harmless to the praised--especially to those persons occupying leadership positions? This also may not be the case, because some people, once praised, may find their spiritual defense against arrogance and impetuosity immediately disintegrating; they thereby lose their ability to resist personal worship, they deviate from the masses, and they deviate from the organization. Bad things such personal arbitrariness and patriarchal workstyle also begin to spread as a result. As an ancient saying put it: "If those above like something, those below will like it even more." Actually, not only if you "like" it, but even if you don't "like" it to begin with in your own heart or even dislike it somewhat: if you fail to come out and severely criticize and firmly stop it, those below will think that you have acquiesced and agreed with it. Then they will "praise" you even harder, and that will provide those of a devious mind with an opportunity. In the case of a great number of people who from having a humble and modest disposition with their guard up against arrogance and impetuosity to having a complacent, proud, conniving outlook, the evolution always took place gradually in an atmosphere steeped in "praise."

A thorough materialist is fearless. But he is "afraid of praise alone," because once "praise" becomes profuse, one's "materialism" hardly becomes "thorough." On 14 September 1918, when Lenin had recuperated from his would in an [attempted] assassination and saw that during the period of his treatment the newspapers had published many articles praising him, he angrily said to his secretary: "This simply won't do, I am a person just like anyone else...but now they have made me so prominent. This is too fearsome!" It looks as though all Marxists are "afraid" of "praise" of themselves.

In view of the painful lessons of the "Great Cultural Revolution," the Party Central Committee has proposed that it is necessary to prohibit all forms of personal worship. This puts before leading cadres of all levels the question of correctly treating "praise." With respect to exaggerated praise, we should naturally criticize and expose it relentlessly; but with respect to the kind of praise that results from seeking truth from facts, we should also naturally adopt Commander in Chief Peng's position of earnestly "chatting" with the praiser. In a word, our leading comrades should raise their vigilance toward all kinds of praise and cultivate a prudent and apprehensive awareness. This will be good to our cause, to the masses of the people, and to the leaders themselves.

SICHUAN'S FIRST SECRETARY SPEAKS ON CRITICISM ON LITERATURE, ART

Hangzhou ZHEJIANG RIBAO in Chinese 25 Aug 81 p 4

[News report by Xinhua News Agency telegraph from Chengdu on Aug 24: "Criticism on Erroneous Thoughts and Works Must be Launched: Tan Qilong [6223 0796 7893] Speaks About Praise, Criticism and Self-Criticism on Literary and Artistic Creations"]

[Text] First Secretary of CCP Sichuan Provincial Party Committee Tan Qilong spoke about the question of praise, criticism and self-criticism on literary and artistic creation at the meeting conferring prizes on distinguished literary and artistic works.

He said that literary and artistic workers should enthusiastically praise the party, praise socialism, praise the people's army and praise the people. This is the demand of the people.

Mentioning the flood disaster Sichuan recently suffered, he pointed out that had this great natural disaster happened in the old society, people would inevitably have suffered from broken homes, death and wandering. However, today because of party leadership, the socialist system and the people's army, the army and people are united in one will to struggle together. In the aftermath of disaster, tranquility prevailed and people's basic livelihood was assured. Production was recovering and everywhere one sees the touching scenes of people rebuilding their homes. If the party, the socialist system, and the people's army are not praised, what then can be praised?

He said that after smashing the gang of four, a hundred flowers bloomed and a hundred schools of thought contended; literary and artistic creation prospered and a large number of good works were produced. However, an extremely small number of people were spreading erroneous thought, producing bad works, and even speaking against party leadership and the socialist road. We must engage in criticism and self-criticism on erroneous thoughts and works so that literature and art can develop in the direction of serving the people and serving socialism. Criticism should aim at encouraging people to be good and start from the desire for unity by way of seeking truth from facts, presenting the facts and reasoning things out. At present, a small minority of people are reacting to criticism as if it were persecution. This is against the party tradition of criticism and self-criticism.

'BA YI RADIO' ON PERSECUTION OF PLA BY DENG, HU

OW060551 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 5 Oct 81

[Text] Five years ago, Hua Guofeng, Ye Jianying and leading comrades of our army including Xu Xiangqian, Xu Shiyou, Chen Xilian and Li Desheng, with the support of the masses of commanders and fighters, crushed at one blow the Jiang-Wang-Zhang-Yao gang of four, thereby putting an end to the 10 years of bloody fascist rule. Veteran party and army leaders such as Comrades Deng Xiaoping and Hu Yaobang, whose murders the gang of four planned but lacked enough time to carry out, and tens of thousands of other cadres and intellectuals thus have lived to this day and have assumed leading party, government and army posts. In contrast, our army's leaders and the large numbers of army cadres, who contributed to the downfall of the gang of four have been charged with all kinds of crimes and subjected to merciless attacks and persecution in the past several years.

Comrade (Zhu Yuanshi) pointed out in a recent article: It was very difficult to check the turmoil of the "cultural revolution" during Comrade Mao Zedong's lifetime. This was because on the eve of the "cultural revolution," the Party Central Committee was already powerless to restrain Comrade Mao Zedong in any way. And the gang of four, with Comrade Mao Zedong's energetic support, became emboldened and did as it pleased. It even persecuted cadres and the masses with methods not permitted to be used even on enemies. This was one side of the picture. On the other side, even after the death of Comrade Mao Zedong, the gang of four had followers all over the country, and the force of habit of the "cultural revolution" prevailed. Under the circumstances, if not for the decisive actions of the leading comrades of the army, particularly the leading comrades of the Nanjing, Guangzhou, Beijing and Shenyang PLA units, at the risk of their lives, it would have been absolutely impossible to overthrow the gang of four so easily. An unprecedented civil war would have broken out throughout the country. Who would have won is an open question. But the country and people would have suffered from it whatever the outcome. Millions of heads would have fallen.

Moreover, after the downfall of the gang of four, it was exactly the leading comrades of our army who supported the reinstatement of the veteran cadres, particularly Comrade Deng Xiaoping who had been dismissed from all posts inside andoutside of the party. They not only tightly protected Comrade Deng Xiaoping against the wish of Comrade Mao Zedong and the gang of four but, afterwards, firmly supported him to take charge of the work of the Party Central Committee and the Military Commission.

However, after the domestic situation became stabilized, the principal central leaders promptly followed the habitual practice of feudal emperors, of "cooking the dog when the hare is dead" and "laying the bow aside when the bird is killed," and began to play down and check the active role of the army in the party and the country and elbow out, even attack, our army's leaders. In the 5 years since the downfall of the gang of four, tens of thousands of army cadres have been persecuted under various pretexts or have suffered to varying degrees because of involvement in the "three supports and two militaries."

Since he became chairman, Hu Yaobang has repeatedly brought charges against veteran army cadres before Deng Xiaoping, complaining that those veterans, because of their seniority and power, are difficult to handle. He plans to carry out extensive replacements of principal leading cadres throughout the army while Deng Xiaoping is chairman of the Military Commission. This will be an extremely wrong thing to do. Coercion has never been a wise and effective method of leadership.

MILITARY AND PUBLIC SECURITY

'BA YI' RAPS AIMS, RESULTS OF PRC MILITARY DRILL

OW031325 (Clandestine) BA YI Radio in Mandarin to China 1400 GMT 2 Oct 81

[Text] The military exercise held in Nei Monggol Autonomous Region revealed two problems: 1) the military training conducted in the past few years did not meet the needs of actual combat; 2) it was unwise to hold the exercise to show to the West, particularly the United States, China's determination to resist the Soviet Union.

These problems cropped up during the exercise mainly because the leaders of the PLA units did not fully understand the directive issued by the General Staff Department last year that training must as much as possible meet the needs of actual combat. For instance, major antinuclear and antichemical warfare equipment was not pulled out of dangerous positions quickly enough; the "enemies" were not expelled quickly enough; bunkers, shelters and other such structures were not used. In addition, some units were interested only in the [word indistinct] of their own divisions and regiments and failed to coordinate with fraternal units. Of course, the offices under the General Staff Department will eventually make an overall summary report on this exercise. However, one thing is sure: they failed to make overall, full preparations before the exercise.

Also, it was improper to choose Nei Monggol region as the site for the exercise. Comrade Deng Xiaoping, chairman of the Military Commission, said: "This exercise is more important politically than militarily." But whether this predetermined political objective can be achieved is dubious. First, since the relations between China and the Soviet Union have already worsened to a great extent, there is no need to further aggravate them. Second, it is very naive to think that the exercise, by regarding outer Mongolia and the Soviet Union as the imaginary enemies, can change the Reagan administration's attitude toward our country.

Over the past several years we have almost unconditionally supported all U.S. policies. However, the Shanghai communique on Sino-U.S. relations has gradually turned into no more than a scrap of waste paper. The recent "act on U.S. relations with Taiwan" actually reflects the practice of the two-China policy.

Moreover, it should be noticed that the many measures taken recently by the United States to strengthen its strategic position in Southeast Asia are not meant to prevent Soviet expansion as some shortsighted people allege. It goes without saying that the Soviet strategic focus is in Europe. Now that the United States is supplying the ASEAN countries with huge military aid and increasing its military loans to Indonesia, it is obviously regarding our country as its potential enemy. The U.S. trade volume with the ASEAN countries now exceeds 21.1 billion dollars while U.S. investments in these countries exceed 4.5 billion dollars. These important strategic and economic interests have forced the United States to counter China's increasingly powerful influence in these countries.

Premier Zhou also repeatedly emphasized this when he was alive. This is also precisely why U.S. strategic guided missiles are aimed at more than 100 major targets in our country. By worsening Sino-Soviet relations one cannot expect to bring about a true Sino-U.S. alliance. It should be pointed out that any military exercise from now on should proceed from actual conditions and from China's long-term interests, even though its political importance is given priority.

ZHOU YANG REPORT ON LU XUN

OW282040 Beijing XINHUA Domestic Service in Chinese 1150 GMT 27 Sep 81

[Text] Beijing, 27 Sep (XINHUA)--At the 25 September meeting in Beijing to commemorate the centenary of the birth of Lu Xun, Comrade Zhou Yang delivered a report entitled "Persist in Lu Xun's Cultural Direction and Develop Lu Xun's Militant Tradition." Excerpts of the report follow:

During the 100 years since Lu Xun was born, earthshaking changes have taken place in China as well as in the world. Now our great nation, led by the Chinese Communist Party and guided by Marxism-Leninism-Mao Zedong Thought, has surmounted every difficulty and danger after long, tortuous and complicated struggles and is advancing with new strength and confidence toward the goal of building a socialist, powerful and modern country. Lu Xun was unable to see the birth of new China in the Orient, but during his lifetime of only several decades he made incalculable contributions to this great change, which is unprecedented in the thousands of years of Chinese history. Moreover, the influence of his works and thinking is worldwide.

The great thinking of an era is invariably the social product of that time. Lu Xun's thinking was born at a time when the Chinese people's anti-imperialist and antifeudal struggles had suffered setbacks and failures and was developing again with immense vigor. Lu Xun came into being as a great figure at the time of the drastic change; he was created by the revolutionary struggles.

His talent and cultivation did not make him a mere writer and scholar; it turned him into a heroic fighter standing at the forefront of the times in fighting thoroughly against imperialism and feudalism, an outstanding pioneer in the ideological emancipation movement and a great communist.

Lu Xun's thinking developed through a relatively long process of pain and intensive contradictions, from learning foreign affairs to supporting the reform movement to supporting the democratic revolution aimed at overthrowing the rule of the Qing Dynasty. Lu Xun's thinking developed in step with the development of the times. As early as the "4 May movement" period, he sided with the pioneers who took the journal new youth as representative of their central thinking, including the earliest communist Li Dazhao. He also directly joined a number of international antifascist struggles in support of the proletariat and progressive personages of foreign countries. In the rigorous domestic and international political struggles and in the movement to oppose the Kuomintang's counterrevolutionary cultural "encirclement and suppression," Lu Xun became a staunch standard bearer for the proletarian revolutionary culture of China and acted as an unwavering proletarian revolutionary and a great communist fighter. Lu Xun's road was a typical reflection of the road taken by the outstanding Chinese intellectuals of the 20th century in continuing to pursue truth and advance--a road of continued advance from patriotism and democracy to socialism and communism.

Lu Xun created brilliant literary works. Not fearing the difficulty involved, he scaled the height of China's modern literature and art and became the greatest founder and trailblazer of our new culture.

Lu Xun made contributions in many fields, but his most prominent historical merit was on the cultural front. He used his outstanding feats to point out a new direction for the Chinese culture. Comrade Mao Zedong pointed out correctly: "Lu Xun's direction is the direction of the new Chinese culture." Generally speaking, this is a national scientific and mass direction. The cultural direction that Lu Xun stood for is not out of date because of the completion of the new democratic revolution. It will further develop with the advance of our program of socialist modernization. Lu Xun's direction is still the one that we should keep to and develop. His heritage remains to be the treasure for our promotion of the socialist spiritual civilization and an indisputable forerunning guide and beacon light for the advance of the Chinese culture.

Without exception, the great culture of a country has its striking national characteristics and its own originality. It belongs to both the nation and the world. In other words, we can say that because it is a nation's culture it is part of the world culture. The inscription "the soul of our nation," written by Lu Xun's old friend Shen Junru after Lu Xun's death precisely indicated the high value people attached to him. With his outstanding creativity and national style, Lu Xun portrayed the suffering and indignation of our nation. More importantly, he portrayed our nation's most valuable quality, its most honorable thinking and sentiments and its most persistent fighting spirit. From Lu Xun himself and from his works we can find the essence of our nation's rich thinking, the wisdom, warmheartedness and creativity of the Chinese people in the semicolonial and semifeudal society and the real soul of our nation.

During the period of the "4 May movement," Lu Xun fiercely attacked Chinese traditional culture, but he was never a national nihilist. He was good at distinguishing between the essence and dross of our traditional culture. With intensive and extensive concern and indignation, he had to attack the weak points of our nation in order to revive it. No one else in the history of Chinese ideology and culture had made such conscientious and profound analysis and criticism of our people's negative features. At the same time, however, Lu Xun never forgot that in our nation there were a lot of hardworking people who were willing to give their lives for the interests of the people and that these people were the backbone of our nation and constituted the force for the survival and advance of our nation. Lu Xun was a man who fully respected foreigners and was good at learning their strong points. However, he was also a man with a high sense of national pride and dignity and a great patriot as strong as iron and steel.

On the one hand, Lu Xun practiced the "takeover doctrine" in absorbing foreign culture to develop our own national culture. On the other hand, he introduced the achievements of our national culture to the world so as to spur on the development of world culture. He upheld the idea of blending the national with the international and integrating patriotism with internationalism. He opposed both complacense and the style of improperly belittling ourselves, worshipping foreign things and fawning on foreigners. He looked down upon the "waiter style," which lacks national pride and is servile to foreigners. He also despised the comprador writers who thought China was lagging behind others in everything. Just as in dealing with opium, he tried to sweep away the dispirited culture, either introduced from the West or created at home, which poisoned the young people. He was indeed a defender of the spiritual health of our people and young men. Lu Xun's experience tells us that a good national writer should at all times be loyal to most people of his nation and should be good at developing the nation's fine cultural tradition. At the same time, he should have the farsightedness to break through the narrow national limitations, grasp the trend of the progress of world culture and be adept at assimilating foreign culture to enrich ourselves so the culture of our nation will continuously advance. Lu Xun was exactly such a man to boldly assimilate the strong points of foreign writers while having a profound knowledge of our own national culture. He knew very well the history and current condition of the Chinese nation. Because of this, it was not accidental that he became a great representative of Chinese culture, which occupies a significant position in the world.

To inherit Lu Xun's militant tradition in promoting the socialist spiritual civilization, we should carry forward his revolutionary spirit and scientific spirit in a way suited to today's actual situation. We should also do well in combining these two kinds of spirits. All social activities carried out by Lu Xun, including those in the literary and art fields, were based on his enthusiasm in cherishing the motherland and the people and in trying to make social reforms. While carrying out these activities, he always took a scientific approach.

After Lu Xun had decided to uphold the Marxist scientific world outlook, there was a further improvement of his scientific spirit, and his knowledge of Chinese society and the rule for the development of literature and art attained a still higher level. He called Marxism "the fundamental and practical social science," which he believed was conducive to the advance of literature and art.

Exactly as he himself said, Lu Xun accepted Marxism after he had drawn "lessons from facts." Among the truth-seeking Chinese, Lu Xun was one of the earliest people to come in contact with Marxism, but he did not accept it at that time. It was not until he had seen the 1911 revolution and other numerous incidents that he came to realize that only the Marxist analysis of human society and the road charted by Marxism were correct and that Marxism was suited to China's condition and required for saving our country. Then he resolutely corrected his ideological "deviation" and accepted the science of Marxism. In the hard years of white terror when "every family was a portrait of distress" in the wake of the "12 April" incident of 1927, Lu Xun boldly stepped forward and openly stood under the banner of the Chinese Communist Party.

Since Lu Xun's faith in Marxism was based on his deep understanding of the Chinese social condition and the law governing the development of history, he did not display the least sign of dogmatism when using Marxism to guide his words, deeds and writing. He was able to understand people, comment on world affairs and analyze the complicated social contradictions in a way more thorough and deep than ever. He had a more profound and practical understanding of the actual revolutionary struggle, the state of the revolutionary ranks and their strength and weakness. Over and over again he stressed that a revolutionary should "understand the reality of revolution." He pointed out: "Revolution is painful. It is bound to have dirt and blood and is by no means as interesting and perfect as some poets have thought. In particular, revolution is a practical thing, requiring a variety of humble and troublesome work. It is by no means as romantic as some poets have thought. In addition, revolution requires destruction, but construction is needed more. Destruction is a delightful job, but construction is a troublesome thing." For this reason, he was never intimidated by blood stains nor overcome by difficulties and setbacks. In the extremely difficult period of the revolution, he still believed that only the new rising proletariat had a future. In the march of the revolutionary ranks, some withdrew, some ran away, some became disappointed, and some rebelled, but his faith persisted in the revolutionary cause. He was deeply aware that all these were inevitable phenomena in the course of the revolution. With such a firm revolutionary faith, he fought to the last moment of his life, showing the most valuable revolutionary integrity and political quality of an intellectual believing in communism.

All his life Lu Xun applied his revolutionary spirit and scientific approach to his artistic practice and persisted in taking the road of revolutionary realism in his creative work. Since the "4 May" era, he always followed orders of the revolutionary forerunners and even referred to his own writings as "order-following literature." On the other hand, he was always faithful to artistic truthfulness, loudly calling on writers and artists to boldly open their eyes to observe society. He repeatedly stressed that a revolutionary writer should first of all be a revolutionary and personally experience a revolutionary life, for this was the only way not to misrepresent the revolution. While stressing that revolutionary writers should look reality in the face, Lu Xun also pointed out that they should have lofty goals and ideals. Lu Xun's scientific attitude lay not only in his attention to reality but also in his emphasis on proceeding from reality and tirelessly pursuing lofty goals and ideals. One important reason for the high level of maturity of Lu Xun's works was the fact that his realism was a combination of reality and ideals, able to fire men with enthusiasm to reform society and increase their strength to struggle toward their great goal.

Lu Xun's scientific attitude was not only applied to his creative work but also prominently embodied in his social and literary criticism. Lu Xun's militant life was a life devoted to a thorough criticism of the feudalistic and bourgeois old society and old culture. He regarded his essays as a reflex action and a means of attack and defense, and he maintained that "a writer's task is to make a prompt answer or stand against harmful things."

Lu Xun often pointed out that we needed strong critics who knew social science and we needed scientific criticism. This kind of criticism first of all should be out of "warm good intentions," that is, pure motives and the goal of unity. This kind of criticism is criticism seeking truth from facts and aimed at helping those criticized. Lu Xun never avoided mentioning his own viewpoints. Just as he was strict with himself, he often had disputes with his comrades in arms. He never easily let go of his comrades' shortcomings and mistakes, but sharply criticized them. He often warned them to pay attention to overcoming "left" ideas and sentiments. On the other hand he was always sincere toward them and correctly affirmed their strong points and achievements.

Summing up the painful historical lesson, all of us who experienced the 10 years of internal disorder must never give up the weapon of criticism. We must never give up criticism and self-criticism. We must learn to use the weapon of criticism and self-criticism and correctly handle and solve contradictions among the people themselves. In order to make our criticisms suit the socialist spiritual civilization, it is necessary to raise the level of our literary criticism and criticism in various other fields (including self-criticism), making such criticism more effective and scientific.
